U.S. Cong. Congressional record.

Appendix

Tribute to Senator George

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a remarkably fine article on the career of the distinguished senior Senator from Georgia [Mr. George], written by William S. White and published in the New York Times magazine of March 13, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR GEORGE: MONUMENTAL, DETERMINED
(By-William S, White)

WASHINGTON.—"Monumental" is the word for WALTER FRANKLIN GEORGE, the organ-voiced patriarch of the Senate and the third most powerful man in the United States in foreign policy. For "Mister GEORGE"—this is what his wife "Miss Lucy" calls him in the way of the old-fashioned southern gentle-woman in speaking to others of her husband—is for the Eisenhower administration in these tense days both a rock and an adornment.

He is a Democrat but in any ways, and especially in world affairs, a very unpartisan one, indeed. He has now resumed, after what to him in his long Senate career is a short hiatus of 14 years, the chairmanship of the Senate Foreign Relations Committee. He is hand in glove with Secretary of State Dulles and with the President himself, though sometimes his is the hand and theirs is the glove. And though the George hand is seemingly gentle, it can be steely.

It is obvious to those in position to observe these matters closely that Mr. George is in the confidence of the Secretary of State to a degree that no other Senator has ever been during Mr. Dulles' tenure. This does not exclude Senators of Mr. Dulles' own Republican Party, no matter who they may be.

Senator George keeps up with the highest affairs of the State Department—the crises, the burgeoning new policies, and all the rest that matters—in a very personal way. He does not do this by going to the State Department. Every Thursday, barring his absence from the country, Mr. Dulles comes by at breakfasttime to Mr. George's apartment in the Mayflower Hotel to put the whole burden of the moment on the breakfast table,

Senator George, in his discretion, passes on to his colleagues of the Foreign Relations Committee such of these matters as he may think fit as the dean of the Senate as well as the chairman of that committee. He is not merely a partner in bipartisanship but its ambulant embodiment. An irreverent junior Democrat—the word "irreverent" is used because, while Mr. George is in no sense stuffy, he is profoundly impressive—observes of the arrangement: "George is the rich man's Arthur Vandenberg."

This irresistibly apt comparison to the last great Senate exemplar of bipartisanship—the late Republican Senator from Michigan in the days when the White House was in Democratic hands—is unconsciously revealing. No one on the Democratic side, and not many on the Republican side, if it comes to that, would think of comparing Mr. George to any other Senator in any way that did not clearly put him in the senior position.

This position he occupies, not simply in the committee but in the whole of the Senate, for a variety of reasons. First of all, to all there present he is senior; he has been 30 years in that body, and that is a very long time. Then, he not only runs the Foreign Relations Committee but also is the voluntary ex-chairman and still senior Demoratic member of another body that in some ways is even more puissant, the Committee on Finance.

He is, therefore, in a position with one hand to help shape the great affairs of the world—not excluding such affairs as peace and war—and with the other to assist in adding to, or relieving, the tax burden of everybody in the United States. He is also the President pro tempore of the Senate, its Presiding Officer in the Vice President's absence.

But all this indicates only a small part of the story of the prestige of George. (The monosyllable "George." by the way, is the most common way of speaking of him in Washington, even though now and then one hears him referred to as "Walter." When a man in the Senate is called almost habitually by his last name, it implies an unconscious concession by the speaker that here is a personage who does not need even the grand, rolling title of "Senator.")

Walter Franklin George, in his front-row seat just next to the chair of the majority leader, Senator Lyndon B. Johnson of Texas, is an institution. Stocky rather than tall, his eyes cavernous behind thick spectacles, his small hand wearily smoothing his shock of white hair, he is for all the world like a proctor or monitor in a school for boys. Very grown men dread his frown and fear his displeasure, the one because it is so forbidding, the other because of the magnificent basso-profundo of his admonishing voice.

When he feels aggrieved he puts the case with the air of a patient man long, long put upon—intolerably and endlessly put upon—and now at last compelled to utter, as politely as may be remotely possible, some slight suggestion of the incredible travail that he has had to endure. Clearly, he honestly considers his capacity for endurance to be extraordinary.

Thus when he indicates that even this capacity has now been exceeded, the whole Chamber comes to a most respectful halt. The air is thereupon filled with Jovian bolts and rolls of thunder, and Members not remotely involved in the cause of his distress will nevertheless look a bit guilty and apologetic that matters have come to such a sorry point.

These incidents rarely occur—Mr. George is as far as possible from being a quarrel-some man—but when they do, they are memorable. One such occurred last year.

Senator George was determined to break a proposed constitutional amendment to limit the President's treatymaking power

that had been put in by Senator John W. Bricker, Republican, of Ohio. He was equally resolved upon the adoption of an amendment of his own, and this George paper, along with the Bricker paper, met the opposition of Attorney General Herbert Brownell, Jr.

Mr. Brownell had sent to the Senate a memorandum disapproving some aspects of Mr. George's project, and it became the duty of the unfortunate Senator William F. Knowland, of California, the Republican Senate leader and a respectful disciple of Walter F. George, to read the Attorney General's caveats on the floor.

Senator George arose in all his splendid fury to dispose of the luckless Mr. Brownell, who, had he been present, would hardly have known what had hit him until it was all over.

The Senator recalled with a mixture of sorrow and anger that he had undertaken to listen to the proposals of the administration, which he need not have done at all. But now, he said, with an incredulous scorn, look what had happened.

Someone in the Justice Department, George quickly concluded that it was "some kloik" (clerk), as he put it—had sent up a document that was both ridiculous and impertinent. This, he indicated, was about all that could have been expected of an agency in the hands of Mr. Brownell. For this, the Senator loudly suggested several times, was "a very odd little Attorney General."

His curiously wounding description, the nearest thing to an epithet that this correspondent ever heard George employ in debate, for good or ill, all but swept Brownells influence from the Senate floor. The small incident is a key to much of the Senator's operating power.

His most admiring friends (and they are very many) could hardly have maintained that George really dealt with the Brownell memorandum on its merits. Nevertheless, he destroyed it in a single phrase; it is his gift—and now a gift unique in all the Senate—to be senatorial in the grand manner. Senators do not always and necessarily require of a George that precision of logic, or that information as to details that they require of younger and lesser men.

Who expects a great prima donna to parse the sentences of her lyrics? It is enough that she sings. It is thus with Gronge when with matchless effectiveness he takes the lead on the floor for an Eisenhower foreign policy. Like many of the great politicians of the old school, he will not be bound by the details, nor will he haggle over the fine print.

Those who seek to engage him in these areas are wasting their time; he will peer at them in morose, lofty indifference, as not long ago he peered at those who wanted to put reservations into our defense treaty with Generalissimo Chiang Kai-shek.

He looks upon all high policy as a traveler sees a distant landscape. It is the panorama in which he is interested; it is not his habit of mind to be concerned with the situation of the hills and valleys. A traditionalist in these matters, he has the deep conviction that the conduct of foreign policy belongs in the hands of the President and, all in all, he will, before he is through, return to the White House a measure of control over world affairs that it has not had since Franklin D. Roosevelt.

He will do this, that is to say, so long as he remains convinced that the White House itself is acting with proper responsibility—and with due deference to the Senate. He is perhaps the only man who could make so difficult a rationale—that is, both a rendering unto Caesar and a retention of the Senate's own proper place in the scheme of things.

His own views are internationalist, as is fit and apt for a southern politician of his generation. They are oriented more toward Europe than toward Asia, in the typical fashion of Democrats who find it very hard to understand the passionate intensity of the old Republican preoccupation with Asia.

But these views could not fairly be called, even by the most vehement America Firster, hospitable to give-away. Mr. George in his time has helped to open the treasury to many foreign enterprises, and will do so many times again. For all of that, he does not gladly fling public money about. Few public men feel, in principle, a deeper pain at the size of the public debt. In a word, he is suitably safe in the fiscal sense—a circumstance that greatly forwards his influence in the Senate.

He is, moreover, the only man in the Senate who can visibly, undoubtedly, and repeatedly change votes simply by his incomparable rhetoric on the floor. Other men are much more effective in gathering votes in the lounges and corridors—Mr. George's junior colleague, Senator Richard B. Russell, for one. George, for his part, scorns the practical kind of operation, the man-toman discussion in which Mr. Russell so excels.

It is, nevertheless, the judgment of some of the most open-eyed and informed men in the Senate that George of Georgia, given ideal circumstances, can come close on the floor to controlling as many as 25 votes on certain issues at certain times. These issues will for the most part be issues of foreign policy; whatever George decides in this field is very nearly final with nearly all the Democratic rank and file and with a good number of Republicans as well.

Why this is so it is very nearly impossible to explain, though some suggestive considerations may be offered. There is the fact that the Senate is basically a hierarchal body; and George is the great hierarch. There is the fact that George is an authentic and profoundly safe conservative; no man supposes for a moment that George will lead him onto any terrain of sticky innovation.

One seeks to avoid exaggeration here. It is, nevertheless, for all practical purposes, a fact that when Groege takes a position it has, for many in the Senate, much of the political force that the proclaimed dogmas of the established churches may in the spiritual realm have for the faithful. The Senate feeling is that in Groege there is safety, there is continuity, there is dignity, there is a kind of indescribable stability as the years go by and he goes on.

It is so secret that when the Democratic leadership of the Senate senses trouble one of the regency is likely to mutter to another: "Shouldn't we ask George to go in now?"—meaning to go on the floor and do his stuff, George, of course, will go in or not, as he pleases. He is not the sort of man to be assigned to do anything, indeed the very suggestion of attempting to direct him in any way would be regarded as appailing heresy.

Like most artists, essentially he goes his own way. For example, in spite of his incredible seniority he is not a member of the Senate Democratic policy committee though this is not to say that his views are not sonorously heard there from time to time.

The chief of the Democratic high command, Senator JOHNSON of Texas, is 30 years junior to his seat mate; Mr. George needs no membership on any committee to transfer his views to Lyndon. Lyndon, for his part, looks with an affectionate fascination on his senior and would no more think of interfering with that senior in his sphere—foreign policy—than he would propose to try to tell a Texas uncle how to run a ranch.

Some of the rank and filers occasionally will attempt to challenge "the Old Man," but these youngsters most often are put in their place by the leaders even before they go so far as to provoke the Olympian frowns of George himself.

The Senator, more than any man who sits with him, embodies the powerful quality of long success. He was, for example, one of the triumphant survivors of 1938, the year that Franklin Roosevelt undertook to purge Congress of certain rightwing Democrats who were, the President felt, getting in the way of the New Deal.

Today, Mr. George recalls that episode with what can only be called a splendid, and somewhat absent, detachment. Mr. Roosevelt came to a political meeting in Barnesville, Ga., and sat on the platform with Senator George himself, among others. The President told the crowd that the Senator was both a scholar and a gentleman; but then he went on to say in substance that Mr. George, for all that, just wouldn't do in the Senate. As the President finished his speech, he turned to the Senator, said quietly, "God bless you, Walter," and went away.

Mr. George was returned to the Senate in a great outpouring of votes. Later, in the 6 months that he served in 1941 as chairman of the Foreign Relations Committee, he became indispensable to Mr. Roosevelt's great foreign-policy designs; there was, for example, the little matter of passing the lend-lease bill.

The President never afterward referred directly to the contretemps of 1938. Once, however, in the crowded and anxious war years he sought a certain tax program of Mr. George, who then had on his other hat as chairman of the Finance Committee. Pressing this program as one likely to be popular with the voters, Mr. Roosevelt said urgently;

"WALTER, if I know anything at all about Georgia politics * * *." At this point GEORGE caught the Presidential eye. " * * * and certainly I don't," Mr. Roosevelt finished with a laugh.

"Mr. Roosevelt," says Mr. George now, in a soft, forgiving rumble of a voice, "had a quite genuine gift for separating his personal feelings from his political feelings. He never mixed the two."

Senator George, on his side, has an equally decisive way of separating the personal from the official. Just before this Democratic Congress met, the administration was most anxious for him to leave the chairmanship of the Finance Committee and return to the chair of the Foreign Relations Committee.

At length he was requested by the President and Secretary of State Dulles to come to the White House. They put their hopes before the Senator. He agreed to go along. But, as he says, "I told them that I could not undertake the social part of this job. I do not much care to go out in the evening. I said I might feel obliged to come once a year to some official entertainment at the White House, but nothing beyond that. It was agreed."

What has happened in practice is that the unofficial stand-in for Mr. George at diplomatic affairs is his tireless and convivial junior on the Foreign Relations Committee, the 87-year-old Senator THEODORE FRANCIS GREEN, of Rhode Island. By custom Mr. GEORGE, who is only 77, is still invited everywhere; by general understanding he will now and then accept an invitation, but more or less at the last minute it will somehow turn out that he cannot go after all.

Determined is also the word for WALTER FRANKLIN GEORGE.

Natural Gas Regulation

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. KEFAUVER. Mr. President, on February 26, 1955, I issued a statement commenting upon the action of the White House Committee on National Fuel Policy with particular reference to their recommendation that the Federal Government remove itself from all regulation of field producers of gas. I would like to place a copy of my statement in the RECORD, and also a letter from Mr. Thomas W. Goodloe, president of Ten-nessee Natural Gas Lines, Inc., with tabulation showing weighted average price of producers for gas purchased in southwestern fields by 10 major pipeline companies from 1948 to 1953. Mr. Goodloe's letter and tables show that the price to field producers has increased 300 percent during that 6-year period. Further relaxation of regulations would be disastrous to the consumer.

There being no objection, the statement, letter, and tables were ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR KEFAUVER

The White House Report on Energy Supplies and Resources Policy, released today, is bad medicine for consumers.

The weasel-worded section on natural-gas regulation means that the White House is giving administration backing to what amounts to a repeal of the Supreme Court decision in the Phillips case. This means consumers had better get ready for more millions on their gas bills.

The policy enunciated in this section is much worse than proposals to exempt the so-called independent producers of gas from interstate regulation—the so-called Kerr bill.

It harks back instead to proposals of some years ago which would exempt all field producers from Federal regulation. Integrated companies, which own both pipelines and field production, serve as an illustration. Under this policy, such an integrated company produces its own gas in the field and could charge whatever it wishes to its pipeline company. The pipeline company then would be subject to regulation only in transmission costs. At the other end, the distribution end, local regulation would be powerless to deal with anything that has gone before.

The White House policy statement simply sacrifices the interests of some 60 million consumers who depend on natural gas to the profits of a comparative handful of oil companies who produce it.

TENNESSEE NATURAL GAS LINES, INC., Nashville, Tenn., March 1, 1955. Re Regulation of gas field prices. The Honorable Estes Kepauver, United States Senate,

Washington, D. C.

DEAR ESTES: Tennessee Gas Transmission
Co. supplies most of middle and east Tennessee. This company's weighted-average cost of gas in 1948 was 4.28 cents per mcf and at present that company's weighted average cost of gas in the field is more than 12 cents per mcf, or approximately 300 percent of the 1948 field-price cost.

Attached is a tabulation showing the weighted-average price of producers for gas purchased in Southwestern fields by 10 ma-

jor pipeline companies in the years 1948 to This tabulation is an excerpt from an exhibit introduced by United Gas Pipe Line Co. in FPC Docket No. G-1142. In most cases prices have further increased substantially since 1953. It appears that the increase in field prices over this very short period has been tremendous and such prices should certainly now be approaching fair prices to producers, if indeed they have not already arrived.

Very truly yours, THOMAS W. GOODLOE. President.

Weighted average prices paid to producers for gas purchased in the field by 10 major pipeline companies (includes 745.11 field purchases and 745.12 gasoline plant outlet purchases)

Resignation of Robert Cutler as the President's Special Assistant for National Security Affairs

> EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Cutler's Contribution," published in the Washington Star of March 11, 1955. Mr. Cutler, a very distinguished citizen of Massachusetts, has been doing one of the most sensitive Federal jobs as the President's Special Assistant for National Security Affairs. He has been the operating executive of the National Security Council. He retired from that position as of Saturday last. The editorial is a commendatory one, which he well deserves.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. CUTLER'S CONTRIBUTION

As the President's special assistant for national security affairs, Robert Cutler has rendered distinguished service in one of the most sensitive of all Federal jobs. And now that he has resigned from the post, to return to private life and his native Boston, it may rightly be said that the country at large is indebted to him for important labors that cannot be publicized in detail because they have had to do with top-secret matters

of defense and foreign policy.

For Mr. Cutler has been the operating executive of the National Security Council. As such, in addition to having played a major Fole in reinvigorating the NSC as the Government's highest policymaking agency, he has participated in procedures that have resulted in decisions of the greatest import to the United States and the free world in general. Further, besides having served as a key administrator privy to secrets of the most vital sort, he has been perhaps the closest of the President's confidents and personal advisers-a man who because of the unique sensitivity of his duties, and not because of any lack of natural gregariousness, has kept himself out of the limelight and carried on his work with the utmost discretion and a real passion for anonymity.

It is because of this that relatively very few Americans know anything about Mr. Cutler. But the Nation, even though it has seldom seen his name in the headlines, owes him thanks none the less for what he has contributed to it since President Eisenhower called him to the White House. He is leaving his post in excellent shape for Dillon Anderson, his successor, and he has every reason to take proper pride in the fine ex-ample he has set as a public servant.

Norway and the Viking Spirit in the Atomic Age

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. WILEY. Mr. President, on last Saturday night it was my pleasure to address the 60th anniversary banquet of the Sons of Norway, meeting in New

I ask unanimous consent that the text of my address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NORWAY AND THE VIKING SPIRIT IN THE ATOMIC AGE

It is a pleasure to participate in observing this 60th anniversary of your outstanding organization—the Sons of Norway.

It is a privilege for me from many stand-

First, as a United States Senator, I am pleased to pay tribute to a great ally of our country-Norway; an ally which has proven its staunch mettle in war and in peace.

Secondly, as an American, I am pleased to pay this tribute to a freedom-loving land, a land whose people share the values which we

Norway, like ourselves has always been deeply dedicated to the cause of liberty. Her people have always been a living demonstraion of the principles of human brotherhood. Norway, like our own, is a devout nation, with a reverence for the Lord.

And, then, there is a third reason: It is because like many in this audience tonight, I am proud to be a descendant of Norwegian parents and grandparents. We share, therefore, a common admiration for the land from which our forefathers came, a land which has always been truly worthy of that admiration.

MY VISIT TO NORWAY

May I say that it was our good fortune to spend a few days in Norway last summer.

Our good friend Trygve Gottas arranged for a car, and we set out on a journey to my father's old home in Numedal.

We stopped at Dramen and met some of the distinguished folks of that city.

From there, we journeyed to Kongsberg where our friend Trygve had assembled some 30-odd relatives of mine; we were treated there to a wonderful dinner.

We had rommegrout; we had gjeost and mountain trout and many other tasty dishes that spoke of Norway.

Of course, there were exchanges of toasts and much that was spoken, brought up memories of days that are gone.

We then journeyed by car into Numedal to my father's old home. Of course, here again we had to eat before we left.

In one of the rooms we found an old album with pictures of my parents and of us children when we were youngsters. There were pictures of the family taken in various periods.

This visit recalled another visit I had made back in 1939 before the Second World

I was attending the Inter-Parliamentary Union Conference in Oslo, and took a day off to get down to my father's old home. I also took a day off to go to Gudbransdalen and located the house in which my mother was

She came to America as a little child with

her folks before the Civil War.

My father emigrated when he was about 21, right after the Civil War.

While in Norway, I visited with the Crown Prince and a number of the Norwegian offi-We were the guests of our Ambassador cials. and his wife.

NORWAY'S BRIGHT BUT CHALLENGING OUTLOOK

Our general impressions of Norway last summer were that here were a people that were going ahead, that realized they belong completely to the West and are taking a strong position in that regard.

But the legacy of World War II's hardships, when 20 percent of Norway's national wealth was destroyed, are still with her.

Norway has serious domestic problems, for her's is basically a country poorly endowed with national resources. She has a \$400 million yearly deficit. Her taxes are high. Controls are strict on many phases of economic life.

Yet her production is booming. modest agriculture is expanding. Her great shipbuilding industry reached one-half mil-lion tons last year. Her shipping fleet—third largest in the world-flies her respected banner on the seas. In 1954, she had the biggest herring catch in history.

Norway, in spite of the damage of war and occupation, in spite of considerable defense burdens, stands stanchly with the free world.

NORWEGIAN-AMERICANS' CONTRIBUTIONS TO UNITED STATES

And now friends, I want just briefly to turn back a few pages of history here in our own land.

From the mid-19th to the mid-20th century, approximately 850,000 persons of Norwegian birth settled in the United States. Unlike other immigrant groups (who gravitated to the cities) Norwegians settled principally in the rural areas of America where they became among the sturdiest American farmers.

Their assimilation into the American scene was rapid. They took up our language promptly. Their ways and customs from the old country were not too dissimilar from the ways and customs of the new land.

The first Norwegian pioneers in my own State established a colony at Muskego, near Milwaukee, in 1839. Prior to the middle of the 19th century most Norwegian immigrants headed for Wisconsin.

As the years went on, Norwegians, as you know, settled elsewhere in the Middle West. By 1914, there were more Norwegians in my neighboring State of Minnesota than in any other State. Then, North and South Dakota, Montana, Washington, and Oregon attracted great numbers.

Norwegians brought to the new land their deep devotion to religion, and their deep interest in schooling for the young. Luther College, in Decorah, Iowa, was established in 1861, and St. Olaf College, in Northfield, Minn., in 1874. They established Concordia College in Moorhead, Minn.; Augustana College in Sloux Falls, S. Dak.; and Pacific Lutheran College in Parkland, Wash. They set up many newspapers, many singing societies and bands.

From the ranks of Norweglan Americans have come Knut Nelson, Governor of Minnesota and United States Senator for more than quarter of a century; O. E. Rolvaag, author of the epic of adjustment to the American scene, Giants in the Earth; Thorsten Veblen who is regarded universally as one of the greatest economists so far produced in our land; Victor Lawson, journalist and financier; and Eric Severeid, one of our most prominent radio-TV commentators, a man who, like his Viking ancestors, does not run from a fight.

NORWAY'S OWN CONTRIBUTIONS

From Norway itself to the world came Henrik Ibsen, in literature; Magnus Olsen, in science; Edvard Greig, in music; Kirsten Flagstad, in opera; Gustav Vigeland, in sculpture; and in discovery and exploration in centuries gone by, Leif Ericson; and in more latter days, Friedtjof Nansen and Roald Amundsen.

Yes; here is a country with a population only approximately that of my own State of the Union. Here is a country of meager resources, of often difficult weather conditions. Here is a country which has to live principally by the sea, which is often a hard master.

Yet, here is a country where culture has flowered, where freedom has thrived, where her sons and daughters, both those who have remained at home and those who have journeyed beyond the seas, have made important contributions to mankind.

Here is seen the triumph of courage, of resourcefulness, of industry over all obstacles.

And these are precisely the qualities needed in today's troubled world.

THE BIG ISSUE: NEUTRALISM OR DEFENSE

But now I should like to turn at this point to the major issue of our times: whether the nations will prove adequate to defend themselves against international Communist aggression or whether they will succumb one by one to that dreadful conspiracy? Throughout the world today, there are hundreds of millions of individuals in many free lands whose leaders unfortunately have chosen thus far blindly to turn their backs to and ignore the Communist international menace.

The neutralist leaders seem to prefer to make believe that it does not exist.

Many of these leaders recognize that communism is a threat at home. Some of them have adopted stern measures against internal subversion. But they seem to prefer to deceive themselves and to deceive their own people into believing, on the international front, that the Pelking Government and the Moscow Government do not really represent a direct and immediate threat to the peace and security of mankind.

Indeed, many of these neutralist leaders seem to act as if it were the United States which is the principal threat to world peace and security.

Nothing could, of course, be further from the truth. No land in the world more dearly desires peace than our own. No land more dearly desires to devote its major energies to constantly raising living standards and improving the peaceful way of life for its people.

But no land more clearly recognizes than ourselves that in this dangerous atomic age, to be weak is to "commit suicide on the installment plan."

NORWAY: SYMBOL OF DEFENSE

But, I am pleased to say that there are many lands which are in far closer proximity than ours to the Communist threat which definitely recognize as we do the grim danger to the free world.

Here is a land, like Norway, which is within but minutes of Soviet jet bomber bases, at modern supersonic speeds. Yet, Norway has bravely and completely cast her lot with the free world in the North Atlantic Treaty Organization.

She is contributing to the sinews of defense in terms of manpower, installations, military production, maritime strength, and vigilance.

Here is a wonderful symbol for all the world to observe and admire.

Brave Norway stands practically at the jaws of the Soviet bear. Yet, unafraid, undismayed she calmly, coolly signifies that she will take her stand in defense of her own independence. And by her very act of courage, she thereby deters the danger of war to herself and to all the free world.

Now, let me say that there are many reasons why some lands have preferred neutralism thus far: Historical reasons, cultural reasons, military, religious, economic, and political reasons.

We must understand why various lands have chosen neutralism. We must see the problem through their eyes. We must not be overly quick to criticize, although we must be frank and objective.

At the same time, we should take off our hats in salute to a country which has known what war can mean, what dreadful occupation can mean, and yet is willing to risk its all, knowing how close it is to the deadly peril.

This is the spirit which we need in our time.

LET'S NOT BE PANICKED BY WAR DANGER

Here, in our own country, we read every day alarming stories of what a thermonuclear war could mean.

We read about how many casualties could occur in our major cities.

We read about the danger of radioactive fallout, potentially contaminating areas of 7,000 square miles.

There are some who allow these admittedly grim stores virtually to paralyze themselves. They throw up their hands in dismay as if nothing constructively can be done or should be done.

That, however, is definitely not the attitude to adopt.

And Norway is the living proof that there is a more positive attitude to adopt, an attitude of courage, or forthrightness, an attitude which recognizes the peril, which recognizes all the horror that a third world war could mean.

But Norway knows that if there is anything worse than war, it is slavery.

Norway knows that hysteria concerning the danger of war can only bring war closer, that it is one thing to try all-out to prevent war; as we are, indeed, trying; it is another thing to become so panie-stricken about the danger of war that you try to appease; you forget that there is something worse in this world than to fight on your feet. It is to crawl eternally on your knees before a Red dictator.

PROBLEM OF QUEMOY AND MATSIT

What we can use in this country today is more of the Viking spirit. It is a fearless spirit which is willing to brave the unknown and to take calculated risks.

Nowhere, perhaps, on the international scene today do we more need this spirit than in troubled Asia, particularly in the western Pacific, in connection with our problem of defending Formosa, the Pescadores, and the related areas.

There are those in America who still would have us shrink back from this mission. They seem to say, "Let us not venture into this dangerous unknown affecting a few offshore islands 6,000 miles from the California mainland. Who knows where the uncertainty affecting Matsu and Quemoy may lead us?"

Well, the answer is: No one can accurately predict what will happen tomorrow morning, much less, next month or next year.

But we know quite well what would have happened or would happen were we to eliminate uncertainty and openly to exclude Matsu and Quemoy from our commitments.

Some of our good friends in the United Kingdom keep repeating, "Abandon outright Matsu and Quemoy."

But we have rightly refused to do so, preferring instead to leave the ultimate decision as to whether those islands will be defended under the varying circumstances of the future, to the great man who now occupies the White House, aided by his most expert advisers.

The burden of that decision will be a heavy one, a fateful one, a prayerful one. But you can be sure that when it is made, it will be objective, not emotional. It will be on the basis of all of the factors in the situation. It will not be based on just one factor, one geographic area; it will not just be on the basis of the problem of Formosa and the Pescadores, it will take into consideration our position in Korea, in Japan, in southeast Asia, and elsewhere in the world.

BOTH MILITARY AND PSYCHOLOGICAL FACTORS CRUCIAL

And if I may say just a few more words about that particular critical situation, let me say this: There is entirely too much piecemeal thinking in our country today.

Some individuals seem to say, "there is no important factor but the military factor with regard to Formosa, the Pescadores and related areas."

But that concept is nonsense. The principal Communist victories in Asia have been scored, not by traditional techniques of military warfare, but rather by the revolutionary new application of psychological warfare, by skilled propaganda techniques, by the eroding of morale among its foes.

So, a key question is, "What would be the psychological effect of possible loss of Matsu and Quemoy on the Chinese Nationalist forces on Formosa, on our allies and friends in southeast Asia and elsewhere, on our enemies in Peking and in Moscow?"

But then, there are those who swing to the opposite extreme and say, "The only factor is the psychological factor."

That concept, too, is false.

The Peking regime consists of shrewd military (and political chess players). It tries to ridicule us as a paper tiger, but it knows we have sharp military claws.

As for ourselves, the decision as to when and how we will use our strength is not a

simple one.

The Joint Chiefs of Staff of the United States must determine whether Matsu and Quemoy are (a) defensible in view of their proximity to the Chinese mainland, and (b) are worth the price of defense. The Joint Chiefs will weigh the effect of the possible rain of artillery fire from the mainland which may soon fall unceasingly on those offshore islands. The Joint Chiefs will consider the availability of Red jet fields and of Red jet fuel and Red sampans and Red paratroops. The Joint Chiefs will weigh the commitments of our Armed Forces in the Pacific and elsewhere. So, their military decision will be an immensely complicated one; let no armchair general or amateur admiral attempt to assert dogmatically what should be our military course under any and all circumstances. We have competent Chiefs of our Armed Forces; let us retain our confidence in their military judgment.

Let us maintain our well-placed faith, too, in our Chief Executive who obviously has so broad a background in military science that he is in a position personally to weigh the judgment of his own highest military ad-

visers.

DANGER IN PUBLICIZING ALL PLANS

Another example of piecemeal thinking is that very often people here in the United States seem to want to insist on publicizing virtually all the facts and plans-which we may want for our public, but which our enemies may want still more.

The President and the Secretary of Statea marvelous team-have been absolutely sound in resisting unwise efforts to have us

give away completely our hand.

They have perceived very clearly that, while from some standpoints it might be advantageous to outline very clearly and precisely what specific areas we actually propose to defend and those we do not propose to defend-that there are obviously grave disadvantages to that procedure.

We all remember the unfortunate consequences which flowed from the decision openly to exclude Korea from the United

States perimeter of defense,

So, we do not intend to engrave any more invitations to Peking to swallow up more

territory with impunity.

But the piecemeal thinkers are still not satisfied, all they can see is one segment of the problem—the matter of informing our own people, but they ignore the consequences of "spilling the beans" to the enemy.

RED CHINA WILL PROBABLY NOT CHOOSE WAR

We can be sure, Peking and Moscow will try to guess or plans by all sorts of little or big experiments. They will probe, they will jab here or there.

Let's not make their guesswork any easier. They have enough sples without our giving away our intelligence secrets on a silver

Our splendid Secretary of Stategreatest to ever occupy that high office—has told Red China exactly what we want her to know and nothing more. John Foster Dulles has spoken with vigor and clarity and substance. We will defend Formosa, the Pescadores, and related areas with force of immense power. But the decision as to war rests squarely in Peking. She will stand

self-indicted before the world if she chooses the course of war.

I do not believe she will choose war. For all its admitted strength, the Red dragon's fire for the present may be so much hot air. Clearly, she burningly covets Formosa and all the islands. But her ambition out-reaches her limited capabilities. Mao-Tse-Tung and company are hard realists, not idle daydreamers.

KREMLIN WATCHING OTHER DEVELOPMENTS

And before I conclude my references to the current situation, let me say this: The crisis in the Formosa Straits is being judged by Mr. Khrushchev and his cohorts in the Kremlin and Peking on the basis of many other facts elsewhere in the world.

Mr. Khrushchev is watching what the United States does in relation to strengthening its Armed Forces. This is not merely a matter of quantity, but rather, of quality, particularly the quality of our nuclear weapons and our strategic air programs which are

definitely progressing.

He is watching what we do to the vital appropriations request of the United States Information Agency. If the USIA funds are slashed, Mr. Khrushchev could declare a few hours holiday in Moscow. If Congress were to be pennywise and pound foolish and to reduce the ability of the United States Information Agency to get across the facts to the peoples of the world, particularly to the people of southeast Asia, it would be a sad day for the cause of the free world.

KHRUSHCHEV HOPES FOR AID SLASH TO SOUTH-EAST ASIA

Mr. Khrushchev is watching even more closely the nature of our future economic aid program to southeast Asia. He is hoping we will pinch our pennies so tightly that he can easily pick up such valuable but vulnerable population, real estate, and resources as South Vietnam, Laos, Cambodia, and Thailand-all of which vitally need United States aid. Giving them aid with an eye-dropper won't be of any more help than giving them more aid than they can reasonably absorb.

Mostly, Khrushchev is hoping that America's almost universal and completely understandable desire for a balanced budget will lead us to miserly errors of ommission. Those errors would make for a further unbalanced world; a world in which a balanced United States budget would become abso-

lutely impossible thereafter.

And-in our own land, Mr. Khrushchev is watching, too, what happens to civil-defense appropriations. He will want to see whether we regard seriously the problem of defending the lives of 165 million Americans, in a small Nation which has now been crossed by a jet plane in 3 hours, 46 minutes, or whether by slashing civil defense, Congress were to indicate that it doesn't take too seriously this grim problem of defense in this superspeed age.

Most of all, Mr. Khrushchev and his cohorts will be watching the American spirit, the United States backbone.

Do we cringe, and shrink, and waiver, or do we stand firm and resolute and brave?

The latter course is the only true American course, and it is the one course which we will indeed follow.

CONCLUSION

It has been a great privilege to address the Sons of Norway tonight.

As we blow out these 60 warm candles in this fine organization's birthday cake, we look forward to its innumerable anniversaries to come.

We now that in the years up ahead, its members and their families will continue to contribute not only to America, not only to friendship with Norway, but to te cause of the free world.

Financing of Production of Electric Energy

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "In Kansas and New York," which appeared in the Topeka Daily Capital, issue of Friday, March 4.

During the past few years the private utility companies in Kansas have been expanding their production of electric energy at a rate that is in keeping with the demands of our State. They have done this without financial aid from the Federal Government and in keeping with the true traditions and policies of the free enterprise system that has made our State outstanding.

Not only have they built a capacity to take care of the needs of our people but they have supplied this electric energy at rates that are competitive with electricity produced in other States and rates that our people can pay.

There being no objection, the editorial was ordere to be printed in the RECORD.

as follows:

IN KANSAS AND NEW YORK

The socialistic virus that seems to have gripped certain elements in various parts of the country has not taken much hold here in Kansas. Two electric power projects provide the contrast between New York and the Sunflower State.

The Kansas Power & Light Co. this week announced a \$16 million construction plan, to be paid for out of its operating revenues. without asking the Federal or State government for subsidies or help of any kind. strong public utility serves about one-third of the State, does it satisfactorily and at rates the public can afford to pay. And pays over \$8 million a year in taxes.

Look at what's happening in New York. Some of the Empire State's top officials are trying to get Congress to pass a bill to enable the State to finance, build and operate a \$300 million hydroelectric power project on the Niagara River near the falls. In one way or another, the taxpayers of New York would have to put up the money. They would also lose the millions that would be paid in taxes if private enterprise undertook the project.

The inconsistency of the New York pro-posal is emphasized by the fact that the State government already is hard-pressed for finances. And by the further fact that 5 private utility companies, with a splendid record of experience and achievement behind them, want to carry out the program the socialists in the New York legislature and elsewhere insist upon doing at public ex-pense. These companies would have started installation long ago, with private capital, but Congress has not yet given them

The same public power advocates who raised their voices in protest when the Atomic Energy Commission signed with Dixon-Yates for a powerplant, now are baying at the doors of Congress for approval of the New York scheme. These socialistic people are clamoring for the United States Government to spend \$1 billion for dams on the Snake River in the Northwest. other billions for the Colorado River project, which is about as fantastic a proposal as any

New Dealer ever dreamed.

It is fortunate that the people of Kansas have their feet on the ground, instead of keeping their heads in the clouds. The Kansas Power & Light Co., under the management of president Deane E. Ackers and his board of directors, asks no help from the government when improvements are needed to provide the necessary power for its cus-tomers. The virus of socialism has not struck the Kansas public utilities.

Industrial Dispersal Needs in Civil Defense

EXTENSION OF REMARKS OF

HON, LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Starting Civil Defense," published in the Washington Post and Times Herald of March 12, 1955. The editorial deals with industrial dispersal needs in civil defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STARTING CIVIL DEFENSE

Defense Mobilizer Arthur Flemming recently suggested the establishment of a legislative-executive body similar to the Hoover Commission to report on industrial dispersal needs in civil defense. Such a commission might have some merit as a means of calling public attention to what is necessary and as a means of compelling more vigorous action by the Executive and by Congress. But the basic trouble is not that the dimensions of the problem and the necessary precautions are unknown. It is that the administration has lagged in supplying the facts necessary for public judgment and the leadership to go with them.

More scrutiny in Congress of the sort being given by the Kefauver subcommittee of the Senate Armed Services Committee certainly will help. We doubt, however, whether the creation of a joint committee on civil defense, as suggested by Senator HUMPHREY, is necessary. The need is not for a prolifera-tion of committees. There is and has been every reason for confidence that Congress would respond sensibly and sympathetically if it were presented with a realistic administration program. Leadership in this field is basically an administration responsibility.

It is shocking that the Federal Civil Defense Administration has been so hamstrung by secrecy, according to testimony by Val Peterson, that it could not inform subordinates about the consequences of radioactive fallout, let alone plan effectively, until the Atomic Energy Commission released the data last month-even though the existence of the danger has been known for many months. It is obvious that the move of the civil defense headquarters to Battle Creek, Mich., whatever the reason for it, has handicapped the agency enormously at a time when the major activity on the Federal level needs to be in Washington.

Even the facts the agency has had have ot always been publicized. Two and a half not always been publicized. years ago the Associated Universities prepared for the Federal Government an exhaustive study of civil defense problems known as Project East River. Perhaps some of the recommendations are now outmoded by the magnitude of the hydrogen bomb and the fallout problem, but wide understanding of the report would have been of enormous help in persuading the public that civil defense is not futile and that something can be done. Although most portions of the report were not classified, they have never been disseminated.

Considerable progress has been made in dispersal of new industry, and though some plans and assumptions will have to be revised in light of the fallout, the efforts have by no means been meaningless. The worst lag has been in the planning for safety of individuals. The early warning lines across Canada, very late in getting started, are now being pushed ahead rapidly and personnel safety measures will have to be speeded up to keep abreast of the warning system. What is lacking is authoritative shelter and evacuation planning done at the Federal level, with followthrough to see that States and cities apply it to their own situations.

Sir Winston Churchill and Field Marshal Montgomery recently have dramatized the importance Britain attaches to civil defense. The same sort of top-level attention and leadership is needed here. Assuredly, the initial responsibility for adequate civil de-sense must remain with States and communities throughout the country. But it is questionable whether defense at the local level can be made meaningful until the administrative revises its own concepts to take a more active role in seeing that local measures are effective.

Farm Income

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup of March 9 and March 10, 1955.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

FARMERS UNION GRAIN TERMINAL ASSOCIATION,

St. Paul, Minn., March 9, 1955.
Last night Minnesota legislators and other officials of State government were the guests of Northwest farmers at a dinner in the GTA office building. The affair honored these public servants for the service they And it was also an appropriate time in the headquarters of this region's co-op grain marketing organization for leaders in a farm State like Minnesota to do some serious thinking about the status of agriculture and the welfare of the farm family,

M. W. Thatcher, general manager of GTA, told the crowd that, in his opinion, there would be no change in price-support legislation in Washington before 1956, despite the fact that farmers will feel the economic pinch more and more this year and next. He also gave legislators and others present some of the facts from the GTA family farm survey, obtained in the first county to be surveyed. It's a west-central county of Minnesota.

Thatcher said first tabulated returns, based on a study of 220 farms in that county, showed that "farm income averaged 31 cents an hour in 1954." He pointed out that their income was "less than they would have realized if they had sold their farms and invested the money at 5-percent interest." The average net income of the farm families surveyed was \$1,739. They had an average capital investment of \$37,905. Say they had invested that money and gotten a 5-percent return on it. They'd have received an average income of \$1,895 off that. And that would be deemed quite reasonable, you can be sure, by the investment experts today.

But these farm families didn't do that. They worked-worked long, hard hours. And when you figure up how they made out, it looks like this: Even by allowing them absolutely nothing for that labor, they still didn't come out with a modest 5-percent return

on investment.

Another key fact that the first surveys show, Mr. Thatcher pointed out, is that the farmer's gross income was higher in 1954 than the average for the 5-year period studied. But, net income, that's what's left after paying expenses, was less. The reason? The farmer's costs went higher and ate up more and more of that gross income.

Mr. Thatcher also had some conclusions that particularly ought to interest business-men. He showed that "Main Street's prosperity is linked with farm income. It becomes very apparent from the survey reports that the farmers will spend money if given an adequate return so he has the cash with which to get the goods he needs and wants," Mr. Thatcher stressed.

The figures from the survey make this clear. The average gross income per farmer for the 5-year period was \$8,337, of which 75 to 80 percent goes right back to the community as operating expense. And most, or all, of the other 20 or 25 percent goes back, too, because the farm family spends that for living, for clothes and food, for the dentist and the doctor, for schools and churches. As Mr. Thatcher pointed out, "The operating costs are pretty much fixed so the squeeze takes place on family living."

Another fact for business people to mull over is this. The survey shows a pent-up market on farm buying that averaged \$3.843 per farmer just for repairs, things like painting, and fencing, and additions or replacements to buildings. There is a great market there if farmers can get the income. And, of those surveyed, 98 percent have radios, 97 percent have refrigerators, 77 percent have running water, and 38 percent have already television. Most of this they bought when income was higher. And many farmers expressed doubt that they could replace such items at present income. That thing for business to think about. That's some-

The farmer is a great customer when he's got the income. It's sound business for Main Street to pitch in and work with the farmers of GTA, the co-op way, for a sound farm program to bring that kind of income.

> GTA DAILY RADIO ROUNDUP FARMERS UNION GRAIN TERMINAL ASSOCIATION, St. Paul, Minn., March 10, 1955.

Congress is getting deeper and deeper into the problems of agriculture and considering proposals that concern farmers. Two days ago, the House Agriculture Committee approved by a vote of 23 to 11, a bill that calls for a return to mandatory, firm price supports at 90 percent of parity on basic crops, like wheat and corn, for this year and 1956 and 1957.

Farm writers have called attention to the fact that when the House committee voted on the same question last year, it was much more one-sided in favor of firm supports. So, there's a shift—a closer division of opinion. Why? One reason is that the idea is being pushed in Washington that price-fixing ought to be given a trial, and it's only

been in effect for a couple of months at this date. And, then, of course, the other factor is the knowledge that the President holds in his hands the power of the vote. And, it's pretty clearly understood that he would use it to stop any bill that would upset the flexible price-support law.

But there has been a host of other bills in addition to the House farm committee bill. Over on the Senate side, for example, the news today tells us that Senator HUMPHREY, of Minnesota, is developing a plan to set supports higher for the family-type farmer and lower for the bigger farms. The plan would give growers 90 percent of parity on gross sales up to \$25,000 a year. would apply to a list of storable and perishable crops ranging from meat, milk, and eggs to wheat and cotton. Then a larger grower would get 75 percent of parity for sales between \$25,000 and \$50,000. And there'd be no price supports at all on sales above the \$50,000 limit. This bill aims to give protection to the smaller-the familytype farmer under the price-support program.

That plan is in the developing stage. Another type of bill of interest has been introduced by 23 Senators. They include Lan-GER and Young, of North Dakota; MANSFIELD, of Montana, and HUMPHREY. This bill is a food-stamp bill. It would work like this: The Secretary of Agriculture would determine the amount of surplus of perishables like dairy and poultry products, meat, fruits, and other commodities. Then certificates Would be issued to old-age pensioners and low-income people. They would take the certificates to a store and exchange them for the surplus food commodities.

This is the time of the year to keep your eyes on Washington, where farm prices are being made through legislation. And it's a time to do more than get ready for spring planting. It's also time to let Congressmen know what your problems are, and what you think of the bills that Congress has before it. The views you give will go a long ways toward helping your Representatives and Senators in considering legislation that affects you and the economic welfare of your family. Don't worry for a minute that they won't pay attention to your letter. They will, because they know farmers don't write letters to while away the time. They know you're concerned or you wouldn't have bothered to write.

And join with your fellow farmers of the Northwest in marketing your grain through GTA, the co-op way—working for better farm prices and a better future for the families on the land.

Gentle People of Prejudice

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an excellent sermon by Rev. Paul Covey Johnston, D. D., of the First Presbyterian Church, of Wichita, Kans. I commend it to the attention of my colleagues.

There being no objection, the text of the sermon was ordered to be printed in the RECORD, as follows:

GENTLE PEOPLE OF PREJUDICE

(By Rev. Paul Covey Johnston, D. D., First Presbyterian Church, Wichita, Kans.)

Matthew 5: 47: "If ye salute your brethren only, what do ye more than others?'

(Scripture: Luke 15: 11 to the end.) Senator Fulbright, a Rhodes scholar with an Oxford degree, recently "spoke his piece on January 25 at the National Book Awards dinner in New York City. His theme was the pressure to conform, which is a Machiavellian monster of our time. He pointed to the monopoly control of what people hear, see, read, and listen to; to the only 100 cities left in the United States where there is more than 1 newspaper competing for the thinking of the people; to the 4 "lords of radio" who dominate the networks and for 50 percent of whose products less than 2 dozen advertisers pay; and to the 5 big film companies which command most of the picture industry. This concentration of communication power is stereotyping our people-which is to say: rapidly eliminating individual judgments and flattening out individual opinions. It works adversely for the politician, who, however earnest, may come to believe he can retain his seat and exert influence only by parroting the sterile dogmas of the street. He will risk no bold scouting for what lies ahead for the Nation, nor utter prophecies of what ought to be. Business sometimes insists on what powerful Socony-Vacuum said to Princetonians, "personal views can cause a lot of trouble, the 'isms' are out"; and warned undergraduates to watch their step while in college if they expect to get good jobs after their degrees. Gagging the breath of student curiosity, it dangled bread before their mouths as a reward for silence and the absence of thinking. Some businesses have presumed to reach beyond the employee and attempt to control the kind of mate he will marry, and to set up rules for the conduct of his home. This is done in the name of "efficiency"; it is really an attempt to impose a conformity which will make a slave out of the worker, devoted to the behests of the managers. Education has no comfort, either; and brave indeed are its leaders who, midst loyalty oaths, kangaroo courts, and public suspicions, dare to imagine their job to be to admit their pupils to all relevant knowledge, and then to encourage their imprisoned splendor to escape. But the confession which tears the veil from these confusions, and which may become most celebrated for its candor, was contained in the report recently issued by the Reece committee of the House of Representatives. This report said that "the trustees of the tax-exempt foundations should be very chary of promoting ideas, concepts. and opinion-forming materials which run contrary to what the public currently wishes, approves, and likes." So, we are to have no prophets. "The voice of the people is the voice of God"—whatever the level of their timidity, ignorance, or coarse notions. These great research institutions are to be merely numb and neutral; and if the people are currently galvanized by soap operas and their equal, let the foundations rest content to underscore the wisdom of such execrable taste. Senato FULBRIGHT asks what the end result of all this can be? "It can be a society shaped in imitation of an Egyptian mummy; a society where the em-balmer holds the highest place of honor; a society of fixed, painted, and hard shells; a society feeding on its dry rot, until the fateful hour when a probing finger striking the shell from without makes it collapse on the empty center." You ask whether the You ask whether the Senator is a Democrat or a Republican; I say that in such comments he is greater than either, and exhibits qualities of a statesman.

I. This statement, which joins with so many others that warn us of the dangers of herd mentality, the suffocation of individual initiative, and the insidious dressing-down of ideals to an acceptable lowest common denominator, is a grave indictment of the cultural drift in our day. It admits a passion for mediocrity, and encourages the cowardice of having no opinion and preferring the security of being faceless in the mass rather than asserting one. If this is not anti-American, and antithetical to the traditions of our country, and to the incentives which have characterized and made us a distinguished people, I do not know what is the glory of the United States. There is nothing more lack luster than the willingness to be regimented into a common mold, yet that the phenomenon is not only a creeping lethargy but a galloping threat is undebatable. Scared into silence by public witch hunts and frightened into ananymity by the rotting suspicion of one another we have allowed to pervade our society, our boasted freedoms are largely a wistful memory. They will surge back, I believe, but not until we have taken the wraps off the individual, given the person, his ideas and acts, the respect of the dignity they are due; isolated the peril of coerced sameness for what it is: returned to the grand doctrine that a man is always right until he has been proven wrong; and made large place for the variable talents and even diverse opinions of some people. The latter can always be handled in the light and free air of open debates; for then they stand or fall according to their verity; repressed, they fester, and spread whatever poison they promote through the whole body politic, social, educational, and economic. Hence I believe that the current habit of boisterous suspicion and suppression is democratically destructive, and the clear enemy of the very system it professes to conserve. It is blighting our politics, substituting expedience for stamina, pruning ambition from the tree of achievement and denying us our natural leaders.
What comes out of the crowd into which

people lose their particularities is of great concern to us all; and, I believe, to the integrity of our Nation, its own future, and its mission in the world. We have come as far as we have because the American Constitution and the American tradition have not only protected the individual's rights, they have just as importantly placed a premium on his ideas, and their possibilities. We have been willing to listen to anyone with a notion-be he statesman or crackpot-leaving to time and the consensus the reward of judgment as to its soundness. We have expected our leaders to rise from the ranks, and to be people who can see farther than the drudging ones can look. But if we are to be compelled to conformity; if the vast intangible forces which possess congregates of people are moving in this direction, and are abetted by short-minded purveyors of shortminded wisdom; then we face a complete revolution in our culture, and a whole new set of axioms as to how life is and gets along. For myself, I do not believe that individual initiative is passé; against regimentation-even for a supposedly good causemy soul revolts; I believe we are in an historical interim period, until the human creature learns, through pain and thwarting, that monopoly of any kind will reduce him to a zero; meantime I have to admit that the spark of genius glows but fitfully against the glacier-like mountain of impersonality which would fain cover it and snuff it out. The tragedy is that so many of our people are as yet unaware of the peril.

But, compressed into the crowd, what comes out of the crowd is, I repeat, of enormous importance. The question is larger than the one natural to this Race Relations Sunday, yet our immediate theme of prejudice and how to deal with it rationally and as Christians is a sector of it. For a crowd is not as the persons who compose it. It has its own psychology. Its actions are swayed and determined not by reason, ordinarily, but by emotions. Explosions will occur in a group which would never burst in the persons of it. A crowd is notoriously cruel and captious, whereas the individuals thereof can be, each of them, gentle and considerate.

So it comes about that everything depends on the level on which a crowd is integrated. Have it the fashion that it is good and right and beautiful to knock an inoffensive old man down, to kick and defile him and you are in the presence of the mentality of the Nazi, and what any welldisciplined disciple of Hitler and his god, Woden, would do to any Jew just because he is a Jew. Or contrariwise, listen to the president of Swarthmore College trying to define the living spirit of that institution of Quaker origin and tradition and unable to lay his finger on its intangibles save to say that it inheres in a code of life and conduct which believes in God and cares very much for people; and you are in the presence of what is best and most admired in American thought and behavior.

Recognition of the corporate power of groups does not absolve us of personal responsibility, for a crowd moves in the direction in which its most earnest or flamboyant individuals aggressively take it. The attitudes which you and I bring to the group, and the contributions we make, are of crucial moment. And I take it that none of us—in this hearing, at least—devise to demit our responsibility, nor hide in the namelessness of the company. But we do well to appreciate the immense potential of any crowd for woe or weal.

II. The woe I can illustrate from the story of José Morales, a Mexican war worker in Los Angeles. Dorothy Baruch tells it in her book Glass Mouse of Prejudice. was proud of his war job. He had written his brother, who taught in the University of Mexico, that at last he had work in which he could use his knowledge and skill. One day, after finishing his shift, José took the bus home. When he got off at his street corner, he saw some men standing, waiting. They were strangers to him. He had never seen them before, nor they him. they looked hard at him and saw under the light of a street lamp that he was slim and dark. One of them cried "dirty Mexi-And then they were on him. They off his clothes. They beat him with can. tore off his clothes. chains and pipes. They left him naked and bleeding. His back was broken. The next morning José died.

Such a story leaves one bewildered. How could human beings be such brutal cowards? They had never seen him before, but from their actions you would think he had been some form of incarnate evil. But the horrible event, not infrequent in modern American history, was within the pattern of a false white supremacy which some crowds will enforce on just that dastardly level. It was blood broother to all manner of devices which we whitefaces will use to maintain our economic superiority-which we fear to share or lose-and a social caste system from whose disintegration we angrily dissent. ticket agent in a railway station may deliberately keep Negroes waiting until the last minute before train time, while he first serves the whites and then sits on a desk, chatting leisurely with a pal. He intends to be infuriating. He enjoys keeping the Negroes waiting. He knows they are bitter and he relishes their bitterness. He feels big. He is a white man. "Let the damn niggers wait." A woman with rooms to rent slams the door in the face of an in-quiring couple. "I don't take any Jews

here." She knows her words are an insult. She intends them to be. She feels important, even righteous.

The terrifying thing about prejudices of this kind is that it justifies itself to itself. It does it by the assumption of an unearned right. The white man eats where he pleases, lives where he pleases, dances and where he pleases. He takes that right as his-as absolute, and unrelated to his own merit or demerit. He does not believe he needs to give a thought to the fact that dark-skinned people do not have these rights, nor to the fact that they are denied them not because they are worse people but because they do not belong to the dominant They may even be better peoplemore intelligent, more reliable, and more gracious and pleasant to have around. Is it any wonder that one-half of the people of the globe, being dark-skinned, and having had a taste of these rights and liberties, have risen and are rising in gigantic rebellion against the retreating white man? white man retreats before the ferocity of the one-time colonials, and his own shame. Can it be other than expected that whenever the conditions I am describing appear or are continued, we Westerners are held up before the censure and disgust of the very Asians with whom we are trying so desperately to politically cooperate, to the point of saving our own skins? And can you imagine anything else but the doggondest racial explosion building up in South Africa at this hour, where the stubborn Dutch Afrikaner still seeks to maintain "apartheid" and keep the surging millions of black slaves under heel?

The way down to Avernus for racial prejudice is easy, and it is charted. Recent history is all one needs to observe the quick descent. A culture is slipping when it grants special privileges, or denies them, on grounds which have nothing to do with individual desert. The Nazis, herding luckless Jews into freight cars, and then into the ovens, showed us how. All human and humane distinctions were lost under the Hitlerian code. "In the night," wrote Hegel, "all cows are grey"; and in the night of racial prejudice, all despised persons are alike.

Then there must be scapegoats, that guilt and remorse may not rest on the aggressor but be transferred to the luckless. Follows the necessity for lies to support the hate. The Negro is, of course, shiftless, lazy, mentally inferior, and sexually unsafe to have around—which, of course again, is no more true than that there are thousands of whites as disappointing and as dangerous. The last step down is to make self-importance out of cruelty, and to be happy in hurting.

Oh, but you say, don't get so excited, Mr. Preacher! These things you describe do happen, and we deplore them; but none of us would dream of beating up an innocent Mexican, or even of making the "niggers" wait at the ticket window. I am not so certain of the latter, for I've lived in cities with their restrictive residential covenants, and I know something of our social complexes and irritations.

But granted the benefit of the doubt about our attitudes, we are again not excused from responsibility concerning the level on which our cultural mentality is integrated. I have taken much of my material, from the José Morales story on, from the tested pen of the trusted psychologist, Harry Overstreet. have even adopted his theme as the title of this sermon. He calls us the gentle people of prejudice. The title is ironical. We are gentle in our prejudices because we do so little to overcome and replace them, either in ourselves or in others. Most of us do have a streak of antifeeling toward the Jew. or the Negro, or whoever, but it does not alarm us since we intend no violence. while we go along with our indifferent and admittedly un-Christian prejudices, we are

helping to create a pattern that is fraught with profoundest evil. What we seemingly harmless people do is to permit the immoral principle of condemning people in the mass to take root in society. Once that principle is established, other things inevitably follow: Such as the permission to look down on certain groups of people; then to partially despise them and allow them to be objects of insult and humiliation. The way is then open for the more violent to project their frustrations upon the innocent. Of course, we do not intend such extremes. But he who permits evil, commits evil: And we who share in creating such social sanctions must share the guilt they subsidize.

The psychologist faces us with the cause of the inertia which characterizes so many Christian and church people. He takes off the covers and tells us that, deep down, we actually do not believe in the God-given equality of human beings and their rights to the respects of human dignity. We still prefer preferments, and we continue to regard ourselves as superior. Yet we profess the magnanimous position, both in our Constitution and our religious creeds. Caught, therefore, between ideals we cannot give up and practices equally entrenched, we develop a protective unresponsiveness to events and conditions which should properly fill us with horror and drive us to remedial action. This is a sickness of the soul. The religionist will say that it is evidence we are not thoroughly converted to the mind and way of Christ. And irrespective of what it does to the segregated, it returns in a corruption of the person prejudiced. The gentle people of prejudice are intellectually and morally sick; and what is worse, they are sick people who try to make their own sickness the measure of their society's health.

Not very pleasant, is it? We did not realize that we are so profoundly guilty, and that our evasions are so directly tied with the overt chair of degradation we take such please in denouncing. But if we give ear to the psychologist's charge, let us also hear the Master's challenge. Jesus loved and suffered for everyone, as children of the Heavenly Father; and He made it clear that He expected all His followerers to honestly adopt the same attitude. We are to be distinctive in this matter; and if we Christians fall back into the strife and contentions of the struggle for existence and positions of power which describe the non-Christian ethic of life, we have failed our commission and betrayed our Lord. Quite the opposite thinking and behavior is demanded of us. "What do ye more than others?"—Jesus turned one day to say to His disciples. He startled them immeasurably. They were saluting this person and that, and performing the customary courtesies. "Is that all?" cried Jesus. you content to go along, conforming to the fashions and the rules, and not breaking through their deadening shell to achieve some great social thrust and advance for the people?"

What do we more than others? I do not see how any of use can rest, or ride along with the great disparities of our day, and proclaim ourselves neutral or indifferent to its accusations. In such a case, I believe we cannot escape being the "sick souls" of Dr. Overstreet's definition, or from carrying the deep guilt and defeat complexes of those who refuse to measure to what we profess.

Moreover, I believe we, as Christians, must take fresh and forgiven souls into the deliberate reformation of the crowds to which we belong or to which we have access. The point, again, is the integration of the group at its highest possible level. We must make it the fashion, as well as the intent, that every living soul is reckoned on the basis of the merit and quality of his life, and not on the basis of any arbitrary, historical, or unavoidable personal characteristics.

We are on the way to this desired social ideal in America. Anyone with eyes he himself does not blind can see what is happening. Education, the courts, and a thousand human amenities grow in grace and concert to progressively eliminate segregation. They, more than the churches, lead the way. They are teaching us how to handle, and to finally erase, our prejudices. The movement is universal, deep-flowing, and determined. It is of the will of God.

"Though the mills of God grind slowly, They grind exceeding fine."

What makes any loyal churchman wince is that we are so far behind. I bow my head and confess the charge when Dr. Mc-Cracken, minister of Riverside Church in New York, stands up and preaches on the theme: "Discrimination, the Sunday morning American shame."

"What do ye more than others?" Tilt Justice's scales; and load the balance, not with mere equity, but with love's gracious companionship and concern. This is the Christian way, the healthy and the healing way; and the root requirement of all Christ's pledged people as they meet their brothers.

Difficult Problems of Guatemala

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. WILEY. Mr. President, for many years I have been following closely the situation in our sister Republic of Guatemala.

I was one of the first Members of Congress to point out what was then the rising Communist crisis in the hemisphere, as the former Arbenz regime evolved more and more into a complete Soviet-style dictatorship. At that time I urged strong action to curb what was then the mounting threat to the Panama Canal and to the hemisphere as a whole.

Then, with the fortunate overthrow of the Arbenz regime by the liberation forces to Col. Castilo Armas, I pointed out that the hemisphere had secured an historic opportunity to help a sister republic show how the ruin and slavery of communism could be replaced by the prosperity and good life of freedom.

Although, since the liberation, Colonel Armas and his associates have taken many sound administrative actions, and authough the United States Government has been deeply sympathetic with the problems of the new government, unfortunately, the situation in that country remains exceedingly troubled.

I frankly believe that our own Government could and should do far more to be of assistance to the Government of Guatemala, to help make of it a showcase for the Western Hemisphere.

This does not relieve Guatemala itself of its own basic responsibilities. On the contrary, I believe that the Guatemalan Government and people are, fortunately, determined to rely upon themselves to the fullest possible extent. But they realistically recognize, as we should, that the Communist legacy of ruin cannot be overcome overnight.

The tens of millions of dollars which the Communists stole from the now bankrupt Treasury; the heritage of an agrarian and labor discontent which the Reds promoted; the shortage of corn; the problem of unemployment—these are but a few of the serious aspects of the current situation, coupled with the disturbed coffee market.

Surely, I say, in the instance of at least the corn shortage, American official resourcefulness is capable of helping our friends promptly to meet this problem. And surely, we can be of other assistance, consistent with our commitments elsewhere in the hemisphere.

I have a high regard for State Department and FOA intentions to be of genuine assistance to Guatemala. But my earnest hope is that the programs already announced will definitely be implemented in full as speedily as possible; and, more important, that they will be supplemented as needs require. I urge this in the interest of Pan-American unity and freedom.

Mr. President, I send to the desk two hard-hitting newspaper articles published last week under the theme Whither Guatemala. They were written by Mr. Daniel James, and were released by the Spadea syndicate. I ask unanimous consent that these articles be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WHITHER GUATEMALA?

ECONOMIC CRISIS LOOMS—RED REVIVAL FEARED
(By Daniel James)

(EDITOR'S NOTE.—Daniel James is author of the new book Red Design for the Americas: Guatemalan Prelude. He is an authority on Central America, and has just returned from the Carlibbean.)

Guatemala is on the verge of an economic crisis. The crisis could topple her new anti-Red government, revive communism, and wreck United States policy.

Americans seem totally unaware of these grim prospects. They have been fed too much ballyhoo and too few facts about anti-Communist Guatemala. Yet fact No. 1 is that President Carlos Castillo Armas' regime, after 6 months in power, faces bankruptcy. And so does our policy in Guatemala.

Two-thirds of Guatemala's 120-millionpound coffee crop is unsold. Her notoriously tight-fisted, short-sighted coffee growers have been holding out for high prices while the market has been falling. Since coffee accounts for 80 percent of national revenues, the Government is at this moment virtually without an income.

It scraped through January and February thanks to incoming corporation and land-tax payments then due, and to bumper cotton exports. But no more money is due from those sources, and other expected revenue is piddling. With coffee still unsold, Castillo Armas may find it difficult or impossible to pay his obligations this month.

At best, if all the coffee were sold, the Government would lose \$6 million in taxes owing to unexpected low prices. Unless new sources of revenue are developed, Castillo Armas faces a rough year even if he rides out the impending crisis.

Unfortunately, there is no Guatemalan money in sight to help the Government. It can be authoritatively stated that some \$50 million fled Guatemala between 1952 and 1954, when the Reds were in power. Of that sum, \$24 million was deposited in foreign,

mostly United States banks. Another \$6 million was invested in foreign enterprises. The rest, \$20 million, is reckoned to be in Red hands.

Some flight capital has returned, but not enough to start a trend.

Added to these woes is a shortage of corn.

Added to these woes is a shortage of corn. Potentially, this may be the most explosive element of all. Corn is the basis of the national diet. It is worshiped almost as a deity by the Indians and thus possesses profound psychological meaning. A scarcity of corn could be calamitous.

Communism, hoarding, or both, may be responsible for the corn shortage. Prices are up to 6 cents a pound whereas normally they range between 4 and 5. Plantings were disrupted last year by the Red agrarian reform, and corn already planted was damaged by fall storms. However, peasants may be withholding corn in anticipation of higher prices.

Guatemala's progressive young Minister of Economy and Labor, Jorge Arenales, has authorized the private importation of 80 million pounds of corn. This, when put on the market, is expected to drive prices down and force hoarders to sell. By April, Arenales expects to know whether hoarding or a bad crop caused the scarcity.

If it is a bad crop, as many think, Guatemala will have to beg, borrow, or steal enough corn from somewhere to prevent starvation this year.

Still another serious economic problem is unemployment.

Around 20,000 workers, most of them in the capital, are believed to be unemployed. They present a political, as well as economic, headache. Some were lopped off Government payrolls for economy reasons. Others were fired by antilabor employers. Still others were laid off unfinished public works.

Officials say most of the jobless will be absorbed within 3 months on new highway projects, but by then the situation could be out of hand.

Behind the unemployed lies a discontended urban working population. The workers feel they are losing under Castillo Armas the rights they enjoyed under his Marxist predecessor, Arbenz. They begin to long for the days when their unions were a power in the land, ignoring the fact that they were Red controlled.

Specifically, the workers disapprove the abolition of the old unions. Castillo Armas is giving the unions every chance to purge themselves of Red influences, but that has been done in very few cases and so there is really no labor movement in Guatemaia.

Also resented is a decree issued in January which gives employers the right to fire employees for union activity and virtually prohibits peasant unions. The latter, however, is directly attributable to the fact that the illiterate peasantry is a prey to Red demagogy and only last January 20 Redled peasants joined a conspiracy to overthrow Castillo Armas.

Trade-union leaders blame everything on the antilabor atmosphere they say prevails among leading politicians. There is some truth to the charge. At best, the Government itself has been barely lukewarm to labor. On the other hand, labor has thrown up no really able men to replace its old Red bosses, and that is perhaps a primary reason why no labor movement exists.

Whatever the pros and cons of labor, this much is true: worker discontent is on the rise and there is a developing nostalgia for the past. In an acute economic crisis, this could be turned by clever Communist agitators into a strong leftist current.

Confronted by the prospect of an economic crisis accompanied by a political one, Castillo Armas can pull through only with the aid of the United States.

WHITTHER GUATEMALA?

TOO LITTLE GUATEMALA AID THREATENS UNITED STATES POLICY

(By Daniel James)

United States policy in Guatemala is failing. That is the sad conclusion this re-porter has reluctantly reached after a 4-

week, on-the-spot survey.

The consequences, if we fall in Guatemala, will be disastrous. Our prestige in Latin America will practically vanish. Our programs in Asia will be compromised. Communists everywhere will have a field day as we argue over who lost Guatemala.

When Guatemala's Reds were overthrown last June, United States leaders from President Eisenhower on down swore to make the Central American Republic an anti-Com-munist showcase. They were solidly backed by both political parties and the public. Rarely has there been such unanimity as on the need for all-out aid to Red ravaged Guatemala.

Now, 8 months later, how much aid have we given?

On paper, \$6,425,000. In fact, less than half that amount. Money is being doled out for certain projects only as, if, and when,

Of the total aid authorized, \$4,425,000 will eventually go into roads—If Guatemala can match it with \$1.5 million of her own. Another \$500,000 will go to finish a hospitalif Guatemala can match it with \$500,000. Health, agricultural, and other projects likewise depend on Guatemala's ability to match

So far, then, our aid largely consists of putting up dollar for dollar in a situation where the matching party sorely lacks dollars.

But even if we donated the entire \$6.5 million outright, that would be about as helpful as feeding aspirin to a man with appendicitis.

That sum, Guatemalans point out, represents exactly what their Government paid its employees in back wages last December.

It about equals what the Government expects to lose in coffee taxes this year.

It is less than one-third of what the Reds

are known to have stolen.

"A fraud" is how one Guatemalan bitterly described our aid to me. He was echoed by others. Already, our policy of too little is breeding dissillusionment in us.

Washington is relying upon United States Private capital to give Guatemala what she needs. That is sound general theory. The trouble is, it does not apply to Guatemala's immediate problems.

United States businessmen are swarming into Guatemala seeking investment opportunities. Some are already building roads, exploring for oil, selling machinery, making

The Electric Co. of Guatemala, a United States subsidiary, is putting \$17 million into new hydroelectric facilities to increase the capital city's power capacity. Pan American World Airways is about to join with local money to erect a big hotel. United Fruit reportedly awaits disposition of a United States antitrust suit before investing \$25 million.

Tourists are beginning to return, realizing no Red problem now beclouds enjoyment of Guatemala's unparalleled scenic beauty.

President Carlos Castillo Armas deserves great credit for the improving business picture. His personal popularity, general poli-cies, and practical measures—such as a progressive petroleum code-have combined to assure United States business a warm welcome and fair treatment in Guatemala.

Backing up Castillo Armas is the most talented and dedicated team of United States officials this reporter has ever seen abroad. United States Embassy, Informa-

tion Agency, and Foreign Operations Administration personnel deserve medals for their handling of a delicate task.

Owing to all these factors, Guatemala is acquiring a new look. Guatemala City streets, once deserted, are filled with busy and happy people. Stores are brimming with new merchandise. Hotels are full. New buildings are going up.

But overshadowing this bright picture is the dark legacy communism left behind. A looted treasury, a corn shortage, a jobless problem, and a falling coffee market (for which the Reds cannot be blamed) all spell a major crisis. Neither the Guatemalan Government nor United States investors are equipped to tackle it.

economic crisis in Guatemala just now would, as a matter of fact, slow down the flow of investment. It would destroy confidence in Castillo Armas, and perhaps cause his downfall. It would wreck United States plans for Guatemala and United States policy nearly everywhere in Latin America. We must awaken to these dangers at once and realize that only swift and unstinting

United States aid can ward them off.

The primary immediate job is to help Castillo Armas acquire sufficient funds to Castri or the task of governing. Second, Guatemala may need emergency food and grain supplies. Third, we must expand and accelerate our technical assistance—and without requiring Guatemala to match funds. Fourth, coffee prices must be ad-

Further, we should announce a long-term program. Guatemala needs about \$50 million to build a decent road network-one of the keys to an expanding economy. She needs perhaps another \$50 million for such basic projects as modernizing her agriculture. For about \$20 million yearly spent over the next 5 years, Castillo Armas' chances of finishing his term in 1960 would be immeasurably enhanced and Guatemala's stability and prosperity practically underwritten.

Vice President Nixon, just back from the Caribbean and keenly aware of Guatemala's problems in particular, might well suggest that President Eisenhower ask Congress to enact a \$100 million, 5-year program for Guatemala. Only such a program will demonstrate that we are really trying to make the world's first anti-Communist revolution a success.

Atlantic Union: Let's Meet the Challenge of Our Time

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Greater New York Branch of the Atlantic Union Committee last Friday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ESTES KEFAUVER, OF TENNESSEE, AT THE ANNUAL DINNER OF THE GREATER NEW YORK BRANCH OF THE AT-LANTIC UNION COMMITTEE, FEBRUARY 18,

Judging from the experience of the past few years—and indeed, from the long history of military alliances—the longer we delay exploring better means of uniting the free peoples, the worse emergencies we shall face in the coming months and years.

Along with some 29 of my colleagues in the Senate and House. I have again introduced the Atlantic Union resolution to make that exploration possible.

Many of you will recall a day 4 years ago when President Eisenhower, at that time NATO Supreme Commander, addressed the Congress. In his speech he asked this question: "Why, then, are we frightened of dicta-torial government?" And he gave this an-"Only for one reason, because they have a unity of purpose. What we have to do—the only thing we have to do—is to meet that unity with a higher type, the unity of free men that will not be defeated."

Since that day, the Atlantic democracies have increased their collective military strength and the military effectiveness of the North Atlantic Alliance. Let us not forget, however, that during this same period the rulers of Russia and Red China have increased their military strength and effectiveness and that Soviet Russia is now building hydrogen bombs and transoceanic planes which can drop them on the United States.

During these 4 years, the Atlantic democracies as a group, and notably some of the nations of Western Europe, have increased their economic strength. Let us not forget, however, that Soviet Russia and Red China have also increased their economic strength even more rapidly under the lash of dictatorial power.

But in these 4 years the Atlantic democracies have not made comparable progress in increasing their political unity. Indeed, conflicts of policy between them concerning relations with areas of Asia and attitudes toward Communist propaganda offensives suggest that they are less united in some respects than they were 4 years ago. Our need for such unity, emphasized then so clearly by our present President, remains both critical and urgent. Threatened by a Communist bloc which can maneuver and strike with dazzling speed, we must still negotiate before we can act jointly.

This contrast between our respective ac-complishments in the military field and in the political field is the more striking when our potential capabilities in those two fields are recalled. For our military capabilities are clearly subject to strict limitations for the long-haul limitations set by the need to maintain a free and prosperous economy.

But there is no limitation on our political capabilities except ourselves. As free men, nothing except our own intelligence, our own will, and our own attitudes can bar us from doing anything which our security and welfare demand.

I am convinced that the introduction of this resolution will contribute directly to early ratification of the Paris Agreements. It will be regarded in France, in the German Federal Republic and in all other nations which must still ratify these agreements as a proof that there is powerful support in the Congress of the United States for further development of the Atlantic community. also recognize that the failure of EDC and the inclusion of the German Federal Republic directly in NATO have made further development of the Atlantic community imperative. Knowledge that this impressive support exists in the Congress for a resolution proposing a convention which would explore on the broadest basis the possibilities of achieving this objective will give them new hope and confidence that ratification of the Paris agreements will not lead up a dead end street, but will contribute towards the Atlantic development which these agreements themselves and the time in which we live have made urgent and necessary.

The history of the last few years has shown that progress on an Atlantic basis and progress in Europe are closely inter-related. When we have taken the lead in developing NATO and have emphasized the importance of increasing the solidarity of the Atlantic Community, which includes our country, Canada, and Britain as well as the countries of Western Europe, we have seen progress toward unity in Europe. But when we have refrained from mentioning the word "Atlantic," have called only for unity in Europe and have exerted pressure to persuade Europeans to take steps in which we were to have no part, the result has been failure.

We recognized in 1949 by becoming a party to the North Atlantic Treaty that our defense and theirs were inseparable. Surely, there is every reason why we should explore together in common, in a convention comprising our best minds and theirs, how our common defense might be made more effective and less costly and how we might at-tain that greater unity for which President Eisenhower has so consistently called.

This resolution opens to the democracies a new and broad road toward the attainment of this objective. At the same time, it provides the free nations with a means of taking the intiative in the war of ideas which forms a central part of the cold war. We cannot win the war of ideas if we remain on the defensive. To move forward toward ultimate victory in this ideological struggle, to make possible an expansion of the frontiers of freedom which have receded so far in the last decade, we must take the offen-Siva

Our forefathers demonstrated unsurpassed political capacity throughout our history as a nation, first in creating our American Union and afterward in expanding that Union from a fringe of 13 States along the Atlantic seaboard into a continental area containing 50 times as many people and constituting the freest and the most powerful and productive Nation in the world. met the challenge of their time. Shall we fail to meet ours?

This Is Your Country

EXTENSION OF REMARKS OF

HON, J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include an article written by my esteemed constituent and friend of many Members of this Congress, Louis Bromfield. I believe that this article, like the writings of Mr. Bromfield, is well worth the reading by the Members.

The article follows:

THIS IS YOUR COUNTRY (By Louis Bromfield)

In some ways the present Congress is well started on its way to be the shabbiest Congress in our history. It is a Democratic Congress and for its record the Democrats must take the blame, especially since they initiated most of the shabby goings-on.

The proposed \$20 a year per person tax reduction has about it something actually childish, and, so far as the Democrats are concerned, something desperate—the seeking for some kind of issue where issues seem to be few and far between. The size of the reduction is childish for, while \$20 is \$20, it will not make or break any family in the whole United States and certainly not have any world-shaking general benefits under the present conditions of high wages, general

employment, unemployment, reinsurance, social security, etc. Indeed the people to whom it might conceivably mean something are in the brackets which do not pay taxes in any case. And it is true that the inflationary effect of such actions may well cost the tax-payer far more than \$20 a year in rising living costs before he is through.

Presumably the Members of Congress or at least the House of Representatives should understand these things. If they do not they are ignorant; if they do they are shabby, mischevious, and even dishonest. In either case, they are unworthy of their jobs and poor representatives indeed of the American people, who are not fools despite the low opinion of them expressed by the late Harry

While the \$20 reduction means comparatively little in these times to the average citizen, it means a vast amount to the Government and the general overall welfare of a people who already have a burden of nearly \$300 billions of debt, with what is still one of the most extravagant governments in the world in terms of waste in the field of bureaucracy and the operations of the Armed Forces. Congress, or those Congressmen who have proposed and supported this iniquitous measure, are merely repeating the cheap political trick of passing on the burden of this debt to their children and grandchildren. At the same time they are enthusiastically voting to double their own salaries.

The men who proposed and support this reduction might well have applied their time to getting to work on a bill to put into action the economies and reforms set forth in the Hoover report of reducing and disciplining bureaucracy, on creating further economies while raising the efficiency of our defense forces, in modifying or creating a bill for the extension of the draft which makes some sense in view of changed conditions. It it astonishing that Democrats of the honor and dignity of Speaker RAYBURN, Senators GEORGE and RUSSELL should lend even lip service to this absurd reduction in taxes.

The irresponsible action of the House in voting to extend the draft for 4 years without hearings or consideration is still another demonstration of irresponsibility. Presumably the extension bill was passed hastily to demonstrate to the world that the people were behind the foreign policy of the administration. If this is so, there was some justification, although not much. Otherwise the action is ill-considered or not considered at all. The mere extension of the draft for a perid of 4 years, when 2 years would certainly be adequate, is certain to produce enormous expenditures of taxpayers' money and to produce utter confusion in a situation where there will be at least three times as many eligible draftees as can be accepted in the Armed Forces. Nothing is more expensive than the military training of a draftee, especially when, as many of them feel, there is no real necessity for a draft if the Congress and the Armed Forces would completely modernize the Army, raise pay and make a military career attractive to

There is an immense amount for Congress to do that would cut hundreds of millions, perhaps billions, from the expense of government and defense, and so justify in honest terms a genuine tax reduction without inviting inflation and without cheating our children and grandchildren. Congress, and especially the House of Representatives, has certainly started off on the wrong foot. If their actions to date are a sample of considered Democratic Party tactics, they are shabby indeed and will convince few people. The dragging out of the old New Deal stuff about helping the common man doesn't stand up. The proposed tax reduction is in reality helping no one and is harming the

Nation as a whole. Surely the Democratic Party cannot be as bankrupt as its present actions and policies indicate.

Chinese Reds Ignore United States Warning

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include Drew Pearson's column titled "Chinese Reds Ignore United States Warnings," which appeared in the March 12, 1955, issue of the Washington Post and Times Herald:

CHINESE REDS IGNORE UNITED STATES WARNING

(By Drew Pearson)

Secretary of State John Foster Dulles informed the American ambassadors to 15 Asiatic countries last week that the time had come for the United States to stand firm against Asiatic communism. Reporting to the Nation by radio and television this week, Dulles reaffirmed that position.

He did not, however, outline the means and methods, by which we are to stand firm.

Earlier this week. I took the liberty of suggesting the means by which we should stand firm in the Orient, namely, by adopting the same method the orientals have used against us-the boycott-blockade.

The Chinese have used the boycott time after time against the Westerner in the Far East. The Indians used it to help win their independence from the British. whereas a battle to defend the small islands of Quemoy and Matsu would bring misunderstanding, bitterness and probable defeat. a boycott could be enforced-and be far effective-without war.

Without arguing the pros and cons of the boycott weapon for the moment, however, let's take a look at Dulles' stern words of warning and see what they will mean to the Chinese Communists whom he is hoping to stop dead in their tracks.

Unfortunately, Dulles' warnings, stern, forbidding, and frequent as they have been in the past, have too often been reversed, either by his own Chief in the White House or by Dulles' own policies or by the policies of his administration in curtailing military budget. Naturally the Chinese Reds listen to the radio and read the newspapers. And here is the record of Eisenhower admin-istration statements they have read in the past:

Dulles to American Legion, St. Louis, September 2, 1953: "There is a risk that as in Korea Red China might send its own army into Indochina. The Chinese regime should realize that such a second aggression could not be confined to Indochina. The Chinese regime should realize that such a second aggression could not occur without grave consequences. I say this soberly in the interest of peace and in the hope of preventing another aggression miscalculation."

"Grave consequences" in diplomatic language means a threat of war. But the Chinese Reds ignored the threat. They went right ahead with the invasion of Indochina.

MASSIVE RETALIATION

On January 12, 1954, Dulles announced that the United States of America was prepared to meet aggression with instant retaliation by "means and places of our own choosing." We would depend primarily upon "a great capacity to retaliate instantly," he said, referring to the atom bomb. The Chinese, however, blissfully proceeded to take over more areas of Indochina.

EISENHOWER'S WARNING

At Seattle, August 1953, Mr. Elsenhower told the Governors' Conference: "If Indochina goes, several things happen right away. The tin and tungsten that we so value from that area would cease coming. All India would be outflanked. Burma would be in no position for defense." His warning fell on deaf ears and the United States did nothing to back up the warning.

ANOTHER WARNING

Speaking to the newspaper editors on April 16, 1953, Mr. Elsenhower said that a truce in Indochina must not mean more attacks on Indochina. "It (a truce) should mean an end to the direct and indirect attacks upon the security of Indochina and Malaya. For any armistice in Korea, that merely released aggressive armies to attack elsewhere would be a fraud." But the Chinese did exactly that. They made the Korean peace a fraud. The United States, however, did nothing about it.

NIXON WARNS

Addressing the American Society of Newspaper Editors in April 1954, Vice President RICHARD M. NIXON warned the United States was ready to send land troops to Indochina. This did not seem to scare the Reds at all.

NIXON WARNS AGAIN

Speaking in Cincinnati a week later, however, Nixon claimed the Reds have been scared. "We warned the Chinese Communists that if they make overt moves across into Indochina as they did in Korea that they would run the risk of retaliation of the United States against China. Result: The possibility of that overt move by the Chinese Communists has been reduced very, very definitely." The Chinese, meanwhile, kept moving into Indochina.

IKE UNWARNS

Perhaps the Reds remembered an exactly contrary statement made by Mr. Eisenhower on February 10, 2 months before Nixon's warning. "No one could be more bitterly opposed to getting the United States involved in a hot war in that region than I am," said the Preisdent.

THE REPUTES NIXON

At any rate, the Communists hadn't long to wait before the President cut the ground out from under his Vice President. It was on April 20 that Nixon threatened stern measures against the Reds. It was on April 29 that Mr. Eisenhower told a press conference: "We certainly could not hope for a completely satisfactory answer from the Communists. The most you can work out is a practical way of getting along"—something, he added, that would stop "bloodletting."

Thus the Chinese Communists have heard brave words from one quarter and compromising words from another. They have listened to threats of both massive retaliation and land troops. They have listened to the demands of the China lobby and also watched us cut our military budget.

No wonder they have marched right ahead, first in Indochina and more recently opposite the Islands of Matsu, Quemoy, and Formosa. So it's highly doubtful that Secretary Dulles' stern words of warning last Tuesday will have much effect on the men in Peiping.

What the United States faces, therefore, when you get down to cold facts, is either another retreat, or a shooting war, or a third alternative—the weapon which orientals have used against us—the boycott-blockade.

Conservation

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. BEAMER. Mr. Speaker, it was my privilege to be invited to speak at the seventh annual banquet meeting of the convention of the Ohio Conservation Congress on Saturday evening, March 12. This important subject of conservation is so very important that, under unanimous consent, I include it in the Appendix of the Record.

The address follows:

As an introduction to this particular talk, I feel that it is fitting that I quote President Elsenhower on the subject of conservation: "Vitally important are the water and minerals, public lands and standing timber, forage and wildlife of this country. A vast growing population will have vast future needs in these resources. We must more than match the substantial achievements in the half century since President Theodore Roosevelt awakened the Nation to the problem of conservation."

President Eisenhower then calls for a strong Federal program in the field of resource development and I again quote from the President: "The best natural resource program for America will not result from exclusive dependence on Federal bureaucracy. It will involve a partnership of the States and local communities, private citizens and the Federal Government, all working together."

My personal interest in conservation is that of one as a farmer, as a conservationist, and as a legislator. For this reason, my approach to this particular subject on this occasion will be from this three-armed point of riew.

This past winter I had the opportunity with my congressional committee to visit briefly in Spain. This is a country with more than 2,000 years of history. The guide and informant that accompanied us on a portion of this journey stated that the population of Spain at the present time is some 29 million people. However, it was told that an estimate of some 43 million was made for the number of people living in this area at the time of the occupation of the Iberian Peninsula by the Romans. It also is recorded and reported that Spain was one of the most prosperous and industrious countries that the Romans occupied at that time. were vast timber resources and forests that were standing. It also was a place where ships were reprovisioned with food and fiber products from a very rich soil.

We noticed that many of the farmers still used the old wooden plows drawn by oxen, and that the soil seemed to be very thin and of low productivity. In fact, the average production of grain products has dropped so low that in our country it would be considered a failure if our farms produced in the same manner that theirs are producing. vast timberlands have been depleted, and the country today has a shortage of water. fact, the hotel at which we stayed in Madrid shut off the electricity from 4 to 6 each afternoon, because they stated that the hydroelectric plants did not have sufficient water to supply them with the energy required. At the same time, they have no coal resources and, since imported coal is expensive, very few steam-generating plants can be or have been built.

It then occurred to some of us that the timbers had been exhausted in the construc-

tion of vast fleets of ships that were used in fighting their neighbors and even among themselves. The Spanish nation has been ravaged by wars with other countries and even with civil wars in its own boundaries. The last civil war cost more than 1 million lives and billions of dollars of loss in property damage. Thus it is seen that a once rich country now has wasted its resources in wars and in the lack of conservation practices. Spain has a recorded history of more than 2.000 years, and the United States has a history of less than 200 years. Is there a comparison to be drawn and can a lesson be taught to those of us who are interested in the conservation program?

An eminent agronomist in this country not too long ago asserted that if any foreign power really has imperialistic designs on our country that she would be wise to delay action for perhaps another 100 years. By that time, this authority stated, we shall have used and wasted so much of our natural resources and especially our topsoil that our people will be so starved that they will not

be able to resist. Not long ago, I had the privilege of visiting in Nevada and witnessing the explosion of one of the atomic bombs. Our committee also saw the immense destruction that is possible with the use of this new type of nuclear energy. It has been pointed out by prominent conservationists that every the amount of waste of certain natural resources is greater than the explosion of many of these same hydrogen and atomic bombs. For example, it has been discovered that at a certain spot in Indiana on the Ohio River that every minute a 40-acre farm passes by in the form of silt. I am going to estimate that this farm is worth at least \$300 per acre and, in our section of Indiana, it is worth much more than that. This then means that every minute \$12,000 worth of good rich topsoil is floating down the Ohio River eventually to be deposited in the ocean where it is lost forever. amounts to more than \$17 million per year for this one given spot and think of the many, many other rivers that are carrying silt from the topsoil of so many of our farms

throughout this country.

In the last 40 years, the United States has spent more than \$586 billion on wars of various kinds. This is a staggering figure and it is done in the hope that the world can be made a more peaceful place in which our children and children's children will live. However, are we saving for our children and our children's children the God-given resources that we inherited or are we returning these to the ocean to be deposited where they will be lost.

Reference was made to the age of Spain and the age of the United States. In less than the 200 years, in fact only approximately 180 years, we have made approximately one-third of our soil incapable of producing a crop. At that same rate, more than one-half of our soil will be destroyed in 100 years. Perhaps the agronomist that gave the dire suggestion of a foreign power waiting 100 years was not too far from wrong. For this reason it behooves all of us to pay a tribute to the defenders of soil, woods, vater, and wildlife, and to all conservationists. It is for this reason that I consider your invitation to meet with you a distinct It is for this reason that I consider privilege.

In this talk I almost feel that the subject of water should be the one to be emphasized. Man's earliest recorded history was on shores where streams of sweet water flowed to the sea. Even as man pushed back from the seashore to the uplands, he recognized a good land as one "of brooks of water, of fountains and springs flowing forth in valleys and hills, a land of wheat and barley, of vines and fig trees and pomegranates, a land of olive trees and honey, a land in which you will eat bread without scarcity.

in which you will lack nothing, a land whose stones are iron and out of whose hills you can dig copper." The author of this portion of Deuteronomy recognized the value of water whether it comes in the form of rain or snow or fog or dew or in any form of precipitation. Sea water is too salty to meet most of man's needs and thus he depends largely upon fresh water.

The need to conserve water reaches to one of the most basic points in life. Water is needed to quench the thirst and for many personal needs not only of man but of livestock and to keep crops alive and growing. Modern industry uses water for steam gen-eration, for washing, cooling, conveying, and for a multitude of other processes today. Not counting the stream flow that is used mecanically to generate hydroelectric power, industries in the United States in 1950 used approximately 120 billion tons of water-almost 50 times the weight of all other indus-

trial materials. This took a flow of about 80 billion gallons per day which is 8 times as much as that which was used in 1900. The expectation by 1975 is that industry will require 21/2 times as much or 200 billion gallons of water per day. In this connection, most of the States in our Union can double the present Withdrawals of water at relatively low costs and a few States could increase them 10 or 20 times.

Before proceeding to a further discussion of conservation, it is necessary to stop and realize that whenever a quart of crude oil, or a ven of coal, copper, lead, stone, iron or gravel is mined and taken from this earth that it is gone forever. It also must be remembered that it never can be replaced. This fact alone should make us stop and remember what a tremendous role these resources play in our everyday living.

It was for this reason and for many other similar motivating factors that the 83d Congress passed the Watershed Protection and Control Act of August 4, 1954, which now is Public Law 566. This is an outstanding and historical accomplishment in the field of water conservation. It sets up the regular procedures for aiding local groups within a single watershed whereby they may have assistance in carrying out watershed protection. tection works. It applies to the entire country and provides for cooperation from the Department of the Army and the Department of the Interior. It expands and gives impetus to the watershed phase of the Nation's flood control program which the Department of Agriculture has been carrying on since 1936. Thus, it reflects the growing sentiment for nationwide action on upstream watershed protection and tribu-

tary flood control.

"In the Department of Agriculture" according to Secretary of Agriculture Ezra Tatt Benson, "we are determined to assist farmers to carry out a more effective program of soil and water development and wise utilization on a nationwide basis. naturally includes protection and development of soil and water resources on individual farms and ranches and also in the small

watersheds of subwatersheds."

Secretary Benson very wisely has pointed out that this program is very well the life-blood of the West both for irrigated and dryland farming, and in the East where many farmers today are using supplementary irrigation at some time during the growing season. Businessmen, bankers, and residents of small towns and communities that are harmed by floods and small tributaries of rivers, likewise are very much concerned and will be benefited by the eventual work and development of this watershed program.

Watershed development should be comprehensive and include flood control, power, irrigation, and navigation. It should also keep all natural resources in proper balance and in proper priority in relation to need. Some of these several points have been listed by the Department of Agriculture:

1. Sustained and improved agriculture production without waste.

2. Protection and sustained yield management of forest lands.

3. Prevention of erosion, protection of streams from excessive siltation, and flood

- 4. Protection of community and industrial water supply.
- 5. Maintenance of underground water 6. Irrigation and drainage on sound land
- use basis. 7. Maintenance of fish and wildlife re-
- sources. 8. Areas for recreation and various
- studies esthetic, cultural, and ecological. 9. Protection of grasslands suited to range

utilization.

Those of you who have traveled across our vast country and even in other lands undoubtedly have wondered whether or not their barren ground had some use to which it could be placed. Even the wastelands of Nevada which I visited at the time of the bomb tests only recently are serving a valuable purpose at the present time in the advancement of science and, we hope, in the protection of the human race. In hills and mountains nearby they are finding new sources and supplies of uranium which is one of the important factors in the development of this new science.

Thus, it is evident that the problem of water reaches into every particular phase of human endeavor. One of the important considerations in certain portions of Ohio and Indiana and, for that matter, in many areas is that of the pollution of water. Pollution of water supplies is characteristic of nearly all of the heavily inhabited watersheds, but it is most serious in the manufacturing belt from St. Louis and eastward to the Atlantic coast. Pollution of the Ohio River became so objectionable that Congress by special resolution gave the affected States authority in 1936 to form an interstate compact to deal with the problem.

Withdrawals of water for cooling purposes are so heavy in some areas that river water sometimes becomes too hot to act as an effective cooling agent and increases pollution because some forms of waste matter dissolve more readily in warm water. United States has reached a point where the costs imposed upon its economy by using streams and rivers as open sewers exceed the apparent savings. Many downstream communities are forced to pay large sums to purify water or to develop alternative supplies sometimes from distant sources. Valuable wildlife and recreational assets are destroyed and public health is menaced. Industries that require relatively clean water are discouraged from locating along heavily polluted rivers even though good plant sites, labor supply, and other attractions exist. Some plants whose water supplies have deteriorated have moved to other localities rather than incur high costs of purification.

Some of the above information was secured from Resources for Freedom, which points out the necessity for the Water Pollution Control Act of 1948 which was passed by the 80th Congress. This Water Pollution Control Act provided the beginnings of a program of Federal cooperation with States and interstate bodies. It authorizes the Surgeon General of the Public Health Service, in cooperation with other interested agencies and bodies, to prepare comprehensive programs for interstate streams and underground water and, at the request of State or interstate agencies, to undertake research on specific problems. There are many other provisions in this worthwhile act, but I merely point it out as one of the steps taken by the Federal Government in the protection of this natural resource—water. The entire program is designed to give impetus to the local communities and to the States to first undertake the correction of this pollution problem. However, the Federal Government is ready at all times to step in and assist if the States and local communities have failed to act.

This bring up the study and consideration of pollution from coal mines. Seepage from abandoned coal mines is a source of sulfur water and acid that has ruined many good fishing streams and made the water unfit for many other purposes. Generally speaking this has been recognized as a State responsibility but insofar as the pollution affects streams that flow from one State into another, it can be said to enter the Federal domain. Previous sessions of Congress have considered bills which would require owners of abandoned coal mines to stop them against leakage. Otherwise, the Federal Government, through the Secretary of the Interior, would be directed to enter such mines and construct stoppings such as will prevent the formation and escape of polluting materials. A bill of this nature was introduced in the 83d Congress. However, within my knowledge no such legislation has been introduced in this 84th Congress. Several Members from Pennsylvania have introduced other bills which would authorize cooperation with that State for flood control and drainage in anthracite mines.

Incidentally, it has been estimated that the Ohio River and its tributaries receive daily some 25 million pounds of sulfuric acid derived from active and abandoned coal mines of which some 60 percent reaches the

water courses above Pittsburgh.

Public Works Administration funds were used to steal up more than 40 percent of the abandoned coal mines in Pennsylvania, West Virginia, Kentucky, and other coal-producing States during the depression period from 1933 to 1938. At that time, the cost of sealing each opening ranged from \$365 to \$467. The higher prevailing presentday cost was cited by the Assistant Secretary of the Interior as one reason for advising against enactment of certain types of legislation.

The Secretary of the Interior has expressed the opinion that the cost of sealing the mines should be assumed by the people of the States in which the mines are located and not by the country as a whole. The State of Pennsylvania, for example, during the past 15 or 20 years has followed some such extensive mine-sealing program.

Since I am a farmer, as I indicated earlier in this discussion, soil conservation is of special interest. Perhaps a report on Indiana alone would give an illustration of the work of this agency. There are 65 soil-conservation districts in my home State. These districts comprise 15,850,827 acres or 68 per-cent of the total area of the State. This area also comprises or consists of 109,367 farms which is 66 percent of the total number of farms in the State. These 65 soilconservation districts are on a county basis and there are 92 counties in the State. Thus, and there are 92 counties in the State. it is seen that the big majority of the State of Indiana has adopted the soil-conservation

Until January 1, 1955, soil surveys completed a total of 4,920,317 acres, including practices on contour farming, cover cropping, strip cropping, seeding of pasture, wildlife area improvement, tree planting (which includes windbreaks), pond construction, terracing, diversions, and farm drainage.

On the national level, more than fourfifths of the country's farms and ranches and nearly 90 percent of farmland now are within the boundaries of the soil-conservation districts. More conservation planning

and treatment is being done each year.

The policy of the Department of Agriculture, or the keynote of our national action

program of soil and water conservation can be stated by saying it is one to encourage and aid the farmers to plan and apply conservation farming measures, and to do for them only those things which need to be done in the public interest and which local people cannot do for themselves.

The basic Soil Conservation Act of 1935 established this principle and designated the United States Department of Agriculture through Soil Conservation Service to provide technical and certain other assist-

ance to accomplish that end.

The 83d Congress passed several laws of far-reaching effect in this conservation program. The first was the Watershed Protection and Flood Prevention Act to which reference previously was made. The second was the amended Water Facilities Act which will make loans available for this particular purpose. The third is a new provision in the internal-revenue law that enables farmers to treat expenditures for various soil and water conservation measures as current expenses that may be deducted from farm income for tax purposes.

With this Federal recognition of conservation, especially through the watershed program, the success of this program is going to depend on public understanding of the problems and objectives and upon local participation all of the time. The program is purely local and Federal Government merely becomes a partner by providing technical and cost-sharing assistance. To be successful, the program must be advertised and encouraged and public acceptance must

be developed.

May I return to the farming problem to illustrate the importance of the conservation program. From 1919 to 1927, the number of persons engaged in farming dropped 4 million; 19 million acres were withdrawn from cultivation and 76,000 farms were abandoned. However, the farm income for fiber and food products during that same

period increased 15 percent.

During World War II, high rigid price supports were used as incentives to increase production. Unfortunately, these supports were continued at great cost to the taxpayers and as an illusion to the farmer. At the same time, lower prices can tend to force the producer to reduce costs and become more efficient and perhaps even increase production.

For example, in the last 15 years yields per acre have risen 20 percent. In cotton, for example, the gain has been more than a third. In tobacco the gain has been as much as one-half and in corn the gain in production has more than doubled. This illustrates the advancement of technological research in farming and in agriculture in general. Since the farmer can produce more from his soil with modern fertilizers and modern farming methods and since one man can farm a larger acreage than previously with modern machinery, it means that there is a terrific strain placed upon the soil and the farmer wants to keep it for future generations.

However, there are many other considerations which I know will be of interest to you and to all other people interested in conservation practices. Polluted streams and waters are contrary to the public interest for another reason and it is because they reduce opportunities for fish and wildlife to exist. Polluted streams also make the neighboring areas repulsive to all who would use them. Each species of fish has its own temperature needs but all fish demand reasonably pure water. Some are more tolerant of impurities than others but the best sports fish are those which thrive in clean water. Trout want cold water. Small-mouth bass want cool water. Large-mouth bass want warm water. If the temperature is too low, the fish become sluggish, they don't eat enough food to grow on and if the temperature is too high, the fish die.

Thus, good watershed protection, whether for lands under farm management or in forests, tends to encourage the maintenance of cool springs of water with a fairly even temperature. Conditions which reduce the flow of springs tend also to raise the summer temperature of these springs. This, in turn, can have a bad effect upon the streams that normally support trout and small-mouth bass. The water becomes too warm to support such fish.

Watershed management is vital to good fishing also because, except during periods of rain or fact-melting snow, most streams receive their flow from what might be called leaks in the ground water reservoir. These are the free-flowing springs. If they go dry, the stream goes dry. Then, sooner or later, the fish will disappear and so will their sources of food. Neither fish nor fish food can live in a dry stream bed. Good watershed management maintains soil conditions that encourage water to seep into the lower soil levels.

The recommendation given by President Eisenhower in his budget message on January 17 of this year makes the following important statement: "Under the recommendations for the fiscal year 1956, the Federal Government will spent \$673 million for development of land and water resources. A large share of this total—\$430 million—is for continuation of work on 152 river basin development projects and units under construction by the Bureau of Reclamation and the Corps of Engineers. Much of this work is multiple purpose development for irrigation, flood control, navigation, and hydroelectric power."

It was pointed out that there are under construction 37 of these projects which virtually will be completed in 1956. The budget message further included recommendations that would intend to encourage States and local public and private groups to take the initiative in developing the valuable water resources with Federal cooperation where national interests are involved. In fact, the budget includes \$20 million under proposed legislation to enable the Bureau of Reclamation and the Corps of Engancers to participate in 1950 in partnership water developments.

We finally come to the conclusion, and it certainly is clear that clear water and plenty of it in a continuous flow is necessary for the life of man, for the industries upon which he depends, and for the wildlife to which he looks for much of his recreation. To provide the clear water requires effective management of all watersheds coupled with such controls that sources of pollution may be kept down to the amounts to which nature can adjust. The Watershed Protection and Flood Control Act of August 4, 1954, is a major step toward this goal of achieving clean waters. To a great extent it supplements the Pollution Control Act of 1948. Acid seepage from abandoned coal mines continues to be a source of much damage to many fishing streams but the programs now underway in some of the States promise to fit in with the Federal program and reduce even this danger to the extent that it may be met by natural processes.

The laws whether Federal or State are merely tools available to be used. Without vigilance and citizen leadership of such conservation organizations as are represented here, such laws may be so neglected as to be no more than clanging gongs. As with the maintenance of freedom, we must fight to maintain conditions which will assure the continuous flow of clear, uncontaminated water.

Some time ago I read the story about Daniel Webster who scornfully described the western half of the United States as a formidable home of savages and beasts and an expanse of wasteland and brooding mountains. This was just a little more than 100 years ago. Webster even made the significant statement that he would not vote one cent from the public treasury to place the Pacific Ocean one inch nearer to Boston than ti is. He could not see any use to which the great deserts and endless mountain ranges ever could be put. The comment on this statement is the fact that few men so illustrious have ever proved so wrong on such a tremendous scale so soon. As a result, would it not be well for us to look 100 years ahead and try to determine not only the number of people who will be living off of the soil and will be dependent upon the products of the soil, but also to know in advance whether or not this same topsell still will be with us to produce the necessities of life. Reclamation, of course, is important, but conservation is a first-line defense to avoid the necessity of reclamation in the future.

We have enough good land left in these United States to keep us prosperous and well fed if we conserve and improve it. It can be done and with the assistance of conservation groups such as yours and others throughout the United States, the people will learn and know how to do it. We can make most of our land produce more and more year after year. We also can save that same land but will we do it in time?

No Free Enterprise for the Gold Miner

EXTENSION OF REMARKS

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. ENGLE. Mr. Speaker, every producer has the right to sell his product in the best market which bidding under conditions of freedom and full information provide. This proposition is incontrovertible.

The producer of gold is the only producer who must sell his product at a fixed price and is compelled by law to sell it to a single buyer, the United States Government.

This constitutes an unjust combination of economic servitude and reprehensible monopoly.

UNCONSTITUTIONAL

It is repugnant to the American principles of free enterprise and contravenes the letter and spirit of the Constitution. It is a denial of the right to sell and

the correlative right to buy.

It forces the gold miner to surrendct the fruit of his labor at an arbitrary price to a single buyer.

NOT LEGAL

Denying the gold producer the greater value which a free market would afford is a deprivation of property without due process of law.

The law compels the Interstate Commerce Commission to establish rates which permit a reasonable return on a fair value of the property. Under this statutory duty railroad rates have been raised 5 times since V-J day for a total of 52 percent.

LIVING RETURN DENIED GOLD PRODUCERS

This right to a living return does not extend to gold producers.

The law enjoins the Federal Power Commission to set a rate structure on gas which permits a fair return on property. The FPC has construed such a fair return at 61/2 percent.

No such consideration applies to the

gold producer.

The Civil Aeronautics Board is admonished by law to maintain a rate structure which will permit a fair return on capital and promote the further investment of capital in air transportation.

No such duty has ever been imposed upon the Treasury in the purchase of

gold.

Every State utility commission is compelled by law to set rates which will permit a fair return on property and promote the flow of capital into the electric utility industry.

No State, by law or in any other way, has displayed any genuine solicitude for

the gold producer.

PARITY PRINCIPLE IN LAW

The Federal Government, recognizing the elementary and imperative duty to survive, incorporated the parity principle in law to assure a fair return to the farmer. At substantial cost to the taxpayer minimum prices are guaranteed for every important farm crop.

There is no price parity for the gold

producer.

MINIMUM WAGE FOR WORKERS

The Federal Government enforces a minimum wage for workers. It encourages the organization of workers in order to enable them by collective bargaining to get the best price for their services which the market can afford.

There is no minimum wage for the gold producer. Collective bargaining is

impossible.

The tailor and the shoemaker can sell their product in the best market. The gold producer has a tightly bound, dictated market.

HAS BUT ONE CONSUMER

The gold producer has a single consumer totally indifferent to his losses, although eager to share in his profits,

The owner of a security has wellorganized free markets in which he can offer his shares to the highest bidder.

The producer of gold is not permitted to search for bidders.

Freedom of choice is one of the basic human rights in a democracy. In the United States this is denied only to the gold producer. The law treats him as a pariah. He is an economic untouchable.

This malevolent discrimination has brought great hardship to the gold producer. The price of his products was fixed in January 1934. His costs were not fixed.

WAGES UP 189 PERCENT-GOLD REMAINS SAME

Since January 1934, wages have gone up 189.3 percent. Wholesale prices have mounted 130.7 percent. Fuel is 64.2 percent higher. The cost of living has risen 83.4 percent.

The United States Treasury still pays \$35 an ounce for gold. Since the price was fixed in January 1934, the value of the money which the Treasury uses has dropped 43 percent. The ounce of gold which the producer must deliver is still

100 percent pure. There has been no addition of base alloy to compensate for the decline in the value of the dollar. The cheating has been strictly unilateral.

When the United States abandoned the gold standard in 1933, it was believed to be a temporary expedient justified by an urgent crisis. It left the control of the currency in the hands of a bureaucracy neither elected by nor directly responsible to the people.

CONSPIRACY BEHIND NO GOLD STANDARD

Under the influence of imported English monetary dogma and totalitarian ideology the country has never returned to gold. A sinister conspiracy of silence

shrouds the question.

The Federal Reserve Board and the International Monetary Fund both have a vested interest in managed currency. They constitute a mischievous cabal opposing the return of an honest currency. The lack of a common currency denominator, which only gold can provide, has maintained artificial currency values completely out of touch with the realities of fair value.

PREVENTS INTERNATIONAL TRADE

False currency values soothing to the pride of alien ministries have prevented the revival of wholesome international

The stubborn refusal to permit gold to exercise its historic function as a currency has retarded world recovery and placed an intolerable burden on the American economy.

TREASURY PRACTICE UNJUST

Who would say that the \$35 of 1934 could be any stretch of imagination be construed as \$35 today. If that was a pledge of value to us by our Government they owe us now at least \$70 an ounce for gold, but as the Treasury Department is now administering the Gold Act the industry is only allowed to receive value of about \$17 an ounce. And remember, we are not allowed to seek other markets and sell our products to higher bidders.

The gold-mining industry has thus been picked out as the sole victim of a particularly vicious swindle, perpetrated upon it under the power and majesty of the Government which controls our money and presumably stands on the pinnacle of integrity.

The Anthracite Coal Industry

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a resolution by the Lions international district governor's cabinet in Pennsylvania, Lions district 14-H:

Whereas Pennsylvania district 14-H of Lions International is composed of 66 clubs in the anthracite coal-producing area of Pennsylvania, including the cities of Carbon-

dale, Scranton, Pittston, Wilkes-Barre, Nanticoke, and Hazleton, and many important boroughs and towns, having a membership of about 3,500 members; and

Whereas the anthracite coal-producing area with its mining industry and other important industries located therein is impor-tant to the security and welfare of the great Keystone State of Pennsylvania, and our Nation; and

Whereas the said area is presently suffering from unemployment and the coal industry is not very prosperous for many reasons, among which are competition from oil and gas, and the importation of cheap residual oil from abroad, the tremendous problem of dewatering and drainage of the mines; and

Whereas the said anthracite area is in dire need of help and assistance from both the State and Federal Governments in the rehabilitation of the said industry; and

Whereas both the said State and Federal Governments should exercise the power and authority vested in them for the purpose of enacting legislation in aid of the said industry and area and making the necessary appropriation of funds for the purpose of helping the said industry: Now, therefore, be it

Resolved by the members of the district governor's cabinet in Pennsylvania Lions district 14-H, in regular meeting assembled, That this appeal be forwarded to the President of the United States, our United States Senators, our Representatives in Congress, the Governor of Pennsylvania, our State senators and our representatives in the assembly, our Lions Clubs in this district and other interested bodies and persons for the purpose of supporting this appeal so that proper action may be taken by those in authority in behalf of the welfare and security of our great anthracite area and industry, our State and our Nation; and be it further

Resolved, That copies of this resolution be forwarded to the press in the district for their valuable support and aid herein.

Importation of Hams and Other Pork Products

EXTENSION OF REMARKS OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 2, 1955

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am inserting in the RECORD a newsletter report, dated March 4, 1955, published by the St. Louis Livestock Exchange at the National Stockyards.

This article discusses the depressing effect of excess imports of Polish hams, and other pork products, in helping to drive down the price of hogs and pork products in the United States, and gives facts that are worthy of the attention of the Members of Congress at the present time:

THE LIVESTOCK SITUATION

The hog and pork market worked lower again, almost daily declines in wholesale pork winding up the week with loins down as much as \$5. Increased meat tonnage apparently cannot be blamed for the current weakness, since the February meat output was at the lowest point of several months. In fact, hog slaughter last month was off nearly a million head from the January kill; the 4,600,000-head hog butchering of February could even be considered moderate when compared with the peak winter slaugh-

ter (in December) of 6,119,109 hogs.
We are indebted again to the American Meat Institute for giving wide publicity to the unusually large imports of canned hams and other pork from Communist Poland. As was pointed out several weeks ago, these Polish imports last year (almost 20 million pounds) increased 39 percent over 1953 imports; to put it mildly, it is discouraging to learn that the imports from Poland during January jumped a whopping 55 percent over the canned ham and other pork imports during January 1954. In 1955 the January imports totaled 3,627,000 pounds against 2,339,000 in the same month of 1954. imports have been running about half of the American canned ham production figure. And the Meat Institute says, "United States tariff cuts on canned hams are under consideration." Now, canned ham carries a 31/4-cent per pound import rate. A cut-rate duty could bring in a veritable flood of foreign pork.

January 1955 combined imports from all countries increased 18 percent over a year earlier but other European countries (Germany, Denmark, Holland) reciprocate by buying a lot of American products with the dollars they get from selling their canned hams here (such as lard, tallows, hides, variety meats, etc. Poland doesn't buy any pork products here to make it worse, but could be using dollars gained through the sale of hams thrown on the American market in competition with domestic products, to the strategic materials anywhere else in the world which the United States does not permit any Communist country to export from the United States.

With the serious decline of the price of hogs, it would appear, Congress and the administration ought to take a serious look at this situation and make some move to protect our own economy which is evidently being depressed by excessive imports from Communist Poland.

Handling the Government's Share of the Cost of the Civil Service Retirement Fund

EXTENSION OF REMARKS

HON, GARDNER R. WITHROW

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include a study called the Budget in Transition, by the National Planning Association:

HANDLING THE GOVERNMENT'S SHARE OF THE COST OF THE CIVIL SERVICE RETIREMENT FUND

For many years, Federal Government employees and the United States Government have shared the cost of a retirement and disability plan operated through the civil service retirement fund. From 1929 through 1953 the budget included an allowance for the Government's contribution to the cost of the system, appropriations were made, and the amounts involved were recorded as Government expenditure. They added to the total deficit as reported on the administrative basis.

The amount appropriated for many years was a compromise figure-below true actuarial cost and above the cost of current benefits and payments and for this reason and others, the liability of the Government not represented by appropriations has grown to a figure in excess of \$10 billion. This led to proposals for a reconsideration of the policy of financing the retirement fund, and studies of various possibilities have been going on for some time. Because a policy had not been worked out, Congress has refused to make appropriations for the fiscal years 1954 and 1955 in line with the pattern established during the previous 30 years of the system's life. The appropriation would have been \$368 million in fiscal 1954 (President's Budget Message for 1954, p. M52) and a somewhat greater amount in fiscal 1955, roughly about \$390 million. For fiscal year 1956, on the old basis, the figure would have been still greater, roughly about \$416 million, but the President suggested (message for 1956, p. M82) only \$216 million. These figures exclude certain cost-of-living increases for workers who have already retired, which have continued to be appropriated each year.

The failure of Congress to appropriate the amounts involved reduced the accounting totals of expenditures and the deficit. It has no effect on payments to retired employees but it allows the Government's unfunded liability figure to grow faster than would have been the case.

Highlights of changing policy with regard to the appropriation for the civil service retirement fund appear in the budget messages sent by the President to the Congress during the past few years. In the message on the 1953 budget, the President said (p. M75):

"The cost of civilian employee's retirement benefits is financed by contributions from the employees and the Government. By law, Federal employees covered under the system are required to contribute to a trust fund 6 percent of their salaries, and the Govern-ment is required to contribute an amount sufficient to cover the remaining cost of benefits. The Government contribution for the fiscal year 1953 consists of a normal contribution of 2.78 percent of payroll to pay currently accruing costs, and a deficiency contribution to pay interest on and provide for amortization of the Government's accrued liability to the fund. This liability results from employees' services rendered prior to the effective date of the system, credits for military service, and insufficient appropriations for the Government contribution in some years. This budget includes \$458 million for the annual contribution of the Government for the fisctl year 1953 to the civilservice retirement and disability trust fund. \$148 million more than in the current fiscal year. This estimate takes into account the higher benefits future annuitants which will result from a recent advance in the pay rates for Government employees. It also provides for the first of 30 annual payments to amortize the Government's accrued liability to the fund so that the retirement system eventually will be financed on a full reserve basis, as is contemplated by the Retirement Act."

Congress questioned the program suggested by the President and established a committee to report on the problem. It appropriated \$324 million for 1953, however, which represented a continuation of past Government policy.

In the message of the 1954 budget, the President said (p. M52):

"I am recommending appropriations of \$427 million to cover the Government's obligations to the civil-service retirement and disability fund and \$3 million to pay annuities under special laws. The Government's obligations to the civil-service retirement and disability fund includes \$59 million to cover the cost for 1953 and 1954 of the temporary increase in benefits voted last summer for persons then receiving annuities from the civil service retirement system, and \$368 million for its contribution as employed for the fiscal year 1954. The amounts I am recommending do not provide for payments on the Government's outstanding liability

to the fund, since this is one of the problems to be studied by the Committee on Retirement Policy for Federal Personnel recently established by the Congress."

Congress falled to appropriate the amount

requested by the President, waiting instead for the report of the committee that it had established.

In the message on the 1955 budget, the President said (p. M101):
"An appropriation of \$30 million is recom-

mended to permit the continued payment to retired Federal workers of temporary costof-living increases as authorized by the Congress in 1952. The budget also includes \$2 million to pay annuities under special laws.

"The civil-service retirement system is financed jointly by employee contributions and appropriations by the Government. The Congress, at its last session, however, did not appropriate for the Government's payments to the fund. The resumption of these payments is not included in this budget. Recommendations for financing this system as well as other retirement programs for Federal personnel will be determined after the Committee on Retirement Policy for Federal Personnel completes its study and reports to the Congress on or before June 30,

No appropriation was requested for the fiscal year 1955 and none was made.

In the message on the 1956 budget, the

President said (p. M82):

"The civil-service retirement and disability system should be financed on a more satisfactory basis. Employees now contribute 6 percent of pay, covering about one-half the currently accruing cost, and the Government is responsible for the rest of the cost. the past the Government's share of payments to this fund has not been provided on & consistent basis and in the last 2 years appropriations have been deferred pending the report of the Committee on Retirement Policy for Federal personnel. The Committee's report to the 83d Congress establishes the necessity for a sound and lasting financial basis for the civil-service retirement system. Financing of the civil-service system is a problem requiring careful consideration because of its importance to the Federal career service. For 1956 I am recommending a Government contribution of \$216 million. which is estimated to be the difference in that year between the Government's share of current benefit disbursements and the interest earned on its part of the fund. This will serve to maintain at its present level the equity the Government already has built up in the fund through its past contributions."

A table showing the figures on appropriations to the civil-service retirement fund by the Government on the basis of policy decisions existing in 1953 and prior years, compared with actual and proposed appropriations, is set forth below

In millions of dollars?

Year	Old basis	Actual and pro- posed	Differ- ence
1952	310	310	0
1954	368	0	368
1955	1 390	0	390
1956	1 416	216	200

¹ Estimate.

The estimates for 1955 and 1956 are rough projections based on the figures used in 1953 and prior years. They are lower than the estimated \$794 million level premium cost to the Government, carried in the tables of the report of the Committee on Retirement Policy for Federal Personnel which was submitted to the 83d Congress on June 29, 1954. Included in the level premium cost are amounts necessary to put the system on # self-sustaining basis.

Majority of Security Risks Hired by Eisenhower Administration

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by John Cramer entitled "Air Force Aide Says the Big Majority of Security Risks Were Hired by Ike." The article appeared in the March 11, 1955, issue of the Washington Daily News and follows:

AIR FORCE AIDE SAYS THE BIG MAJORITY OF SECURITY RISKS WERE HIRED BY IKE

(By John Cramer)

Somewhere between 75 and 95 percent of all Federal employees "separated" from the Air Force under the Eisenhower administration's security program were employees hired by the Eisenhower administration.

That, in case you missed it, was the meaning of testimony given a Senate Government Operations subcommittee this week by Fred Ayer, an Air Force intelligence representa-In effect, it confirmed this column's estimate of last October 15 that "up to 75 percent" of all Eisenhower administration security risk separations involved employees hired by the administration itself.

It confirmed it—but strongly indicated the estimate may have been on the conservative

side,

And it cut new ground from under Republican politicians who have given the public the completely misleading impression that virtually all of the administration's security risk separations involved employees appointed by previous administrations.

That couldn't possibly be true. But, as politicians will, the GOP politicians have done their best to convince the public it is true.

Last October 15, this column said:

"Up to 75 percent of the 6,926 Federal employees the Eisenhower administration claims to have separated from the Government payroll as security risks may have been hired by the administration itself.

That is this reporter's estimate based on an analysis of past and present Government hiring and investigative practices.'
The column went on to explain:

That the great bulk of Federal employes are hired on a subject-to-investigation basis. That these investigations inevitably turn up many employees who have falsified their job application forms * * * who had police records as criminals, or drunks, or sex per-

That most of these employees ordinarily are dismissed before the end of their 1-year probationary period and generally within a

few months.

That previous administrations separated them under an unsuitable label.

That the Eisenhower administration has been separating many under a security risk

That these separations, mostly within the first month (or probationary) employment, undoubtedly had removed a great many Elsenhower appointees—and undoubtedly accounted for a high proportion of the administration's accounted to the second t ministration's security risk totals.

After the story in this column appeared, there were several attempts to minimize it.

NOT FULL STORY

For example, Vice President RICHARD NIXON, who made much of the security risk lasue in his campaigning in the West, cited

previously unpublished figures which showed that the vast majority of all State Department risk separations involved employees appined by previous administrations.

There is no reason whatever to question

his figures.

But State Department, for a number of reasons, is not a typical Federal agency.

Air Force is far more typical.

And the Air Force's Mr. Ayers told the Senate subcommittee that "95 percent of the Air Force statistics" published as security risk cases "would be probationary employees"—meaning those who had been on the payroll less than a year.

That doesn't quite mean that 95 percent of all Air Force security risk separations were Eisenhower appointees.

What it does mean is this:

That an absolute minimum of nine-six-teenths of the Air Force risks must have been Eisenhower appointees.

That the actual proportion almost certain-

was much higher.

Until very recently, the administration defined security risk separations as including all employees who were fired as security risks—all who were fired for other reasons, under regular civil service procedures, and who subsequently were listed as security risks-and all who resigned before a final decision on charges—even though they didn't know about the charges.

These standards were modified in December to exclude employees fired under regular civil service procedures-and to make a distinction between resigned employees who knew about the charges against them, and

those who didn't know.

But the original standards were the ones in effect last October when this column presented its "up to 75 percent estimate."

They also were in effect last September 30—the last date for which administration

security risk totals are available.

According to Civil Service Commission, Air Force security risk separations totaled 680 between May 28, 1953, the starting date of the security program, and September 30, 1954.

According to the Air Force's Mr. Ayers, "95 percent" of the separations in this 16-month period involved probationary employeesthose who had served less than a year.

Five months elapsed between January 1953, when the Eisenhower administration took office, and May 28, 1953, when its security program went into effect.

This period undoubtedly brought the removal of the vast majority of all remaining Truman probationary employees who had failed to stand up under investigation.

In fact, the proportion of Truman appointees in the Air Force risk separation could equal seven-sixteenths only if no Truman risk appointed after May 28, 1952, had been separated until May 28, 1953.

A much better guess is that at least 90 percent were separated within the first 5 months after appointment.

In other words, before the Eisenhower administration program started.

H. R. 4720

EXTENSION OF REMARKS

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. McGREGOR. Mr. Speaker, on Thursday, March 10, this Congress passed H. R. 4720-what might be called the career incentive bill. In my opinion this legislation will have a tremendous effect upon the morale of our people as well as upon the military and economic condition of our country.

This bill will increase the base pay of the active, retired, and Reserve forces of our military units and certainly it will be an incentive for young people to make a career of the armed services. I have always advocated, and last year introduced House Resolution 521, requesting that a study be made to make the Armed Forces more attractive, giving those who volunteer their services, compensation, and benefits comparable to what could be earned in civilian life. I want to thank the military, administration leaders, and especially the Armed Services Committee for their cooperation in considering my resolution.

I firmly believe that the intent of my resolution, at least a portion thereof, has been put into effect by the passing of H. R. 4720.

I am sure all of us recognize that we must have an adequate defense and I am certain that this legislation will go a long way to help this Nation protect the freedoms that we all enjoy.

I am one who does not like the word compulsion and one who firmly believes that the least Federal controls we have the better off we are. I hope and pray that this increased incentive will so attract the younger people into military service that we will soon be able to do away with the draft and other forms of compulsory military training.

Textile Tariff Cuts Hurt Workers

EXTENSION OF REMARKS OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include an editorial which recently appeared in the Charlotte Observer, the outstanding evening newspaper published in Charlotte, N. C.

This editorial makes it clear that the textile worker in the United States is the one who will suffer most from a further reduction in our already low tariff on textiles. The editorial follows:

The 24 trade groups associated with the American Cotton Manufacturers Institute were a little sweeping in their criticism of reciprocal trade agreements, but their advice against "hastily enacted" legislation was sound.

Their warning is particularly applicable to the textile industry, which is especially vul-nerable to ill-advised reductions in tariffs on its products. These cuts have already averaged 37 percent and have affected 91 percent of the industry's products. In some indi-vidual cases, the tariff has been reduced by 50 to 75 percent.

In the cotton textile industry labor costs comprise 67 percent of the total value added to the raw material by manufacture. Since the cost of cotton to foreign manufacturers is just as low as it is to American firms, and in many cases lower, any further cuts in the tariff would probably have to be taken out of the 67 percent that goes to wages.

A comparison of wages in the United States and in other leading textile manufacturing countries will show why this is so. The average hourly wage in the American textile industry is \$1.30. In Switzerland it is 43 cents, in Britain 45 cents, in France 39 cents, in Germany 31 cents, in Japan 13 cents, and in India 9.5 cents.

The Japanese industry, where the wage is one-tenth of the American wage, is rapidly returning to its prewar production, but many of its former markets have been cut off. If the tariff were lowered so that Japanese textiles could enter this country at a profitable rate, the American textile worker with his \$1.30 an hour would be competing with the Japanese worker at 13 cents an hour.

In that case the competition would not be between the American and the Japanese manufacturer, but between the American and the Japanese workers.

The argument of the free-trade group is that American business could make up for the difference in wages with greater efficiency. That is not true. The Japanese industry was almost destroyed during the war. It has been replaced by the most modern machinery, fully as efficient as ours.

The same is true of the industry in France and Germany, where wages are about one-fourth of the American wage. India likewise is installing modern machinery with American foreign aid money, but the people operating the machines get only 9½ cents an hour.

The American textile worker is the one who would be hurt by that kind of competition. The free traders ought to think about that.

What Should Be the Government's Farm Policy?

EXTENSION OF REMARKS

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an essay written by a young man, James J. Tarrou, of the Ashland High School, Ashland, Ohio. I recommend this reading to my colleagues:

WHAT SHOULD BE THE GOVERNMENT'S FARM POLICY?

Different ideas and proposals on various aspects of the Government's farm policy have been top political questions for years. Now it is even more important than ever that we take an objective look at our present agricultural policies. Our program should be one that will promote reasonable farm prices, give farm control back to the farmer, and provide for an expanding and changing economy.

The present piecemeal program under which we are now operating is totally ineffective because it provides for none of these things. But in fact it has forced unnaturally high consumer prices, resulted in unmanageable surpluses, priced us right out of the foreign markets, forced socialistic production and marketing controls on American farmers, and allowed farm prices to drop for 5 of the last 6 years.

It is time that we had a long-range farm program, geared to the future. Agriculture is not a piecemeal business; it cannot have a piecemeal program. As a long-rang policy the theory that we are over-producing is not

true. The real trouble is that we are underconsuming. It is true that for several years, we have been producing an over-abundance of certain commodities, but this is due to unrealistically high price supports which encourage unusually high production of these items.

We need a sliding price-support system that will allow farm commodities to sell at a normal level as long as that level does not threaten disaster to the farmer.

United States Department of Agriculture statistics show that price supports are on less than 25 percent of all the farmer's crops, and that for the last 20 years the prices of nonsupported crops have averaged slightly higher in relation to parity than the prices of those supported.

It must also be remembered that profit is not price alone; it is price times volume minus expense. It would do no one any good to receive \$10 a bushel for wheat if he had no wheat to market. But in many areas farmers are faced with the serious problem of not having enough cash crops to sell because of strict acreage allotments.

American agriculture naturally will produce more food than can be consumed in the United States. At the same time many countries have minerals and raw materials which we need, but which cannot or will not produce enough food for their people.

If our agriculture is to be prosperous, as it can truly be only when it is producing at full capacity, and if we are to obtain the much-needed raw materials, we must be able and willing to trade with other countries.

As long as we have the food we have a moral and political obligation to get it where it is needed. Whether communism or freedom wins the battle for world dominance depends on which one can get the most goods to the most people.

The last, but an equally important, factor in a successful farm program is expansion of education and research. It is estimated by leading economists that within a little more than 10 years our population increase will require 20 percent more food. American agriculture can and will meet these increased demands, but that is only for 10 years. What about 25, 40, or even 50 years? Again agriculture will respond, but it becomes obvious that the solution to our farm problem is through plenty, not scarcity.

No matter what the unforeseeable demands on American agriculture may be, they can be met through research. Research is the key to the future and to prosperity.

If we continue research and develop ways to market our surpluses where there is a demand, we will have a prosperous agriculture. Prosperity can come only through production.

If we follow this plan of sliding price supports, an opening of foreign markets, and increased education and research, we can expect to have an agricultural economy which will meet the needs of the Nation and the world for years to come.

BILL VAN TIBBURG.

He Bit Off Too Much

EXTENSION OF REMARKS

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the Congressional Record, I include an article from the Washington Post and Times Herald of Monday, March 7, 1955,

by George Sokolsky entitled "He Bit Off Too Much."

The article is as follows:

THESE DAYS
(By George Sokolsky)
HE BIT OFF TOO MUCH

You never know what you are liable to get into when you act as a plain citizen who helps to pay the civic bills as a taxpayer, and you begin to question the experts. The new rule seems to be that those who call themselves experts having spoken, it is for the rest of us to tremble and obey.

I got into a thing called fluoridation because I read an article in the Scientific American about this stunt. I did not like the authors' approach to the problem, since, in effect, they started out by telling those who might disagree with them that they were swinish antiintellectuals. As I read their profluoridation article my hackles rose and I said to myself that apparently nobody knows whether this thing is really good of bad except for small children and why not buy it in a drugstore. I have since discovered that I have paid cash money to a dentist to do it on my children out of a bottle. In fact, a study on the use of a stannous fluoride dentifrice appears in the Journal of the American Dental Society for February.

the American Dental Society for February. Having said such things to myself. I thought that maybe I would share my thoughts with my gentie readers, when lo and behold, upon my head fell a mountain of literature, pro and con, articles signed by physicians and dentists who favored and opposed fluoridation and even more material from those who join movements and become fanatical about them, no matter on which side.

I have now gone through this accumulation of literature, first having thrown away all the duplicates. What I discover is this:

all the duplicates. What I discover is this:

1. Fluoridation is good for children up to
their 8th year;

 It can be done out of a bottle bought in a drugstore by dentists and is being done;
 It does not help adults much, if at all;

4. The dental profession is not 100 percent in favor of fluoridating drinking water to lessen the danger of caries, which is fancy talk for a cavity; some dentists say that the arguments for it are nonconclusive; others say, "What do you know about it, you aren't a dentist?"

5. Nobody denies that fluorides in water, even in small quantities, can affect the kidneys adversely and can later in life show up in kidney stones; the pros take the position that the quantity used in drinking water is so small that the danger is not worthy of consideration. Still, if you get a kidney stone, you would know that it hurts and can cause great damage;

6. Nobody bothers about the citizen who is alergic to the stuff; perhaps he will drink bottled water or gin. When I go to Chicago for instance, I order bottled water from Wisconsin because the taste of Chicago water upsets my digestion. But what does the fellow do who has no expense account?

7. Fluoridation at the reservoir does not control the dosage; a child who drinks 10 glasses of water a day, gets 5 times the dosage of one who drinks 2 glasses a day.

of one who drinks 2 glasses a day.

This about sums it up. I have talked to a number of distinguished dentists about fluoridation. What impressed me most is that they object to being quoted pro or con. They say it is unethical for them to express an honest opinion as citizens about a matter which involves the taxpayers' money, because they may only ethically express them selves through learned journals.

Nevertheless, I get the impression that there is division in the ranks and when doctors do not agree, what should we laymen think? Maybe fluoridation is a boon, but I remember a whole skinful of boons which in short order were silently discarded and forgotten.

Death of Thomas B. Fitzhugh

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. FULBRIGHT. Mr. President, I request unanimous consent to have printed in the appendix of the Congressional Record an article which appears in the February 1955 issue of Rural Electrification, regarding the death of Thomas B. Fitzhugh, of Little Rock, Ark. Mr. Fitzhugh was a leader in the rural electrification program, and I know that many Members of the Senate and the House of Representatives who have worked with him in behalf of the REA will regret the loss of this able and public spirited citizen.

I knew Tom Fitzhugh for many years. Not only am I saddened by the loss of a close friend, but I also realize that my State has lost an influential and progressive leader, a gentleman in business

and association.

Tom Fitzhugh, perhaps as much as any other person, is responsible for the development of rural electrification in Arkansas. He served his State unselfishly and at a great personal financial sacrifice. I know, however, that the rural electrification program, which he pioneered, will serve as a living memorial to his memory and to his tireless work in behalf of Arkansas farmers.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

DEATH OF THOMAS B. FITZHUGH IS LOSS TO RURAL ELECTRIC PROGRAM

(By Ed H. Thomas, editor, Rural Arkansas magazine)

Thomas B. Fitzhugh, a rural electric cooperative leader of national prominence who wrote the law enabling farmers in Arkansas to organize their own power systems, died at Little Rock on December 29 at the age of 46, after an illness of several months. He had served as attorney for NRECA in 1943 and again in 1946.

Fitzhugh was attorney for Arkansas State Electric Cooperative at the time of his death, as well as attorney for Ark-La and Arkansas Electric Power Cooperatives. He also was legal counsel for Central Telephone Cooper-

"The rural electric cooperatives have suffered a severe loss in the death of Tom Fitzhugh," Harry L. Oswald, executive manager of the Statewide, said. "His service to the farmers in the State has extended over nearly 20 years. He distinguished himself in public affairs as well as in the activities of the rural electric cooperatives."

Fitzhugh was on the publications committee which launched Rural Arkansas magazine in 1946 as the official publication of the State co-op and worked with Oswald (at that time field representative of REA) in starting the series of local co-op annual meetings on a rotational basis since copied by many statewide associations. In the realm of power supply, Fitzhugh took the lead in obtaining approval for engineering surveys which resulted in a loan of \$101/2 million to build a co-op steam generating plant and transmission system in northwest Arkansas—a proposal blocked by lawsuits filed by the commercial utility companies in the area.

Tom Fitzhugh started his public career in 1932 when he was elected city attorney at Augusta and graduted to State politics in 1936 when he managed the successful campaign of the late Carl E. Balley for attorney general, then becoming assistant attorney general. Two years later Fitzhugh managed the campaign which made Balley governor.

The man who later was to become a leader in the rural electrification drive by the cooperatives which boosted the number of electrified farms from less than 2 percent to more than 85 percent in the State in less than 20 years was appointed by Governor Bailey as chairman of public-utilities division, which now is the public-service commission. Early difficulties in getting the commercial utilities to even quote a rate to the cooperatives spurred Fitzhugh's interest in helping farmers obtain their own rural power systems. This interest in welfare of farm people was reflected in other activities. He helped organize the Arkansas Plant Food Co. and was its attorney as well as counsel for the Arkansas Farmers Association.

Fitzhugh helped organize many of the REA-financed co-ops, teaming up with Waldo Frazier, of the Farm Bureau, and E. E. Karns, then with the Extension Service, in holding meetings of farmers at many communities. While he was on the utility regulatory agency, Arkansas took the lead in adopting the area allocation plan, under which service territory was assigned to the utility best able to serve it, whether the power supplier was a commercial company or a cooperative. This policy helped to hold the building of so-called spite lines to a minimum in Arkansas, enabling the State to escape expensive duplication of utility lines. Sixty percent of the area of the State is allocated to the co-ops, practically all of it rural because the law prohibits a coopera-tive from serving in a town of more than

His first visit to Washington, in the interests of rural electrification, took Tom Fitzhugh and Governor Balley in 1937 to the office of REA Administrator Morris L. Cooke to inquire what was needed to give Arkansas farmers adequate electric service at a reasonable rate. Decision to write an enabling act to permit organization of REA-financed co-ops grew out of this meeting.

Serving on the Public Service Commission until Homer M. Adkins became governor in 1941, Fitzhugh went into private law practice in Little Rock, becoming legal counsel for Arkansas State Electric Cooperative when it was organized by the 18 rural electric coops in the State. He was in the Navy in World War II assigned as an armed guard officer on merchant ships facing danger of submarine attack. Returning late in 1945 he resumed his leadership in the rural-electric program.

He studied in the school of business administration at Washington and Lee University at Lexington, Va., for 3 years and received a law degree there after 3 years of additional study. Opening a law office at Augusta, he spent much of his time in management of the family's farm interests which included more than 3,000 acres along White River in Woodruff County. He was president of Fitzhugh, Snapp & Co., a general merchandising firm in the town of Fitzhugh, 7 miles north of Augusta, and of Fitzhugh Gin Co., in Woodruff County.

At the time of his death he was a partner in a legal firm with Howard Cockrill at Little Rock. He was a member of Christ Episcopal Church at Little Rock, the Little Rock Country Club, and the Arkansas and American Bar Associations.

He is survived by his widow, Mrs. Camille Waldron Fitzhugh, formerly of Walnut Ridge, and four sons, Thomas, Edward, James, and David, also a brother, Davis Fitzhugh, of Augusta.

Slovak Independence Day, March 14

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. FLOOD. Mr. Speaker, on March 14, 1939, the Slovak Parliament, perhaps under unusual circumstances, but nevertheless, declared the independence of Slovakia. I say under unusual circumstances, because the Slovaks would not have chosen that particular time to declare publicly what we and the whole world consider as their God-given and inalienable right to do. But were it not for the pressure exercised by Germany the yearning of the Slovaks for their national home would have been delayed much longer. As it happened, March 14 became the day of the fulfillment of Slovak national aspirations.

At the commemoration of this historical day of Slovaks throughout the world, I wish to remind the Members of the House that it was our own President Wilson who was intimately acquainted with the situation of the Slovaks in the newly born Republic of Czechoslovakia and that it was exactly this President who, after witnessing the plight of the Slovaks in that new state, proposed that the right of self-determination of the Slovak Nation should be brought to the attention of the League of Nations at one of its first meetings.

That this was so, is testified by no one less authoritative on this subject, than was the eminent American journalist and aide to President Wilson during the Versailles negotiations following World War I, Colonel Stefan Bonsal, who as a close friend of the foremost Slovak Patriot General Milan R. Stefanik witnessed the interview of President Wilson with General Stefanik at Paris in 1919, and who later was to learn about the Slovak national aspirations from other sources.

As it appears to us Americans, we may object to the Slovaks that they seized the opportunity to declare their independence on March 14, 1939, when Germany seemed to dominate the fate of the whole area of central Europe, a Germany which at that time was or was about to become our enemy. But, as we cannot blame the sick for accepting medical treatment at the first opportunity of seeing a doctor instead of waiting in agony for their own doctor, so we cannot reproach the Slovaks for the very fact of having declared their independence in 1939 instead of waiting for our own encouragement.

No, we cannot reproach them for having used their God-given right for freedom; on the contrary, we join our Slovak friends throughout the world in their joy of the glorious past of their nation and in their hope that soon again the chimes of victory of the good over the evil will ring in Bratislava and Kosice the hymn of freedom and liberty denied to them now under the Communist domination.

To make this possible, however, we cannot just stand by. We have to en-

courage all such brave and democratically minded Slovaks throughout the world, and their organizations that we are willing to help them if they also will help themselves. In this respect, I mean not only the organizations of those Slovak exiles who before all are responsible for the liberation of Communistdominated Slovakia, such as the Na-tional Committee for Liberation of Slovakia, but also organizations, clubs and lodges of Americans of Slovak descent, who are inspired by the plight of so many of their countrymen in Slovakia. Only recently one such organization was founded in the Luzerne County district under the guidance of some of my friends such as John T. Kmetz, Andrew Kosik, Stephen Farris, John J. Baloga, John Adamchak, and others in order to seek ways and means for a better understanding of the Slovak problems.

As for me, I have already expressed my views about the Slovak problem when on July 3, 1952, I introduced House Concurrent Resolution No. 238, in which I have not only stressed the traditional friendship of the American people with the people of Slovakia, and reaffirmed the firm conviction of the American people that the Slovak people have the right of self-determination and the right to be governed by their own consent, but, ever since, I have convinced myself by closely studying this same problem, that only then when Slovakia will become an equal member of the family of free nations, peace will prevail in that area of central Europe.

Backward Farm Step

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the Congressional Record an editorial from the March 10, 1955, edition of the Washington (D. C.) Evening Star:

BACKWARD FARM STEP

The House Committee on Agriculture has taken a predicted step backward in approving legislation which would restore the mandatory 90 percent of parity price supports for five basic crops—corn, wheat, cotton, peanuts, and rice. The same legislation would raise the discretionary minimum on dairy supports from 75 to 80 percent. It is legislation which should be defeated in the Senate if it passes the House.

The high, rigid price-support program, adopted originally as a temporary wartime formula, was set aside last year by legislation authorizing flexible supports for the 5 commodities within a range of 821/2 to 90 percent of parity. Actually, the authority to lower the supports does not become opera-tive until the 1955 crops come in, so this formula for Government aid has not been tested and is not, of course, responsible for the declining trend in farm prices which has been noted since 1951. Meanwhile, however, the high support program has resulted in Government purchase of billions of dollars of commodities-products that were

destined to be surplus even before they were planted or harvested. Furthermore, the chief beneficiaries of this wasteful program, as President Eisenhower pointed out last year, have been about 2 million owners of large and highly mechanized farming Little or no benefit has gone to about 3.5 million small farmers. At the same time, the consumer-taxpayer has footed the bill for unneeded purchases and storage, as well as in higher prices for the commodities being held off the markets.

Under other legislation enacted last year, the Government is authorized to dispose of some of the huge commodity stocks in return for foreign currencies, goods or services, and, within limitations, to give away some for famine relief. The Department of Agriculture has reported substantial progress on this program. In addition, expansion in research and educational work in agriculture is under way and a special study is near completion on the problems of the lowincome farmer. Last November's farm area voting in the congressional elections did not indicate any pronounced displeasure with the administration's approach to the agricultural problem. Certainly it warants a fair trial, and there should be no retreat to a system that failed because it was not designed for normal peacetime periods.

Hon, William H. Ayres, of Ohio

EXTENSION OF REMARKS

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial written by a personal friend of mine, Mr. G. J. Kochenderfer, who has been an editorial writer for the Mansfield News-Journal many years. This editorial is of particular interest as it refers to my friend and distinguished colleague and very capable Congressman from Ohio, WIL-LIAM H. AYRES. Congressman Ayres is doing an outstanding job for his constituents as well as the people of the country. I am sure the editorial will be read with a great deal of interest by his friends:

A CLASS PROPHECY THAT CLICKED-GRADUATE OF WELLER TOWNSHIP SCHOOL, NOW CON-GRESSMAN, AS PREDICTED

(By C. J. Kochenderfer)

Remember that class prophecy which was put forth when you were graduated from high school? Think back for a moment on how it happened, and then you may be surprised at the accuracy of one such prophecy that took a forward look of 18 years.

This reference is being made to a graduate in the class of 1932 from Weller Township High School, who, according to the prophecy, was to be a Member of Congress in 1950and it was in exactly that year that he was first elected to Congress from Ohio's 14th district, which includes Summit County, with Akron as its chief city.

This is another of the instances in which the placement of a Methodist minister was instrumental in bringing to Richland County a boy who, without his guessing it at the time, was destined to succeed beyond the ordinary, and it is to a Mansfield teacher that he gives much credit for the upward start.

The name is WILLIAM H. AYRES, now serving his third term in Congress, having been re-

elected in 1952 and 1954 as a Republican in

what is thought of as a Democratic district.

Born in Eagle Rock, Va., February 5, 1916,
the son of Rev. and Mrs. William H. Ayres, WILLIAM, Jr., was subject to the changes to which Methodist preachers of that period became accustomed, and it was in 1927 that his father's transfer from Brighton, Ohio, to the Pavonia Church, with inclusion of the Franklin and Olivesburg churches in his cir-

So it came about that five of WILLIAM's youthful years were spent in this country; years which concluded with his graduation from Weller-Union High School, as it was known then.

Now comes the name of a Mansfield teacher into the story—Miss Pearl Danback, 223 South Franklin Avenue—who teaches mathematics (geometry) in MHS, but who was then principal of Weller-Union School.

It was Miss Danback who recognized Wn.-LIAM's above average potentialities and it was at her insistence that he became active in debating. She also encouraged him to apply for a scholarship at Western Reserve University, which he received and was among the graduates from WRU in the class of 1936, with an A. B. degree.

First employment after college graduation was as a salesman of heating equipment in Akron, interrupted by service as a private in the United States Army during 1945 and 1946. After discharge from the Army WIL-LIAM established his own heating and insulation business in Akron, which continues under the name William H. Ayres, Inc., of which he is president.

Difficulties encountered in a suit against the East Ohio Gas Co., including governmental interference, stimulated WILLIAM's interest in politics, in which his first venture was to run for Congress at a time when he admits having been naive enough to think that one man could correct a lot of evils quickly. Anyhow, William is now serving in this third consecutive term, which may be taken to indicate that he is doing right well in pleasing his constituents.

Recollections of occurrrences of school days in Weller township remain fresh in WILLIAM'S memory with eighth grade attendance in the one-room school in Payonia.

It was while in the eighth grade that WIL-LIAM accumulated enough savings, from trapping muskrats and skunks, to buy a Model T runabout, which provided transportation to high school for himself and some neighborhood children. Remembering that he was a 12-year-old at that time, William now wonders how the parents of the children who rode with him to school ever consented for them to do so. However, he was paid \$1 a week by each of those he provided with this transportation service-which seems fair enough.

It was while a high-school senior-at the age of 16-that a painful experience came about. William had been chosen valedictorian of the class and had prepared what he felt sure would be a terrific speech.

But fate intervened, and on the morning of Friday, May 13, 1932 (note the Friday the 13th), a baseball bat slipped from the hands of Perry Phelps, a classmate (also a riding passenger), and struck William on the mouth, knocking out seven teeth and breaking his jaw.

Thus, instead of declaiming his carefully prepared speech, William could do no more than sit on the platform, with his remaining teeth wired together and his jaw supported by a contraption that resembled a birdcage, while Miss Danback read his speech.

Also remembered is an episode of the summer of 1931 with unpleasant consequences. It was while WILLIAM was engaged in a tussle with Wendell Oswalt, who now conducts an office equipment business at 187 Marion Avenue, that Wendell's collarbone was broken

and William was required to do all of the heavy work on the Oswalt farm that would have otherwise fallen to Wendell, who did no more than lead the horse that pulled the hay up to the mow while WILLIAM (or BILL, as he was then known), was already in the mow doing the real work.

There was also a time when WILLIAM, as a schoolboy, played on the McVey Post American Legion junior baseball team, of which Ralph Hughes, now court bailiff and probation officer, served as director for 10 years, and the friendship of WILLIAM and Ralph has

extended through the years.

By the way, it was Miss Leota Pittinger (now Mrs. Arthur Boyce, of Shelby) who prepared the class prophecy which, in its forecast if William's later career, proved amaz-

ingly accurate.

It was the first girl with whom he became acquainted after entering Western Reserve-Miss Mary Helen Coventry, then at the age of 16-who became William's bride on April 1, 1937. Their home is at 804 Sunnyside Avenue, Akron 3, and they have three children: Virginia, 16; Frank, 14; and July, 10.
William's office is 227 West Exchange

Street, Akron, and during the time he is required to be in Washington as a Member of Congress he can be addressed at the House

Office Building.

Information from the current issue of Who's Who is to the effect that he holds membership in the American Legion, Amvets, Eagles, and Moose, also that he is a Methodist.

Appreciation of his father and mother is expressed in WILLIAM's realization that they were "very understanding parents," and he comments: "Being raised in a Christian home is a wonderful experience." His mother had been a missionary and had always seemed to consider her son a likely prospect for that field of activity, but circumstances directed otherwise.

WILLIAM's father has now retired from the more arduous tasks of the ministry but continues to serve as pastor of the Brokensword Methodist Church, north of Bucyrus,

Defense of Quemoy and Matsu Islands

EXTENSION OF REMARKS

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Congres-SIONAL RECORD, I include a letter from Mrs. Robert V. (Gertrude S.) Cram, Minneapolis, Minn., with resolution adopted by the members of the Second Ward DFL Club, recommending that the United States not defend the Quemoy and Matsu Islands against Communist China, Also, that our foreign policy should make Formosa a United Nations protectorate, preliminary to self-determination.

The letter and resolution follow:

MINNEAPOLIS, MINN., March 7, 1955. Hon. Roy WIER,

Washington, D. C.

DEAR MR. WIER: I have been instructed to send you the enclosed copy of a resolution adopted by the DFL Club, of the second ward, at a recent meeting. We hope it will help your thinking on this important question.

Sincerely yours.

GERTRUDE S. CRAM Mrs. Robert V. Cram, Secretary, Second Ward. DFL Club.

Whereas there is great uncertainty about United States responsibilities in the Formosa areas; and

Whereas this uncertainty may be less of a deterrent than a provoker of war: Therefore be it

Resolved, That the Second Ward DFL Club considers it sound United States policy not to defend Quemoy and Matsu Islands. Also, it should be United States policy to take steps to make Formosa a United Nations protectorate, preliminary to a self-determining

Textiles and Tariff: New Approach to the Revolution in World Trade

EXTENSION OF REMARKS

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. JONAS. Mr. Speaker, under leave to extend my remarks, I include a thoughtful editorial which appeared recently in the Charlotte News, an outstanding afternoon newspaper published in Charlotte, N. C.

The Charlotte News has been outspoken in its advocacy of a liberal trade policy for our country. The editorial makes it clear that the News has not shifted its position but points out that one country cannot, by itself, bring about a revolution in trade and urges a realistic approach to the problem. The editorial follows:

The administration's new reciprocal trade bill (H. R. 1) is no tempest in a tariffpot. It is a genuine, full-blown threat to Dixie's multi-million-dollar textile industry and to the economic security of armies of south-

The effects would be felt right here in Mecklenburg if the textile industry-or any significant portion of it—should be sacrificed to foreign competitors.

The measure—which would extend the 20-year-old reciprocal trade law 3 years and give the President additional powers to reduce tariffs 5 percent a year during the period is dangerous in its present form. It would be folly to extend the law without adjusting it to the realities of the age.

These sentiments do not represent a major shift in the basic beliefs of the News. the past, our editorial policy on trade has been based on two cardinal points: (1) The more trade the better; (2) the freer it is the better.

We have not changed but conditions have altered the timetables of progress. We still believe in the free movement of goods throughout the world. We still maintain that it is a goal toward which the nations of the world must work. But one country cannot, by itself, bring about a revolution If it tries today, it will be caught in trade in a whirlwind of conflicting economic and strategic currents.

While nodding heads in unison about the necessity to reduce tariffs and stimulate a liberal trade policy, too many foreign nations have been silently erecting sky-high barriers to free trade. Import quotas, currency-control straitjackets, import licenses and every other conceivable protectionist device are being put into effect. A whole new arsenal of economic weapons has been developed. They make tariffs seem like horsedrawn artillery in a world of atomic armament.

But there are other new ingredients in the international trade stew as well.

For one thing, the ever-quickening technological and scientific revolution, which is undercutting the advantages of international specialization, is making the world even more fiercely competitive. Adequate mechanisms of adjustment have not yet been forged.

Under ideal free-trade conditions, one area

might be watchmaker for the world-because it might have a corner on the raw materials, skilled labor, efficient machinery, etc. In exchange for its watches it could receive other items from other specialized areas that produce them—on a stuff-for-stuff basis. The theory is that if a nation wants to sell, it must also buy. Every country has something to sell, something else to buy.

But look at textiles. They are produced all over the world. Techniques are about the same. Equipment is almost identical. There's not a great deal of difference in efficiency-although Americans have a par-

ticularly high rating.

There is, however, a difference. It is in wages paid labor. The average Japanese textile worker makes 13.6 cents an hour. The average United States textile worker makes about \$1.30 an hour. This is a ratio of about 10 to 1. When you consider that, in textiles, labor costs make up 49 percent of the value added by manufacture, the importance of this difference is clear. (Wages are not the only cost differential; there is also a disparity in the cost of cotton, equipment, and transportation.)

Japan is one of the world's principal manufacturers of textiles. United States foreign ald helped put the industry on its feet after World War II. Even under present tariff schedules, it is flooding the United States with cotton goods. In December alone, 85,-300 dozen woven cotton shirts entered this country from Japan. Prices are considerably below general United States levels. Quality is not always sleazy.

This competition has already injured United States producers. In the third quarter of 1954 (latest available figures), profits on sales after taxes amounted to only 1 percent-lowest level since 1938. Last year the United States lost 600,000 spindles while Japan was adding more.

The South-and particularly this immediate area-is, for better or worse, built upon a cotton economy. This is not a happy or particularly healthy situation. But it is a fact. Any sudden jolt to the textile industry will run like an earthquake through the region's entire economic terrain.

Slowly, new industry is being established. lowly, Dixie's economic base is being Slowly, Dixle's economic base is being strengthened and broadened. But the region is not yet ready to exile King Cotton. Human factors are involved. Too many lives are wrapped up in the prosperity of thousands of individual mills and supporting institutions and businesses. The textile South must not slash its own throat or stand idly by while someone elses wields the razor.

This does not mean, however, that the goal of a liberal trade policy should be junked. It simply means that before the United States liberalizes its trade program further, it should take stock of what the total world situation is and act accordingly. It should decide what its long-range strategic and economic interests are.

It may take a 2- to 3-year trade truce to provide a breathing spell for competitive relations to shake themselves down.

It will certainly mean that America will have to develop a clearcut understanding with its world neighbors about mutual responsibilities in international trade.

It will probably mean some additional investments abroad to open up new markets— for the United States and even for pesky rivals like the Japanese.

The Nation's first concern must be to maintain a high level of production and employment in a solvent and expanding American economy. Next, from that sound economic base, the Nation must work aggressively to strengthen the free world through the expansion of world trade. In the long run, both of these responsibilities can be discharged—if Americans have the patience, the wisdom, and the commonsense to do the job.

The Inquiry Into the Stock Market

EXTENSION OF REMARKS

HON, J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Don't Brush Off Wall Street As None of Your Business," published in the Courier Journal of Louisville, Ky., of March 4, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T BRUSH OFF WALL STREET AS NONE OF YOUR BUSINESS

Senator Fulbright is taking great pains to calm any fears that may be stirred by the prospect of his inquiry into the stock market. Obviously he does not want anybody to think that he and his colleagues on the Senate Banking Committee suspect any funny business, any unwholesomeness, any danger. He doesn't want to shake anybody's confidence or start a selling spree. He is not investigating, he insists, but only studying.

This caution on the Senator's part is a good thing. But there is no call for any apologies as to the inquiry. It too is a good thing. It can very well become a means of creating a better general understanding of great developments in our economic life. It could, in short, be highly educational, bringing more confidence rather than less.

There never was a time when such a study was more appropriate. The stock market has come to be a vital interest to more and more people. As the national product grows, incomes grow and savings, too. Last year the people of this country made more money than ever before, spent more—and still saved around \$20 billion. Here is a potential stake for investment in the essential America of production. The assurances of health and protection that a competent and sympathetic study should give might make things really move.

More and more people are buying stocks. In the United States are around 20 million individual shareholders. There are more women than men. Activity and interest have grown in the last year phenomenally. Sales on registered exchanges in December 1953 totaled around 65 million shares, of value around \$1.5 billion. In December 1954 the total was 135 million shares, of value nearly \$3.2 billion.

Is this unhealthy? Not so long as prices and the essential elements of value keep in proper proportion. Is this the case? That is what the Fulbright committee could and should find out.

Is the vast amount of trading and the dramatic increase in prices due to a competition among investors—the institutional investors (pension trusts, foundations, etc.) versus the personal investors—which might bring about an inflation and distortion of values by the old pressures of supply and demand? This is for the committee to find out and if necessary to give advice, utter warning, or propose regulation.

We can't think of a healthler sign than the entrance of these millions of individual stock buyers into the market. Responsible corporations and stock sellers seem to have the same idea. There are more and more appeals to the little fellow—pay-as-you-go plans, solicitation of popular interest in the movement of stocks. So long as these are backed up by proper scrutiny of issues, for which we have the machinery and proper insistence on equities (solid margins), the stimulation helps all. With some 10 billions in new issues of stocks and bonds taken to market last year, it is desirable to have as many investors as possible. Otherwise the capital for new and larger enterprises might dry up.

There may be a value in the Fulbright inquiry also for guiding Government money policy. Are public agencies too likely to be as skittish as investors? Is there a danger of making credit for general business purposes too tight simply because restrictions are deemed necessary to discourage stock speculation? This question from the National City Bank's letter is repeated here by way of showing that there is more than one legitimate and timely point to the Fulbright inquiry. The thing is not necessarily to be feared. On the other hand, the country might get some valuable enlightenment from it, not to say encouragement.

Mine Drainage Legislation

EXTENSION OF REMARKS

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to inform the House that on March 7, 1955, a hearing on the mine drainage bills, one of which I introduced-H. R. 2931-was held before the Mine and Mining Subcommittee of the Committee on Interior and Insular Affairs of the House, At this hearing a number of officials of the mining industry appeared in behalf of this proposed legislation and, although it affects several districts, it also directly affects the coal industry of my congressional district in Pennsylvania. I had the privilege of testifying at this hearing and herewith insert the following resolution that has been adopted by Loomis 2444, UMW, Wilkes-Barre, Pa., expressing interest and urging Congress not to delay the mine drainage legisla-

Whereas the Honorable Congressman DANIEL J. FLOOD has always taken a keen interest in the problems of the mine workers; and

Whereas he has introduced the mine drainage bill, which will boost production and provide work for thousands of unemployed through production and pumping work time: Therefore, be it

Resolved, That the mine workers of the Loomis local go on record to sing high the praises of a great Congressman and a real friend of the miners and laboring class of people; be it further

Resolved, Congressman FLoop insist on no further delay by any unfounded local opposition

Adopted by the officers and members of the Loomis Local, No. 2444, United Mine Workers of America.

PELIX THOMASHEPSKI,
President.
ALBERT STATKEWICZ,
Recording Secretary.
MICHAEL SALKO,

Adenauer Sees End to Cold War

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very enlightening article entitled "Adenauer Sees End to Cold War," written by May Craig and published in the Portland (Maine) Press-Herald of March 10, 1955. May Craig is the Washington Correspondent of this newspaper.

There being no objection, the article

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

ADENAUER SEES END TO COLD WAR (By May Craig)

Bonn.—Konrad Adenauer, Chancellor of the German Federal Republic (West), looked tired and white when he came into the small drawing room of the Palais Schaumburg to greet the group of editors and publishers with whom I am traveling. He is a tall, lean man, straight, though nearly 80 years old. He has great dignity, quiet power, is indomitable.

He was tired after the battle in the Bundestag about the London-Paris accords, the agreements about Germany in NATO, German rearmament, allowing the German Saar Valley to remain temporarily in French administration, Germany joining the Western Union of free Europe. He won all but the Saar agreement by a two-thirds vote; he won the Saar bigger than had been thought. But it was a battle, with no holds barred. An American correspondent who stayed with the battle all the time, said he thought it was the most healthful demonstration of democracy he had seen in Germany—everybody said whatever he wanted to—all the points of view, all the bitter differences were laid out, just like in our Congress.

The Chancellor came quietly into the drawing room, with several members of his cabinet. Tall windows had thin glass, curtains, and yellow damask draperies; there was a bowl of red tulips on a table, though the ground outside was covered with snow; large portrait of the wife of King Charles the Fifth looked down on us, regal in red velvet.

Adenauer wore formal morning dress, and sat comfortably on a sofa facing us. An interpreter translated what Adenauer said, a few sentences at a time.

The Chancellor said that the defeat of the European Defense Community (EDC) in the French Assembly last September had been a hard blow, but the Bundestag had voted on the next best thing and adopted it with a comfortable vote. There is no trend toward isolationism in West Germany, nor towards "anschluss," which means reunion, with the East, in that vote; it shows the desire to cooperate with the West.

He said he believed a few weeks would complete German approval and that this time France would not lag behind. For 4 years, he said, his government had told the West Germans that this was the way for Germany to go, toward unity with Europe for its defense against communism, but that this could not go on forever.

If these agreements are ratified, he said.

If these agreements are ratified, he said, then we enter "a new phase," in world politics.

After complete ratification, he said he believes the Communist cold war will end because they will see it serves no purpose. In that I do not agree—I don't think the Communists ever give up. There remains, Adenauer said, Asia, and the Middle East, with turmoil, but he trusts to the diplomacy of the United States to win a measure of success there too.

He hopes to open negotiations with Russia for relaxation of East-West tension. He hopes for decision on control of the H-bomb, which, he said, he believes is an instrument for peace because of its awfulness.

I asked him whether, if Russia makes German neutrality a condition for reunification of East-West Germany, the West Germans would consent, however reluctantly. He replied sternly and firmly that they would not.

"We are firmly convinced that a reunified Germany cannot exist neutralized," he said. "We saw the fate of Poland. Ninety percent, at least, of the East Germans want reunification, but in freedom, not in slavery."

He is not for talks with Russia on reunification unless there is some good chance of tolerable agreements for our side. just come from a talk with Erich Ollenhauer, head of the Social Democratic Party, the second largest political party, after Adenauer's Christian Democratic Party. Ollenhauer had used mealy words about Germany reunited which would be a menace neither to east or west. The Ollenhauer party is for talks with Russia now. His party does not want reunited Germany to ally with any of the occupying powers, which means—the neutrality that Adenauer condemns firmly. Adenauer wants to begin at once on the steps toward rearmament. "The world must be shown that the accords are not just a piece of paper. I believe this will show the Communists they must think again—review their plans. We need heavy equipment from the United States. We should think of steps to peace, not how many regiments. We want to be on the free European side."

Advance of the Churches

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. MARTIN of Pennsylvania. Mr. President, the spiritual strength of America is the bulwark of our national security. It is the most powerful barrier against the spread of communism and other un-American ideologies among

It is, therefore, most gratifying to have placed before us information showing how much the churches have advanced in recent years.

The data, published by the information service of the National Council of Churches is of great interest. I ask unanimous consent to have the article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHURCHES ADVANCE

The following data gleaned from Information Service published by the National Council of Churches (research and survey department) strengthens faith in the progress of religion.

"More than 94 million of the people of our Nation are members of churches or synagogues. More than 30 millions of new membars have been added in the past 14 years. A century ago, 1 out of every 6 Americans was a church member. Today the ratio is better than 1 out of 2—more accurate-

ly, 6 out of 10. Since 1920, church membership has increased twice as fast as the population; it has doubled while the population increased by 50 percent. In 1940 less than one-half the people were church members; today 60 percent."

The World Almanac, 1955, reports 250 religious bodies with an estimated 294,359 churches and an inclusive membership of 95.681.604. The Roman Catholics have 31,-648.424 in 15,914 parishes. Protestantism enrolls 56,138,335. Jewish congregations have 5,000,000 in 3,990 synagogues. Most of the Protestants are envolled in a few major denominations. The Yearbook of American Churches reports that there are 77 religious bodies with over 50,000 members each, and these reported 98.2 percent of all church members.

Detroit Speed Track

EXTENSION OF REMARKS

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the lead editorial from the Washington Post and Times Herald of Monday, March 14, 1955, which points out that "Assuming that strikes will be averted, the auto industry by its own calculations will run into serious trouble after the middle of the year."

Government officials in high places have severely criticized those who urge the auto industry to take heed before it is too late. I hope that the Washington Post editorial may help to impress these Government officials with the importance of the situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DETROIT SPEED TRACK

The hot dispute between Ford and Chevrolet over which company won the race for auto leadership last year approaches the competitive spirit of a contrast between the Giants and Dodgers. Ford says it sold more and Chevrolet says it produced more cars last year. This year the race is equally furious, with both producing at a faster rate. What the onlookers will want to know is not who will win but whether the auto industry is engaged in such a furious drive for sales in the first half of the year that it is headed for serious trouble in the second half.

An outsider cannot make decisions for the industry. One of the inviolate rules of free enterprise is that Government may not tell an industry how much to produce or how much to charge for its product. Those are necessary responsibilities of management. The managers may make unwise decisions, but once Government attempts to set the price or fix the rate of production it becomes in fact the master.

The auto industry has introduced new designs that are making a hit with the buyer, who is in a buying mood. Thus, the auto companies are making an all-out drive for the consumer's dollar. Competition has seldom been more intense. By March 5 this hustling industry had produced 1,481,248 new cars during 1955; the figure at the same point last year was 998,557. In other words, production so far this year is 48 percent higher than in 1954. Besides capitalizing on

the popularity of the new models and the buying mood of the public, the industry is preparing for a possible summer strike by the auto workers. If the manufacturer has a large supply of new cars on hand, he can face labor's demands with a certain calm and be in a position to sit out a long strike. General Motors' contract with the CIO United Automobile Workers expires May 29 and Ford's contract expires June 1.

Assuming, however, that strikes will be averted, the auto industry by its own calculations will run into serious trouble after the middle of the year. One estimate is that the industry will produce about 4 million cars in the first half of 1955 and about 2.6 million in the last half. This decline could have unpleasant consequences throughout the economy. Many important industries are dependent upon the automobile industry for a large part of their business. Such a cutback in auto production could hurt the steel and rubber industries particularly, and have serious political effects. The major question, then, is whether the producers are paying enough attention to their very real though undefined social responsibility.

Army Pay Rate

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Quit Kidding the Troops," published in the Army Times of March

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

QUIT KIDDING THE TROOPS

We had a rather pitiful little note the other day from a unit commander in the field. "For Pete's sake, help," he cried in typescript. "Stop those people at the Pen-tagon before they tear the already frayed morale of my men into tatters. We can't take much more of this." Or words to that

His complaint, briefly, was first based upon those two words prominent on every re-enlistment poster being sent to him for display. They were: "Regular promotions." In his unit, he said, were three key noncoms. He called them his "unfortunates." All SFC's they had dates of rank going back to March 1945. None were foul balls, he said, but they had never been in the right place at the right time for upgrading. Though they had all but lost hope, they had not lost their sense of humor. So they could ignore the posters with no more than a passing shrug, but he could not.

He could not help but contrast the scarcity of top grade promotions among enlisted people with the officer promotion system. He pointed out that most of his fellows, up to the grade of colonel, had at least a chance to move up every 4 or 5 years. Upgrades depended simply on seniority and efficiency—and had no regard for TO & E vacancies. No such rewarding "step up the ladder" is in the offing for most noncoms today. He wanted to know—in view of the Womble report and such-why not.

Well, this paper has tried to report "why not." The Army's official explanation has always been that grade limits are fixed by the amount of money allowed for pay, and service requirements (time in position or grade set as minimums for promotion, etc.). Some of these limits are the work of the Budget Bureau or of Congress. But others are caused by the need to conform to the troop program and the TO & E. As long as these boundaries exist, there will always be a shortage of ratings. (See our story of last week on NCO "spots.")

So—to get back to our officer and his "unfortunates"—the Army would probably do well to treat the subject frankly and honestly when it brings the matter up among soldiers at reup time. For instance it should not make wild statements in some of the pamphlets it puts out, like "You and the Army." Much of this little booklet makes sense, but we doubt that anything is gained by telling service people that—

"Actually, your chances for promotion in the present-day Army are unlimited."

"Under its new policy of officer procurement, the grade of master sergeant is only the first step." (But that first step is a "when and if" proposition, isn't it?)

"A warrant or commission is within your reach." (Possibly, but only if a warrant or commission is within an enlisted man's chosen field.)

The booklet then goes on to say: "The pay of the first four (warrant officer) grades corresponding to the pay of major, captain, first and second lieutenants is as follows:" and prints the following corresponding (or "matching," according to Webster) table:

WO basic pay

[After 14 years]	
W-4	\$408.56
W-3	340.48
W-2	295.08
W-1	257. 24
Officer basic pay	
[After 14 years]	
Major	8459.52
Captain	414.96
First lieutenant	363.10
Second lieutenant	326.04

If we assume that the author of the pamphlet was thinking of "corresponding" as meaning "matching" in its use here, then this, indeed, is some match. If he wasn't thinking of it in this way, then he should have made himself clear.

In our view, this is no way to make the warrant officer happy with his lot. It's no way, either, to encourage enlisted men to try for a warrant officer's bar. It's a good way, however, to instill a feeling of cynicism and bitterness in a soldier's breast.

The moral of all this: Quit kidding the troops.

The Inquiry Into the Stock Market

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the Record an excellent article by Miss Sylvia F. Porter appearing in the New York Post of March 10. This article reveals a keen insight into and understanding of the hearings being conducted by the Banking and Currency Committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Arm: To Avert Trouble (By Sylvia F. Porter)

There never has been anything to parallel it—a full-dress Government investigation into a boom while it is still roaring along just to find out if there is anything wrong that could turn the boom into a bust.

Always before in our country, we have begun the probes after trouble has happened. That's normal procedure. First the disaster strikes, then we look for the culprits to blame, then we try to write new laws or curbs to deal with the situation.

But in Washington today an entirely new spectacle is taking place. For the Senate Banking Committee, under the brilliant direction of Senator Fulbright, of Arkansas, is spending the month of March investigating the stock market, not because there is trouble.

(There isn't anything wrong with the stock market today. It simply has been going up and up and making whopping paper profits for people with the cash, know-how, and luck to be in the advancing stocks.)

The Senate is investigating Wall Street only because it wants to make sure the boom remains sound and doesn't blow up in our faces.

And that, I submit, is a fact that in itself is of deepest bread-and-butter meaning to all of us.

What are the Senators finding out that's good and that's bad as they question some of the top financiers, bankers, industrialists, and economists of our Nation?

They're finding out plenty that's good.

For instance, there is no doubt that the great stock boom of the last 18 months represents a belated catching up with our spectacular economic growth since the 1930's * * that it reflects investors' relief over the mildness of the 1953-54 recession and their optimism over our long-term future * * that it mirrors the Government's easy credit policies and the changes in our tax laws last year.

Just by stressing these points, the committee is doing the Nation a service. Confidence is essential to our continued prosperity. As the committee encourages justified confidence in our bright future, it will help make that bright future a reality.

But the Senators also are finding out things that are bad.

Only a thoroughly blased person would deny that speculation in stocks recently has been climbing at an alarming pace and that reckless gambling on tips and rumors is spreading through the Nation.

Only a blind optimist would argue that the economic road ahead is entirely clear and we need not fear any bumps or detours. The road is good but not that good. For the fact is we are not expanding at a rapid enough rate to absorb all our new workers or to offset the increase in the efficiency of men and machines. The fact is that the key industries sparking our revival now are building and automobiles and you may properly shudder at what might happen to our economy if these industries suddenly slow down or decline.

Just by stressing these points, the committee is doing the Nation a service. Awareness of possible dangers also is essential to our continued prosperity. We'll be in a much healthier condition if the committee's findings do help control speculative excesses and alert us to the fact that maintenance of stability is an ever-present challenge.

Day after day, the witnesses are emphasizing to the committee the many distinctions between 1929 and today.

But to me, one distinction which hasn't even been mentioned is among the most significant. This is it:

In 1929, our Government didn't have the slightest thought of acting in advance to prevent economic catastrophe. Even if our

Senators had thought of it, they wouldn't have known what to do or how to do it.

Today, a prime search is for preventives so we won't need any cures. This investigation symbolizes the search and shows how far we have moved toward true economic statesmanship in our land. And this alone makes the jobs, paychecks and savings of all of us more secure.

Achievement of Citizens of Seymour, Ind.

EXTENSION OF REMARKS

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. CAPEHART. Mr. President, the fine citizens of Seymour, Ind., have done it again.

You may recall that Seymour gained nationwide publicity some time ago when its 9,629 inhabitants, together with their neighbors in nearby Jackson and Jennings County areas, oversubscribed an \$850,000 fund to build a new hospital without assistance, Federal or otherwise.

Now, in typically American fashion, this same group of citizens has just completed a fine new building to house the Seymour Boys Club as the culmination of a civic effort which they appropriately have called Seymour's rebuttal to the alleged appeal of foreign ideologies.

The story of that civic effort is a fascinating one. So, just a few days before the scheduled dedication of the new building next Wednesday, I ask unanimous consent, Mr. President, to have printed in the Appendix of the Record a history of the project sent to me by the committee in charge.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

SEYMOUR'S REBUTTAL TO THE ALLEGED APPEAL OF FOREIGN IDEOLOGIES

Mr. Wilbur Pfaffenberger, a successful shoe merchant and respected citizen of Seymour, passed away on February 14, 1939. His will generously stipulated that his home, his place of business, and other property or the proceeds of their sale should be used for the benefit and betterment of the boys and girls of Seymour.

For the past 13 years the Seymour Girls' Club has occupied the residence of the late Mr. Pfaffenberger. The other properties were sold and the proceeds have been held in trust awaiting an opportunity to use them to advantage in accordance with Mr. Pfaffenberger's wishes.

Prominent citizens of Seymour, who have served as trustees for 15 years and are currently entrusted with the management of this fund include Mr. Donald L. Coy; Mr. Burton F. Swain; Mrs. George Laupus, Jr.; Mr. Ernest N. Birge; Mr. Norman Lasher.

The Seymour Boys' Club was organized in 1940, as the result of joint efforts of a group sparkplugged by Mr. Ernest N. Birge and Mr. Walter L. Surface, to provide a wholesome center of recreation and character building for the male juveniles of our community. Through the cooperation and generosity of Mr. Arthur Kaufman the second and third floors of the Kaufman Building on Chestnut Street were made available to the club.

The club membership grew steadily under the direction of past President William Reetz until by the summer of 1953 it had passed the 500 mark and bulged the seams of its quarters to a near-bursting point.

Something surely had to be done to provide adequate room for the enthusiastic crowds of Seymour youth which came in ever-increasing numbers to participate in the activities so successfully conceived and administered by our popular director, Mike Kreshka.

The board of directors of the Seymour Boys Club, composed of a group of leading Seymour business men acted to meet the situation. An equally energetic trio of directors was given the task of meeting the housing problem by raising funds to build a new boys club.

The first move of this committee: F. Walter Voss, George Graessle, and Edward F. Scherer, was to obtain a commitment from the trustees of the Pfaffenberger fund of \$24,000. They then begged, borrowed and just plain sandbagged every available source for donations. These modern buccaneers sailed the high seas of Seymour until the count of their pieces of 8 reached the undreamed of total of \$23,000. With the Pfaffenberger money, their loot now totaled \$47,000. All that was necessary to complete the dream of shiny new quarters for our boys club was what then seemed the simple procedure of locating a building site, preparing plans, and erecting the structure. However, many months of struggle and hard work lay ahead. Unfortunately land and building construction come high these days and the job had to be done within a limitation of \$47,000 on hand and in the bank.

Efforts were first directed to purchasing a site for the building. All concerned agreed that a square city block of vacant land on South Broadway owned by the B & O Railroad, would be an ideal location. Attempts to obtain an offer at any price within reach were unsuccessful until Edwin Blish, President of the Seymour Boys Club and chairman of the Hoosier Area Council, appealed directly to Mr. R. B. White, president of the B & O Railroad, with an explanation of the purpose for which the land would be devoted. At one time Mr. White had lived in Seymour. Mr. Blish received an immediate favorable reply from Mr. White and a few days later the boys club was proud owner of a city block of land for a purchase price of \$4,000. After spending this sum there remained but \$43,000 in the building fund.

The winter of 1953-54 was devoted to conferences with architects and builders over plans and specifications, having in mind the fiscal limitation, but also keeping an equally alert eye on the climbing membership total which by the spring of 1954 had passed the 600 mark.

The architect completed final plans in April 1954 and bids were requested from contractors to be opened in May.

The fateful day arrived and the following board members me' to consider the various proposals submit d: Harold C. Ahlbrand, president, A. H. albrand Co.; Edwin Blish, proprietor, Blish Feed & Chick store; E. S. Cummins, vice president, National Veneer & Lumber Co.; C. H. Englehardt, principal, Shields Junior High School; George Graessle, vice president, Graessle-Mercer Co.; Harold S. Hobson, vice president and general manager, Seymour Manufacturing Co.; Taylor T. Hoffar, attorney at law; Edwin F. Scherer, partner, the Hobby Shop; Paul Scully, plant manager, the Grote Manufacturing Co.; Glenn Seward, personnel manager, Seymour Plant Arvin Industries; Alfred Snyder, proprietor, Snyder's dairy; Walter L. Surface, district manager, American United Life Insurance Co.; Burton F. Swain, president, National Veneer & Lumber Co.; Thompson, vice president, Thompson Dairy Co.; Wagn Trautner, chief engineer, Grote Manufacturing Co.; F. Walter Voss, Voss & James T. Sons, morticians.

Gloom descended upon the group when the figures were added and it was finally clear that \$43,000 would not construct a building large enough to house the club membership.

At this point Mr. Blish said: "Boys, we can't obtain additional money and obviously our funds will not buy what we need. We can build it ourselves with the aid and assistance of the community as a whole. Let's go."

Mr. Blish's temerity in suggesting such a course was based largely on his confidence that Seymour was a typical American community and as such was blessed with a goodly supply of citizens willing to put their shoulders to the wheel in a common effort for the good of all. Mr. Blish's faith that Seymour would be equal to the task had recently been reinforced by his knowledge that another group of his fellow citizens had successfully scaled a seemingly unclimbable mountain. From the inhabitants of this city of 9,629 and the surrounding area in Jackson and Jennings Counties, the Jackson County Schneck Memorial Hospital Foundation had sought to raise by popular subscription the entire cost of a new hospital for Seymour without Federal or other aid. The goal of \$850,000 was oversubscribed.

With this assurance, his trust in God and his fingers crossed. Blish obtained the approval of the board to proceed with no definite assurance the job could be completed. He gave Harold S. Hobson the task of heading a building committee. Mr. Hobson soon found that he suddenly had been converted from a full time manufacturer of hand agricultural implements without professional construction experience into a part time do-it-yourself builder of a boys club.

Blish and Hobson ably assisted by Director Mike Kreshka adopted the tactics of Messrs. Voss, Graessle and Scherer with innovations of their own in transforming the \$43,000 fund into as big and fine a building as could be provided within the means at hand.

Suppliers of materials were contacted and in every instance the response was a positive and affirmative reply to a request for their cooperation: "For the boys of Seymour? You bet, count us in; we will go along with you 100 percent."

Arrangements were made with Paul Stuckwisch to be a working foreman and superintendent of construction on an hourly basis. Paul laid out the foundation on July 5, 1954, and he and his two brothers Noble and Glen went to work with a vengeance. As construction proceeded Richard Darlage, Pete Willman, and Leon Pollert were added to the working force.

Nothwithstanding the fact that the original size of the building had been enlarged after it was decided to go ahead with construction, the major concern of all was that the building would not adequately house all the boys who were club members. As a matter of fact, consideration was being given to the necessity of restricting the membership to younger boys which would have made no provision for high-school boys.

In August as the walls were rapidly rising, the Seymour Optimists Club became interested in the project because they felt it was absolutely necessary to provide proper recreational facilities for boys through high-school age. The Optimists raised \$4,000 among their membership and through a club-sponsored appeal for donations. With this increase in the available funds, 25 feet were added to the length of the building, which area was to be earmarked for use by older boys. Thus, the senior lounge became a part of the project. High-school boys may hang out or play pool in the lounge or they may bring a girl, sip

a coke, and dance to jukebox music.
With the Optimists' contribution the sum of \$47,000 became the final amount available for construction of a club building containing a floor area in excess of 8,000 square feet, including a gymnasium with basketball floor.

Every penny of this sum spent for materials and labor was stretched to the limit. The only extravagance permitted was a rigid insistence that only the best of materials be used and that no detail be slighted. The savings made by Scottsmen Blish and Hobson, combined with many truly generous responses to appeals for gratis materials and voluntary labor have made it possible for us to present this beautiful club to the boys of Seymour.

Thus, the acorn planted by the late Mr. Pfaffenberger 16 years ago sprouted and took root in the custody of the fund trustees. Messrs. Voss, Graessle, and Scherer, with the help of the Optimists, nursed the sapling on its way to maturity and Messrs. Blish, Hobson, and Kreshka have harvested a mighty oak with the aid and assistance of the entire community. Seymour accordingly has proved the fundamental soundness of the American system of free enterprise. munism can never extinguish the beacon light of democracy which burns so brilliantly in Seymour. We have shown that in the United States we need no politically inspired and sponsored youth movements to regiment our sons. We have done our job of providing a place of recreation and guidance for the boys of our community with the pioneer spirit which built America and we have had a peck of fun doing it.

Federal Aid for School Construction

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. METCALF. Mr. Speaker, the Committee on Education and Labor has been holding hearings on Federal ai for school construction. Members o. Congress who have introduced legislation on this subject and who have a special interest have been heard and have made worthwhile contributions to the general information on this important question.

It was no surprise that one of the outstanding presentations was made by our very able colleague the gentleman from Arizona [Mr. UDALL]. His analysis of the questions confronting the committee provided the answers to many of the objections raised against the school-construction proposals. His statement before the committee is worthy of study by every Member. The statement follows:

STATEMENT ON BILLS TO PROVIDE FEDERAL AS-SISTANCE FOR CONSTRUCTION OF PUBLIC SCHOOLS, HOUSE COMMITTEE ON EDUCATION AND LABOR, MARCH 9, 1955, BY REPRESENT-ATIVE STEWART L. UDALL, SECOND DISTRICT OF ARIZONA

I am appearing today before my own committee, not merely as another Congressman urging positive action, but as a grassroots witness—a former school board member in a typical "problem" district faced with an oppressive tax rate and a shortage of classroom

There is an old saying that in our preoccupation with the forest we sometimes lose sight of the trees. My focus will be on the "trees" in this presentation. I would like to point out some elementary facts which might help to point the way around the two stumbling blocks which seem to lie across the path of full-scale Federal participation in a national school-building program. I refer to: (1) the argument that large-scale Federal participation necessarily means Federal control of education, and (2) the argument that the size of the national debt prohibits such Federal action.

THE FEDERAL CONTROL OBJECTION

This objection was squarely posed by the President in his school message in these terms: "Federal aid in a form that tends to lead to Federal control of our schools could cripple education for freedom." I daresay no one here will quarrel with this assertion as a general statement. However, when we attempt to determine whether the Hill-Bailey-Kearns type legislation is, or is not, "aid in a form that tends to lead to Federal control" our quarreling grounds are quickly staked out. Apparently the administration feels that all of these bills "tend to lead to Federal control," otherwise the President's proposals would have adopted the grant-in-aid technique as a major premise.

Before exploring this subject further, I would like to take a moment to examine one of the "trees"—the organization and functioning of a typical school district. We all know that the governing body of a school district is a board of education. However, it was my experience that the people take a keen interest in school government, and in many respects the conduct of school affairs represents democratic self-government at its best. I might say, too, that a wise school board is always closely attuned to the mind of the community, and consults freely with parents of school children and makes frequent use of citizens' advisory boards.

As a community project school operation might be roughly divided into three general areas—educational management, fiscal management, and plant management. Let us attempt to list the main initiative and responsibility exercised under each of these management areas.

A. Educational management includes these functions:

 Hiring and firing of administrators and teachers;

Determination of basic educational policies (e. g., whether teaching shall be "traditional," "progressive," etc.);

3. Human relations policies—parentteacher and pupil-teacher relationships; and 4. Curriculum policies, classroom proce-

dures, use of school facilities, extracurricu-

lar activities, etc.

(Obviously educational management is the most important function of a board of education, and is an area where communities traditionally stand guard against any outside intrusion. I would venture to say that there are few, if any, fields of government where local prerogatives are so jealously guarded and outside pressures so intensely repelled.)

B. Fiscal management includes these functions:

Determination of annual school budget outlay;

2. Fixing salaries and wages; and

3. Financing capital improvements by bond issues, special levies, etc.

C. Plant management includes these functions:

1. Selection of school sites;

2. Design and construction of school buildings;

Maintenance and operation of school facilities and grounds;

4. Purchase of equipment and furnishings; and

5. Hiring and supervision of maintenance force (busdrivers, groundskeepers, etc.).

Any discussion of Federal control of a

Any discussion of Federal control of a school system takes place in a vacuum unless the usurpation of control relates directly to the management duties outlined above. It must be, to use the President's words, a type of encroachment that would "take

away the responsibility of communities and States in educating our children."

Let us look then, for a moment, at the type of Federal controls created by the Hill-Bailey-Kearns legislation. As I read these bills they require State agencies to qualify to administer the disbursement of funds. These agencies would devise federally approved plans designed to guarantee that the Federal funds will be properly matched and channeled where the need exists. Field administration to ensure compliance by local districts would be the function of the State agency.

Now I do not think the average school board member would consider that his governing power or the right of local determination would be seriously threatened by this type of legislation. Such supervision as might be asserted over him would touch on 1 or 2 functions of fiscal and plant management, and then only to assure compliance with minimum State standards. I venture to predict, too, that State administrators would exercise their powers with restraint and due regard for local prerogatives.

EXPERIENCE UNDER PUBLIC LAW 815

I would like to comment briefly on the experience of my district under the old program-Public Law 815. This is a plan, mind you, where a Federal agency deals directly with local districts, determines eligibility, and exercises the necessary supervision to ascertain that the Federal moneys are actually used economically to build classrooms. Our school board received three Federal grants totaling \$737.818.99 during my tenure. We selected the architects. We had buildings designed to suit our special requirements. And these structures were erected by local contractors on sites chosen by a citizens committee. I met a Federal official only once during the entire process, to discuss clearing title to a school site. As far as I recall, our vital management prerogatives were preserved from all except nominal encroachment. * * * Unless the Hill-Bailey-Kearns bills have

hidden controls not apparent on their face, it would be my opinion that the amount of Federal control under these laws would be considerably less than under Public Law I can only conclude that Federal regulation of local school boards would be minimal, and local management of the school systems would be kept 99 percent intact. Sincere people may well argue that the limited controls proposed by these bills are the opening wedge and that more encroachments will follow. This may be a sound argument. But if we are to proceed on the basis of past experience and take actual controls inherent in the legislation before us, pernicious Federal control is largely a myth.

THE NATIONAL DEST OSJECTION

It seems to me that the other chief stumbling block is the budgetary fear which has caused the administration to hang back when massive Federal participation is proposed. A day or so after the President sent his school message to Congress, he was asked at his press conference to comment on criticism from congressional quarters that his program merely loaded more debts on overburdened States and school districts, and it was reported that he replied: they [the critics] mention the national debt?" Perhaps this is the nub of the administration's opposition. If so, I think the President might well be persuaded away from this objection if he would listen to the schoolmen of the country for a momentand turn a deaf ear to Secretary Humphrey.

Thirty years ago most public schools were wholly operated and maintained from taxes levied against the real property located within the particular school district. As that burden became more oppressive a movement was set afoot in the State legislatures to shift some of it to the counties and the

States. This has been done on the theory that providing an education for the children of the State is a statewide problem and should properly be met, in part at least, by mustering the full taxing power of the State. We are now confronted with a nation-wide classroom shortage of sufficient magnitude to constitute a serious national problem. Acting on much the same theory as that embraced by the citizens of the States, many of us here have concluded that Federal responsibility is involved, and that the whole national wealth should be marshaled to help hard-pressed communities cope with this situation.

Practically everyone is agreed that the shortage exists. And I believe that everyone (including the President) is also agreed that the funds must be provided to overcome this educational "deficit," we disagree only in regard to where the burden shall fall.

In short, our diagnosis is the same, we are agreed on the cure, and the only dispute concerns how the doctor shall be paid; the administration says the patient should pay; Hill-Balley-Kearns says the whole family (i. e., local districts, States, and the Federal Government) should share the load.

I'm afraid the President's advisers have confused the Federal debt with the national debt. The Federal debt, as we well know, is some \$278 billion; the national debt is the sum of the debts of Federal, State, county, city, and school district governments. Once we have agreed that the classrooms must be built, the Rubicon is crossed, and the only question that remains is where the funds shall be raised to accomplish the agreed purpose.

Mr. Chairman, having participated intensively in school education at the local—one might say the child—level, and holding strong convictions as to the vital place it occupies in our national life, I would like to say today that if we are forced to place priorities and choose this year between a national highway program and a national classroom construction program, I shall cast my lot with the schools.

Mr. Speaker, I also call attention to the following editorial from the Washington Post on March 13 commenting on Mr. UDALL's testimony:

WHOSE MONEY IS IT?

Representative STEWART L. UDALL thoroughly deserved the general acclaim he received from his fellow-members on the House Committee on Education and Labor the other day for his striking analysis of the school-aid problem. He provided some much needed perspective on the issue which constitutes the essential difference between President Eisenhower's school-aid proposal and the formula sponsored by Senator Hnl. and Representatives Balley and Kearns—whether the principal additional financial burden should be borne locally or by the Federal Government.

Mr. Upall put his finger on what is apparently the nub of the President's objections to direct Federal grants-in-aid to the States—the fact that this will tend further to unbalance the Federal budget. "Did they ever mention the national debt?" Mr. Eisenhower retorted to critics who objected that his program placed increased indebtedness on already overburdened States and school districts. "I'm afraid," commented Mr. UDALL, that "the President's advisers have confused the Federal debt with the national debt. The Federal debt, as we well know, is some \$278 billion; the national debt is the sum of the debts of Federal, State, county. city, and school district governments. Once have agreed that the classrooms must be built, the Rubicon is crossed and the only question that remains is where the funds shall be raised to accomplish the agreed purThus the problem, as this newspaper has suggested from the beginning of the controversy, is basically a bookkeeping one. We share Mr. Udall's view that just as the burden of financing schools was originally shifted from local districts to counties and State governments, it needs now to be shifted, in part at least, to the Federal Government. The reason is that the Federal Government has the revenue resources, while the States and the localities have not. And the problem has become a national one with a disastrous impact on the whole Nation.

Publisher Williams Honored at Chamber of Commerce Dinner

EXTENSION OF REMARKS

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1955

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks in the Record, I include an article paying tribute to Hon. Jack Williams, Sr., editor and publisher of the Waycross (Ga.) Journal-Herald, who was recently honored by being elected to the "South's Hall of Fame for the Living":

LIFE OF SERVICE: PUBLISHER WILLIAMS HON-ORED AT CHAMBER OF COMMERCE DINNER

(By Jim Pinson)

Georgia newspaper publishers joined the people of his hometown last night in paying tribute to Jack Williams, editor and publisher of the Journal-Herald.

lisher of the Journal-Heraid.
"Mr. Jack," who came to the annual chamber of commerce dinner to introduce Pogo's creator, Walt Kelly, was taken by surprise.

creator, Walt Kelly, was taken by surprise.

The tribute was threefold. First, Hubert
Lee, editor of the magazine Dixie Business,
Presented Editor Williams with a scroll naming him to the "South's Hall of Fame for the
Living."

He said Mr. Williams was respected as much as any editor in the Nation. "He possesses a great love for people. In transmitting the news he has come to know all their little joys and heartaches, their life stories."

The South's Hall of Fame for the Living is composed of 200 southern leaders from whose ranks the magazine selects "the man

of the South" each year.

Jere Moore, publisher of the Milledgeville Union-Record and a longtime friend, presented to editor Williams a bound volume of letters from editors and publishers from all over Georgia, testimonials to his service to his profession and to the people of the State.

He said the Journal-Herald publisher had contributed much to the progress of the State in such fields as health, conservation, and growth of the pulpwood industry.

The testimonials, editor Moore told Mr. Williams, "show what Georgia newspaper publishers think of you. They are precious memories of many old friends."

"Mister Jack" arose to reply to the tribute only to be told that still another honor was to be accorded him.

Said Cecil Herrin, president of the chamber of commerce:

"He has been one of the most stable and constant supporters of the chamber. He has never waivered in his faith."

In behalf of the chamber he presented to Mr. Williams a replica of the Jack Williams cup inscribed as follows:

"For a lifetime of faithful, unselfish, and loving service to his fellowman."

President Herrin said the "overflowing loving cup" was the chamber's expression of love and appreciation for a fine life of service.

Misty-eyed and his voice filled with emotion, publisher Williams accepted the honor with "great humility and deep emotion." He said it was one of the greatest honors of his life.

A newspaperman for 40 years, Mr. Williams has been editor and publisher of the Journal-Herald since 1915. Awards received by the editor and his paper have included the Baynard Knight cup for community service, the Sutlive trophy and the Miller medal.

Packers and Stockyards Act

EXTENSION OF REMARKS

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. SIMPSON of Illinois. Mr. Speaker, I am introducing a bill to amend the Packers and Stockyards Act, to prevent sudden and unreasonable decreases in the price of hogs and cattle which are sold at stockyards and subject to that act.

In the year 1952, hogs had reached a \$15 price from the high in 1947 of \$31. About a year ago hogs had rebounded to around \$26. They have been dropping back in price since that time until they have virtually reached the 1952 price of \$15 to \$16.

In 1947 and 1948 the top price on cattle was around \$41 to \$42. Since that time they have gradually gone down in price to the low of probably \$22, and now the same grade around \$26.

During these fluctuations of hogs, they have dropped on some days as much as 75 cents per hundredweight. While this severe drop per day was going on, in my opinion, a corresponding decrease of meat over the counter was not brought about. A hog raiser or cattle feeder would naturally try to guess when he thought there would be a light run of these animals at the stockyards and send in some of his animals accordingly. The legislation which I have introduced to amend the Packers and Stockyards Act would not permit the price paid at a stockyard for swine of any grade to fluctuation more than 15 cents a hundredweight less than the average price paid at such stockyards for swine of the same grade on the preceding day. The price paid at a stockyard for cattle of any grade will only be within the permissible range of fluctuation only if it is not more than 25 cents a hundredweight less than the average price paid at which stockyards for cattle of the same grade on the preceding business day.

This fluctuation limitations should, if it becomes public law, not cause a hog raiser or cattle feeder to try to hit the market when there are short runs. Regardless of any day the markets are open, a hog raiser or cattle feeder would know that there would only be a certain fluctuation downward and no more in his

price. It seems that this should help stabilize the market. If hog prices especially continue their downward trend, it only means that the hog raiser will sell his brood sows and market his corn at the Government price. If this is done, and I believe it will be, there will then, within 6 months to a year's time, be a shortage of pork, and the same vicious cycle will proceed over again.

The same thing, I think, is true with cattle. Fifteen to sixteen dollars per 100 weight for hogs at the stockyards with the price of concentrates today is not a

very profitable one.

This office has not consulted with the Department of Agriculture relative to this legislation or with the packers. It is my hope that the Agriculture Committee will call an early hearing on the bill that I have introduced. At this time, anyone interested, the Department of Agriculture, the packers, hog raisers and cattle feeders, and the agriculture associations, would be allowed to express their views. I have no pride in the authorship of this offered legislation. If during the hearings a better solution is forthcoming, I will be the first to welcome it. I sincerely feel that someone should come up with some kind of a solution and soon. I feel that a packer would rather have a stabilized livestock market than one with violent fluctuations. If a hog is worth \$16 today to the packers to slaughter, it should be worth a minimum of \$15.85 the next day and not \$15 or \$15.25. Again, I think the same is exactly true about cattle.

I believe the hog raiser and the cattle feeder would welcome some attempt at

stabilization.

That Old House

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I include an article written by Helen F. Bate, which appeared in the Corson County News, a weekly newspaper in my home county. Mrs. Bate has so uniquely painted life and human nature on the Western prairies, that I felt her word picture should be preserved:

Like the spokes on a wheel converge toward the hub, so the paths around our place have for numerous years moved to and from the center of our activities, namely, our home. But starting just lately the paths have all led to the wrong place. In short, we moved from our home into our new house, and now though we are partially settled, we are constantly beset with the idea that "it's been fun fooling around in here but now let's go home."

As soon as we moved in we invited the cats in to make things seem more homelike. They looked things over and then picked out the bed with the newest blanket and pounced on it. We promptly raked them off and showed them a rug near a register. They stalked out, highly offended, and headed

back for home. Next we asked Laddie inside. He came in reluctantly, his toenails slipped on the new linoleum, he shuddered, looked horrified, and backed out. Then he also went back home to sit on the doorstep as he has so often done during his 12 years, to peer through the screen glass storm door to see what was going on inside.

The next morning we returned to the old house for some things we'd forgotten. The cats forced their way in and leaped joyously on the old couch in the dining room and

stretched out

As the cats purred and the range gave out its careful warmth, we moved among a lifetime of memories in picking up the articles for which we had come. Memories of threshing crews cooked for on a twoburner oilstove, of very young calves flexing their damp, new legs on an old blanket by the heater during the late winter blizzards. Or of baby chicks having comingout parties in an old cracker box on a lukewarm oven door.

Recollections of golden lamplight on pine rafters, of dusky Christmas mornings and the frosty fragrance of a cedar Christmas tree. Memories of the first spring rain on the claim-shack roof, or of standing on the porch on early spring evenings listening to a creek cutting foamy channels through drift-filled draws after a long, deep

Memories of cool summer evenings after hot August days and the night wind moving in through the screen door under a canopy of grape vines. Or of old snapshots and letters, of young tomato plants growing lustily in sunny south windows in March or of evenings spent with a seed catalog.

After a time, loaded up with various articles, including the cats, we returned to our new house to gaze at spotless walls and shiny woodwork and wonder why we were living there since it didn't seem to be home.

In time, no doubt, we'll become accustomed to living in this new house, but, as Edgar Guest said, "It takes a heap of living in a house to make it home."

Blocked Currencies

EXTENSION OF REMARKS

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following letter from Mr. Alfred W. Barth, vice president of the Chase National Bank, offers what I believe is a sound and businesslike approach to the problem of blocked currencies. In this instance, reference is made specifically

to the Spanish peseta.

It is refreshing to hear a man of Mr. Barth's standing in the financial world praise the Report on Economic Assistance to Spain by the International Operations Subcommittee of the Committee on Government Operations, under the able chairmanship of Mr. CHARLES B. Brownson, of Indiana. Having had the honor of serving on the Brownson subcommittee in the last Congress, I am happy that we were able to contribute something tangible and constructive to the great problem of blocked currency and exchange generally.

Without free exchange of currencies, international trade is difficult, and it is hoped that this study will help us and our Spanish friends to ease any tension in this field that may still exist.

A distinct gain to the United States would be possible if Mr. Barth's suggestion could be followed of having the United States take title to the blocked pesetas in Spain and use them for its purposes. What this would amount to. of course, would be that aid goods to the amount of the value of the pesetas would not be sent into Spain. The Spanish Government would turn pesetas over to the United States, receiving nothing in return. Ethically, this would be quite proper, since the pesetas are owed to American nationals anyway and would be spent in Spain. The actual negotiation for using blocked pesetas is a responsibility presently of the United States Operations Mission in Spain. This problem is currently being worked on, since rather difficult negotiations about the total aid level have just been completed and now that that is out of the way, attention is being turned to the area of blocked pesetas. There are no controversial matters involved in the nature of the indebtedness.

Mr. Barth's letter follows:

THE CHASE NATIONAL BANK, New York, March 4, 1955. The Honorable KATHARINE ST. GEORGE. House of Representatives,

Washington, D. C. DEAR MRS. St. GEORGE: Through the courtesy of Mr. Coster Schermerhorn I have just received a copy of the Report on Economic Assistance to Spain made by the International Operations Subcommittee of the Committee on Government Operations.

The report has had my most careful at-tention and I find it to be outstanding in that it is an unbiased study of a highly controversial and difficult subject. Not only does it reflect a tremendous amount of understanding of the problems but it gives praise where praise is due and is not afraid to criticize when criticism is in order. I take this opportunity to ask you to be good enough to convey my heartiest congratulations to your entire committee.

Your committee seems to be unanimous in

the following conclusions:

1. "The defense support assistance program is essentially economic aid to bolster its (Spanish) economy to a point where it can support sizable increases in military expenditures and to improve the logistic capabilities of the economy in relation to bases for joint use with the United States."

"Testimony of United States officials indicates that the Spanish Government has frequently gone beyond the letter of existing in cooperating with United agreements

States authorities."

3. "That further efforts be made in accordance with the terms of the economic aid agreement with Spain to discourage cartel and monopolistic business practices . and that this would result in the establishment of conditions under which private foreign investors could supply a substantial portion of the outside capital for capital expansion."

4. "Since Spain's future economic ability to finance its share of the cooperative military program without defense-support grants may be expected to vary with crop levels and hydroelectric power production, both dependent on weather conditions, the existing time lag between authorization and use of funds may well result in unnecessary expenditures.'

5. "To obtain necessary imports Spain must expend its slim holdings in foreign ex-

change."
6. "At present, it is definitely contemplated that at least \$250 to \$300 million will be spent by the United States on airfield and naval base construction over a period of several years. Approximately 70 percent of this will be spent in Spain."

"One of the great hazards of any effort to help any nation to modernize or enlarge its national economy under forced draft, as was brought home to the subcommittee in its study of the United States aid program for Korea, is the danger of inflation.'

8. "The subcommittee was impressed with the evidence on every hand that the sincerity and good faith of the United States in this cooperative endeavor were matched by equivalent contributions and efforts on 9. "That defense support assistance for

Spain be continued but that further authorizations take due notice of the fact that less than half of the funds authorized in 1953

has actually been used to date."

I hasten to state that I agree completely with the above conclusions, but may I take the liberty of suggesting that the Economic Aid Agreement dated September 26, 1953, spells out the obligations of the United States Government as well as those of the Spanish Government and I would like to refer in particular to subparagraph F of section 1 of article 2 of this agreement which reads as follows:

"The Government of Spain will use its best endeavors * * * to make as promptly as possible in agreement with the Government of the United States of America in which will be established for United States nationals and companies a system of payments and international transfers, including the progressive conversion of their accumulated peseta balances."

It would be of prime interest to learn what our Government contemplates doing for the relief of the many American holders of blocked peseta balances which are variously estimated to amount to considerably more than one-half billion pesetas and which resulted from financial rather than commercial transactions and also includes an important item which is often overlooked. namely money, securities, and real-estate inheritances which are due to American heirs from Spanish decedents.

If it is the desire of our Government to aid Spain improve her financial and economic situation, and this I believe to be so, then I am of the opinion that the suggestions which I made to Mr. Clarence S. Gulich, Chief of the Iberian Division of the Foreign Operations Administration, in correspondence which I exchanged with him in the early part of 1954 should receive renewed and serious consideration.

In connection with inheritances you may be aware of the fact that at the present time Spanish nationals may receive inheritances to which they are entitled in the United States, with free right of transfer, without any undue complications. However, in the reverse situation when United States nationals are the legatees they cannot receive inheritances due them because of transfer restrictions and thus the funds due to American legatees remain blocked in Spain and are possibly subject to depreciation if the inflationary trend, which you so correctly analyzed in your excellent report, continues.

May I reiterate what I have told Mr. Clarence S. Gulich, namely, that in order to assist Spain improve her financial and economic situation and at the same time help United States individuals and corporations, most serious consideration should be given to the development of a plan whereby American nationals be permitted to liquidate their holdings of blocked pesetas, as seems to be envisaged in subparagraph F of section 1 of article 2 of the Economic Aid Agreement signed on September 26, 1953. would this prove of great benefit to the United States nationals but just as important—the economy of Spain would profit. The plan which I suggested to Mr. Gulich

envisaged that these holdings of blocked Pesetas be acquired by the United States Government and then utilized in connection with the base construction program. While I was finance officer of the United States in Spain during 1943 and 1944 I concluded a similar operation, acquiring a very substantial amount of blocked pesetas from Amer-lean nationals for the purpose of paying taxes which the Government owed the Spanish Government.

I feel convinced that American holders of blocked pesetas would be glad to sell them to our Government at the rate of 50 pesetas to the dollar and, also, that the competent authorities in Spain would be agreeable to

such a proposal.

The benefits which such a program would have are legion, but the most important are:

1. A large foreign indebtedness now on the books of Spain would be eliminated-without causing a strain on the limited foreign exchange holdings of Spain.

2. The American taxpayer would be saved a large sum of money due to the reduction of the cost of the base program by reason of the favorable rate of exchange.

3. American nationals—taxpayers—would enabled to repatriate holdings now

blocked in Spain.

After the United States Government has utilized all of the blocked pesetas owing to American nationals, it would seem to me that, if it is the desire of the United States Government to really assist Spain, then I believe that our Government should purchase pesetas directly from the Instituto de Moneda Extranjero, at a rate of exchange to be agreed upon, thus increasing the dollar holdings of Spain. It goes without saying that, prior to this proposition becoming an actual fact, an intergovernmental agreement Would have to be drawn up to insure that all future American earnings, as well as all future inheritances due to American legatees in Spain, would be freely transferable in United States dollars.

As above stated, Spain would not only build up her dollar balances but she would be enabled to purchase in this country many of her badly needed consumer goods, includ-

ing foodstuffs, etc.

I believe that the late Senator McCarran saw the importance of the foregoing when he suggested his amendment to the Mutual Security Act of 1954, section 109 of Public Law 778, to wit: "Provided, That 80 percent of the foreign currencies generated hereunder shall be used to strengthen and improve the civilian economy of Spain," the balance to be available for use of the United States.

In other words, he must have realized that if counterpart funds were used in their entirety on the base construction program, then the purpose of the Economic Ald Agreement would be defeated.

Perhaps also the authors of section 104, Subparagraph G of Public Law 480 were of the same opinion when they suggested the use of funds resulting from surplus sales for "loans to promote multilateral trade and economic development, made through estab-lished banking facilities of the friendly nation from which the currency was obtained, or in any other manner which the President may deem to be appropriate." In other words, if a substantial portion of counter-part funds—no matter how they were created were used for such long-term loans to Drivate industry in Spain for work on badly needed local programs, such as the moderni-Pation and extension of electric power, the rehabilitation of transport facilities (including highways and railroad tracks), the rationalization of industrial undertakings and providing, of course, that such loans would thereby thereby increase employment, efficiency in industry, and consequently the exports of Spain, then some real headway would be made to "improve Spain's financial and ecohomic situation." This statement is impor-

tant because, as your report clearly indicates, in Spain particularly, either due to a lack of a capital market or for other reasons private industry has found it very difficult to obtain the necessary funds in a private market and it is for this very reason why the INI is encroaching more and more on private industry, thus reducing their independence.

Pardon the length of this letter, but I felt that your report was of such worth that you might like to hear the views of a banker whose interests lie in the same direction and who-due to the nature of his work-appreciates the complexity of the problems which ont Spain.
Yours sincerely,
Alfred W. Barth,
Vice Presid confront Spain.

Vice President.

Red Cross Stands as Symbol of Helpfulness

EXTENSION OF REMARKS OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Red Cross Stands as Symbol of Helpfulness," which appeared in the March 7, 1955, issue of the Park City Daily News, of Bowling Green, Ky.

The editorial is as follows:

RED CROSS STANDS AS SYMBOL OF HELPFULNESS

All over the world, the Red Cross stands as the symbol of helpfulness in time of trouble. In this country, people have a chance once a year to show by their dollars that they are grateful for the work of this remarkable agency. That time is now at hand,

Hardly an American lives who does not know the great and continuing humanitarian record of the Red Cross in disaster relief all around the globe. Since 1953 it has responded to 19 international appeals, and, of course, many similar calls at home.

What is perhaps less fully appreciated is the present extent of Red Cross services to the American Armed Forces at home and abroad. Forty percent of its estimated 1955-56 budget of \$85 million, which it hopes to raise in this March campaign, will go for such services.

Never in our history has the Red Cross served longer overseas than in the period during and since World War II. Workers can be found at snowbound bases in Alaska, Greenland, and Newfoundland, in the dusty desert of north Africa, in half a dozen European lands, and in the Philippines, Korea, and Japan.

President Eisenhower once said an army doing peacetime duty in a foreign country needs the Red Cross more than does a shooting army. Personal problems, other than his physical safety, loom larger to an inactive soldier than a man in combat.

Red Cross people provide service personnel with financial aid, counsel them on a wide range of matters, help them communicate with their families, and perform many tasks in military hospitals. Some 100 Red Cross girls take lively recreational programs into remote spots occupied by our soldiers.

Altogether the Red Cross has 2,200 workers placed in 270 military installations and 140 hospitals here and abroad.

Most of us are pretty familiar with the immense blood program, which the Red Cross expects will cost more than \$14 million in

the year ahead. This is big business-business whose objective is the saving thousands of lives. And the agency also has a number of other programs of unmistakable value.

The Red Cross naturally deals with emergencies of many sorts as part of its routine. But there is one emergency it does not plan for financially: war. If trouble should break out in the Formosa area, all its present estimates would be outmoded. Understandably, the agency would welcome a little cushion of money to hedge against that danger.

The Red Cross does not need to be sold to the American people. It should be enough to note that this is the moment for them to make another investment in the helpfulness

it symbolizes.

Need Gulf Weather Ship

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the New Orleans Times-Picayune and the New Orleans States:

[From the New Orleans Times-Picayune of March 11, 1955]

NEED GULF WEATHER SHIP

Bills have been introduced by Senator Eastland and by Representatives Thompson and Boykin expressing a united desire by gulf coast interests for establishment of a Government weather ship, or floating ocean station, for continuous meteorological broadcasts from the gulf.

The necessity of more reliable warnings as to gulf-bred hurricanes and line squalls, plus data helpful to path forecasting, has impressed itself particularly since resump-tion of offshore oil development and the revelation of potentials for fisheries expansion. Even were the coast spotted with radar stations, there would remain a vast blank area from which ship and aircraft reports are few. and difficult to correlate.

In a comparable land area, stretching southward from the line formed by Oklahoma, Arkansas, Alabama, Georgia, and South Carolina, no less than 146 United States weather stations aid the public with timely, reliable forecasts of changing weather. The density can be no less in other continental sections. Surely one station could be provided to bring the mystic gulf (its western half, at any rate) into the analytic picture.

Ever since weather service began the coast forecasters have sat upon a fence, having plenty of information from north and northwest, but very little from the southward to fit into calculations. A sort of meteorological battle line exists along this frontier in the form of conflicting air masses and movements; but the forecasters really know only what one of the antagonists is up to. Add to this situation the hurricane menace; add the new coastal and offshore developments (in which the United States has a tremendous stake), and the need for doing something about it becomes obvious.

[From the New Orleans States of February 13, 1955]

NEED FOR WEATHER SHIP IN GULF STRESSED-FORECAST DATA SCARCE IN AREA

(By Gordon Gsell)

The safety and prosperity of many multimillion-dollar industries along the coast of the Gulf of Mexico depend on timely and accurate weather forecasts.

But to the forecaster, that vast body of about 716,000 square miles of water is almost a complete void. He must depend on sporadic, and many times unreliable, ship and aircraft reports.

aircraft reports.

Meteorologists for many years have been unanimous in their pleas for the location of at least one Coast Guard weathed ship in the gulf. But only since the development of the great offshore oil industry and the postwar expansion of the fishing fleets has the need for such a ship come into sharp focus.

Bills are before Congress to establish one such ship in the gulf, and opinion in favor of the plan mounts as the public becomes more weather conscious.

A leader in the fight for the weather ship is Representative T. A. Thompson, of Louisiana's Seventh District, who introduced a bill in the 1954 session of Congress but which was not acted upon. He has offered another at the current session and identical measures are being prepared by Representatives Frank M. Boykin, of Alabama; William Colmer, of Mississippia; and Jack Brooks, of Texas.

KEEP CLOSE TAB

If an outline of the Gulf of Mexico were moved north and superimposed on a map of the continental United States, the gulf area would cover Texas, Oklahoma, Louisiana, Arkansas, Mississippi, Alabama, Georgie, South Carolina, and Florida, with enough left over to make several New England States.

And in this area of the continental United States there are 146 reporting weather stations which transmit surface as well as upper air observations several times a day. Forecasters can keep close tab on air masses which move south and eastward.

But to the south of the gulf coast the only reports to be had are from ships which take part in a cooperative program with the Weather Bureau, and aircraft. The ship reports are limited mainly to the route between New Orleans and the Florida Straits. Reports from the west gulf are almost non-existent.

Meteorologists ask this question:

Would anyone in this day of expanding science think of basing the weather service for those nine important States on cooperative reports from motorists who happen to be driving from Miami to Little Rock?

Yet, they point out, it is analogous to the manner in which weather information for the Gulf of Mexico is obtained.

ONE HUNDRED AND EIGHTY MILES OUT

Archie N. Kahan, executive director of the Texas A. and M. Research Foundation, an organization which has endorsed the proposal for a weather ship, points out, "If the Gulf of Mexico were an area of persistent high pressure and infrequent storminess bordered by slightly populated wastelands, such an incomplete weather service would be acceptable. In the light of increasing industrialization of the gulf coast and the known frequency of gulf-bred storms, a need for weather service improvement by all possible means is apparent."

A proposed location for the weather ship, advanced by Nash C. Roberts, Jr., a private meteorologist, and Charles Murphy, chief of industrial services for the Louisians department of wildlife and fisheries, is about latitude 26 degrees north, longitude 90 degrees west, or about 180 nautical miles south of the mouth of the Mississippi.

Roberts points out that, contrary to popular belief, hurricane warning service would be only a small part of the weather ship's contribution to forecasting. At such a location, he says, it would be of great value during the winter months when vicious storms breed on the edges of cold fronts which lose their push and stall along the coast.

With a weather ship about 180 miles out in the gulf forecasters would be able to tell just how far south of the coast the cold fronts moved, he says. The ship would also be close enough to the coast so that nothing in the form of a disturbance could form between it and the coast without being detected by the ship's radar.

AID RESCUES

The meteorologist stresses the fact that the installation of radar stations along the coast could never be a substitute for a weather ship, since in addition to having radar devices, the ship would also take surface and upper air observations, and it is the so-called steering winds at the very high levels which govern the path of a storm.

Such a ship could also serve as a rescue craft, Roberts explained. It would be equipped with radio homing devices and aircraft in distress could be guided to it in emergencies. Fishing boats which operate deep in guif waters would also be able to get valuable weather information from the ship.

If legislation is passed authorizing the station, it would be maintained by two cutters fully equipped with the latest observation equipment. One cutter would be on station at all times, with the other used as relief.

Dissent and Separate Statement of Commissioner Holifield on Commission Report on Lending Agencies

EXTENSION OF REMARKS

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. HOLIFIELD. Mr. Speaker, the Commission report is so faulty in concept and method that I must object to it even though a few recommendations, standing alone, may have merit.

By and large the recommendations in the report, if fully carried out, would make it harder for American citizens to buy homes or to get loans for their farms or businesses

The recommendations point in the direction of tighter agricultural credit, a slowing down of housing construction, restrictions on the rural electrification program, and limitations on other direct or indirect aids provided by the Federal Government.

Persons will differ as to the wisdom of these programs. There is no doubt, however, that they concern intimately the affairs and well being of millions of Americans and the health and strength of the national economy.

The Congress recreated the Hoover Commission to study the present organization and operations of the executive department and agencies, with a view to better management and economy. I do not believe that the Congress wanted advice from the Commission on public policies of every sort.

The Commission has construed its congressional mandate otherwise. This report indicates that the Commission is willing to roam far and wide in the field of public policy.

No matter how wise and well informed, the 12 Commission members cannot be expected to have more than a casual acquaintance with many of the complex issues posed by this report. The task force study contributed little, in my opinion, to the deliberations of the Commission.

It is unfortunate that the present Commission did not benefit from the experience of the first Hoover Commission along this line.

The previous Commission engaged Price, Waterhouse & Co., a firm of certified public accountants, as a task force to study Government lending activities. The previous Commission's report, based on that study, was criticized by three Commission members—Acheson, Pollock, and Rowe—as being wholly wrong in its organizational approach and as reflecting a narrow accounting view on broad public policies.

Senator AIKEN, in a separate dissent, stated at the time that the Price-Water-house report on lending agencies "does not adequately represent the broad public-interest viewpoint which motivated the establishment of these agencies"—Report on Federal Business Enterprises, 1949, pages 113-114.

Nevertheless, Price, Waterhouse & Co. were engaged a second time to make a study for this Commission. Their present report is a rehash of the old report, with some additions to bring it up to date and with some modifications in the light of recent developments. Many paragraphs are taken verbatim from the earlier report. Senator Arken's comment is equally applicable today.

Neither the Price-Waterhouse report nor the Commission's own report represents an adequate study of Government organization and management. Numerous agencies are strung together on a common thread of lending, guaranteeing, or insuring activities, however diverse the Government purposes served thereby. The activities range all the way from housing loans to Eskimos in Alaska to American participation in the International Monetary Fund.

Instead of studying Government agencies and functions and then deciding what reorganizations should be effected, the report attempts a wholesale rearrangement and curtailment of these agencies and functions to fit an oversimplified pattern.

Thus, starting with the assumption that Government lending is generally a bad thing, the report then easily disposes of a variety of important Government functions. Recommended for termination are the following:

Crop loans to farmers made by the Commodity Credit Corporation.

Loans to American firms in foreign trade made by the Export-Import Bank. Loans to colleges for student and faculty housing made by the Housing and Home Finance Agency.

Loans to veterans for home and farm improvements made by the Veterans Administration.

Loans to public housing authorities for low-rent projects made by the Public Housing Administration.

Loans to rural electric cooperatives and other groups made by the Rural Electrification Administration.

Loans to communities for planning and construction of public works made by the Housing and Home Finance Agency.

Where lending or related activities are not to be terminated outright, the report proposes that these be restricted by the imposition of higher interest rates or extra fees.

Thus the Federal intermediate credit banks are to add a premium charge on their loans to borrowers.

The Farmers Home Administration is to do likewise and to require greater

equities from prospective farm owners.
The Federal Crop Insurance Corporation is to increase its premiums to farmer participants in the crop insurance pro-

The Small Business Administration is to increase its interest rates on loans and is given a grace period of 2 years to

The Federal Housing Administration is to require larger equities from prospective home owners and to reduce its insurance coverage by sharing risks with mortgage lenders.

In place of the Government loan program for rural electrification, the Rural Electrification Administration is to be reorganized and required to obtain its financing from private sources. Like-Wise, the Federal Housing Administration is to be made a privately financed institution.

Reviving a concept of "mutualization" advanced by the first Hoover Commission report—Report on Federal Business Enterprises, 1949, page 36—the present report proposes that the Federal intermediate credit banks liquidate Federal Ownership of their capital stock and that liquidation of the Federal investment be accelerated with respect to the banks for cooperatives, production credit associations, and the Federal savings and loan insurance corporations.

Reviving other proposals of the first Hoover Commission—ibidem, pages 12 and 15-the report recommends that those Government agencies which hold Government securities return them to the Treasury for non-interest-bearing credit; and that all agencies which lend funds or guarantee loans charge such interest rates or fees as will cover their administrative expenses and the cost of money to the Treasury.

These proposals are made without regard to the effect of the actions on established programs or objectives sought by the Congress.

The justifications advanced in both the first and second Hoover Commission reports are that the agencies involved should not be subsidized by public contributions to their administrative ex-Penses or to their income in the form of interest on investments in Government Eccurities. And, further, that such agencies should become privately owned and managed as rapidly as possible by retirement of Government stock or by obtaining their financing from private sources.

Again, these positions are taken without regard to the impact on authorized programs and without a careful evaluation of the consequences for the national economy.

report is ill-defined; it does not indicate Government equity once the capital stock of the Government is retired.

Whatever the advantages of "mutualization," the result is the creation of hybrid Government agencies which are, in most cases, privately owned and privately managed, subject to a limited amount of Government regulation, but remote from congressional, Presidential, or General Accounting Office audit control.

At the same time the "mutualized" agencies enjoy many Government privileges. Among these are tax exemptions, free use of Government mails, free use of Government buildings and property. Government annuity contributions to the employees, access to Government funds, and reliance upon Government insurance or other commitments.

Even if these privileges are removed in whole or in part, the agencies are still Federal instrumentalities in some sense, and the conflict of interest between private and public management and policy remains

Although the report recommends that certain agencies be brought under the Government Corporation Control Act, it fails to point out that withdrawal of Federal stock ownership from "mutualized" agencies ordinarily is accompanied by withdrawal of General Accounting Office audit.

In a few cases, such as that of the Federal Deposit Insurance Corporation, the Congress enacted special legislation to permit GAO access to the Corporation's books. However, the status of this agency is still a matter of debate. It is publicly managed and privately fi-nanced. Technically the Corporation has no owner since the Government stock was retired. The Commission does not consider this phase of the problem.

Government subsidies so vehemently criticized in this report, are means of achieving public purposes deemed worthy by the Congress. I may note that the report hardly begins to identify all the subsidies involved in Government

Merely to cite one example, the hundreds of millions of dollars obtained by large companies as interest-free loans through the device of accelerated tax amortization gets no mention in this

The subsidies involved in the administration of Government programs which help home owners, farmers, smallbusiness men, veterans, and others of modest means pale into significance when compared with the subsidies that are doled out to big manufacturers, publishing firms, ship operators, airline companies, and the like.

The Congress has authorized subsidies of many kinds throughout our history to develop the Nation and to keep it strong. The Commission made no systematic study on the whole subject of subsidies, nor does it recommend their elimination in all fields. The ones complained of in this report appear to be, in the main, those which bring widespread benefits to the whole population.

The "mutualization" concept in the Defense, Economic, and Political Union of Western Democracies

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, March 14, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid editorial entitled "How Far Federal Union?" written by the distinguished editor, Mr. Carroll Binder, and published in the Minneapolis Morning Tribune of February 15, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

HOW FAR FEDERAL UNION?

Recent developments on both sides of the Iron Curtain point up the desirability of a convention to explore the possibilities of defense, economic and political union of the Western democracies.

Fourteen Members of the Senate and sixteen Members of the House have joined Senator Estes Kefauver, Democrat, of Tennessee, in introducing a concurrent resolution requesting President Elsenhower to invite the other democracies which sponsored the North Atlantic Treaty to name delegates to meet in a convention with similarly appointed delegates from the United States.

The purpose of the convention would be

"to explore and to report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense,

economic, and political union."

The object would be to see whether the United States and other nations long experienced in the practice of freedom can find a basis of cooperation which would enable them to more effectively maintain their free institutions during the crtical era ahead.

The changes in Russian leadership and policy clearly foreshadow more aggressive efforts to extend Communist power at the expense of non-Communist countries. Russia is taking steps to increase its military and industrial potential. It is coordinating its policies with those of Communist China and the satellite countries in order to function monolithically against the democracies.

While the Soviet bloc is being welded more closely together it is trying to foster divisions within the democratic camp so that they will act separately rather than unitedly. The Communists hope to create conditions in which the United States and its allies will be economically and militarily weakened and at cross purposes politically.

A military alliance such as NATO is his-torically difficult to maintain over a long period, particularly during intervals in which the common danger is not as apparent as it

is at this particular time.

Clarence Streit and other advocates of the principle of Federal union, as distinguished from traditional type of alliance, have been trying to interest the Atlantic democracics in the idea of closer cooperation for the past 16 years.

The Kefauver resolution provides for an exploration of the possibilities of such a union. Adoption by Congress and partici-pation in an exploratory convention would not commit the United States to such a political relationship. It would merely acquaint the American people and the people of other Atlantic nations with the possibilities of uniting for their security and economic well-being in freedom.

We are glad to see Senator HUBERT HUM-PHREY and Representative JUDD among the sponsors of the resolution. We hope the resolution is adopted and that the President will send representative members of both political parties to such an exploratory convention.

Tribute to Abraham Lincoln

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Khan, who is prominent in Pakistani circles in the West, complimenting Abraham Lincoln's great soul.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW YORK PARISTANIS HONOR ABRAHAM LIN-COLN'S MEMORY ON HIS BIRTHDAY

New York's Pakistanis paid tribute to the memory of the Great Emancipator at a Lincoln's Birthday celebration held at the Pakistan League's headquarters, 80-82 Clinton Street, New York City, on the 12th of February 1955. More than 200 Pakistanis and American friends present heard Ibrahim Chowdry, president of the Pakistan League of America which is a member of the Moslem Council pay tribute to the great spirit of Abraham Lincoln describing Lincoln's keen interest in India and the East and Dr. Mubarek Ali Khan, pioneer in the citizenship fight for immigration bill for India quota and organizer and national president of India Welfare League from coast to coast which became in 1947 the Pakistan League of America and is now national welfare chairman of New York, Arizona, and California. Dr. Khan, prominent in Pakistani circles in the West complimented Lincoln's great soul. "Mr. Lincoln's spirit," said Dr. Khan, "was fundamentally Islamic in character and practice as is proven by all of his speeches, writings, and deeds. In these days it is increasingly necessary that we pause and consider the contributions of this man to our times and period. We need these good, clean views of this God-sent man."

Dr. Khan quoted President Lincoln's speech given April 19, 1864, in Baltimore on the anniversary of the blood shed in 1861 by loyal soldiers marching to protect the Capitol and for the occasion of the opening of a fair held for the benefit of the United States Sanitary Commission:

"Mr. Lincoln. So true it is that man proposed and God disposes.

"But we can see the past, though we may claim to have directed it; and seeing it, in this case, we feel more hopeful and confident for the future.

"The world has never had a good definition of the word liberty, and the American people, just now, are much in want of one. We all declare for liberty; but in using the same word we do not all mean the same thing. With some the word liberty may mean for each man to do as he pleases with himself, and the product of his labor; while with others the same word may mean for some men to do as they please with other men, and the product of other men's labor. Here are two, not only different, but incompatible things, called by the same name, liberty. And it follows that each of these things is, by the respective parties, called by two different and incompatible names—liberty and tyranny.

"The shepherd drives the wolf from the sheep's throat, for which the sheep thanks the shepherd as the liberator, while the wolf denounces him for the same act, as the destroyer of liberty, especially as the sheep was a black one. [Applause.] Plainly, the sheep and the wolf are not agreed upon a definition of the word liberty; and precisely the same difference prevails today among us human creatures, and all professing to love liberty."

Mr. Ibrahim Chowdry concluded the meeting with an earnest prayer that the United States might be guided by the spirit and noble thinking of the Great Emancipator. Both Mr. Chowdry and Dr. Khan likewise spoke in high esteem of United States Senator WILLIAM LANGER, of North Dakota, and Congressman EMMANUEL CELLER, of York, and Mrs. Clare Booth Luce, who are among the first to champion the cause of India and people of Pakistan who were barred from citizenship until 1946 under the Oriental exclusion laws. As both Mr. Chowdry and Dr. Khan stressed: "They are the ones whose heart and conscience struggled for citizenship rights for India and Pakistanis to be able to become Americans since July 2, 1946. Thank you sincerely and kindly, ladies and gentlemen."

Hungarian Freedom Day, March 15

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. RODINO. Mr. Speaker, the revolutionary movements of mid-19th century Europe are probably not as well known as they deserve to be. Those movements, especially the revolution of 1848, are of particular significance in the political evolution of various European peoples toward national freedom. Even though the movement of that year did not result in definitive freedom for subject peoples, yet the seeds of liberty and independence took root firmly in many lands. Hungary was one of them.

The Hungarians were restless under Austrian rule and were clamoring for their ancient liberties. Early in 1848 they saw their chance, and under the leadership of Louis Kossuth they secured a number of political rights. On March 15 of that year they adopted a charter by which freedom of the press was guaranteed, a Hungarian national guard was established, feudal servitude as well as heavy taxes on the peasantry were abolished, and a general tax system was introduced extending to all classes. The Hapsburg Emperor agreed to this charter and appointed a Hungarian ministry responsible to the Hungarian Parliament. The country thus became practically independent.

As we all know those days of virtual independence did not last long. By the middle of the following year the gains registered in the freedom-day charter were lost and the Hungarians once more

were brought under a form of government they did not desire.

Ever since 1848 the memory of freedom day has been revered by the Hungarians and they have celebrated it as a national holiday. It is indeed a memorable event in the long history of man's struggle to attain free and democratic government and I am happy to join in its celebration.

Perry Meloan, 1881-1955

EXTENSION OF REMARKS

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the Record I include herewith an article entitled "Perry Meloan, 1881–1955," which appeared in the March 10, 1955, issue of the Edmonson News, of Brownsville, Ky.

It was with deep regret that I learned of the death of my friend Perry Meloan, one of Kentucky's finest newspapermen. The editor and publisher of a small weekly, but often quoted in papers many times its size, Mr. Meloan's life was dedicated to the theory that a newspaper existed in order to dispense news with sincerity and truth; to make the community a finer place in which to live and to serve as a forum for public debate and expression.

There was never any doubt in anyone's mind about how Mr. Meloan felt on any subject but fairness of mind always left the columns of the Edmonson News open to the other side—thus often leading to hot debate but always working for a better community particularly for the young people. Any community feels keenly the loss of such a man, and though Kentucky will feel this loss deeply it is fortunate in having his son, Jack Meloan, to carry on the traditions of integrity and high principle which were established by his father.

The article is as follows:

PERRY MELOAN, 1881-1955

(EDITOR'S NOTE.—The following is the text of remarks made by Charles E. Whittle at the funeral of Perry Meloan at Brownsville Missionary Baptist Church last Sunday morning.)

Perry Meloan, son of the late John Z. and Altha Jane Clayton Meloan, was born at Murray, January 6, 1881, and died at his home in Brownsville, March 5, 1955.

In 1900 he was married to Julia Utterback and they shared together the beauty and bits of mutual marital devotion until she passed away in 1918. He never remarried and his mention of her always exemplified memories of tenderest love and affection.

To them were born 2 sons: Jack, of Brownsville, and Pat, of Nashville; and 2 daughters, Mrs. John Sangston, of Red Bank, N. J., and Mrs. Hazel Gentry, of Bowling Green. These and his 7 grandchildren and 1 brother, R. R. Meloan, of Murray, survive him.

The deep family devotion which existed between him and them throughout his entire life undoubtedly succored him in his days of adversity and will sustain them in the grief they bear at his loss.

In recent years he and the family of his son, Jack, have shared together their home here; and his daughter-in-law, Louise, and her little son, Billy, have joyed in his affection, and have returned it, as if they were his own.

Early in life he became a devout member of the Christian Church and for many years was an active church leader in that denomination. Always he continued to be proud that his grandfather traveled almost all the way across Kentucky in pioneer times to be baptized by Alexander Campbell himself, and was an eminent minister of that faith. In later years, Mr. Meloan did not assume an active role in church affairs, but he was always zealous in his personal practice of Christian charity toward his neighbors, and in opening the columns of his press gratultously for church purposes without prejudice toward dogma, creed, or denomination.

In business and by profession Perry Meloan was a newspaperman; and his ambitions in this field were richly realized.

Over a period covering several years he was editor of such outstanding newspapers in Kentucky as the Paducah News-Demorat, the Paducah Evening Sun, the Owensboro Inquirer and Messenger, the Lexington Herald, the Clinton Gazette, and the Murray Ledger, and of a number of newspapers in other States, including the Birmingham Age-Herald (in Alabama), the Fort Myers Press (in Florida), the Advance (in New York City), the Beckley News (in West Virginia), and the Paris Post-Intelligencer (in Tennessee).

For a considerable period of time he also held a position in the editorial department of the Courier-Journal in Louisville.

But he was never happy with the metropolitan press. Essentially he always yearned for a small-town country weekly of his own, in which he could say what he pleased in his own inimitable way.

It was this yearning which led him, with his son, Jack—then still in his teens—to Brownsville in 1927. With no capital assets except their native ability and their faith in our people, they established the Edmonson News, affectionately known to all of us since its lowly first editions as "the Gimlet."

In the intervening years he has served continuously as its editor and joint owner, and has undoubtedly wielded a greater influence upon the destiny of affairs here than any other citizen of our county.

His loyalty to our people and his willinghess always to wage battle for the commonplace citizen has been characterized by an able pen and an utter disregard for his material gain. Who of our people of this gen-eration does not remember his crusade for the rights of the residents of the Mammoth Cave National Park while they were being ousted from their homes; his championship of candidates from this county when pitted in their fights for public office against candidates from other counties, without any regard for political affiliation or any hope of material reward; his recent campaign for better pay and better treatment of our school teachers after they were deprived of benefits from Frankfort to which he felt that they were entitled; and above all, perhaps, the long hours of sweat and toil and the considerable sum of money he sacrificed in mailing out the Gimlet regularly each week without charge during World War II to every member of the armed services who went from Edmonson County, wherever he might be stationed within the States or in the remotest corners of the globe. Other like crusades of his will undoubtedly recur to all of you. But always his onslaughts were based upon high principle in behalf of his friends and fellow citizens. Personal venom or spleen—if he ever felt any—were never exhibited by him, either in the Gimlet or in his private conduct.

He was no ordinary man—no ordinary newspaperman. He was truly one of the great country newspaper editors of all time, and in his passing the profession has lost one of the giants of the fast-vanishing type.

Somewhere within the bosom of this man was an extraordinary power which sustained him in his work, gave his pen a might, and endeared him to us all. Was it not the boundlessness of his love—his love for the simple, the beautiful, the lowly things of this world—a love so all pervading that it left no room for envy, ambition, avarice, greed, or hate?

Few of us knew of his love for music, and the rhythm of the spheres it reverberates. Yet he was an accomplished pianist, and his first sojourn in Edmonson County was half a century ago when as a bugler in the State militia he encamped with his regiment for maneuvers at Manmoth Cave.

He loved flowers. Yet when his physician some years ago advised him to relax from his work by cultivating a flower garden, he went to the woods rather than the florists for his plants; and right soon his garden was all abloom with a rict of beauty reflected by the commonplace flowers most of us had but despised. Because he loved them all the more for their lowliness they unfolded for him a delicacy within their petals unseen by selfish souls.

He loved pets—dogs, in particular; and no stray was too mongrel or mottled to become an object of his affection. They returned his devotion and trailed him at his heels in his shop and in his home.

He loved and was beloved by children. Although still in his midforties when he came to Brownsville, he immediately became "Uncie Perry" to all of the children here. How happy it made him.

Once he suggested that it be said of him at his funeral:

"Here lies a man beloved by all the dogs and all the children in Brownsville."

To him that was praise and panegyric enough.

Yet his love and his bigheartedness encompassed the old and the young alike so abundantly that he soon became the beloved "Uncle Perry" to all of us. But mostly he lavished his love upon the lowly. To him a pound of sausage or a peck of sweet potatoes tendered by some impoverished farmer or penniless widow for a subscription to the Gimlet was greater payment than all of the gold envaulted at Fort Knox.

"Uncle Perry" was conversant with the Scriptures. One of his favorite passages was 1 Kings, 20: 25, in which is so glowingly described the richness and glory of the reign of Solomon and the extent of his dominion over the peoples of Judah and Israel; but the verse he always quoted was the 25th:

"And Judah and Israel dwelt safely, every man under his vine and under his fig tree from Dan to Beersheba, all the days of Solomon."

"Safely, every man under his vine and his fig tree"—emblematic of joy and plenty.

After all, that is the thing "Uncle Perry" sought for our people—all people—that all might dwell safely in peace and joy and plenty. What an ideal for Christian living. No wonder we loved him so.

Back to the sod which enbosoms his forbears at Murray we consign his ashes; his passionate love for his fellowman flowed back yesterday morning into the boundless bosom of the God who is love; but our memories of him we shall treasure as priceless jewels to sustain us in our quest for the better, the loveller things of everyday living, and to be handed down to our children as a beautiful tradition, the tradition of our beloved "Uncle Perry." Still Mainly Political

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an article published in the St. Louis Post-Dispatch of Friday, March 11, 1955:

STILL MAINLY POLITICAL

Politically clever the Senate Democrats' compromise tax plan may be, but there are strong reasons why it should be defeated just as the House bill should have been defeated.

The first reason is that nobody now knows whether the economic and budgetary circumstances that will exist next year will justify a tax cut next year. The Democrats in effect admit that their proposal is unwise at the moment by delaying its effect until next January.

But how do they know that it would be

But how do they know that it would be wise as of that date? They do not know, of course, and neither does anybody else. The only reason for adopting a postdated tax cut now is a political reason.

Likewise politics provides the only reason for linking a cut in individual income taxes with revision of last year's tax benefits to corporations and stockholders. If the Democrats want to reopen consideration of these issues, let them offer a separate bill and debate it on its merits.

Actually a majority of Senate Democrats last year supported the accelerated depreciation plan which it is now proposed to repeal as an offset to the personal tax cut. As for the tax credit on dividends, this newspaper opposed it at the time and we still oppose it, but we do not believe it should be repealed as part of an omnibus exercise in demagoguery designed to prove that somebody in Washington loves the "little fellow" with a tender passion.

Under the Senate Democrats' plan, as under the House bill, a good many "little fellows" would be taken off the tax rolls altogether, and that is another reason to defeat this measure.

Progressive tax rates which give recognition to the principle of ability to pay are and should remain the heart of our income tax system, but those rates should be applied in such a way that some income tax, however small, is paid by virtually every employed person.

At present a single person begins paying income tax at an income of around \$13 a week. A married person has a tax liability if his income is over \$29 a week. The head of a family of four begins paying taxes at around \$50 a week. In each case, the tax liability amounts to 1 or 2 percent. It amounts to 12 cents a week for the unmarried person, 60 cents a week for the married person, and about \$1 a week for the head of a family of four.

Are such taxes so onerous that they should be eliminated altogether at the lower income levels? We cannot believe so. Perhaps a case can be made for adjusting this rate or that, but surely the principle that some income tax should be collected from most employed persons is sound.

As a matter of fact, we suspect that most such persons would themselves prefer to pay some tax, as a recognition of the obligation which they and all others owe to a Government whose services range from national security to many fields of social welfare. When the time comes to cut individual income taxes, they should be cut in such a way as to avoid relieving large groups of any liability.

Confiscation by Default

EXTENSION OF REMARKS

HON, HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. OSTERTAG. Mr. Speaker, for many months now, I have been pressing the International Joint Commission to establish administrative machinery to adjudicate claims arising from the power and navigation projects it has authorized on the United States-Canadian border, particularly those affecting Lake Ontario and the St. Lawrence River.

Shorefront residents of Lake Ontario find themselves faced with potentially severe damages if the lake level is raised and maintained at high levels. Yet the causes of these damages may well be diffused among a number of entities, national and international, with the result that litigants seeking redress or protection will find themselves lost in a legal jungle.

Up to this time, the International Joint Commission and the Department of State have insisted that there is ample protection for these individuals under the Constitution and laws of the United States and the laws of Canada.

In order to determine whether this is accurate, I recently asked the Legislative Reference Service of the Library of Congress to make an analysis of the relevant provisions of the Constitution and statutes.

That analysis has now been completed, and under leave to extend my remarks, I append a copy hereto.

It concludes "categorically" that the "extant treaty, statutory and administrative provisions—affecting shorefront property owners—afford no definitive protection," and that "the constitutional protection is more theoretical than substantive."

In other water resources development projects on the United States-Canadian border, the Commission has recognized the total inadequacy of normal legal procedures and remedies, and has itself assumed responsibility for the establishment of formal administrative machinery to adjudicate claims arising from such projects.

The Library of Congress study confirms, if confirmation is necessary, that such machinery should be established in connection with the St. Lawrence projects if the statutory and constitutional protection of the rights of United States citizens are to be safeguarded. Failure to do this will result in the virtual confiscation of their property by default.

The analysis of their legal remedies under our present laws, made by James P. Radigan, Senior Specialists Division of the Library of Congress, follows: [The Library of Congress, Legislative Reference Service, Washington, D. C.]

ANALYSIS OF THE CONSTITUTIONAL AND LEGISLATIVE PROVISIONS WHICH EXIST AND CAN BE INVOKED TO PROTECT AND INDEMNIFY RESIDENTS OF NEW YORK LIVING ALONG THE SHORES OF LAKE ONTARIO FOR DAMAGES RESULTING FROM THE PENDING ST. LAWRENCE DEVELOPMENT PROJECTS

That there are constitutional, treaty, statutory, and administrative provisions that could conceivably be used, either singly or jointly, as a base upon which to erect a claim for damages resulting from a raising of the level of Lake Ontario in connection with the St. Lawrence development is not denied. These provisions are: Constitutional-the just compensation provision of the 5th amendment and the due-process provision of the 14th amendment of the United States Constitution; treaty-article VIII of the Boundary Waters Treaty of 1909; statutorysection 10 (c) of the Federal Power Act (16 U. S. C. 803 (c)), Public Law 358, 83d Congress, McKinney's Consolidated Laws of New York, book 42, article 5, title I; and administrative-the order of approval issued October 29, 1952, Document 68, by the International Joint Commission and article 19 of the Federal Power Commission's order issued July 15, 1953.

Practically, however, none of these has the solid foundation it appears to have.

T

The constitutional protection afforded by the just compensation provision of the 5th amendment which would be available if the damages of the lakeshore property could be attributed to the activities of the St. Lawrence Seaway Corporation and the constitutional protection afforded by the due process provision of the 14th amendment which would be available if the damages to the lakeshore property could be attributed to the activities of the Power Authority of the State of New York (the designee of the Government of the United States, under sec. 1 of Executive Order 10500 signed by President Eisenhower on October 4, 1953) would not come into play in either instance unless the damages sustained were found to be in effect the taking of private property for public use. See U. S. v. Lynah ((1903) 188 U. S. 445); U. S. v. Cress ((1917) 243 U. S. 316); U. S. v. Dickerson ((1947) 331 U. S. 745); and U. S. v. Kansas City Insurance Co. ((1950) 339 U. S. 799).

It is possible and even probable that the damages suffered by these residents would not be considered a taking of private property for public use but would be considered a remote or consequential damage resulting from the exercise of the plenary power of the Government to make improvements in navigation. Such damages create no liability. See Jackson v. U. S. ((1913) 230 U. S. 1); U. S. v. Chicago M., St. P. and R. Co. ((1941) 312 U. S. 592).

Admitting for the sake of argument that the increased height of Lake Ontario resulting from the proposed project, in and of itself, is a servitude imposed upon the land for which there may be no just legal or equitable claim for compensation, there is a substantial equitable claim for relief for storm damages which would not be suffered by these residents were it not for the increased water height.

As stated by Melissa E. Bingeman, Fras, in a reprint from the proceedings of the Rochester Academy of Science, December 1953, page 18:

"The question arises: How much is destruction of shores increased by reason of high lake levels? Obviously a 3-foot wave that might be innocuous with the lake at a 245-foot level could be destructive in certain areas with the lake at a 247-foot level. Or, if a wind of a given force raises the cutting edge of a wave 5 feet, from 245 to 250 feet above sea level, then a lesser wind which will

raise it 4 feet will raise it from 246 to 250 feet, and a wind which will raise it 3 feet will raise it from 247 to 250 feet. Manifestly, therefore, the higher the level of the lake, the less wind force is required to work damage upon the shore. The significance of this principle lies in the fact that the number of winds increases as their velocity decreases. There are more winds of 60 miles per hour than of 70 miles per hour, more of 50 than of 60, and so on progressively, in this area—which is in the zone of the great westerlies."

Even if liability is conceded, the proof these residents would be required to produce in sustaining their contention would be almost impossible to supply. If we consider the liability as analogous to the liability of a tort feasor, the rule of decision that the last efficient one (in this case the wind) of several successive causes (in this case in creased height of water and wind) is regarded as the approximate cause or the rule of decision that where several causes are concurrent, the predominant efficient one (the wind) is regarded as the proximate cause where the damage done by each cannot be distinguished, might foreclose recovery. See Howard Fire Insurance Co. v. Norwich & New York Transportation Co. ((1870) 12 Wall. 194).

I

The treaty protection, if any, emanates from article VIII of the Boundary Waters Treaty of 1909, the pertinent part of which reads: "The Commission (International Joint Commission, United States and Canada) in its discretion may make its approval in any case conditional upon the construction of remedial or protective works. * * and * * * may require that suitable and adequate provision * * * be made for the protection and indemnity against injury of any interest on either side of the boundary."

III

The statutory provision afforded stems primarily from section 10 (c) of the Federal Power Act, the pertinent part of which reads "each licensee shall be liable for all damages occasioned to the property of others by construction, maintenance, or operation of the project works pertinent or accessory thereto, constructed under the license, and in no event shall the United States be liable therefor." This provision, as is readily seen, does not create a new liability on the part of the licensee but merely provides that if there is a liability arising from the operation of the project the licensee and not the Federal Government is liable. See Hope Plantation v. South Carolina Public Service Authority ((1550) 59 S. E. 2d 132).

Granting argumento, that sufficient proof might be furnished to establish liability and to obtain a judgment against the St. Lawrence Seaway Development Corporation or the Power Authority of the State of New York, the problem of collecting might arise. Even though the acts creating government corporations authorize them to sue and be sued, it does not necessarily follow that the property and funds of such corporation are attachable. See Federal Housing Administration v. Burr ((1940) 309 U. S. 242) and Inland Waterways Corporation v. Young ((1940) 309 U. S. 517).

IV

The administrative protection, if any, afforded by section (a) of the order of approval of the International Joint Commission which reads: "(a) All interests on either side of the international boundary which are injured by reason of the construction, maintenance, and operation of the works shall be given suitable and adequate protection and indemnity in accordance with the laws in Canada or the Constitution and laws in the United States, respectively, and in accordance with the requirements of article VIII of the treaty," is nothing more than a notice to the applicants that the Commis-

sion expects them to recognize any liability which is found owing by the Court. It cer-tainly does not go as far as the Commission could or as far as is implicitly possible under the provision of the treaty. The administrative protection, if any, afforded by article 19 of the Federal Power Commission license which reads: "ARTICLE 19. In the design, construction, maintenance, and operation of the project covered by this license, the licensee shall comply with all applicable provisions, and requirements of the order of approval (International Joint Commission Docket 68) issued October 29, 1952, by the International Joint Commission to the Governments of the United States and Canada for the construction of certain works for the development of power in the International Rapids section of the St. Lawrence River," is nothing more than a requirement that the licensee comply with the order of approval, which unfortunately does not cover liability for the contemplated damages.

Neither sets up any administrative procedure for determining damages resulting from the development of the St. Lawrence, although such procedure could be set up under the terms of the treaty and the licensing provisions of the Federal Power Act.

CONCLUSION

In summary, it may be stated categorically, that the extant treaty, statutory, and administrative provisions afford no definitive protection and that the constitutional protection is more theoretical than substantive. Therefore justice demands that the Governments of the United States and Canada afford these residents practical remedial aid.

Walter Winchell's American Broadcasting Co. Simulcast of March 13, 1955

EXTENSION OF REMARKS

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Record the opening statement I made on Walter Winchell's American Broadcasting Co. simulcast in New York at 9 p. m., Sunday, March 13, 1955, together with the questions I asked Mr. Winchell about his stock market references.

There being no objection, the matters were ordered to be printed in the Record, as follows:

OPENING STATEMENT BY SENATOR HOMER E. CAPEHART ON WALTER WINCHELL SIMULCAST IN NEW YORK CITY OVER ABC NETWORK AT 9 P. M., MARCH 13, 1955

Mr. Winchell, at your invitation, I am happy to appear on your program tonight.

I accepted your invitation because you said you would be willing to answer any questions I chose to ask.

There are several questions I will ask you which are intended to bring out the facts for your listening audience with respect to reference to stocks you made in previous broadcasts.

However, in the event time does not permit you to answer on this program all the questions I have here, I will release the unanswered questions to the press and you may answer them later.

QUESTIONS BY SENATOR HOMER E. CAPEHART TO WALTER WINCHELL SIMULCAST, NEW YORK, MARCH 13, 1955

1. Why should you, or any radio or television commenator, ever refer to a stock as a bad or good investment?

2. How many specific stocks have you mentioned on your broadcasts or telecasts?

3. Have you or any member of your family ever been paid, or received anything of value for mentioning any of these stocks?

4. Have you ever recommended to your listeners that they either purchase or sell any particular stock or stocks?

5. What stocks have you or the members of your family purchased in the last 2 years, and did you purchase any of the stocks you mentioned on the air?

6. Did you ever suggest or infer to your listeners that a specific stock would go up or down?

 Has any officer, director, employee, or stockholder of any corporation ever asked you to mention, or plug, any stock in which they were interested?

8. Has any individual ever given you any stock tips, either orally or in writing?

9. Has any statement about a stock that you ever made turned out to be false?

10. If asked, would you go to Washington and answer these questions under oath, and if so, will your answers be the same?

Nation's Business Is Definitely on Upbeat

EXTENSION OF REMARKS

HON, LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. ALLEN of Illinois. Mr. Speaker, we see daily increasing indications that our Nation's business is advancing. It is gratifying, therefore, to see that an Illinois newspaper has taken editorial note of the country's progress and I commend your attention to the editorial taken from the March 7 edition of the Sterling Gazette, Sterling, Ill.:

NATION'S BUSINESS IS DEFINITELY ON UPBEAT

Perhaps you may be one of those individuals who do not believe in signs, such as "fresh paint," and feel the urge to touch the articles to which the sign refers to find out for yourself.

Then again, you might be one of those who don't believe the news stories that are constantly reminding us that things are getting better because there may not be any sign that you can touch to make sure it is true.

Be that as it may, regardless of how you feel about it, things were definitely on the upbeat last week in key areas of the Nation's business.

Here's where you could spot the most impressive gains:

Consumer spending at retail, 4 to 6 percent higher than a year ago.

Automobile production, significantly high-

Automobile production, significantly higher than the week before and just below the all-time peak.

Contracts awarded for heavy construction jobs, 58 percent ahead of the year-ago rate. Production and refining of crude oil—highest ever recorded.

Brisk demand for unfinished steel indicated a renewal of inventory building by major steel consumers. Output of the Nation's steel mills hit 90 percent of capacity for the second week in a row. Prices of iron ore moved up.

Proposal for Joint Committee on Civil Defense

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter dated February 28, 1955, which I received from Dr. Harold S. Diehl, chairman of the Council on National Defense of the American Medical Association, together with a report of a national survey which the council conducted to determine the status of American civil-defense preparedness.

This report appeared in the Journal of the American Medical Association on October 9, 1954. I commend it to the attention of the Senate, together with a renewed plea to the Senate for increased awareness and alertness to the immediate needs for enlarging our program of civil defense and preparing on a more realistic level of priority.

There being no objection, the letter and report were ordered to be printed

in the RECORD, as follows:

AMERICAN MEDICAL ASSOCIATION, Chicago, Ill., February 28, 1955. Hon. Hubert H. Humphrey, United States Senate,

Washington, D. C.
My Dear Mr. Humphrey: It was with considerable interest that I read Senate Concurrent Resolution 11, which you jointly submitted with Senator Symington to the Senate on February 4, 1955. That resolution, which calls for the establishment of a Joint Committee on Civil Defense composed of seven Members from the Senate and a like number from the House, is most timely and merits careful consideration.

Recent public pronouncements of the widespread devastation that can be expected from the use of hydrogen bombs in the event of an enemy attack make it not only apparent but absolutely essential and vital that the Federal Government assume its proper role in civil-defense preparedness. It is necessary that the Federal Government take such steps as to assure that adequate plans, preparation, and financial support are provided for the best possible defense of our civilian population and facilities. You are commended for the forthright speech you made in support of the resolution. It clearly pointed up the necessity for active leadership on the part of the Federal Government if we are to have an effective civil-defense program.

As you know, the medical profession has, for a number of years, been keenly aware of the necessity for intelligent medical civil defense planning. Our Council on National Defense has attempted to attimulate interest and to educate our membership to its responsibilities in civil defense. In addition, we have cooperated with all echelons of the Government in preparing and implementing plans for medical care in time of national emergency.

Last year, the council conducted a national survey to determine the status of medical civil-defense preparedness, by State, for both wartime and natural disasters. I am enclosing a copy of the results of this survey as I am sure you will be interested in this tabulation.

If at all possible I would appreciate about 25 copies or reprints of the resolution and your speech together with the other material as it appeared in the Congressional Rec-ORD. I plan to distribute this material to members of our council as well as other interested persons.

We shall be most happy to assist in any way possible and I invite you to call upon us in such capacity as you deem appropriate.

Cordially, yours, HAROLD S. DIEHL, M. D., Chairman.

STATUS OF MEDICAL CIVIL DEFENSE PLANNING IN STATES

The council of national defense of the American Medical Association recently completed a survey of the status of medical civil defense planning in the States and Territories. In conducting the survey a series of 30 questions were used. Questionnaires were sent during April to directors of State civil defense departments and to chairmen of emergency medical service committees of all State and Territorial medical societies. copy of the questionnaire was also forwarded to the executive secretaries of all State medical societies for their general information and for such additional comments as they might consider appropriate. The questionnaires were returned either by the Director of Civil Defense or by the chairman of the emergency medical service committee from all but six of the States. Following is a summary of the results of the survey. results will be made available to interested persons by the council on national defense upon request. The results of the survey are intentionally summarized in terms of those things that the States have not done rather than what they have done. The adoption of this procedure does not represent a failure on the part of the council to recognize and appreciate the outstanding and tireless work done by many individual physicians in the field of medical civil defense, but rather is an effort to present factually the lack of real preparedness in some areas.

STATUTES AND LEGISLATION

Prior to the survey, the council had on file a considerable amount of general information about civil defense legislation in the 48 States, including citations and dates of en-actment. The information received in the 1954 survey enabled the council to bring this material up to date. The survey revealed that there is a civil defense law of one kind or another in every State from which information was received. It may or may not be significant that in at least 13 States no amendments have been made to the State Civil Defense Act within the last year. This may well be due to the fact that some State legislatures meet biannually and therefore were not in session in 1954. However, it definitely is of concern to note that in at least 10 of the States the basic legislation does not appear to be applicable to natural disasters.

APPROPRIATIONS AND STAFFING

It is difficult to make general statements about requirements in appropriations or staffing in civil defense that are applicable to all the States, owing to the great diversity in population, resources, strategic location, and many other factors. The survey revealed that the total paid civil defense staff ranged from I person in Idaho to 116 persons in California. The total number of persons on the medical staff ranged from none in several States to 43 in New York. It is obvious from the survey that many of the States have small civil defense staffs. Information also indicates that in many States the State health officials are also serving in civil defense medical capacities.

The State with the largest appropriation for fiscal year 1954 is New York, with \$1,494,-000; the second largest is California, with \$1.191.894; the third largest is Connecticut, with \$375,201; and the fourth in rank is Virginia, with \$316,270. The 4 highest ranking States in terms of amounts appropriated for medical civil-defense purposes for fiscal year 1954 are: New York, \$438,000; Massachusetts, \$75,000; Connecticut, \$62,550; and California, \$51,048. In at least 18 States the total amount appropriated for civil defense for fiscal year 1954 was smaller than that appropriated for fiscal year 1953. In about 19 States the amount for fiscal year 1954 is the same as for fiscal year 1953, and in only about 5 States is the amount for fiscal year 1954 larger than for fiscal year 1953.

It should be observed that some States have a conditional appropriation authorization for use in case of emergency, such as that of Alabama, \$250,000 for fiscal year 1954. In some States the amount appropriated for medical civil defense is designated for specific things, such as supplies, or a specific amount is allotted for administration. appropriation acts do not specify when the money is to be spent; further, it appears that in a number of States no specific sum for medical activities is specified in the appropriation act itself.

MEDICAL PLANNING AND HOSPITALS

The information received disclosed that at least 7 States still do not have a written civil-defense plan and that 6 of the States that do have a written plan do not include natural disasters in the plan. Of considerable concern is the fact that in 7 States it was indicated that no specific assignments had been made to physicians in case of emergency; in 9 States no specific assignments had been made to dentists; in 9 States, no specific assignments to veterinarians; in 9 States, no specific assignments to pharmacists; in 8 States, no specific assignments to nurses; and in 8 States, no specific assignments to other allied health personnel. It was also revealed that assignment lists in 10 of the States apparently are not kept on a current, or up-to-date, basis.

According to the survey, in about 21 States there appeared to have been no civil-defense committees established on a regional basis; in 18 States, no civil-defense committees established on a district basis; in 9 States, no civil-defense committees established on a county basis; and in 9 States, none established for large cities.

The participation of hospital administrators and officials in drafting civil-defense plans is considered to be important for a number of reasons. The survey revealed, however, that in at least 8 States hospital administrators did not participate in formulating the civil-defense medical plan. In 9 States no plans have been made for improvised hospitals, and in 9 States no plans have been made for mobile first-aid stations.

TRAINING

A variety of information was requested in the section of the questionnaire devoted to civil-defense training. Some of this information is of considerable importance in presenting an overall picture, while some of the questions were asked primarily for education purposes.

In at least 15 States no manuals have been issued for training purposes, and about 14 States have not been divided into regions for training or other purposes. It appears that 10 States, as of the time of the completion of the questionnaire, had had no civil-defense drills; in 16 States no drills had been conducted in metropolitan districts; in 16 States no drills had been conducted in counties; in 18 States no drills had been conducted on a regional basis; and in 16 States no drills had been conducted on a statewide basis. It should be observed here, however, that these questionnaires were completed and returned to the council prior to the nationwide civildefense alert that was held under the auspices of the Federal Civil Defense Administration in the middle of June 1954.

Information received indicates that in 16 States no staging areas have been designated, at least for medical personnel. In at least 3 States there has not been any specific coordination of the various civil-defense divisions and activities within the State.

With reference to civil-defense health instruction in the schools and colleges, the survey disclosed that in 17 States no civildefense courses of any kind are given in the high schools: in 18 States no civil-defense courses are given in professional schools; and in 21 States no civil-defense courses are given in medical postgraduate schools.

COMMENTS AND SUGGESTIONS BY OFFICIALS

The final item on the questionnaire requested comments, suggestions, and recom-mendations as to how the Council on National Defense could be of most assistance to State officials and medical society officials in medical civil defense planning and operations. A wide variety of helpful suggestions was made. They will be presented for the consideration of the Council at its next meeting in October.

SUMMARY OF SUGGESTIONS MADE ON QUESTIONNAIRE

- 1. Encourage interest, and make officers of State medical societies, as well as individual physicians, more aware of the need for civil defense.
- 2. Encourage State legislatures to appropriate more money for civil defense.
- 3. Encourage more interest on part of State health departments. 4. Supply specific information about ex-
- tent of need for mobile first aid stations. 5. Supply specific instructor training man-
- uals-material on hand is too general 6. Expedite assignments of improvised hos-
- pitals to regions and target areas. 7. Provide more civil defense conferences and information.
- 8. Sponsor biological warfare courses on a high level for State officials.
- 9. Sponsor gas-warfare defense courses for high-level officials.
- 10. Survey total hospital liabilities, etc.
- 11. Impress on physicians the fact that they may have to treat 100 times more per sons in a given period than they now think they will.
- 12. Encourage standardized procedures in treatment and other fields.

Ralph R. Roberts, Clerk of the House

EXTENSION OF REMARKS

HON, RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. MADDEN. Mr. Speaker, the following article on our efficient Clerk of the House, Ralph Roberts, was in the magazine section of the Indianapolis Star of March 6, 1955:

THE CALM MR. ROBERTS (By Ben Cole)

The election last November returned to a powerful office a Hoosier whose name appeared on no ballot and who made no campaign in his own behalf.

When the Nation returned the House of Representatives to control of the Democratic Party, it followed that Ralph L. Roberts of Rockport would be the Clerk of the House.

A man seemingly without nerves, Roberts filled the vastly complicated job from 1949 through 1952. He turned over the office to Lyle Snader of Illinois when the Republicans marched victoriously into the Chamber after the election of 1952.

That GOP triumph meant that Roberts would have to step down a notch and become minority clerk.

There have been fewer Clerks of the House than there have been Presidents. He is the 28th. Since the Civil War, there have been only 4 or 5 Clerks, at most.

The Clerk is a constitutional officer of the House. His duties are judicial and executive. Some of his responsibilities were created by law. Some are traditions whose ori-

gins are lost in history.

For instance, the Clerk must subscribe to the newspapers in every district. These are available daily to the lawmakers in the Speaker's lobby. Nobody knows when it started; there's no authority for it; but Roberts had better have those papers on file

every day.

Roberts' signature goes on every bill, as Roberts' signature goes on every bill, as any sigimportant a part of its validity as any signature that appears there. He is the paymaster for the House, laying out some \$2 million in checks every month to Members

and attaches.

Under Roberts is a corps of nearly 200 em-ployees, file clerks, bill clerks, stationery clerks, librarians, disbursing clerk, enrolling clerk, and others. Each is a department head with a sizable staff of his own.

Roberts came by the job in an unorthodox manner. He jumped from a lifetime job as a doorkeeper to the equally long-lived job The jump, though, could have been fatal.

Born to politics, however, Roberts knew What he was doing. Part of his secret was hever having backed a loser for speaker or

for majority leader.

Roberts, however, guessed wrong on his own chances in 1946 when he tried to capture the Democratic congressional nomination in the Eighth Indiana District. He lost to WINFIELD K. DENTON.

Roberts was born in Rockport, a town of some 6,000 Hoosiers along the gentle sweep of the Ohio River, just above Evansville. His father, Ralph E. Roberts, still resides there, an 88-year-old veteran of many political campaigns. The elder Roberts served in many political offices, finally became Spencer circuit court judge when his son was in the eighth grade.

Young Roberts took politics to his heart at an early age. And he hurried to it as soon as his education was complete.

There was an interruption. World War I came along, and he joined the Marine Corps and went hustling off to the trenches in France. "I was in the Marines," is the way Roberts sums up his service record. For the Marines, World War I was no picnic.

Waiting to come home after the armistice, Roberts took a competitive examination for West Point and was 1 of 40, out of nearly 500, Who passed. He entered the military academy, blanched at the idea of spending 4 years learning a science he might never use. Home he went to Indiana and courses at Indiana University and Northwestern University.

It was 1923 when Roberts came to Washington, secretary to the Congressman from his home district, remained to make service

in the House his career.

In 1925, he got a taste of national politics as secretary of the Democratic congressional campaign committee, and he joined in the Al Smith campaign of 1928.

But in his entire Washington career he has hever missed going home to Rockport for every primary and general election, a record he doubts anybody else can match.

In 1943, he was serving as an assistant doorkeeper in the House of Representatives. The chief doorkeeper died unexpectedly, and the House elected Roberts to the post.

Three years later, the Republicans had captured the House and Roberts learned the minority clerkship would be vacant. He started a quiet campaign for election, and

As Clerk, Roberts is the social peer of the Secretary of the Senate. The latter, how-ever, gets more notoriety as a social figure because a private dining rooom goes with the Senate job and the Secretary is often host to the biggest names.

Roberts has no official host duties to clutter up his day. In the House, it is the Speaker who has the private dining room.

However, Roberts' duties have brought him into contact with many luminaries, including the late King George VI who would not enter the House Chamber on grounds that he was denied entry to the Commons and could not break the rule in America.

Roberts is known as one of the Capital's most prodigious walkers. Whenever the weather is even slightly acceptable, he will leave his office in the late afternoon and walk half a dozen miles to the University Club where he is a devoted member.

After a brief pause at his club, Roberts then may proceed on foot another 5 or 6 miles to the Sheraton Park Hotel where he and Mrs. Roberts have their home.

In his office at the Capitol, Roberts has custody of one of the cherished relics of the House: the Adams couch. It is a mo-

hair-covered couch upon which John Quincy Adams died.

After his term as President, Adams returned to the House as a Member. He was stricken fatally while on the House floor, carried to an anteroom and placed on the couch where he remained 3 days until his death.

Another of Roberts' office relics is a chandelier taken from the White House when President Theodore Rooosevelt remodeled the Mansion, its last improvement un-

til 1950-52.

A man of middle years, Roberts has a quiet manner, polished appearance and sin-gularly youthful features. His dark, straight hair is always brushed to perfection and he frequently puffs contentedly on a good quality cigar.

With every Congressman in Washington screaming frantically for gallery tickets on an important day in the House, Roberts can calmly stroll into his office and pass the time of day with a fellow Hoosier and never bat an eyelash when the angriest lawmaker bursts in and demands justice.

You've got to stay calm if you are going

to be clerk of the House.

Resolutions From Oregon Rural Electric Cooperative Association

EXTENSION OF REMARKS OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks, I include herewith five resolutions adopted by the Oregon Rural Electric Cooperative Association and of pertinence to the administration's policy in respect to public

RESOLUTIONS ADOPTED BY THE OREGON RURAL ELECTRIC COOPERATIVE ASSOCIATION DECEM-BER 14, 1954

Be it resolved, That the legislative program of the Oregon Rural Electric Cooperative Association be supplemented by the following policy statement:

"Resolution No. 3

"That we are opposed to the principles and implications of the Dixon-Yates con-

Resolution adopted.

Be it resolved, That the legislative program of the Oregon Rural Electric Cooperative Association be supplemented by the following policy statement:

"Resolution No. 4

"That we urge early enactment of legislation to authorize construction of Hells Canyon Dam."

Resolution adopted.

Be it resolved, That the legislative program of the Oregon Rural Electric Cooperative Association be supplemented by the following policy statement:

"Resolution No. 5

"That we strongly urge Congress to appropriate funds for a new Federal start in the Pacific Northwest, preferably John Day Dam." Resolution adopted.

Be it resolved, That the legislative program of the Oregon Rural Electric Cooperative Association be supplemented by the following policy statement:

"Resolution No. 6

"That we express our lack of confidence in the so-called power partnership policy, and instead we urge a return to the letter and spirit of Federal legislation providing for the preference clause and maximum comprehensive development of our waterpower resources.

Resolution adopted.

Be it resolved, That the legislative program of the Oregon Rural Electric Cooperative Association be supplemented by the following policy statement:

"Resolution No. 8

That we deplore the policy of Secretary of the Interior Douglas McKay in opposition to public power."
Resolution adopted.

B. R. LITTLE, Secretary-Treasurer, Oregon Rural Electric Cooperative Association.

City Council of Chicago Opposes Change in Natural Gas Act

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. O'HARA of Illinois. Mr. Speaker. by unanimous consent I am extending my remarks to include a letter from the Honorable Joseph F. Grossman, special assistant corporation counsel of the city of Chicago, and approved by the Honorable John J. Mortimer, corporation counsel, together with a resolution adopted by the city council of Chicago on January 26, 1955, as follows:

FEBRUARY 28, 1955.

Hon. BARRATT O'HARA, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Your attention is respectfully solicited to proposed amendments of the Natural Gas Act to exclude so-called independent producers of natural gas from the category of natural gas companies subject to regulation. It was strenuously argued in the case of Phillips Petroleum Co. v. Wisconsin before the Supreme Court of the United States that the Natural Gas Act was not intended to apply to producers of gas who sold their product in the State in which the gas was produced even though delivery was made to a pipeline for transportation and sale in interstate commerce. The Supreme Court held that such sales by producers are sales in interstate commerce and that such producers are natural gas companies within the purview of the Natural Gas Act and subject to regulation by the Federal Power Commission.

It is now urged that natural gas when produced is a commodity similar to wheat and other produce and to timber, coal, ore, and oil which are sold in the open market free from price regulation; that natural gas in the field should likewise be free from regulation. The forests and produce of the land must be differentiated from the mineral resources which cannot be replenished or restored when consumed. These mineral reserves constitute the primary wealth of the Nation and the public has such vital interest in their products that they are inherently subject to Government regulation for conservation and necessary use. The necessity for regulation of traffic in such products depends upon the degree of freedom of the channels through which they can be brought to the market for ultimate consumption, as well as upon the balance of supply and demand.

Under our pattern of dual Government jurisdiction, and in accordance with long established tradition, the States have assumed control of production of natural gas to prevent waste and rapid depletion of the resources within their respective bounda-ries and the local distribution of gas for consumption. The United States Congress has undertaken to regulate the production and transmission of natural gas for interstate commerce to protect the ultimate consumers from economic pressure incident to virtual monopoly of the interstate channels

for distribution of the gas. The producers of gas are primarily en-gaged in the production of oil. They explore the country for oil and may discover gas, which, but for the demand of distant consumers developed by investors in interstate transmission facilities, would be burned up or carried away by the winds. They are not interested in the security, comfort, or convenience of posterity, or, for that matter, in the welfare of the present generation. They are bent upon immediate exploitation of all the oil and gas which they can sell in the present advantageous market with preferential taxwise consideration for depletion. Since oil and gas are competitive fuels the producers can control the price of both if the gas can be sold without regulation. Hence, they have organized an unprecedented lobby for exemption from regulation of the price of natural gas produced for sale in interstate commerce, advancing incompatible arguments, in support of their right to a free competitive market price, that it will stimulate exploration for gas to supply the demand and encourage conservation of the resources in the natural-gas fields.

The corporate authorities of the city of Chicago, in behalf of its million consumers of natural gas, having evaluated the special interest of the producers, who are now subject to regulation under the Natural Gas Act. their incompatible interest in the sale of both oil and natural gas and their spurious and inconsistent arguments against the interest of the consumers, as well as the interest of investors in other natural-gas companies, which the Natural Gas Act is designed to protect, passed a resolution op-posing any action of Congress to nullify the

decision of the Supreme Court of the United States that independent producers of natural gas for sale in interstate commerce are subject to regulation by the Federal Power Commission.

A certified copy of the resolution of the City Council of Chicago is herewith transmitted.

Very truly yours, JOSEPH F. GROSSMAN, Special Assistant Corporation Counsel.

RESOLUTION ON EXEMPTION OF INDEPENDENT PRODUCERS OF NATURAL GAS FROM REGULA-TION BY FEDERAL POWER COMMISSION

Whereas more than 1 million homes in Chicago are dependent upon a supply of natural gas from the Peoples Gas System for cooking, and many of them for other domestic uses, such as water heating, refrigeration and space heating; and

Whereas the Peoples Gas System is an integrated system of interstate natural gas companies and the People Gas Light & Coke Co. the sole distributor of gas in the city of Chicago and said system is dependent in great measure upon a supply of gas pur-chased from so-called independent natural gas producers who have heretofore been free to sell their gas at prices affected by competition between natural gas pipeline companies seeking a supply of natural gas to satisfy their respective customer demands; and

Whereas the Supreme Court of the United States has recently determined in the case of Phillips Petroleum Co. v. Wisconsin, that independent producers are natural gas companies within the purview of the Natural Gas Act and are subject to regulation by the Federal Power Commission to prevent unfust, unreasonable and discriminatory prices for natural gas produced and sold in interstate commerce; and

Whereas the oil and gas interests in the United States have initiated a nationwide campaign through the press and other media for enactment of legislation by the Congress of the United States to exempt producers of natural gas from regulation by the Federal Power Commission so that they may exact from those who supply gas for ultimate consumption in the homes of Chicago and elsewhere the highest price obtainable by the incidence of competition among the pipelines for their sources of supply; and

Whereas such competition and competitive prices will rapidly increase the cost of gas for domestic uses in Chicago and elsewhere and will inevitably increase such cost as to restrict the normal use of gas necessary for the health and comfort of residents of Chicago: Therefore, be it

Resolved, That the House of Representatives and the Senate of the United States be fully informed of the consequences of such legislation and that the corporation counsel be and he is hereby directed to use all proper means, and to make such representations to the Congress of the United States, to prevent the enactment of legislation exempting producers of natural gas from regulation by the Federal Power Commission. STATE OF ILLINOIS,

County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of that certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Wednesday, the 26th day of January, A. D. 1955.

Witness my hand and the corporate seal of the said city of Chicago this 16th day of February A. D. 1955.

LUDWIG D. SCHREIBER, City Clerk.

Another Attempt To Grant the "Item Veto"

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. MULTER. Mr. Speaker, I believe the time has come for the Congress to act with regard to giving the President "item veto" power and for that reason I have reintroduced my bill, H. R. 561, on the subject in this Congress.

The following article written by Arthur Krock, which appeared in the New York Times of March 4, 1955, is deserving of our attention:

IN THE NATION-ANOTHER ATTEMPT TO GRANT THE ITEM VETO

(By Arthur Krock)

WASHINGTON, March 3 .- Senator Byrn, of Virginia, has revived the old effort to give authority to the President to disapprove particular items in revenue bills instead of, as now, being obliged to veto or approve them in toto. He has proposed an entirely new formula which may find favor for the general objective which hitherto it has lacked.

Previously the plan advanced was to write into the Constitution unrestricted item veto power for the President. Under the BYRD proposal Congress is authorized to grant or withhold it in any appropriation bill it passes. Congress could specify the sections open to separate veto, maintaining the same right to override a Presidential veto of items as it now has with respect to measures as a whole. If the Byrn amendment were now a part of the Constitution such riders as the RAYBURN \$20-per-head tax deduction on the bill to extend corporate and excise tax rates would be within the President's veto power. So would be the more frequent type of riders that, in contrast to the RAYBURN proposal passed by the House, are not even faintly germane.

The item veto authority over appropriation bills is already possessed by the Gov-ernors of three-fourths of the States. Several Governors have the alternative power of reducing an item. In some States they can veto items in legislation of any kind. Senator Vandenberg, who was an advocate of this Federal reform, President Roosevelt wrote, September 24, 1937: "During my 4 years as Governor of New York I came to the conclusion that the right to veto items in general appropriation acts met with general favor on the part of the legislature and the public."

TWO ROOSEVELTS AND DOUGLAS

He was replying to a letter in which Vandenberg made this observation:

"Legislative riders on tax and appropria-tion bills * * rob the Executive of legitimate and essential freedom of action in dealing with this legislation. * * * I do not see how there can be effective Executive action upon an appropriation bill unless it can be considered by the President in its separate factors."

President Roosevelt replied that Congress already had the machinery to suppress "the evil of intermingling wise and unwise ex-penditures, or tax provisions * * * like that of riders," and "if there were a public opinion * strong enough to carry a constitutional amendment [to the purpose] it ought to be reflected in the action of Congress." But in 1953 his son, Representative Franklin D. Roosevelt, Jr., came out for direct action. On May 14 he served notice that, each time an appropriation bill was before the House, he would propose item veto authority for the President. He quoted Senator PAUL DOUGLAS, of Illinois, as estimating that the lack of this authority costs "about \$4 billion a year of the taxpayers' money."

The Roosevelt, Jr., motion was ruled out of order by the Chair on the ground that it sought to impose legislation on an appropriation bill. That ruling made it additionally clear that an amendment to the Constitution was required for the purpose. But all amendment texts proved vulnerable to the charge that they would dangerously expand the Executive province, enable him to reward and punish areas and individuals Politically, and remove from Congress one of the vital checks and balances derived from the Constitution. By his new formula Sena-tor Byrn hopes to blunt the edge of that Point by minimizing its cause.

THE CRITICS ANSWERED

Other objections have been raised which,

With Byrn's answers, follow:

A constitutional amendment is dangerous because, if a President abused the perogative granted, the harm would be done before the amendment could be repealed. (Answer) Since the item veto authority under the Byrd amendment would be granted by statute, it could be as quickly suspended or repealed, and by joint resolution, which is not subject to Presidential veto.

An amendment text, even with the above saleguard, could probably not be made acceptable to Congress. This is because ceptable to Congress. This is because amendments must be brief, and that pre-cludes the essential definitions of terms like "Items" "Items" and "provisions." (Answer) The Byrd text leaves all these definitions to Congress; also the occasions when they are

to be applied.

"The Federal budget has been in the red 23 cut of 26 years," said Bran in support of his plan. "The Federal debt is at its Peacetime peak of \$280 billions. Contingent debt of the Federal Government is approximately \$250 billions. * * A balanced budget is not in sight. This is a device to attain constructive and responsible economy * * and I believe it to be properly Omy * * * and I believe it to be properly safeguarded in the form I have presented."

Constitutional amendments must travel a rugged, uphill path before they can be obtain the two-thirds of Congress required to submit them to the States and the subsequent approval of two-thirds legislative hajorities in three-fourths of the States. But not many of Democratic origin can claim the support of so rare a party alliance as that of Byrd, Douglas, and Roosevelt, Jr.

Resolution of the General Assembly of North Carolina

EXTENSION OF REMARKS OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. JONAS. Mr. Speaker, under leave to extend my remarks, I include the text of a joint resolution recently adopted by the General Assembly of North Carolina, as certified to me by the Honorable Thad Eure, secretary of state for North The joint resolution follows:

Joint resolution petitioning the President and the Congress of the United States not to adopt tariff policies destructive of the domestic textile industry by failure to recognize difference in cost of manufacture by foreign industry compared with American

Whereas the present conditions of uncertainty in world affairs demand that in the interest of self-preservation our Nation maintain all of its potential capacity; and

Whereas the low living standards of certain foreign countries provide textile manufacturers in those countries with an unfair advantage which may be destructive of that part of this Nation's industrial capacity now made up of textile industries unless there is a tariff structure which acts to offset this unfair advantage; and

Whereas more than one-fourth of the Nation's spindles are operated in North Carolina to process 28 percent of the Nation's

cotton consumption; and

Whereas, of the 450,000 industrial workers in the State, more than one-half, or 228,000, find employment in textile plants, the industry's annual wage bill in North Carolina ranging between \$550 million and \$600 million; and

Whereas the welfare of such industrial workers and their families would be adversely affected if tariffs on textile goods should

be further reduced; and

Whereas, in the interest of protecting the Nation's total industrial capacity, North Carolina's textile industry should not be weakened or forced to lower its manufacturing potential; and

Whereas the lower tariffs on textiles become, the easier it is for foreign countries to ship their products to this country and with each increase in the textile production of foreign countries a part of the American industry's foreign market is destroyed: Now, therefore, be it

Resolved by the house of representatives, the senate concurring—
SECTION 1. That in the administration of

tariff policy and in the enactment of legislation relating thereto, procedures be estab-lished which will provide protection for the American textile industry.

SEC. 2. Be it further resolved that a copy of this resolution be forwarded to the President of the United States, to the two Members of the United States Senate and to each of the Members of the House of Representatives from North Carolina.

SEC. 3. That this resolution shall be in force from and after its ratification.

In the general assembly read three times and ratified, this the 2d day of March 1955.

L. E. BARNHARDT, President of the Senate. LARRY I. MOORE, Jr.,

Speaker of the House of Representtives.

Imports of Residual Fuel Oil

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include for the information of my colleagues a resolution recently approved by the West Virginia State Legislature dealing with our proposed new and enlarged trade program.

The unrestricted imports of residual fuel oil has so raided our coal markets that the economy of our State is in a very sad plight. Approval of H. R. 1, now before the Congress will complete the devastation of our once stable econ-

The resolution follows:

House Resolution 25

Memoralizing Congress to protect the coal industry and the economic status of the employees therein by restricting the importation of foreign residual oil

Whereas the importation of foreign residual oil has stifled the market for the sale of coal;

Whereas the curtailment of the sale of coal, resulting directly from the unrestricted importation of foreign residual oil, has, and is reducing the living standards of the people of the State of West Virginia and is resulting in untold hardships and needless unemployment to the coal miners in the State West Virginia; and

Whereas this importation of foreign residual oil has resulted in a tremendous loss of State revenues to the extent that the State government has been hampered in providing essential services to the people of

West Virginia: Therefore be it

Resolved by the house of delegates, That the Members of West Virginia serving in Congress exert their best efforts in opposing the importation of foreign residual oil into the United States; and be it further Resolved. That the clerk of the house of

delegates forward attested copies of this resolution to the President of the United States Senate, the Speaker of the House of Representatives, and the Members of Congress now serving from West Virginia.

I, C. A. Blankenship, clerk of the house of delegates, hereby certify that the foregoing is a true and correct copy of a resolution adopted by the said house of delegates on the 7th day of March 1955.

Given under my hand this the 8th day of March 1955.

C. A. BLANKENSHIP, Clerk, House of Delegates.

Foreign Traders Association of Philadelphia Favors Deepening of Delaware River Channel and Opposes Recommendation That Local Interests Contribute to the Cost

> EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. WOLVERTON. Mr. Speaker. there is widespread interest in the deepening of the Delaware River as an international highway for commerce. However, the opposition to the recommendation that local interests contribute to the cost of deepening the channel is equally

As part of my remarks I herewith include a copy of a resolution adopted by the Foreign Traders Association of Philadelphia, Inc. This resolution was adopted unanimously by its members at a meeting held on February 28. The association now has 434 members who are actively engaged in international commerce and, therefore, are vitally concerned with the adequacy of shipping. The resolution to which I have referred reads as follows:

In consideration of the importance of the Delaware River as a vital factor in the national security and mainenance of a strong economy, the Foreign Traders Association of Philadelphia, Inc. hereby puts itself on record as opposing the recommendation that local interests contribute to the construction and recommended improvements of the channel in the Delaware River between the Philadelphia Naval Base and Newbold Island.

Brownell Alibis Grain Scandal

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. MULTER. Mr. Speaker, I am directing the attention of our colleagues to the following article by Drew Pearson which appeared in his column The Washington Merry-Go-Round in the Washington Post and Times Herald of March 10, 1955:

THE WASHINGTON MERRY-GO-ROUND—BROWN-ELL ALIBIS GRAIN SCANDAL

(By Drew Pearson)

Attorney General Brownell went out of his way at a press conference last week to try to alibi the dismissal of five Galveston grain scandal indictments just before they were to go to trial and shortly after Governor Shivers, of Texas, had lunched with President Eisenhower.

Brownell even brought his chief of the criminal division, Warren Olney, a competent public servant who did a good job as counsel of the California Crime Commission, to the conference. Together they claimed they were short of evidence and that one Government witness had reversed himself.

This did not, however, satisfy some of the Senators, most of them Republican, who investigated the shocking Galveston grain scandal 2 years ago and who gathered enough evidence to indict several of the grain dealers plus E. H. Thornton, Sr., the father of Gov. Allan Shivers' commissioner of highways who was Shivers' roommate in college and manager of his reelection campaign last summer.

"I would have thought it was a matter for the jury to decide," commented Senator ED THYE, Minnesota Republican. "The dismissal just doesn't look good."

Senator Militon Young, North Dakota Republican, also expressed dissatisfaction.

"How can American wheat farmers expect to sell abroad in competition with Canada," he said, "when Canada maintains strict inspection of its wheat exports while American wheat is sent to ports like Galveston where it's mixed with hog feed and milo maize, then sent abroad as supposedly top-grade American wheat?

"The American farmer does not know his wheat is being mixed with hog feed and he's the one in the long run who suffers."

SWISS REFUSE DELIVERY

Senator Young referred to the fact that two shiploads of the impure Galveston wheat had been sold to the Swiss who refused to take delivery. Several shiploads were also sent to the West German Republic, a country we are trying to keep friendly to the West. They, however, accepted the wheat and used it even though later found to be "unfit for human consumption."

"That's the kind of reputation our wheat is getting abroad," Senator Young commented.

He also referred to the fact that the Bunge Corp., an Argentine firm, made it a regular practice to ship its wheat to Galveston where it had a friendly arrangement with the Galveston City grain elevators, of which E. H. Thornton was manager, to mix its poor wheat with good-grade United States Government wheat right under the eyes of the United States inspector.

Thornton brazenly admitted to investigating Senators that he gave orders to slug the ships as much as possible, that is, mix off-grade wheat with the good. He told how ships selected to be slugged were loaded at night when it was difficult for the inspector and the sampler to see what was happening.

"It's 100 feet from one hatch to another," Thornton testified, "He has to walk that 100 feet, and these ships we might have selected to slug would start at night, and he can't walk from one hatch to another in 10 minutes. He went on to explain that the sampler had to climb up and down hatches.

THE AMAZING BROWNELL

The most amazing thing about Attorney General Brownell's allbi for dismissing these indictments was that the Senate Agricultural Subcommittee had already developed all the evidence a prosecuting attorney would appear to need to take the case to court.

In page after page of the Senate hearings are frank statements of graft and wrong-doing—how the damaged Canadian wheat was imported through Duluth at less than regular duty because it was supposed to be hog feed, how it was carefully shipped to the friendly and cooperative Galveston docks, how it was mixed with good Government wheat and how the Bunge Corp. then collected subsidy payments from Uncle Sam. It's all spelled out in the Senate hearings.

Furthermore, though the Justice Department alloled that there was no evidence any Galveston dock officials profited from the transaction, this is directly contrary to the facts.

At Galveston, bribes were paid to D. J. Sweeney, assistant superintendent of Elevator B, totaling \$5,500 during the same 3 years that the Canadian hog feed was secretly mixed and loaded. The bribes were paid by S. P. Perich, vice president of the Stone Forwarding Co., which handled all shipments for the Bunge Corp.

BRIBERY IS COMMON

Senator Young unearthed the fact that bribery—called "Christmas presents"—was a common custom in loading grain.

"You wouldn't call \$5,500 a bribe?" asked the incredulous Senator Young of Mr. Perich. "No, sir," replied Perich, "not compared to what we paid our other employees."

"But he was an employee in a public warehouse," remonstrated Young.

"He was harbor master, employed by Galveston wharves," Perich admitted.

"But they are a public institution, aren't they?"

"I guess so."

"When you pay a public official \$1,000 or \$2,000, you think it's not bribery?" pursued Senator Young.

"I don't think to give a man a Christmas present is bribery."

"I would say it's bribery, pure and simple," concluded the Senator.

However, the Justice Department apparently agreed with Perich, not with the Senator from North Dakota. They dismissed the indictments.

In Houston, however, they did not dismiss. There, the same agents for the Bunge Corp. bribed William Felirath, superintendent of the Houston public elevator, a total of \$15,-299. In this case, the Justice Department went to trial and secured convictions.

Democratic Support for Ike a Myth

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. HOSMER. Mr. Speaker, a great deal of political capital has been claimed by both parties regarding support or nonsupport of President Eisenhower and his program. The following article recently appeared in the Los Angeles Times in which columnist Holmes Alexander details his belief that congressional support of President Eisenhower by the Democratic Party, as distinguished from members of one wing of the party, and, of course, millions of individual Democrats not in Congress, is a myth:

DEMOCRATIC SUPPORT FOR IKE SEEMS ILLUSORY
(By Holmes Alexander)

President Eisenhower's vocabulary as an old soldier is coming in handy again—especially the big, big D. He finds it most expressive in discussing double-dealing Democrats.

One White House visitor describes the President's peeve over the Democratic \$20 kickback tax as a trigger which has set off a long-delayed chain reaction.

Today when Mr. Eisenhower mentions the rabble-rousing tax tease, authored by his beloved friend, Speaker RAYBURN, the subject leads to deep-buried resentment on other matters.

One of these is the Democratic Party line concerning the proposed cutback in military personnel. Standard criticism by Democrats is that the President is risking his country's life in order to save money.

This charge is a flagrant slur upon something Dwight Elsenhower holds dear—his love of country, as well as upon the only capacity in which he ever claims expert knowledge—his military judgment.

Another smoldering resentment now nearing its blow-up temperature has to do with the sneer campaign against the Dixon-Yates agreement. This contract with a group of private companies to produce electricity for the Atomic Energy Commission has been debated and examined in Congress, by the Securities and Exchange Commission, by numerous public and private fiscal groups-

Every examination without exception has ended in a clean bill of health. But the contract is admittedly and necessarily complicated. The average citizen cannot follow it despite many open-forum discussions by AEC officials and by Messrs. Dixon and Yates themselves.

Democratic mischlefmakers continue to exploit this confusion. They insinuate against President Eisenhower's personal honesty in the matter. Ite is burned up.

The old infantryman's sulfurous anger is not without some political reaction that is just becoming discernible.

It is a reaction which seems to be moving the President from the periphery toward the center of his own party. One GOP leader who has perceived this shift is Senator Styles Bridges, chairman of the GOP policy committee.

For the first time since the death of Senator Taft, Mr. Elsenhower is in a position where he must turn to the Old Guard Republicans for support of his program.

This is conspicuously true on the Armed Forces cutback proposal with its touch upon Ike's emotions as well as his self-respect as a professional sadder.

a professional soldier.
Without votes of confidence from Old
Guard Senators, and specifically without

the active aid of Senator Banges in the policy committee and elsewhere, the President's military bill will be trampled down by Democrats claiming to save the country.

It hasn't been—and can't be—explained how they expect to do so with an additional 500,000 men under arms against an estimated 60 million Russo-Chinese Reds. Only H-bomb supremacy can win or prevent world war III.

One of the day's persistent fallacies is the theory that President Eisenhower's program owes its life to Democratic support. Actually, Democrats in Congress vote for Ike when he offers Democratic measures and against him when he offers Republican measures.

It's as simple as that if you're watching it happen. But the claim that Ike's middle-road program has been mainly supported by Democrats can also be statistically disproved.

Last year the Citizens for Eisenhower, a multipartisan outfit, surveyed the 83d Congress for Ike backers. Taking the Senate and House committee chairmen and the ranking minority members, the citizens made an Eisenhower who's who. It contains percentages of Presidential support in the last Congress. Here are some pertinent samples:

On the Agriculture Committees, Republicans Aiken (94 percent) and Hope (87 percent) outshone Democrats Ellender (40 percent) and Cooley (41 percent). On the Armed Services Committees, Republicans Saltonstall (94 percent) and Short (48 percent) gave Ike better support than Democrats Russell (20 percent) and Vinson (43 percent).

On the money-raising committees, Republicans MILLIKIN (94 percent) and REED (71 percent) succeeded in helping Ike over the opposition of Democrats BYED (45 percent) and COOPER (51 percent).

Even Senator McCarthy (45 percent) was a better Ike backer than his opposite number, Senator McClellan (21 percent).

And Senator Bridges, GOP policy chairman, was an 85-percent Ike backer, while Senator Hayden, holding the same post in

the other party, was a 60-percent Ike backer. It may be news, even to Mr. Elsenhower, that his own party is much closer to the middle road than the Democrats. And certainly it's good news now that the President needs to know where his friends are.

The American-Flag Merchant Marine

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. PRICE. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I herewith include a letter I have received from the national merchant marine committee of the national security commission, the American Legion, and an editorial regarding the American-flag merchant marine:

THE AMERICAN LEGION,
HOD, MELVIN PRICE,

House Office Building,

Washington, D. C.

You may know, has actively lent its support for many yearrs to a strong American-flag merchant marine. In line with this policy we backed the Butler-Tollefson Cargo Preference Act to the limit of our ability. There-

fore, we consider that it is appropriate to call your attention to the attached editorial from the New York Journal-American which describes a current and serious attack on our merchant marine from a foreign source.

In commending the Congress of the United States for putting the 50-50 act on our statute books we wish to restate our opinion that the act is important to our Nation's security and a keystone of a strong American merchant marine policy.

Sincerely.

HENRY PARKE, Chairman.

[From the New York Journal-American of February 4, 1955]

PROPAGANDA

Since 1936 this country has paid subsidies to American shipping interests in order to have an American merchant marine to carry a fair portion of our maritime commerce and to serve as an auxiliary to the Armed Forces in time of war.

In World War I, we had to spend billions of dollars to build ships. Then the costly process had to be repeated in World War II because of our own negligence. Experience has plainly demonstrated that the ship-subsidy plan is both cheaper and safer.

Now, it appears, Great Britain has a scheme to divert American subsidies to the support of the British merchant marine,

which competes with ours.

Under the foreign-aid program, Congress requires that part of the goods we give away be carried overseas in American vessels. Our Government, of course, pays the cargo charges as well as the cost of the goods. And lately the Government has been giving away \$700 million worth of farm products as a means of reducing \$7 billion worth of surpluses accumulated through the agricultural price-subsidy plan.

We read, however, in the London Sunday Despatch that the British Government is refusing large quantities of these free goods because the United States has laid it down that half the goods must be moved in United

States ships.

"The United States Government has been told," the report continues, "that unless the rule is altered, the United States economicaid plan is in danger of breaking down."

Perhaps, in the circumstances indicated, the sensible course would be to let the aid plan break down and save our money. We certainly cannot afford to let our merchant marine be broken down by subsidized foreign competition—much less ourselves pay part of the foreign subsidy.

Slovak Independence Day

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. KEATING. Mr. Speaker, today is the national independence day celebrated by the Slovak people throughout the world. For 10 years their traditions and ideals, firmly dedicated to a heritage very like our own, have been kept alive beneath the cruel oppression of Soviet occupation. Let us joint in acknowledging their brave resistance. Let us send them words of hope and cheer. And let us reaffirm our high resolve to help them win freedom and independence once again.

International Air Carriers

EXTENSION OF REMARKS

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. MACK of Illinois. Mr. Speaker, problems confronting our United States flag international air carriers become more complex day by day. We who are fortunate enough to be members of the Interstate and Foreign Commerce Committee have historically concerned ourselves with keeping our international carriers in a fairly competitive position.

Apparently there is now great concern over our route to the Orient trade cen-

ters out of Seattle.

Apparently, also, there has developed a great controversy over whether Northwest Airlines should enjoy an exclusive operation to Japan and beyond via the Great Circle route or whether, in the interest of free enterprise, Pan American World Airways should not be allowed to compete with Northwest over this increasingly important route.

Mr. Speaker, under leave to extend my remarks, I would like to include an editorial from the Chicago Daily News of February 22, 1955, covering this vital

issue:

MUDDLED ATRLINE PICTURE

When the railroads were built, their routes were fixed and the tracks laid, and that was that. It is not so with the air carriers, Competition between the great airline systems for routes and markets is intense. The taxpayers have a considerable stake in this contest, because of the subsidies paid to the airlines in consideration of the fact that they may become overnight an arm of our national defense.

President Eisenhower himself intervened recently in one of these disputes that carried some special interest to Chicago. After first ruling otherwise, he ordered that Northwest Airlines be permitted to continue flying a Seattle-to-Hawaii route, although Hawaii is served by United and by Pan American World Airways.

In his explanation, Mr. Elsenhower said his intention had been to reduce subsidy payments by assigning the route to the carrier requiring the least aid. He found, however, that it was expected that both Pacific runs would be able to operate with-

out subsidy within 2 years.
Since Northwest and United enter Chicago, the decision means that the present services to Honolulu from this city will continue. The President said he desired to give both Pan American and Northwest "equal opportunity to demonstrate their capacity to develop adequate traffic to op-

erate without subsidy."

That sounds fair enough. But, curiously, the same reasoning does not seem to be applied to Pan American's request to be allowed to operate the great circle route between the west coast and the Orient. This is the north to the Orient route that General Lindbergh surveyed in 1931, but which could not be used until after the war because the Japanese were unwilling to permit American craft over their cities.

Pan American is confined to the mid-Pacific route, stopping at Hawali, Wake, and Guam. This adds 1,847 miles to the flight from Chicago to the Orient, which is the direct destination of 80 percent of Pan Am's passengers. It also costs the Government an extra million a year for GI mail allocated to Pan American to take this circuitous route.

Northwest and Canadian Pacific fly the shorter great circle route; a Japanese and a Scandinavian line are preparing to do the same. It seems strange that the pioneer Pacific carrier should be handicapped in violation of the principle of equal opportunity laid down in the Scattle-Hawaii case.

Importance of Small Mines in Supplying Critical Metals for National Defense

EXTENSION OF REMARKS

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1955

Mr. WELKER. Mr. President, further in support of the contention of many Senators that the continued operation of small mines is vital to our defense and our economy, I have before me an article published in the March 3, 1955, issue of the Idaho Voter, which is a reprint of an article written by Betty Butler and published in the Sunday magazine section of the Spokane (Wash.) Spokesman-Review of recent date. The article is entitled "Idaho Cobalt Mine Gives United States Assurance of Critical Metal." I think it is deserving of the attention of my colleagues in the Senate. All too often we forget the importance of the mining industry in our national defense program. A great deal has been said about our dependence on other countries for strategic metals. In view of those statements it is interesting to note that a small town, population 800, in my State of Idaho, 40 miles from the highway, and 107 miles from the nearest railroad, is the leading and very nearly the only hope the United States has of ever becoming self-sufficient in the production of cobalt.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IDAHO COBALT MINE GIVES UNITED STATES ASSURANCE OF CEITICAL METAL—BLACKBED MINE HAS LONG AND EVENTFUL HISTORY PRIOR TO ITS PRESENT IMPORTANT PLACE IN MAKING NATION SELF-SUFFICIENT IN STRATEGIC REQUIREMENTS

(EDITOR'S NOTE.—The following is a condensation of an article by Betty Butler, from the Sunday magazine section of the Spokane Spokesman-Review.)

The leading, and very nearly the only, hope the United States possesses of ever becoming scif-sufficient in 1 of the world's most strategic metals lies in a little community of about 800 persons, 107 miles from the nearest railroad and nearly 40 miles from a surfaced highway, in the rugged wilderness of the Salmon River Mountains in central Idaho.

The community, and the mine and mill which brought it into existence, aren't even on many road maps of Idaho. But the name of the town—Cobalt—tells the story of why it figures so largely in the plans of American scientists, industrialists and military planners.

Cobalt as a mineral has been known and used in limited amounts ever since the Egyptians colored their pottery with it centuries ago. But it was technological developments of the 20th century that made the element necessary to an adequate defense program and in many phases of industrial progress.

As an alloy, cobalt helps give jet engines the toughness to withstand the terrific heat developed in flight. The material made from tungsten carbide with cobalt as the binder is so hard it is referred to as a diamond substitute, used for high-speed cutting tools and mining drills.

The Belgian Congo produces three-fourths of the world's supply of cobalt, and Canada produces about 15 percent as a byproduct from a number of complex ores. Idaho's Blackbird mine near Cobalt, owned and operated by the Calera Mining Co., is the leading known source of cobalt in the United States.

BLACKBIRD MINE OLD

Though its national importance is new, the Blackbird is not a new mine. In its miles of tunnels and shafts lie 60 years of frustration, broken hopes, and tragedy. The mineral deposits of the district have been known since the days of Leesburg, where discovery of gold in 1866 brought the first permanent settlers into Lemhi County. Well over \$16 million in gold was taken from Leesburg before it was left a crumbling ghost town, but the Blackbird, only a few miles away, yielded little in free gold and was bypassed in the placer-mining rush.

The presence of cobalt was known to these early operators, but there was little demand for it then and it was considered a detriment to the smelting process. But in 1915 Elwood Haynes, one of the founders of America's automobile industry, became interested in the mine as a source of cobalt for an alloy to be used in machining engine blocks. The Haynes Stellite Co. mined in the district between 1917 and 1920, milling about 4,000 tons of ore, but milling difficulties and high transportation costs finally closed the operation.

SIMS BUY MINE

The Uncle Sam Mining Co., principally interested in producing copper and gold, had a try at the Blackbird in 1938. The company leased property from James G. and J. Howard Sims of Salmon, who had picked up the claims at a tax sale, and erected a 75-ton flotation mill. (J. Howard Sims is presently Idaho State senator from Lemhi County.) But the 8,000-foot-high passes, deep canyons, and precipitous cliffs of the Salmon River mountains for the third time won the battle, and the Uncle Sam Co. gave up in defeat.

In 1942 the United States Geological Survey and the United States Bureau of Mines started investigation of the district in a wartime search for strategic minerals. The Calera Mining Co., a subsidiary of Howe Sound Co. of New York, took an option on the Sims property in August 1943 and began underground exploratory work in 1945. Extensive exploratory work since has revealed a large deposit of cobalt, occurring in a 30-square-mile area, which is expected to yield cobalt and copper profitably for many years.

Work on the flotation mill, which sprawls halfway up a steep ridge on the south side of Blackbird Creck, began in 1951, but was hardly well under way when the Government requested Calera to increase it from the planned 600-ton capacity to 1,000 tons. Cobalt was vitally needed in the defense buildup.

MODERN MINING CAMP

Now, with the milling process completed, one of the difficulties that doomed earlier cobait operations has been overcome—but the other still remains. Forty-seven miles of twisting, nurrow, graveled mountain road across Morgan Creek Pass lie between the

Blackbird and the oiled highway (U. S. 93) north of Challis.

Most supplies for the mine and mill and for the town of Cobalt are trucked in from Salmon, 42 miles away, over a 1-way road hacked out of the mountainsides, full of chuck holes and rocks.

But Cobalt people suffer little from isolation. The town's 800 citizens, including about 200 families with 300 children, live in 55 privately built homes, 75 Government housing units, 25 houses and apartments for staff members, and 3 55-unit dormitories for single men. There is also a trailer camp and a hotel.

What the Bill of Rights Means to Me

EXTENSION OF REMARKS

HON, J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. GARY. Mr. Speaker, it is with a great deal of pride that I call to the attention of the House the fact that a 17year-old girl from my home city of Richmond, Va., recently won first prize in a national essay contest on What the Bill of Rights Means to Me, sponsored by the National Association of Real Estate Boards. This fine high-school student, who has brought such honor to our city and State, is Miss Ann Turner. Her essay, judged the best from over 10,000 submitted by high-school students from all over the United States, was translated into 30 languages for international broadcasts, and the Voice of America beamed a recording of her voice, reading her own essay, all over the world on 6 English language programs. I think her inspiring words will grace the Appendix of the Congressional Record, and I commend the attention of the Members of the House to her fine essay, which I here present:

WHAT THE BILL OF RIGHTS MEANS TO ME

I am the Bill of Rights. I represent America. I dwell in her churches, her courts, her newspapers. I protect her people. Long ago my way was paved, my destiny established. I hold the rights of all Americans. I am their watchword, their beliefs, their stronghold. So long as I may ring the words of freedom, I am the basis of their lives, and in me rests the law of a Nation.

A gray, towering spire juts into the sky. Chimes ring through the dusk. From all walks of life come peoples to this sanctuary. Therein dwells their God. Hymns fill the world as their voices echo the truths of peace—voices of youth, of the aged, voices of America. I protect them in this sanctuary. Through me they may choose their religion—worship as they please. They may join their fellowman in prayer, and I pray with them, for I am the soul of America.

Before the hushed courtroom sits the judge, the jury. It is their job to decide the fate of a man. Their wisdom and judgment will determine his guilt or innocence. Once a man was not given this chance. Once he was thrust into the dark cells of injustice. No one would hear his plea; no one would believe in him. He became an outcast of humanity. To a man such as this I have brought justice. I have given him the right of trial by jury. He may stand before the world and be heard. He will be judged in all fairness, guilty or not, and I will stand

In his judgment, for I am the justice of America.

On the street corners, in newspaper stands, on doorsteps, lies the truth of a nation. Gigantic presses work continually to publish the word of the people. There is no one who may say what is to be printed and what is not to be. No one may buy the opinion of America, may bargain with her integrity. Daily, thin lines of clear black type bring to every section of this country the news of the world, unbiased. I am a part of every published article and protector of the people's interests. I am their thoughts, for I am the truth of America.

A friend stops his neighbor on the street. An uncensored conversation follows. It may be a discussion of politics, of government, of religion. They talk freely, unafraid of sudden arrest. In many countries of the world a man's speech is not his own. He may not say what he pleases. He may be incriminated for even the slightest word against his government. Consequently he lives in constant fear. His words are locked behind barred doors and whispered only in the most secluded of places. This is not so in our land. I give to each man his right of freedom of speech, for I am the voice of America.

In courts, in churches, in the mouths and minds of America I dwell. My job is the protection of her people. I am their beliefs, their freedom, their future, for I am the Bill of Rights.

Value of Education

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. ELLIOTT. Mr. Speaker, in an address he delivered to members of the Alabama Press Association at their annual convention in Huntsville, Ala., January 20–22, 1955, Prof. C. E. Bounds, head of the department of journalism of the University of Alabama, pointed out the relationship of formal education to the earning power of an individual in the United States today.

Now when we are considering Federal aid for schoolhouse construction, I think the contents of Professor Bounds' speech are especially significant.

A portion of his speech follows:

You've heard other speakers on this program speak of the future for this State; of its resources and of its recent industrial attainments and future potential. This hoped-for growth of Alabama depends in great measure on the high quality of our local and State government, and on the high degree of intelligence of our supply of workers to be the personnel in this industrial expansion on the good standard of living which Alabama can offer its people, on the quality of its schools and educational institutions, on all the factors which go to insure good citizenship.

I want to offer you editors one course of action you can follow which will help bring about this brighter and happier Alabama. I suppose I would be a traitor to my two professions—newspapering and teaching—if I didn't categorically state that I believe that the partnership of public information and public education is the greatest single force to bring about a better future for this State. From the very beginning of public

education in this country, good citizenship has been its primary aim. As one result of good instruction in his schools, the young citizen is expected to make informed judgments and decisions on the countless questions—political, social, economic—later to confront him, but he must make these decisions and temper his judgment in the realistic light of the current events and situations which make the day's news. And he must gain his knowledge of the news from his newspaper, and thus the newspaper and public education are hand-inglove partners in forming the pattern of thinking which affects our lives and which will determine our future.

We know, from all economic studies and reports, that higher levels of education always lead to higher standards of living and greater demands for consumer goods. We know that industry expands in areas where an intelligent supply of labor is available. That means higher per-capita retail sales—which means more retail and national advertising. We know, furthermore, that higher educational levels mean a greater demand for current information—which means greater circulation for newspapers. So its money in the cash register for newspaper publishers to have a good public school system in their community, and a high level of educational attainment and school completion.

Let me show you exactly what it means in hard money to you and to your community when we measure income in comparison with schooling. Just last month, December 10, to be exact, the Department of Commerce issued a study of the earning records of three classes of average Americans—those who had a grade school education, but no high schooling; those who stopped their education at the high school level, and those who had a college-level education. The difference in average earnings over the 45 years between ages 20 and 65 is amazing.

The fellow who quits in grade school or immediately thereafter earns less than \$1,800 a year average. The high-school graduate doubles this—to \$3,600 per year average. The college graduate skyrockets—his average is \$6,000. Project these figures to make total earnings and you get the picture of what higher educational levels in your community can mean to the economy of your community—and to the financial success of your own newspaper. The grade schooler has a potential earning power of about \$80,000 for 45 years of work; the high schooler earns \$165,000; the college graduate earns \$268,000.

You can see that it's money in your pocket to have better education in Alabama, yet more than 50 percent of all Alabama children who start the first grade drop out of school before they complete the eighth grade. This year in Alabama we have approximately 450,000 kids in the first 6 grades, about 185,000 in the junior-high level, and only about 75,000 in our high schools. Our college enrollment for the entire State is less than 35,000 and, tragically enough, we spend 14 times as much per capita in the State liquor stores than we pay per capita for higher education.

Put it this way: If you and your newspapers, by forcing local authorities to enforce the State compulsory school-attendance laws, by editorially forcing parents to the realization that their kids should go to school, by instilling in your community the appreciation of the advantages of a better education, by being the leader in any program to build more and better schools—if by these and any other means you can boost the educational level of attainment in your communities by as much as a couple of years additional on the average, you'll come close to doubling the potential per capita inceme of your community 10 years from now; and

if you do that, you'll sell more newspapers, you'll sell more advertising, you'll sell more printing, and you'll make more money. As a dividend to the money, however, you'll gain the satisfaction and the pride of knowing you've made a genuine contribution to the future of your town and your State, and you can't measure that in terms of dollars and cents. You'll know you've lived up to the highest demands of a noble profession; you've given leadership to your public; you've helped make a better future for your fellowman.

God Bless America

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. ELLIOTT. Mr. Speaker, in November of last year, I had the opportunity of attending a veterans' day service at the Jasper, Ala., First Church of the Nazarene. At that time, I heard Rev. Paul J. Stewart, pastor of the church deliver a message on God Bless America, which I thought contained some fundamental truths for our times. I commend the reading of it to the Members of the House. Reverend Stewart's message follows:

GOD BLESS AMERICA (By Rev. Paul J. Stewart)

"God Bless America" was one of the most popular slogans, mottoes and songs of the Second World War. It swung in our churches, towered from our skyscrapers, decked our college chapels, and adorned our senate houses. It was stamped on emblems and woven into banners, it swept the highways on automobile windshields, soared through the trackless blue on airline transports and plied the seven seas with our merchant marines, "God Bless America," was the most popular song, the most popular slogan, and the most popular prayer of the war.

APPLICABLE TODAY

Today we must pray "God Bless America" to win the peace as much, or more, than we prayed "God Bless America," to win the war. Even though we won the war, if we lose the peace, we will be of most men the most miserable.

It is an indelible and undenlable fact that God has blessed America. The God of eternity, the God of history, the God of infinity holds the destiny of nations in the palm of his hand. The intelligent and benevolent providence of God is clearly and plainly revealed and manifested in that He reserved and preserved a magnificent continent of immeasureable and inexhaustible resources down across the ages until He had a prepared people to possess and populate it.

While Homer sang, Hannibal fought; Rome rose and fell; the mighty Mississippi rolled majestically toward the Gulf of Mexico unseen by civilized and Christianized man. The great Rocky Mountains towered to the sky unknown and unsung. The broad acres of the western prairies were uncultivated and unharvested.

ALABAMA'S COTTONFIELDS

The cottonfields of Alabama, the wheat-fields of Kansas, the gold mines of Colorado, the coalfields of Pennsylvania, and the oil wells of Texas were undiscovered and unutilized. This vast, unlimited reservoir of resources was the sole possession of a few

Appendix

Preparations for Defense

EXTENSION OF REMARKS

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Robert B. Anderson, Deputy Secretary of Defense, in Oklahoma City, Okla., on the occasion of the 50th or golden anniversary of the Oklahoma City Rotary Club. It is an address that is worthy of careful attention, since it spells out our defense needs and our policy for keeping America in readiness to combat Communist aggression.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am happy and, indeed, proud to be with you as you celebrate Rotary International's golden anniversary. You have a great deal to celebrate. In 50 years you have grown from meager beginnings to a membership of 402,000 in 8.500 clubs the world over. You count some of the most illustrious persons now living among your number—kings and statesmen, scientists and industrialists, artists and explorers, bankers and educators, agriculturalists and oilmen, our neighbor, and the man across town.

Your presence in 89 countries throughout the world is a living testament to the unity of the human brotherhood and the essential alikeness of human beings everywhere. high standard of ethics which is traditional With Rotary and Rotarians is a shining example of what can be done when men are Serious about extending their religious principles into their business affairs. You have done a great deal to make the world a better place to live in these past 50 years and you may look forward during the next half century to the opportunity of doing a great deal more, for the world needs Rotary and what it represents—the gentle civilizing action of moral goodness at the level of busihess and politics and the continuing demonstration that there are everywhere forces which tend to draw men together, uniting them in brotherhood and fellowship regardless of language or color or nation or creed. So I say to you, in the fullness of my heart, Congratulations on 50 wonderful years of progress and achievement. May you prosper and grow in the service of our country and of all mankind."

The span of your 50 years has covered one of the most momentous periods in human history. It has been a period which recorded some of the most profound changes in our world, and in America's position in it. It is no longer the comfortable secure old world of the century's dawning—the gay splendid world of the Edwardians, the confident world of Edison and Carnegie, of Theodore Roosevelt and the elder Morgan. It is a more mature world, and we may hope, a wiser one. In many ways it is a better world

But most importantly to Americans, it is a world in which our Nation has succeeded to a central role in international affairs. We are affected, closely or remotely, by almost every significant event which occurs anywhere in the earth. The "annihilation of distance" as Toynbee expresses it, has sharply narrowed the wide spaces which once separated us from the rest of the world. The monopoly of power once held by Western Europe has been destroyed, and with it many of the relationships which meant political stability to the world's people.

A billion people have been added to the earth in the past 50 years, and perhaps twice that number may be added in the next 50. An advanced technology, available both to the evil and to the good, makes it very nearly possible for man to destroy the culture which he has so laboriously extracted from 15,000 years of experience. And through all these massive changes and upheavals in human affairs there runs the sinister counterpoint of the Communist philosophy and program—a missionary secular doctrine, dedicated to our destruction.

As a result, we in America find ourselves intimately concerned not merely with the physical and military defense of our territory, but also with the defense of the political, economic, and social institutions which are the very stuff of our democracy. The menace is about as near to being total as we have ever seen. It is physical, it is moral. It is military, political, economic, and psychological. It is external and it is internal. It is immediate, and it is continuous.

The dilemma of our times lies in the fact that in order to preserve the essential elements of our society, we must stand ready to meet a military threat, and we must do it in a way which will assure the survival of the values we have moved to defend. It is small consolation to us if our military efforts are so great as to bring down upon us some odious form or police state; yet unless our military preparations are reasonably adequate, nothing else we do may count for anything.

Militarily, we must maintain a capability for several kinds of separate, but related action. We must maintain a powerful retaliatory force, primarily to prevent the outbreak of war, but capable of overwhelming an enemy should he strike. We must have an effective continental defense system.

We must have flexible, mobile ground, sea, and air forces which can be used in a variety of situations and a variety of places in potential trouble spots in many parts of the world while free people are endangered by Communist aggression. We must maintain a powerful Reserve and an adequate production base capable of being mobilized rapidly to whatever degree may be required by the circumstances of any future emergency.

In the nature of the case we have to maintain these capabilities without the advantage of knowing precisely when, how, or in what measure they may be required, if at all. The time, place, and circumstances of physical aggression are largely matters of choice for the aggressor, not the peaceable nation. Since we are thus limited, it means that we must undertake the discharge of our responsibilities for defense within certain limits of what it is possible for our Nation to sustain on a continuing basis—politically, economically, and above all morally.

We cannot expect to run the mile as if it were a hundred-yard dash. What we are capable of devoting to our military effort on a sustaining basis is bound to be measurably less than what we might be capable of putting worth over a very few years of allout effort as the price of immediate physical survival. No nation, not even a dictatorship, can afford to keep itself fully mobilized all the time.

What we are undertaking is a state of partial mobilization, adequate to give a reasonable assurance against the outbreak of both total and limited war, sufficiently advanced to enable us to proceed quickly to whatever mobilization level is justified by the nature of the hostilities we may fall to prevent, and which in the long run will prove tolerable to the institutions of our democratic society.

The nature of this responsibility for our defense is so pervasive and appears in prospect of such long duration, that it must be accepted by all of us as an elementary fact of our contemporary national life. It is an enterprise in which all of us have a part, and in which all bear a certain responsibility.

The processes of war and national defense have ceased to be the concern solely of the small coterle which use to make and prosecute foreign policy—the sovereigns, their diplomats, and their small professional Armed Forces. The past 150 years have witnessed an ever-growing preoccupation with the military means of war to the extent that in times of active hostilities there is scarcely a facet of national life that is not in some way affected. Even now, in a period of nominal peace, 13 percent of our gross national product and 7 percent of our labor force are allocated directly to purposes of national security.

Within the past 5 years we have authorized the expenditure of over \$220 billions by the Department of Defense—more than the total expenditures of our Federal Government from the beginning of our Républic until 1943. Last year the Armed Forces consumed 500 million pounds of beef, 250 million pounds of flour, and purchased \$1 billion in petroleum products. Throughout the length and breadth of America, our farms, ranches, mines, oil fields, forests, factories, and mills poured out their products in an enormous stream to build the strength we must have if we are to live unmolested in a troubled world.

The roots of our military might are thus deeply imbedded in our national life, and because this is so, we cannot limit our concern with things military merely to the end results of the productive process.

We are concerned that there be adequate funds available for national defense; yet we are also concerned with the long-term effect of heavy taxation and expenditures upon your capacity to undertake new business ventures, your ability to replace and expand your capital assets, the ultimate value of your pension plans and life-insurance benefits, the soundness and solvency of your banks and savings companies.

We want to have powerful and effective standing forces; supplemented by trained and readily available reserves; yet we cannot ignore their profound implications for the lives of your sons and daughters, brothers and sisters. We need great quantities of weapons and equipment, constantly to be replaced by newer and more effective models. Yet every substantial change of pace in our procurement programs means the hiring and firing of men, the opening and closing of plants, the quickening or slackening of business in the affected commu-These are but a few, but they are typical of the manifold considerations which are constantly before those who bear responsibility for the direction of our defense effort.

Thus it is that we endeavor to avoid a policy of feast or famine in the development of military strength and seek instead a more nearly stabilized problem of ever-increasing strength that we can and will

maintain for an unknowable period of time.

Let me assure you that the decisions which are made, and the programs which are adopted to acarry out those decisions, reflect the full consideration of all these factors by some of the wisest and most dedicated people I know, military and civilian. And in all America, there is no man whose experience in these matters is greater, whose judgment is sounder, whose solicitude for the people's welfare is more abiding, than magnificent soldier-statesman-patriot whose leadership it is our great good fortune to enjoy in these uncertain days-Dwight D. Eisenhower.

Of great importance is the endless march of technology which renders obsolescent the best weapons of a few years before. It is this fact, more than any other, which warns us against procurement programs which overcommit us to the weapons of a par-

ticular vintage.

The desperate race for weapons superiority goes on, and sometimes the issue of victory or defeat is decided by the narrowest of margins. One may well speculate upon what our own fortunes in the European theater might have been had the Germans gotten their V-weapons into action 6 months earlier than they did, or had they gotten the Focke-Wulfe jet fighter operationally inte-grated into the Luftwaffe before our air offensive smothered it by sheer weight of bombs and numbers, or had the snorkel submarine made its appearance in 1943 instead of 1945.

No one need be reminded of the implication of these events for our own day. appalling consequences of losing the technological race in even a single major weapons system cannot be overestimated, and they argue insistently for the closest kind of attention, not alone of a comparatively few scientists, engineers, factory executives, and military officers, but by all of us.

For it is out of our great commonwealth of skills, knowledge, and understanding in our school, colleges, libraries, laboratories, and factories that all specific applications must be drawn. All of us have a stake in the vitality of that fund. All of us have a responsibility for increasing it, widening its scope, making it more readily accessible to those who would draw upon it and contribute to it. Our success, both in the arts of peace and the arts of war, will be directly proportional to the success with which we are able, through the educational system and process, to provide the most intimate and productive association between this fund of knowledge and those who seek it.

Another area of responsibility in which many of our people are involved directly, is

that of military service.

The President and many others of our leaders have stressed the urgent necessity of having a program which would produce a large, well-trained, readily available reserve. Such a program should try to achieve at least five things.

First, since both the active and the reserve forces have their roots in the common ground of the Nation's manpower pool, any Reserve plan must provide sufficient manpower to staff the active forces.

Second, there was the requirement that we build a reserve force that will be effective if and when mobilized.

Third, we should maintain reasonable stability in such matters as induction age levels so as to minimize the difficulties of our young men in planning their lives and their service obligations.

Fourth, we should provide a pool of militarily eligible men so that the program would operate efficiently.

Fifth, we should in some way insure a reasonable equity of service in the defense

of our country.

The national Reserve plan presently before the Congress obtains, in my judgment, an effective reconciliation of these factors. It is designed to be practicable, flexible, and equitable, and will provide over the next few years a trained, vital, Ready Reserve of almost 3 million men, and a Standby Reserve of 2 million more. Because as a democracy we depend heavily on citizen soldiers, it is essential that we have an awareness and understanding of the importance of this program to our Nation and particularly to those young men whose lives are so vitally con-

This is true of every other aspect of our national defense effort. There is an insistent need for each of us to develop a con-tinuing awareness of his own position in the world, to see how his problems and efforts relate to those of his neighbors, his city, his State, and his Nation. We need to perceive the implications for each of us in the general truth that we can best defend our country by the maximum development of our individual capabilities for useful, productive work.

The engineer, the mechanic, the farmer the shopkeeper, the lawyer, the teacher—all those who contribute to the success of this marvelous organism called the United States, are each in their own way, helping to advance the cause of freedom in the world. It is of critical importance that each brings to his task the very best of his heart, mind, and hand.

And here, it seems to me, we are getting back to Rotary's motto of "service above self," and to the abiding truth that a free community must be built upon something more substantial than the self-love of its citizens. For the very practical meaning of service above self lies in the fact as each individual voluntarily gives up a portion of his time, his substance, his rights and privileges to his fellow men, the happiness and well-being of all, including his own, are increased thereby.

The key lies in the word "voluntarily."

Any form of community life requires a certain amount of order; and to the extent that order is not achieved voluntarily by the self-discipline of its members it will be achieved by the enforced discipline of a central authority. In a responsible free society, there is a minimum of central authority. which means a maximum latitude for the natural creativeness of its individuals to assert itself in making productive and useful things.

Thus in our free society there are these strong motivations of competition, the natural desire to excel, the sense of satisfaction in a job well done, the joy of discovery and creation and constructive effort. In the economic field this has produced a situation in America in which the natural ambitions of people tend to create surpluses, and our problem is how better to utilize and distribute what we have so bountifully produced.

Where the stifling influence of a powerful central authority blights the initiative and creativeness of the people we have not abundance but scarcity. Lacking the stimu-lus of natural incentives, the bored and spiritless people simply go through the mo-tions of the social and economic processes of community life.

We have recently had the novel experience of seeing the Soviet regime admit to failurethe colossal failure of its agricultural program. Here we have the incredible spectacle of a predominately agricultural nation, with a great expanse of some of the richest soil in the world, being actually unable adequately to feed itself.

Despite all its plans and quotas and exhortations Soviet agriculture remains at about the level it was 25 years ago. Its cattle population is 10 million below what it was in 1928; its pork production has dropped 5 million tons since 1940, and by its own admission the supply of meat, potatoes, and vegetables is unsatisfactory. Throughout the world one can see everywhere the results of the two systems: the success and prosperity of the free nations and the poverty and failure of the Communist bureauc-

racy. To a greater or lesser degree these differences are evident in every other field of human endeavor, and they underscore the basic principle that the answers to the common problems of human association should be sought at the most elementary administrative level which permits of a satisfactory solution for all concerned: the town, the precinct, the county, the school district. Still more do they argue the need for the fullest kind of participation of the individual in the everyday process of community life, for the thesis of democracy is that its citizens have the capacity to solve their own problems and to do it better than any paternalistic government could possibly do it for them.

This means that the focus of effort upon & great many things which intimately and directly affect our lives-our moral and religious outlook, the state of our basic edu-cation, the competence of our citizenship must come at the local and individual level: the level at which one person sees and embraces his ultimate responsibility toward his nation, his fellow men, and his God. It is at this level that Rotary has for 50 years concentrated its attention with such great success, and it is at this level that we must continue to work for a world of free and continue to work for a world of free kilds responsible individuals whose useful, happy, abundant lives give increasing proof that "he profits most who serves the best."

Tribute to the Portuguese

EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. SALTONSTALL. Mr. President, 1 ask unanimous consent to have printed in the Appendix of the Record an article entitled "Portuguese Have Added Much Color and Interest to Saga of Cape," and an editorial entitled "Tribute to the Portuguese," both of these having been published in the Provincetown Advocate, of Provincetown, Mass., on March 10.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

PORTUGUESE HAVE ADDED MUCH COLOR AND IN' TEREST TO SAGA OF CAPE

It is hard to find a part of the United States more interesting or more widely known than the sandy fishhook that projects from the Massachusetts coast and is called Cape Cod, writes Raleigh Costa in the Falmouth Enterprise.

Falmouth, like many other towns on the cape is well represented in books such as

Cape Cod, by Kittridge, Old Cape Cod, by Mary Rogers Bangs, and Cape Cod Pilot, by Digges. For the most part, the townspeople as a whole are well informed of Falmouth's past and of early inhabitants of our town. The names Isaac Robbins, Elijah Swift, Weston Jenkins, Ichabod Hatch, Bradford Dimmock, Jonathan Hatch, and Thomas Bowerman are all familiar as early settlers of the town.

There also was another group of settlers, not quite so early as our first, but who now make up quite a large percentage of our townspeople. To the majority little, if any, is known about these people. They are the Portuguese people of the town who inhabit the villages of Teaticket and East Falmouth.

DILIGENCE AND INDUSTRY

Through their diligence and industry they have won for themselves the praise of those who know them. Where today extend in ever increasing dimensions whole fields given over to strawberries and turnips, there existed only a few years ago waste of scrub pine and oak.

Due also to the industry of the Portuguese, Falmouth has taken place as one of the foremost strawberry-growing centers in the entire country, since the production in the last few years has approximated a yield of 1½ million to 2 million quarts of berries each Year.

The fields that extend to each side of the State road through the East Falmouth district are models of well cultivated farms. Row after row of plants is seen, yet a tract of land as large so free from weeds would be difficult to find elsewhere.

Most of the people of Portuguese descent feel that the townspeople should at least have a vague idea and understanding of the origin, race, and language of their fellow townsmen.

MIXTURE OF OLD RACES

The Portuguese are a mixed race originally Iberian or Basque with late Celtic admixture. Galician (derived from the ancient Galiaic, presumably Gallic invaders). Jewlah and Arabic blood are also strongly present. They are generally sober, good natured, obliging, and patriotic, but shiftless. The Portuguese people are of the white race and their language one of the Romance, formed by the junction of the Latin-speaking Celts with the Teutonic races. Words of Greek, Phoenician, Iberian, Celtic, and Carthaginian origin are found in Portuguese as in Spanish, indicating the relations into which commerce or conquest brought the early inhabitants of the country.

The Portuguese language, by means of colonization and emigration, has been widely spread. It is spoken in Portugal, Azores, and Madeira, which are regarded as integral parts of the republic; Brazil and the Portuguese colonies in Asia, Africa, and in the United States, and among the Portuguese Jews scattered over Europe, particularly in Hamburg and Amsterdam. The Portuguese Possess the richness and conciseness of the dialects founded on the Latin tongue.

LANGUAGE

The lingoa geral spoken on the eastern and western coasts of Africa, as well as in some parts of India and Ceylon, which bears an analogy to the lingua-franca of the Mediterranean, may be regarded as a dialect founded on the Portuguese and as containing reminiscences of the ancient maritime Power of the Portuguese people.

It might be quite confusing to some who have heard people of the black race speak and say they were Portuguese. True, they speak Portuguese, but of a different dialect, and call themselves Portuguese because they were Portuguese subjects, much the same as the Prench Moroccan speaks French and says he is a Frenchman. To be more specific, Portugal has possessions in Africa and solely

owns the Cape Verde Islands, of which the inhabitants are for the most part Negroes, except for a few thousand Europeans who are engaged in business there.

This is but a short account, but should be basis for a vivid and closer understanding of the fellow citizens of our town.

March 10, 1955

TRIBUTE TO THE PORTUGUESE

Elsewhere in this issue is an article which points up contributions made to Cape Cod by its Portuguese people, telling something of their ancient origin and development.

This is timely because next Tuesday has been designated by Gov. Christian A. Herter as Peter Francisco Day to honor "a truly great American of Portuguese origin, a patriot whom our historians will always underscore."

The Governor's proclamation has this to

say:
"To Peter Francisco, a giant in structure,
might, and courage, who slew in this engagement 11 of the enemy with his own
broadsword, rendering himself, thereby,
perhaps the most famous private soldier of
the Revolutionary War."

These stirring words are found on a monument at the battlegrounds of Guilford Courthouse, N. C. They will tell tersely of the climatic event in the life of a heroic young man, who did much to assure the future of the newly born American Republic.

Of Portuguese origin, Peter Francisco came to Virginia at an early age. When the Revolution came, Francisco was 16 years of age. He joined the 10th Virginia Regiment of Continental troops and was engaged in some of the war's most sanguinary conflicts until victory was achieved. In his complete dedication to the ideals of freedom and democracy, the youthful soldier performed feats of heroism and daring that have rarely been equalled by any soldier in the annals of American history. As a result, he was severely wounded several times. Truthfully, it can be said that by the arms of such men the liberty of our country was achieved.

Later in life, Peter Francisco, who was industrious, temperate and always devoted to the cause of the weak and unprotected, became sergeant at arms of the house of delegates in Virginia. He died in this public service on January 16, 1836, and received burial with military honors.

Citation of Elgin Watch Co. for Refund of Savings

EXTENSION OF REMARKS

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1955

Mr. DIRKSEN. Mr. President, some of the people who have been critical of the President's decision to raise the tariff on imported watches have claimed that the American watch industry is inefficient. I, therefore, ask unanimous consent to have printed in the Appendix of the Record an official Navy Department press release citing the Elgin Watch Co., of Elgin, Ill., for voluntarily making a refund of savings effected through economical operation even before the price renegotiations have been mediated.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF DEFENSE,
OFFICE OF PUBLIC INFORMATION,
Washington, D. C., February 28, 1955.

George W. Fraker, general manager of the ordnance division of the Elgin National Watch Co., Elgin, Ill., today presented Rear Adm. F. S. Withington, United States Navy, Chief of the Navy's Bureau of Ordnance, with a refund in the amount of \$2,725,000. The Elgin Co. is producing precision ammunition components for the Navy.

The refund applies to four of the current

The refund applies to four of the current contracts the company has with the Bureau of Ordnance. These contracts contain provisions which enable the Government to establish final prices for the material under production, after completion of approximately 50 percent of the production. Although Elgin would not have been required to make this refund until the price-revision negotiation had been completed, it has done so in advance voluntarily.

According to representatives of the Bureau

According to representatives of the Bureau of Ordnance, production efficiencies developed by Elgin have contributed to a portion of the savings to the Government represented by this refund.

This action on the part of the Eigin National Watch Co. is a fine example of Navy-industry cooperation in obtaining necessary defense material in the most economical manner.

Impact of St. Lawrence Seaway on State and Municipal Projects

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1955

Mr. WILEY. Mr. President, all along the 2,300-mile lifeline into the heart of the North American Continent, there is a tremendous burst of activity at State, county, and city levels, as the Midwest prepares for the 1958-59 opening of the deepwater Great Lakes-St. Lawrence seaway frontier, as made possible under the Wiley seaway law, Public Law 358, of the 83d Congress.

I was pleased to see in the March 8 issue of the Wall Street Journal a round-up article by Ray Vicker, staff reporter, regarding the tremendous variety of local projects which are now underway for the purpose of making the various States and communities adequate to reap the fullest possible benefits from the seaway.

These benefits will not drop into people's laps automatically. They must be worked for, planned for, built for—carefully and soundly.

The Wall Street Journal, I may say parenthetically, in recent days has not been carrying very encouraging news to its readers because of the downward fluctuations of the stock exchanges. But at least in this article, as in many other articles, depicting the continuing growth of the American economy, every reader—in Wall Street or Main Street—could feel encouraged and enthused.

As this noted publication knows and as we all should know, the basic fact of the matter is that the economy of the United States is fundamentally sound. It is not only sound, it is booming. Provided the Government continues to provide a sensible framework of encourage-

ment and, provided the American people maintain sound, reasonable confidence in themselves and in their country, there is no reason why we cannot enjoy continued and ever-increased prosperity.

I ask unanimous consent that the text of the fine Wall Street Journal article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEAWAY SPURS PORT IMPROVEMENT PLANS— CITIES ALONG GREAT LAKES PUT UP MIL-LIONS TO PEEPARE HARBORS FOR DEEPER DRAFT VESSELS EXPECTED IN 1959—MILWAU-KEE BEST EQUIPPED

(By Ray Vicker)

Chicago, Int.—Icebound, 2,200-acre Lake Calumet in the heart of this city's industrial south side isn't much to look at with its swamps, garbage dump and backdrop of smoky factories. But civic and industrial officials have been looking at it intently of late. In the office of the Chicago Regional Port authority, two drawings show how the lake will look in 1959. Big oceangoing freighters are moving from a Lake Michigan connecting channel and nosing into docks. Long piers jut into a man-made harbor; warehouses and terminal facilities hug the shore. Around June 1, construction crews will begin the \$22½ million job of transforming the drawings into reality.

Lake Calumet's conversion is one phase of a chain reaction set off by the decision to go ahead at last with construction of the St. Lawrence seaway, to open the way for deep draft ocean vessels to sail from the Atlantic into the heart of the Midwest.

MILWAUKEE TO SPEND \$4.7 MILLION

Among the many projects planned or under way in other harbor conscious cities are: A \$4.7 million harbor improvement program at Milwaukee; a rough plan for a \$20.6 million docking facility at Toledo; a new \$1 million terminal at Toronto; \$109 million worth of Federal channel improvements on the upper Great Lakes; a \$2.3 million harbor deepening project at Buffalo; a \$5 million plus harbor at Ashtabula, Ohio. Even smaller cities such as Manitowoc, Wis., and Erie, Pa., are talking port development.

Pa., are talking port development.

One United States Army engineer estimates at least \$500 million may be invested in the Great Lakes area in the next 10 years by Federal, State, city and private agencies for harbor and channel improvements.

Experts disagree only on the extent to which lake shore cities will be affected by the seaway. All expect heavy gains in commerce. Iron ore from Labrador will flow in big quantities to midwest steel mills, grain will flow from Great Lakes elevators directly to foreign shores, and Milwaukee machinery. Chicago metal products, Detroit autos, and other manufactured goods from the heartland of America will move on water to the rest of the world.

EQUAL TO PANAMA CANAL

The Federal Government's St. Lawrence Seaway Development Corporation estimates 36 million tons of cargo will flow through the seaway the first year it opens. This approximates the current annual volume through the Panama Canal. Higher estimates of the United States Department of Commerce, the Army engineers, and the Great Lakes-St. Lawrence Association range up to 57 million tons annually.

The railroads, which fought the seaway tooth and nail as uneconomic, figure they'll gain as well as lose. A. E. Periman, New York Central's president, speculates that expansion of the lake ports may step up north-south traffic, although it might "affect us adversely east and west."

Right now, most Great Lakes cities don't have much more than a brass band to meet

any big ocean freighters which might ride empty into their ports.

CHICAGO EXPECTS 800 SAILINGS FIRST YEAR

That's why you find so much activity along water fronts, Maxim M. Cohen, general manager of Chicago's port authority, says: "We plan to construct 8,000 linear feet of dock, 4 transit sheds of 60,00 square feet each, 2 grain elevators each of 6.5 million bushels' capacity, 2 railroad classification yards, and 100-acre site for liquid tanks. Completion of this initial project is scheduled for 18 months after the first dirt is turned this June.

But that's only a start. Eventually, the port is expected to consist of 14 miles of docks, with facilities for handling barges from New Orleans, Cincinnati, St. Louis, and other river ports, alongside big ocean freighters from the four corners of the globe. To build that port will require upward of \$100 million.

A second major project here—the \$182 million dollar Calumet-Sag Channel project—is aimed at widening the present link between the upper reaches of the Illinois waterway and Lake Michigan. Completion would allow the biggest towboats on the inland rivers to dock at Chicago, transferring cargoes directly to ocean freighters at the new harbor.

President Eisenhower's budget message to Congress in January called for funds to help get that project rolling. And the Chicago city council already has deeded the Lake Calumet area to the port authority, with legislative action anticipated soon to clear the way for a bond issue this spring. Says Cohen: "We are planning for 800 to 1,000 sailings here the first year that the seaway is opened."

MILWAUKEE PORT NOW BEST

Chicago's present facilities are inadequate even for the tiny freighters which now can navigate the St. Lawrence. When Norwegian marble was imported via the Great Lakes for the new Prudential Insurance Co. building here, the cargo was unloaded at Milwaukee, not Chicago. Milwaukee was the only nearby port with a crane large enough to handle the job. Chicago machinery exporters frequently bypass their own port to ship via Milwaukee.

"Right now we have the best equipped port on the Great Lakes for handling foreign cargoes," says Harry C. Brockel, Milwaukee's municipal port director. "Present port facilities will require only dredging to seaway draft to qualify them as facilities to accommodate seaway traffic." Seaway draft is 27 feet, compared with the present 14 foot St. Lawrence bottleneck.

But Milwaukee officials aren't sitting on their hands. Today, the skeleton of a new 20,000-square foot warehouse stands at the north end of Jones island in the harbor. Welders work on orange-painted beams overlooking the frozen bay. Steel walls will be in place soon. "This warehouse," says Mr. Brockel, "might be called the first step in our expansion for the St. Lawrence seaway."

Recently, the city's board of harbor commissioners presented a further four and seven-tenths million dollar development program to the city council. Biggest project in the program is a new three and four-tenths million dollar general cargo terminal. Others include a new highway to provide better truck access, expansion of rail trackage, purchase of new cranes, and dredging of harbor slips to seaway draft.

DULUTH REVIVES ITS PORT AUTHORITY

The board estimates it has room for 8 new major piers on the south side of the ice-crusted harbor entrance, and 6 on the north side. Currently it has 6 marine terminals which were served by 10 ship lines, in 1954. Foreign sailings totaled 188, compared with 10 in 1946. An estimated 225 are expected for

At the head of the lakes, wintry blasts aren't cooling Duluth-Superior's enthusiasm for the seaway. This hill-rimmed port, 1,340 miles west of Montreal, would be the end of navigation for big ocean vessels.

To get its harbor development program going, Duluth has reactivated its long-dormant port authority. Pending before the Minnesota legislature is a proposal to grant the authority an initial \$73,000 to plan for development of the harbor. Duluth-Superior visualizes itself as the country's biggest grain-exporting port, while also serving as a medium for exports of farm implements and machinery.

Superior, Wis., also is considering reorganization of its inactive harbor commission and setting up a joint port authority with Duluth, and is studying budgetary problems of port development.

Before any of the lake ports above Monroe, Mich., can benefit from the seaway, the Detroit river, one of the connecting links between Lakes Erie and Huron, must be deepened, as must other channels between the upper lakes. A bill is pending in Congress to eliminate such bottlenecks through a \$109 million United States Army Engineers dredging program.

In Toledo, Ohio, civic fathers dream of making the muddy Maumee River into a world-cargo port. The river splits the city, offering 7½ miles of waterfront lined with industrial plants and properties open for marine development.

At the mouth of the harbor, lean lake freighters are moored beside two huge coal docks which handled 20.9 million tons in 1954. But Toledo hopes to become more than a big coal port.

CLEVELAND STUDIES NEW PORT NEEDS

A tentative plan for a new \$20.6 million general-cargo harbor facility has been drawn by Harland Bartholomew & Associates, St. Louis engineering firm. Proposed location is at the mouth of the Maumee on a 175-acre site. Facilities for 10 large cargo ships would be provided at 5 cargo slips and at open wharves.

In a room of Cleveland's city hall overlooking the lake front, engineers are leaning over blueprints of a proposed port of Cleveland.

Currently, the engineering firm of James C-Buckley, Inc., New York, is making a traffic survey of 1,500 manufacturers in a 6-State area to see who might use a port at Cleveland. This information is expected to provide a foundation for port improvements.

Sixty miles east of Cieveland, at Ashtabula. 2 new piers jut 2,000 feet into the harbor, the core of the city's seaway port. The N. J. Pinney & Associates Dock Co. is scheduled to complete two 2,000 by 500 foot bulk cargo terminals with 8,000 linear feet of ship dock within 2 years. On drawing boards, is a third 2,000-foot dock. This \$5 million plus project is a private Pinney venture aimed at transforming Ashtabula into a chemical shipping port.

The Buffalo, N. Y., city administration currently is pressing the State legislature to authorize a Buffalo area port authority.

"We anticipate the greatest value of the seaway to Buffalo will come from the movement of iron ore from Labrador," says Charles C. Fichtner, executive vice president, Buffalo Chamber of Commerce.

Mr. LANGER. Mr. President, will the Senator from Wisconsin yield?

Mr. WILEY. I yield.

Mr. LANGER. Mr. President, with reference to the article in the Wall Street Journal to which the Senator from Wisconsin has made reference, I am entirely satisfied that that article is not correct. The seaway should extend a number of miles inside my State. In my lifetime, there was navigation all the way up to

Montana. I remember that when Teddy Roosevelt was in North Dakota he went on a big ship all the way to Custer and brought back the dead and the wounded

from that point.

I wish to serve notice that I intend to introduce a bill providing for a survey to be made which has for its purpose ascertaining from the Army engineers or the Bureau of Reclamation the facts as to whether the seaway can be extended into the Missouri River.

Mr. WILEY. I certainly would not have any objection to that. I am sure the article speaks, at least, the honest conclusions of the writer. There is a great deal of discussion when we disagree on the floor of the Senate. This is just another example of the Senator from North Dakota disagreeing with the Wall Street Journal.

Mr. LANGER. I agree, on general Drinciples, with the Senator from Wisconsin. All I am trying to do is to have another survey made to see whether we can have navigation to the Missouri

River.

Maritime Training and Federal Funds

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1955

Mr. BUTLER. Mr. President, Just as capable leadership is a prerequisite to the successful operation of government and of business and industry, so must our American Merchant Marine be assured a continuing complement of well-trained, capable ships officers if it is to carry on its function of serving the country's commerce and security.

The recent issue of the Merchant Marine Bulletin of the American Legion, Published by the National Security Commission, editorializes most reasonably along this line, in an expression of views entitled "Maritime Training and Federal

Funds."

I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Recorn, as follows:

MARITIME TRAINING AND FEDERAL FUNDS

The tradition of safe and efficient operation for American-fiag vessels at sea is due, in large part, to the expert training many merchant marine officers have been receiving at the State maritime schools and at the Federal school at Kings Point. Such training has safeguarded life and property; hence, in the common interest, it should be continued and encouraged.

It is with distress that we learn of the recommendation in President Elsenhower's recent budget message that martime training be continued at Kings Point at Federal expense, but that no funds be allocated to the State schools, as in former years. This is patently false economy, which will be a disservice to the industry and damagingly unfair to the State schools that have served so long and well.

Graduates of the State maritime schools of New York, Massachusetts, Maine, and California have the same moral commitment to the merchant marine as have graduates of Kings Point. The maritime industry, as we all know, has no holdover either. Furthermore, the Federal school naval reservist, and the State school naval reservist, and the State school naval reservist have identical obligations to the United States Navy. In short, both groups of students provide equal service to the merchant marine and the Navy. Both should receive Federal support. The appropriation heretofore granted the State schools, some \$660,000, should certainly be restored.

The maritime industry needs competent officers. So does the Naval Reserve. To let the State schools languish when an appropriation which is a very tiny drop in a very big bucket can give them vigor to continue to serve is very poor policy indeed. Let us hope that this Congress will act to restore to the State maritime schools the money they

deserve to have.

The Defense Program and New England: Research for Defense

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1955

Mr. SALTONSTALL. Mr. President, I aks unanimous consent to have printed in the Appendix of the Record an article entitled "The Defense Program and New England: Research for Defense," which was published in the Monthly Review of the Federal Reserve Bank of Boston for February 1955. The article is an excellent one.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DEFENSE PROGRAM AND NEW ENGLAND: RESEARCH FOR DEFENSE

The interest of the Armed Forces in both basic and applied research has brought to New England many contracts for important research work. The three service departments, Air Force, Army, and Navy, share about equally in the \$2.6 billion of funds for research and development shown in the current fiscal year Federal budget. It is impossible to determine how much of that sum will be received by New England research organizations. Nevertheless, some picture of New England's contributions can be pieced together from the published information about individual programs.

Most research for defense is carried on under contracts developed by the service branches, such as the Office of Naval Research or the Office of Ordnance Research. Virtually all basic research is accomplished under such arrangements. Basic or fundamental research is directed toward no specific end product except the increase of knowledge concerning the subject of research. Applied research on the other hand is directed toward improvement in specific commodities, in weapon design, and the like. Each of the service branches has special interests in both basic and applied research, and both types have found acceptance among New England's technicians.

DEFENSE FUNDS SUPPORT RESEARCH

Since its opening in October 1954, the Quartermaster Research and Development Center at Natick, Mass., has awarded 23 re-

search contracts to New England individuals and research agencies. The corps has committed nearly \$600,000 under these contracts which total nearly 10 percent of those placed with all United States agencies since July 1, 1953. These contracts are in addition to the research activities carried on at the center.

The Boston Ordnance District Research and Development Branch estimates its 1954 payments at more than \$6 million to New England research firms and institutions. At the end of the year the branch maintained 160 such contracts worth \$18 million. Comparable data for the United States were \$220 million of contracts under which \$175 million was paid out in 1954. About 400 research contracts averaging \$10,000 in value have been negotiated with 126 universities and colleges in 40 States. Among the New England institutions engaged in this program, Massachusetts Institute of Technology received 16 contracts, Brown University received 6, Harvard 4, while Boston Univers Tufts College, and the Universities of New Hampshire and Rhode Island received 2 each. The remainder were with Boston College, Clark University, Holy Cross College, and the University of Maine.

The Air Force supports research in New England through several different agencies. On June 30, 1954, the Air Force Cambridge Research Center maintained with New England agencies 70 research contracts valued at more than \$60 million. In addition, a small research project on effects of Arctic weather on types of building construction was being carried on in Boston by the Army Corps of Engineers for the Air Materiel Command. While the project employed only 45 persons and spent less than \$350,000 in 1954, it is 1 of but 2 such establishments in the United States. Another unique project is the Lincoln Laboratory near Bedford, Mass., a multimillion dollar research project on the air defense of North America, operated by Mas-sachusetts Institute of Technology for the Army, Navy, and Air Force.

In addition to several projects of applied research carried on by service personnel, the Navy, through its Office of Naval Research, contracts for a large quantity of basic research in its first (Boston) district. The first district includes all of New England except Connecticut. Of some 1,500 Office of Naval Research contracts in the United States providing for about \$20 million per year in payments to contractors, 180 are with New England agencies—principally colleges and universities. The New England contracts account for about \$6 million of payments annually.

TYPES OF RESEARCH

Armed Forces research, in addition to being either fundamental or applied, varies from one service to another. Research for the Quartermaster Corps is concerned with the adaptation of troops and equipment and the maintenance of both under a variety of environmental conditions. This involves problems ranging from fit of clothing to psychological adjustment. At the Natick center, functions are suggested by division titles: Chemicals and plastics, environmental protection, mechanical engineering, textile, clothing and footwear, dispensing and han-dling equipment, and pioneer research. Examples are the development of an 8-pound armored vest that protects the modern soldier. The use of ultra-sonic waves for dishwashing and soil removal is being perfected, and studies in service equipment are carried forward.

Some of the contract research program of the Office of Naval Research is done by the Woods Hole Oceanographic Institution where a new building was dedicated by the Navy June 16, 1954. Nuclear science, electronics, and other laboratories at Harvard and Massachusetts Institute of Technology also carry on contract research for the Armed Forces. Some of the projects operate under contracts jointly with Navy and Army or the Atomic Energy Commission. Some large Navy contracts for basic research are with Brown University where projects in both chemistry and physics are going forward.

In these many ways New England's scientific resources are being utilized by the Armed Forces to improve our Nations de-fenses. At the same time, these labora-tories are training scientists and developing new products and processes, all of which may play an important role in New England's industrial future.

Troop Ships of the North African Invasion

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. BUTLER. Mr. President, in asking for unanimous consent for the insertion in the RECORD of an article from the January-February Merchant Marine Bulletin of the American Legion, issued by the national security commission, I should like to pay well-merited tribute to the two organizations involved.

First, I believe the American Legion is performing a function of utmost value to all our people in its self-delegated task of publicizing the achievements and the problems of the American merchant marine.

Secondly, I welcome the opportunity to extend congratulations to the officials and the men and women employees of the Grace Line, one of our country's great shipping organizations, for the exploits of its vessels in World War II, as well as for the splendid contribution it is making to Western Hemisphere solidarity, through the operation of its four luxury liners and other vessels between the United States and ports in the Americas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SISTER TROOPERS VETERANS OF NORTH AFRICAN INVASION

The Santa Paula, 1 of 4 Grace Line luxury liners, was one of America's most active transports of the last great war, according to Roland W. Charles' excellent book Troopships of World War II.

She made 28 overseas voyages from the east coast of America, including 3 trips to India, 2 of which were of over 3 months' duration. A 9,135-gross ton vessel, she was built in 1932 at Kearny, N. J., for passenger service to the Caribbean. As a peacetime liner she could carry some 200 passengers. As a trooper she lifted 2,209 men. Her 19knot speed and 12,000-mile cruising radius made her one of the most useful of Uncle Sam's auxiliaries.

The Santa Paula's raked bow, twin streamlined funnels, and cruiser stern gave her an appearance of speed and strength. It doubt-less impressed the Australians when she made her first voyage down under early in 1942. Her next trip took her to South Africa and India, and on November 2, 1942, she sailed from New York to participate in the historic invasion of north Africa.

By some strange coincidence her three sisterships sailed with her in this vast armada. It would have been a thrilling moment for Grace Line shoreside executives and personnel had they been able to see their four bravest and finest ships heading out to sea past the Statue of Liberty in defense of their homeland.

It would have been a sad moment, as well, had the onlookers been gifted with an awareness of the future, for two of these sleek beauties were not to return. Santa Elena and Santa Lucia were lost, the former off Algeria and the latter at Casablanca during the landings. The fourth, named Santa Rosa, survived and serves today in glistening peacetime colors with the Santa Paula between New York and Caribbean and South American ports.

Tribute to Alison Wysong

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. NEUBERGER. Mr. President, the showing by the Democrats in the 1954 Oregon election was due to the fine support received by the party throughout the State. Alison Wysong, Democratic chairman for Lane County, Oregon's second county in population, played a leading role in Democratic Party successes. I regret to learn that Mr. Wysong has resigned as chairman, and I am pleased to place in the RECORD a tribute to him from the editorial columns of the Eugene Register-Guard.

Mr. President, I ask unanimous con-sent to have printed in the Appendix of the RECORD an editorial from the Eugene Register-Guard of March 9, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DEMOCRATS' LOSS

Lane County Democrats suffered a real loss this week in the resignation of their county chairman, Alison Wysong. Although he was chairman only a year and a half, his influence on the local party organization was tremendous. Under his leadership the party, for the first time in many years, be-came something to be reckoned with. Lane became a "two-party county."

He was elected chairman after a behindthe-scenes scrap between the younger, more aggressive Democrats and the old horses" who bore so many scars that they could think in no terms save those of always being the "loyal opposition." He changed that line of thinking. Lane County Demo-crats in 1954 were out to win.

Probably his most significant contribu-tion was the setting up of district committees, groups of friends and neighbors who met in all parts of the county to talk politics and generate enthusiasm for the Democratic cause. From these groups came that large pool of volunteer workers who played so important a role in last fall's election.

Some of the internal strife remains. But if the Democrats can get together and pick another chairman of Mr. Wysong's ability and character, they'll keep the Republicans scared to death and thus on the ball. They may become the first party in the county in-stead of the "loyal opposition." And the public interest is served when both parties are active and vigorous. It is not served when either becomes moribund, tradition bound, or resigned to defeat.

Compulsory Medical Insurance

EXTENSION OF REMARKS

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. MURRAY. Mr. President, an excellent article on Sweden's new comprehensive health insurance plan, written by Waldemar Kaempffert, science editor of the New York Times, appeared Sunday, March 13, in the New York Times magazine. The author points up some parts of the plan that could be adapted to the United States, and he cogently discusses the American, Swedish, and British medical philosophies. I ask unanimous consent that the article be printed in the Appendix of the RECORD. There being no objection, the article

was ordered to be printed in the RECORD, as follows:

A NEW EXPERIMENT IN STATE MEDICINE (By Waldemar Kaempffert)

Since the beginning of this year, everybody in Sweden, including resident foreigners, is guaranteed medical care against illness under a new compulsory health insurance law. It is one of the most comprehensive social medical systems ever introduced anywhere.

The operation of this plan undoubtedly will have repercussions in the United States-Our own medical situation will be resurveyed in the light of Sweden's experiment. Some of the basic questions that have been the subject of debate in this country-such as the benefits or defects of compulsory health insurance, which organized medicine here opposes-will again be argued. Therefore, it is useful to examine the Swedish plan and to consider whether any of its principles can be applied in the United States.

In Sweden, there are few doubts that the plan, despite its detailed nature, is working smoothly. Although doctors, drug stores, and the staffs of health organizations have felt pressure under the initial rush of the medical care, reports on the early operation of the system indicate that everything in connection with it is going more or less in accordance with expectations.

This is due primarily to the traditional Swedish attitude toward what in America is called socialized medicine. "Compulsory, for example, expresses the American concept of the Swedish plan but not the Swedes.

For the Swedes, the new type of care represents an inclusion of everyone in "sickness societies" or "funds"—independent groups that have been heavily subsidized by the Government. Through them, about 70 percent of Sweden's population has long insured itself against illness. Under the new law. these societies or funds are retained and new ones will be established as the need arises. Members pay 44 percent of the cost, employers 27 percent, and the Government 29 percent.

The Swedes have none of the squeamishness about public medical care that many Americans have. Even before the new plan went into effect, no Swede, for example, hesitated to go to a public hospital. Indeed, he did so as a taxpayer exercising his right, just as he felt free to call on the fire department to save his house. He did not think of the public hospital as a place of last resort, an institution maintained chiefly for the benefit of the indigent sick. Rather, no matter what his social position or his financial circumstances, he went because he knew that the medical and surgical skill there is high, the diagnosis and therapeutic services so expert that he could find no better anywhere.

Nine out of ten Swedish bables are delivered in public hospitals or clines. Most infants receive care at free clinics. Swedish schoolchildren, regardless of their parents' ability to pay, have long been examined regularly free of charge by physicians. Free dental care and free lunches are also common in Swedish schools.

If a family cannot afford to send a child under 15 to the country once a year, the State pays the rallway fare or the fraction thereof beyond the family's means to get the youngster into fresh air. If the child is under 10, it is accompanied by its mother at state expense. Housewives in lower income brackets are entitled to virtually free vacation trips. No matter what the circumstances of the family, every mother is paid \$58 annually for every child under 16. Sweden prefers this method to allowing exemptions from income taxes for dependent children.

Why is the quality of medical care, whether rendered in a physician's office, at home, or in a hospital, so high—as high as and possibly higher on the average than ours? The reason is to be found in the Swedish system of medical education and in the insistence of the Royal Medical Board and the Swedish Medical Association (a counterpart of the American Medical Association) on the maintenance of rigorous standards.

The majority of physicians in Sweden serve as either full-time or part-time salaried public-health officials but are permitted to practice privately if they are on half-time. Few of the doctors derive their entire income from private practice. Their income averages \$5,000 to \$6,000 a year and they get

Government pensions.

The new system, like the old one, considers need rather than ability to pay, though income is not ignored as a factor. Everybody who is older than 16 and who has a taxable income of at least \$250 a year comes under the new law and pays a basic or minimum premium of somewhat less than \$5 a year for medical care. Another \$5 must be paid for basic or minimum sickness benefits that amount to 60 cents a day. Thus, for \$10 a year virtually everybody in Sweden is entitled to medical care plus a sickness benefit of 60 cents a day. Those who earn less than \$250 a year are public charges, yet receive exactly the same medical care as if they had

been faxed for it.

Everyone is cared for up to 2 years in a hospital ward, and care will continue after 2 years on the basis of social relief. Vitally essential drugs, such as insulin, are free; prescriptions that cost more than 80 cents are filled at half the regular price.

A patient is transported to and from a physician's office or hospital wholly or partly at public expense. If medical care is given by a private physician, three-fourths of the official fee is paid by the local or Federal Government. Anybody who wants a private room can have it for a few dollars a day—at less than one-third to one-half the actual cost.

Among the most important provisions of the new law are the benefits paid for lost earnings and for the extra expenses usually incurred in sickness. Every employed person who earns more than the almost trifling minimum of \$300 a year must pay insurance for supplementary sickness benefits, in addition to what he pays for the basic benefit of 60 cents a day. Housewives who are not employed are included. These extra benefits run from 21 cents to \$3.40 a day, depending on earned income.

Though maternal care is not specifically provided for in the compulsory health insurance plan, expectant mothers get it under a separate law on the same terms as those who

carry medical care and benefit insurance, but with some extras. That is, there is free prenatal and postnatal hospital care, daily basic and supplementary cash benefits, allowances for medicines, and for the fees of private physicians.

A working expectant mother receives from 65 to 70 percent of her normal earnings and a bonus of \$52.38 at childbirth—the equivalent of the basic stckness benefit (3 kroner daily) for a period of 3 months. If the expectant mother does not want obstetrical and other care in a hospital she can stay at home and engage a midwife at Government expense.

Sweden's population of 7 million, which is a little less than that of New York City, is served by some 5,500 physicians, or 7 for every 10,000 persons—about half of the prevalling ratio in the United States. On the other hand, the number of hospital beds per 10,000 population is about what it is in this country. Because compulsory health insurance includes the entire population with very few exceptions, it is estimated that by 1960 probably 8,000 physicians will be needed. There may have to be more hospitals, too, because on them much of the burden of medical care will fall.

The working of the Swedish health plan will, of course, be followed closely abroad, and it will inevitably be compared with the British system of compulsory health insurance. There are close resemblances and marked differences between the Swedish and the British plans. Under both, patients may choose their physicians freely. Approximately 18,500 British physicians have joined the National Health Service, leaving only about 500 in private practice. Some 47 million in the United Kingdom—97 percent of the population—consult Health Service physicians when they are sick. A Health Service physician is paid 16 shillings a year for each patient on his list, but he is not regarded as a public health officer, as he would be in Sweden, if part of his income came from the state or the community.

The cost of Britain's Health Service is met mainly by taxes, plus a weekly levy of 10 pence (about 12 cents) on employees and employers. There are small charges for prescriptions, dental care, surgical appliances, false teeth, and spectacles.

American physicians who have studied the British system say that examinations are hurried and that the number of patients on a subsidized physician's panel is much too large. On a busy day a heaith-service physician will examine 30 or 40 patients and call on 20 more. The average health-service physician makes £2.240 (\$6.272) a year, which is more than he made in the old days.

Would the Swedish plan work in the United States? Given present conditions and our present medical philosophy, it is highly improbable that it would.

In the first place, Sweden is a small country with a small homogeneous population. The United States sprawls over half a continent and its population is composed of many different ethnic stocks. The conditions that prevail in the arid Southwest and West are vastly different from those in the Middle West or New England. With 48 autonomous States and a heterogeneous population engaged in many different kinds of activities, we must work out our own formula for the integration of low-cost medical care with social security. This, however, does not rule out the adoption of features of the Swedish plan that could meet our needs.

Our medical philosophy stems from several basic concepts. One is that we do not want any further socialization—which we identify with Government-guaranteed medical care and compulsory health insurance. Another is that the patient must be free to choose his own doctor. A third is that we should heed the views of the medical profession on this matter, just as we take the medicines it

prescribes. Let us examine each of these concepts.

As to socialization, it is likely that one either believes the Government should take more part in public welfare activities or one does not. But in the field of public health it is not quite that simple. It is possible that some supervision of medical care by the Government or some further participation by the Government in health measures is justifiable on the ground of public good.

This need not interfere with free enterprise; nor would it abolish the private practice of medicine. We did not become Socialists when we provided free education in public schools, taxed income on a sliding scale, and established hospitals where at least some of the medically indigent can be cared for either free or at low cost to themselves. Further Government participation in certain areas of the medical and health fields could win acceptance, just as there has been acceptance of the basic principles of social security, which in their way contain an element of socialism.

When we examine the second concept, it should be noted, first, that under neither the Swedish nor the British plan is the patient deprived of the privilege of choosing his own physician. Even in Sweden political parties could not overcome the opposition to any system that would abolish that privilege. In the United States the opposition of organized medicine would be still more powerful.

There is, nevertheless, reason to question the necessity of free choice in the practice of medicine. How valid is this idea? The right of a patient to choose his own physician is based on the assumption that he knows how to weigh a physician's education, hospital connections, and standing in his profession. Any physician who has a license and who is a member in good standing of the county medical society is supposed to be a qualified practitioner, though he may be a medical medicarity or hopelessly antiquated in his diagnostic and therapeutic procedures. Actually, the physician chosen is usually one recommended to the patient by a friend.

There is no free choice of physicians in the Army or Navy, yet we were assured during and after the war that never in history were armed forces so well cared for medically and surgically as were ours. There is no free choice in the outpatient departments or free wards of our great voluntary hospitals; nor is there free choice when a patient goes to such an outstanding medical center as the Mayo Clinic. There he is assigned by the clinic authorities to the doctor they consider best qualified to handle whatever disease he may have or whatever surgery he may require. There is no hit or miss about it; he gets the specialist whose records show his knowledge and skill.

The third concept—that the views of the medical profession should prevail—is perhaps the root of the matter. Conceding the great good that the American Medical Association has done in exposing charlatans, raising medical standards and improving medical education, questions nevertheless have been raised about its opposition to efforts to improve medical and health conditions through Government participation and compulsory insurance.

The best that organized medicine now offers is voluntary insurance, which does nothing more than provide money to pay, or help pay, the doctors' bills and hospital bills for the period of illness. According to the deeprooted fee-for-service principle a surgeon may charge a wealthy man many times more for an operation than he would charge a poor man. This may seem equitable in theory, but in practice it often works hardship on the salaried or middle-income patient who may not have the reserves to meet a sudden crisis.

Sweden made no leap into the dark when it adopted compulsory health insurance. The country had behind it an excellent system of voluntary health insurance that could easily be made compulsory without in the slightest changing the pattern of medical care and sickness benefits. It has devised a formula which shows that a democratic federated state can have compulsory health insurance, combined with sickness benefits, yet guarantee the best kind of medical care.

We need not copy Sweden's formula, but in the light of the Swedish experience and the British experience questions are increasingly going to be raised about the American medical profession's attitude on this matter. For the sake of the profession itself and the attitudes of the public toward it, it might be useful to reconsider the questions.

The Plight of Guatemala

EXTENSION OF REMARKS OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article from the New York Herald Tribune of March 10, 1955, entitled "The Plight of Guatemala," written by Daniel James.

It is to be hoped that the appropriate committees of the Senate will survey this question and determine what steps should be taken to prevent the newly threatened loss of this American Re-public. Mr. James' article brings into focus the apprehension many of us have felt for some time, that after seeing the freedom-loving Guatemalans wrest their Government from control of the Communists, there may be some disposition on the part of some people in our own Government, which admittedly had such a stake in the outcome of the 1954 revolution in Guatemala, now to maintain a hands-off attitude.

Mr. President, I heard with a great deal of interest, as well as personal pleasure, last night the report of the Vice President on his findings in the Caribbean areas of Latin America on his recent tour. It was especially encouraging to hear the Vice President voice the cpinion that Guatemala is a monument to Communist failure in Latin America.

It may be well, if this is an official Government finding, to look further into this matter to determine the basis for reports that the situation is bad in Guatemala, and that great dangers of communism persist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> THE PLIGHT OF GUATEMALA (By Daniel James)

United States policy in Guatemala is failing. That is the sad conclusion this reporter has reluctantly reached after a 4-week, onthe-spot survey.

The consequences, if we fall in Guatemala, will be disastrous. Our prestige in Latin America will practically vanish. Our programs in Asia will be compromised. Communists everywhere will have a field day as we argue over who lost Guatemala.

When Guatemala's Reds were overthrown last June. United States leaders from President Eisenhower on down swore to make the Central American Republic an anti-Communist showcase. They were solidly backed by both political parties and the public, Rarely has there been such unanimity as on the need for all-out aid to Red-ravaged Guatemala.

Now, 8 months later, how much aid have we given?

On paper, \$6,425,000. In fact, less than half that amount. Money is being doled out for certain projects only as, if, and when

Of the total aid authorized, \$4,425,000 will eventually go into roads-if Guatemala can match it with \$1.5 million of her own. Another \$500,000 will go to finish a hospitalif Guatemala can match it with \$500,000. Health, agricultural, and other projects like-wise depend on Guatemala's ability to match funds.

So far, then, our aid largely consists of putting up dollar for dollar in a situation where the matching party sorely lacks dol-

But even if we donated the entire \$6.5 million outright, that would be about as helpful as feeding aspirin to a man with appendicitis,

That sum, Guatemalans point out, represents exactly what their Government paid its employees in back wages last December. It about equals what the Government ex-

pects to lose in coffee taxes this year.

It is less than one-third of what the Reds

are known to have stolen.
"A fraud," is how one Guatemalan bitterly described our aid to me. He was echoed by others. Already, our policy of too little is breeding disillusionment in us,

Washington is relying upon United States private capital to give Guatemala what she This is sound general theory. The needs. trouble is, it does not apply to Guatemala's immediate problems.

United States businessmen are swarming into Guatemala seeking investment opportunities. Some are already building roads, exploring for oil, selling machinery, making

The Electric Co. of Guatamala, a United States subsidiary, is putting \$17 million into new hydroelectric facilities to increase the capital city's power capacity. Pan American World Alrways is about to join with local money to erect a big hotel. United Fruit reportedly awaits dispositions of a United States antitrust suit before investing \$25

President Carlos Castillo Armas deserves great credit for the improving business picture. His personal popularity, general policies, and practical measures such as a progressive petroleum code-have combined to assure United States business a warm welcome and fair treatment in Guatemala.

Backing up Castillo Armas is the most talented and dedicated team of United States officials this reporter has ever seen abroad. United States Embassy, Information Agency, and Poreign Operations Administration personnel deserve medals for their handling of a delicate task.

Owing to all these factors, Guatemala is acquiring a new look. Guatemala City streets, once deserted, are filled with busy and happy people. Stores are brimming with new merchandise. Hotels are full. New buildings are going up.

But overshadowing this bright picture is the dark legacy communism left behind. A looted treasury, a corn shortage, a jobless problem and a falling coffee market (for which the Reds cannot be blamed), all spell a major crisis. Neither the Guatemalan Government nor United States investors are Neither the Guatemalan equipped to tackle it.

An economic crisis in Guatemala just now would, as a matter of fact, slow down the flow of investment. It would destroy con-fidence in Castillo Armas, and perhaps cause his downfall. It would wreck United States plans for Guatemala and United States policy nearly everywhere in Latin America. must awaken to these dangers at once and realize that only swift and unstinting United States aid can ward them off.

The primary immediate job is to help Castillo Armas acquire sufficient funds to carry on the task of governing. Second, Guatemala may need emergency food and grain supplies. Third, we must expand and accelerate our technical assistance-and without requiring Guatemala to match funds. Fourth, coffee prices must be adjusted.

Further, we should announce a long-term program. Guatemala needs about \$50 million to build a decent road network-one of the keys to an expanding economy. She needs perhaps another \$50 million for such basic projects as modernizing her agricul-

For about \$20 million yearly spent over the next 5 years, Castillo Armas' chances of finishing his term in 1960 would be immeasurably enhanced and Guatemala's stability and prosperity practically underwritten.

Vice President Nixon, just back from the Caribbean and keenly aware of Guatemala's problems in particular, might well suggest that President Eisenhower ask Congress to enact a \$100 million, 5-year program for Guatemala. Only such a program will demonstrate that we are really trying to make the world's first anti-Communist revolution a

Inadequacy of the President's School Proposals

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. NEUBERGER. Mr. President, a further indication of the inadequacy of the President's school proposals is given by the views expressed by the Republican-controlled House Education Committee of the Oregon State Legislature. The President's proposals, the legislators agreed, meant little money for Oregon and high interest rates on Federal money loaned. Oregon's need is pressing-namely, \$100 million worth of new schools in 5 years. The administration's answer provides little or nothing.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the Associated Press, which appeared in the Eugene Register-Guard of March 8, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITTLE FEDERAL AID FOR OREGON SCHOOLS SEEN

SALEM, OREC .- The House Education Committee of the Oregon Legislature docsn't think President Eisenhower's school building program would be of much help in solving Oregon's critical need for new schools.

So the committee will work out its own solution to the problem—Oregon's need for \$100 million worth of new school facilities in the next 5 years.

The committee, at a meeting Monday night, outlined 5 possible solutions aimed at solving the problems of the 34 school districts which can't take care of their needs because they would have to exceed the legal

bonding limits.

The building needs in these 34 districts are \$6 million more than their bonding limits. The rest of the new schoolhouses could be built by districts able to bond within the existing limit, which is 9 percent of true cash value.

The five possible solutions to be studied by the committee are: Increase the bonding limits of school districts, give more basic school support to the distressed districts. issue State bonds, provide money from State bonds, provide money from the State's general fund or finance on the county level.

The committee decided to make its decision after the House Taxation Committee makes up its mind on a bill to limit bonding powers of counties, cities, and school districts.

The committee agreed that the President's Plan would provide little money for Oregon. Members objected to what they called high interest rates on Federal money loaned to the States. But they agreed that if some Federal money happened to come along as outright grants, they would accept it.

DOUBLE SHIFTS

Committee members also suggested that districts might operate 2 daily school shifts, or might run 12 months a year. But these ideas were advanced only in case the people in the districts refused to vote new bonds. J. L. Turnbull, assistant superintendent

of public instruction, suggested an increase in the district bonding limits, which he admitted "would just make it possible for a Poor district to go further into debt." advocated State grants to the districts.

Turnbull said that of the total needs of the 34 districts, 65 percent of the money is needed in Portland's "bedroom" areas within 25 miles of the city.

This prompted Representative William Bradeen, Burns, to suggest that the people of Portland pay part of the cost of education in these areas.

CONSOLIDATION URGED

Representative W. R. Giesy, Monroe, said some districts should be forced to consolidate with other districts in order to cut down school costs.

The committee pointed out that since most of the \$100 million would be used for class-rooms for the first 8 grades, another crisis would develop in 5 years, when high schools become overcrowded.

Cecil Posey, secretary of the Oregon Education Association, advocated increasing the local bonding limits and also giving the districts more State aid.

TWO LOCAL SCHOOLS

Among the 34 school districts which the House Education Committee says are in critical need of new buildings are Elmira Union High and Creswell Union High in Lane

A Tribute to the Hungarian People on Their Day of Independence

EXTENSION OF REMARKS

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. FLOOD. Mr. Speaker, the year 1843 was a year of revolution on the European Continent. Europe was in ferment. The forces of liberalism and

nationalism, turned loose by the Amencan Revolution of 1776 and the French Revolution of 1789 and repressed in Europe during the post-Napoleonic period, burst forth with renewed vigor to shake the foundations of the European system. Hungary was one storm center in the struggle for national independence.

America has her Washington; Hungary has her Kossuth. In our War of Independence Washington came to the fore, and leading the forces of the Revolution carried the cause of American independence to final fulfillment. We are the beneficiaries of the efforts of this great man; we are the beneficiaries of the efforts of his heroic soldiers.

In the Hungarian revolution of 1848 Louis Kossuth, like Washington, came to the fore and led the forces of Hungarian independence. Unfortunately, Kossuth and his compatriots failed in their attempt to establish freedom and democracy in Hungary. Imperial Russia intervened in the war of independence, and joining the forces of the Hapsburg Empire, succeeded in destroying the independence that the Hungarian people had proclaimed.

The Hungarian cause was lost. But, even from failure there arises many wholesome things and from this great attempt at establishing independence in Hungary there emerged a great leader of Hungarian democracy: Louis Kossuth. A leader of inestimable quality and ability Louis Kossuth has rightly taken a place alongside of the world's great leaders of democracy and independence, men like Washington, Jefferson, O'Connell and Bolivar.

Probably one of the most galling aspects of the present regime in Hungary is the attitude it has taken toward Kossuth. Deceitfully, the Communists have attempted in their propaganda to depict Louis Kossuth as a precursor of their own so-called liberation regime. The Communists have used every propagandistic contrivance to make this great Hungarian leader appear as one of them. Indeed, this treacherous tactic is a prime example of the manner in which the Communists have used the good name of a great democratic leader to cloak their own tyranny and injustices. Thus, they have sought to create the impression that the Communist movement in Hungary is really a Hungarian nationalist movement, entirely unrelated to the Soviet Union and the international Communist conspiracy. Indeed, this is a vicious fraud that is being attempted upon the Hungarian people, for Louis Kossuth and his patriots of 1848 were motivated by the highest democratic ideals; they were men grounded firmly in the Christian tradition; they were above all else Hungarians loyal to the cause of their nation. In a word, these men represent everything that we profess to be, great and pure, everything that is fundamentally hostile to the concept of commu-

Today as Hungary lies enchained in a new tyranny, all Hungarians can look to Louis Kossuth and the patriots of 1848 for inspiration in their struggle for freedom. For them we in America pray, as indeed Kossuth himself had prayed, that Hungary will one day be free.

Tennessee Joint Resolution and United States Department of Agriculture's Response Thereto-Re Cotton, Tobacco Acreage Allotments Under Drought Programs

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. EVINS. Mr. Speaker, recently I was pleased to submit to the Department of Agriculture a certified copy of the Tennessee Legislature house joint resolution relative to acreage allotments for drought-stricken counties in Tennessee. In response to this resolution, the Department of Agriculture has prepared an extended response. Under unanimous consent, I include both the resolution and the Department's reply in the Appendix of the RECORD. The resolution and the letter from the Department

House Joint Resolution 13

Be it resolved by the House of Representatives of the 79th General Assembly of the State of Tennessee (the Senate concurring). That the Department of Agriculture of the United States of America is hereby memorialized and requested to cut the allotment of no individual engaged in farming in countles classified as drought-stricken counties in this State by the Department during the year 1954, below the allotment which was made to such individual for the year 1954 upon any crop, allotment of acreage of which is made by said Department; be it further

Resolved, That upon the passage of this resolution and its signature by the chief executive, a copy thereof be duly certified and forwarded to the Secretary of Agriculture of the United States, and to each Member of Congress from Tennessee, and that this resolution be spread on the Journal of the House of Representatives and Senate.

Adopted January 25, 1955.

JAMES L. FOMAR,
Speaker of the House of Representatives. JARED MADDUX, Speaker of the Senate. FRANK G. CLEMENT, Governor.

DEPARTMENT OF AGRICULTURE, Washington, D. C., March 3, 1955. Hon. JOE L. EVINS,

House of Representatives. DEAR CONGRESSMAN EVINS: This is in reference to your letter of February 21, together with Resolution No. 13 adopted by the House of Representatives of the State of Tennessee, the Tennessee State Senate concurring, on January 25, 1955, in regard to establishing certain minimum acreage allotments in counties classified as drought-stricken counties during 1954.

In regard to cotton acreage allotments, the enclosed statement sets forth the size of the 1955 national cotton allotment and the provisions governing the determination of State, county, and farm cotton acreage allotments. The law provides specific for-mulas for establishing the national allotment and its apportionment to States, and for apportioning the State allotment (less reserve) to counties. When the county committee has made its choice on the method for establishing farm allotments, the commit-tee is required to use a specific formula for apportioning the county allotment (less reserve) to farms. The law and regulations prescribe the uses of State and county reserves in accordance with certain factors as set forth in the statement.

The act does not authorize the Secretary to withhold any of the national allotment to allocate at his discretion. All of the national acreage allotment of 18,113,208 acres has been distributed to the States pursuant to the formula provided in the act.

The economic effect on farmers in the drought areas is recognized and their difficulties are sympathetically understood. It is the desire of this Department to alleviate, insofar as possible under applicable provisions of law, the conditions caused by drought and other adverse weather condi-tions in the areas affected. The law governing the determination of State, county, and farm cotton allotments is very specific. law and the regulations permit adjustment in State and county history acreages where it can be definitely established that plantings were reduced by abnormal weather conditions. This authority, however, is applicable only where plantings are prevented by abnormal weather conditions, and is not applicable in cases where normal plantings are made but production is reduced by abnormal weather conditions. We do not feel that the acreage allotment and marketing quota legislation is designed to accomplish such relief through increased farm allotments in subsequent years except where the weather condition adversely affected plantings.

We recognize that cotton farmers are being called on to make substantial adjustments in cotton acreage from plantings in recent years. This adjustment results from the very large stocks of cotton on hand. In October, when the 1955 national allotment was proclaimed, the 1954 cotton crop was estimated at 12,511,000 bales. The December report estimated the 1954 crop at 13,569,000 bales, or an increase of 1,058,000 bales over the October report. It now appears that our carryover of cotton on August 1, 1955, will at least equal, and may well exceed, the carryover on August 1, 1954. In view of our cotton supply and demand outlook situation, there is no apparent basis for increasing cotton allotments for 1955 above those now in

The carryover of burley tobacco as of October 1, 1954, the beginning of the current marketing year, was 1,198,200,000 pounds, the largest on record. It appears now that the 1954 crop, which has just been marketed, was approximately 670,000,000 pounds, the largest crop ever grown. Thus, supplies of burley tobacco have reached an all-time high. Likewise, supplies of fire-cured and dark air-cured tobacco are excessive in relation to current disappearance.

There were no rice allotments in 1954, so Resolution 13 would not be applicable to

that commodity.

Federal legislation pertaining to establishment of farm wheat and corn allotments does not provide for any minimum amount below which an allotment my not be reduced due to drought. It contemplates that the county allotment each year will be apportioned pro rata to all eligible farms according to their crop-rotation practices, tillable acres, type of soll and topography; and also past history in the case of wheat.

Corn allotments have been dropped altogether in six Tennessee counties for 1955. In the remaining nine corn-allotment counties, corn allotments will be larger than in 1954 on most farms. There are no market-ing quotas on corn. The corn allotment is used to determine eligibility for corn-price support and agricultural conservation program assistance.

Wheat allotments are used for similar purposes and, in addition, marketing quotas are in effect, but they apply only to farms hav-ing more than 15 acres of wheat. Normally, only about 17 percent of the wheat farms in Tennessee produce wheat above the 15acre level. Of course the wheat for 1955 has already been seeded, but any operator may comply with his allotment by using his excess wheat acreage while still green and prior to a date set by the State committee for hay, pasture, silage, or green manure.

Allotments and marketing quotas are primarily designed to adjust supplies to market demands. To make exceptions by establishing minimum farm allotments for any specific reason tends to defeat the intent and purposes of acreage allotment and marketing quota legislation.

Sincerely yours,

J. A. McConnell, Assistant Sccretary.

Impressions of Thailand

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. PATTERSON. Mr. Speaker, for the benefit of the House membership I am today placing in the Congressional RECORD one of the most interesting letters I have ever received on an area of the Far East.

The letter I make reference to, Mr. Speaker, was written by Mrs. Edna Cohen, of Waterbury, Conn. Presently Mrs. Cohen is doing a TV show as a public service telecast. A combination of her travel experiences and natural ability as author and artist makes her show both educational and entertaining and one I highly recommended for both adults and children.

Mrs. Cohen, as author, is currently writing a book which will be both fictional and factual and surely of interest to those anticipating a world tour or specifically for educational purposes and good reading.

The letter follows:

WATERBURY, CONN., March 11, 1955. Hon. James T. Patterson, Member of Congress,

New House Office Building,

Washington, D.C. My DEAR CONGRESSMAN: The return of Secretary of State John Foster Dulles from the Far East, will undoubtedly motivate many conferences, bringing into focus the political, economic, and strategic viewpoints of the countries he visited.

As a Member of Congress the news, views, and information amassed by Mr. Dulles will be presented to you from the standpoint of a statesman, and rightfully so.

It would seem to me to be apropos at this time to also get the reaction of Mr. and Mrs. Average American Tourist.

Last year, in our trip around the world, we visited Bangkok, Thailand. Our first favorable impression was the ingenuity of the Thal. No loud speaker was necessary to announce our arrival to our assigned guide. She stood behind the Immigration Official and when we presented our passports, she introduced herself. A car being unavailable, she commandecred a bus to provide us with the private transportation to which we were entitled.

Further proof of their ingenuity is evidenced in the unique construction and decoration of their many temples, the shiny roofs of which are common, ordinary pieces of colored glass and mirrors, set in a manner to catch the rays of the sun and reflect

its brilliancy. On close examination we found the decorations of another temple to be of ordinary broken china and crockery, the pieces of which were set to form exquisite floral designs. The gay tinkling we heard at the approach of still another temple was caused by narrow slats of glass attached to bright colored ribbons, hung from the roofs of the temple, which gently bumped each other in the breeze, causing the pleasant bell-like tinkling.

The houses along the canals, which they call klongs, were crudely built and thickly populated by people in very scant clothes but very large hearts. Not one man, woman, or child failed to call out friendly greetings to the "foreigners" as we traversed the

klongs.

The hand that was extended to us on the street was in welcome, not in alms. We saw no beggars.

The numerous Buddhist priests we encountered were friendly and eager to converse. Giving them money would be considered an insult, our guide informed us.

Thailanders, our guide also said, resented the implication that they worshipped idols. They worship One Infinite Being, she said, the numerous Buddhas representing various phases and emotions in their tangible man-

Thai culture is manifest in their dancing. which is a syncronization of grace and beauty; in their nielloware jewelry, which embodies exquisite patterns with intricate etchings; in their production of bronze tableware, though manufactured under the crudest of methods by our standards, combine a delicate blending of caribou with bronze, patterned in a manner symbolic of their land.

Despite the lack of our type of good roads, automotive and other vehicles are plentiful and the traffic is heavy but controlled. Sidewalks are sorely in need of paving and re-pairs. The city at night is very poorly illuminated. This, we were informed, was due to the fact that Japan, after its occupation Thailand, removed and took with them power equipment, and which so many years later they have still been unable to fully replace and extend.

The sight of a shiny white truck, displaying a familiar seal in red, white, and blue, bearing the words United States Information Service, Mobile Film Unit brought tears to our eyes, lumps to our throats, and a prayer to our lips: "God Bless America!"

A country whose people are poor but clean. humble and friendly; whose ingenuity is used to best advantages; whole religious endeavors are manifest in their beautiful temples; whose placidity is evidenced by their even tempers and lack of haste; and whose strength is in their civic pride and national unity, is truly deserving of respect and consideration in the eyes of Mr. and Mrs. Average American Tourist.

Cordially yours, Mrs. Edward Cohen.

The Revision of U. N. Charter

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. BURDICK. Mr. Speaker, the One Worlders are getting more bold and daring. Through a revision of the Charter of the United Nations proposed for sometime this year, the One Worlders or the World Association of Parliathe United World Federalists propose to make a start in taking this country over,

lock, stock, and barrel.

The United States is to be divided into four regions. The eastern section will include all of the United States from Maine to the Mississippi River and from the Mason and Dixon's line to Canada. The second section will include all the southern States from the Atlantic to the Rocky Mountains. The third section will take in the States of the Middle West from Canada to the Mason and Dixon's line and from the Mississippi River to the Rockies. The fourth section will include the extreme west coast. These sections will be governed by the office of a director or commissar appointed by the World Government and he will administer laws given him by the same one world organization. These laws Will be enforced by a corps of One World police, drawn from every country in the organization. There is no provision for the election of these directors or commissars and neither they nor the policemen used to enforce the laws can be residents of the district they control.

The resources of the world will be Pooled and the rich, natural resources of the United States will be distributed throughout the world to bring every class of person up to a common standard of living. Individual efforts and industry count for nothing—the same identical setup the Soviets have. The One Worlders see a golden opportunity to get their clutches on the immense natural resources of this republic and distribute it

to do two things:

First. To build up the potential

enemies of this country.

Second. To so deplete the United States that it will be an easy victim of the World Government.

Not enough people in the United States are aware of this One World movement, Which was once carried on secretly but is now promoted openly. Churches have joined in demanding this surrender on our part. These churches have been misled by thinking that world peace can be obtained if the United States will give up a part of its sovereignty. This is confused reasoning, because if we give up a part of our sovereignty it means that eventually we will be asked to give it all up if world peace cannot be established without it.

It is as impossible to subscribe to world beace with the Russian government, whose motive force is the destruction of capitalism, as it is to mix oil and water. We are not out to destroy communism, but Russia and China are out to utterly destroy capitalism. All we seek is to arrest communism and keep it from spreading ever outward as a threat to our own Government.

Since it is impossible to have perpetual Deace with the Soviets, what faulty reasoning is it to suggest we give up our own sovereignty, thereby making the world conquest of capitalism more certain. The Soviets and Red China will sign any World peace document, but will not keep a word of their promises. How much more evidence do these peacemakers need to convince them that the signature

mentarians for World Government and of the Reds to a treaty is no more valuable than a page out of a Sears and Roebuck catalog?

> These international One Worlders are heading this country into a lot of trouble here in the United States. Their plans include world citizenship, world legislation, world military control, world distribution of wealth and world management of economic and living conditions of all citizens, including the United States. We fought for our independence and freedom once, and will do it again. I do not believe the people of the United States want to give up, or will give up, any part of the sovereign rights of this republic. I think there are millions in this country who will, when the facts reach them, resist this One World Government, and brand its agitators for just what they are.

> Although the Senate was asleep when the Charter of the United Nations was approved, the Congress is now alive to the menace of the One Worlders' efforts to sabotage the Constitution of the United States. House Joint Resolution 184 was passed unanimously by the Judiciary Committee of the House on March 8th, and reads as follows:

> Resolved, etc., That the 1st day of May 1955 is hereby designated as Loyalty Day and is set aside as a special day for the reaffirmation of loyalty to the United States of America and for the recognition of the heritage of American freedom; and the President of the United States is authorized and requested to issue a proclamation calling upon officials of the Government to display the flag of the United States on all Government buildings on such day and inviting the people of the United States to observe such day, in schools and other suitable places, with appropriate ceremonies.

> While the UNESCO of the United Nations seeks to tear down loyalty to this Nation and destroy patriotic national spirit, the Judiciary Committee expressed the opposite view in no uncertain terms. Gradually, day by day, the people are finding out about the purposes and objects of this sinister organization. The bolder UNESCO becomes, the more its purposes will be disclosed, and the Judiciary Committee of the House is to be congratulated for meeting its pernicious aims head on.

Edward J. McGettigan

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Allentown (Pa.) Morning Call

of March 10, 1955: A GOOD LIFE IS CLOSED

There hasn't been an hour like it in more than half a century of the Morning Call to match the grief of her people upon the death of a fellow employee as when news of the death of Edward J. McGettigan reached us. In an instant the ties that had bound us

with this paper's city editor for almost 30 years were severed. One satisfaction did remain with us: He had been with us and was active as a newspaperman almost until the hour of his death.

There haven't been such distressing weeks as the staff of the Morning Call has passed through recently. The physical decline of Mr. McGettigan was noted with sadness by But all efforts on the part of his colleagues to have him take needed rest were unavailing with the man whose last 45 years had been devoted almost exclusively to newspaperdom. He just refused to quit. seemed he desired to die "in the saddle."

Today our hearts are sad at the passing of a tried and a true friend, for that in the final analysis was his finest relationship with us. However, in our grief we realize that all on the staffs of the Call-Chronicle newspapers share our sorrow. Upstairs and downstairs, in the front office, as well as in the newsroom of the Call, which Mr. McGettigan dominated every night for almost 35 years, there was universally high regard for this admirable newsman, this excellent citizen and this near and sincere friend of so very many persons both within and outside the profession to which he brought lustre and honor during all his newspaper years.

Humbly and haltingly any local newspaperman who knew Ned McGettigan would attempt to reach even partial appraisal of his virtues and determine his stature, first as a newspaperman and then as a man among

His formal education, by modern standards, was brief but thorough. His informal education, achieved almost exclusively from his reading of the best newspapers and magazines, was amazingly extensive. He was the best demonstration of the educational potentialities of American newspapers. Possessed of an unusually keen intellect and highly retentive memory, he brought the great asset—calm and ripe judgment—to the marshaling of dates, facts, and figures in an appreciation and presentation of news, especially that of the local field. A diamond in the rough had been brought to the highest polish and brilliancy by the public schools of the sixth ward and the inspiration that the very good teachers of his day had given to young men to read widely and wisely. If he was not entirely, he certainly closely approached the ideal of newspapermen as to what a good reporter should be and what a good city editor should be.

The spirit of the newsroom which he oversaw for so many years was the very anti-thesis of what the American public has been led to believe a newsroom is like. The Hollywood version furnished no parallel for an organization that had Ned McGettigan as its cool and calm leader and director.

A stickler for facts and for getting to the gist of a story, he imbued his colleagues with the desirability of stripping the husks from the grain, and getting down to facts in dispassionate and logical approach to the truth in the news. He demanded sound reporting. And he got it from men who today bespeak his praise for the practical training that they received while working with him.

It must not be assumed from the above that Mr. McGettigan lacked imagination or emotion. On the contrary he was a man of the most delicate sympathies. This fineness in his nature was a quality that was recognized by all who knew him. Though a city boy, born and bred, he loved nature in all its phases. Photographs of pastoral scenes, of birds and animals—particularly if wild appealed to him especially as items for the dolling up of news pages. Pictures of little children, if they told a story, were irresistible to him. In further exhibition of that trait, Mr. McGettigan's interest in children amounted almost to reverence for little people. Nothing brought greater brightness to his eye and softness to his voice than the arrival in the city room of some child. It might be the shoeshine boy, or an errand boy from some place of business or the child of a visitor to the office. Nothing seemed to cheer his heart and to gladden his soul so deeply as little children. Any story concerning children was likely to receive his closest attention and get the most-favored position possible in the paper.
But Mr. McGettigan's colleagues and as-

sociates are going to remember him more for other qualities for it can be said that

he was a paragon of virtue.

People who came to know the Morning Call's staff invariably were impressed with the high regard which unreservedly was manifested by all for a man who was in a position that has brought dislike and disregard and even stronger feeling against many men in corresponding position on other papers.

His associates knew him as a patient, humble, and serene person. He was quiet and more inclined to listen than to talk. He was friendly, cooperative, and generous to a fault. He could disagree without being disagreeable. He loved to note the little ironies in life and in the lives and activities of man. But he was generous and sympathetic in all his dealings

Never lusty, he had indomitable courage. As a young man he engaged in sports where his courage had to substitute for weight and strength. And in his newspaper work his mild manner and soft voice concealed strength of character that defied the bullies who, both from high and low position in life, frequently challenge the press and its publication of the news.

The mildness of his manner deceived those who did not guess the iron of his character. He had the highest principles and he adhered to them unflinchingly, although often required to employ the wisdom of ages that "a soft answer turneth away wrath."

He was a gentle man in that he did gentle More than any one can know, he deeds. aided friends and associates in difficult hours. He never permitted his left hand to know what his right hand was doing but the objects of his beneficences never can nor will forget his unsolicited aid, cheer, and sympathy in various ways in the hours when they most stood in need.

A brave and a generous man, a noble man, a gentleman in every sense of that term has closed his eyes and his abundant years have come to an end. There is sadness for all who knew him. But there is joy that favorable memory of him has no reservations.

Heaven will be the better for Ned Mc-Gettigan. May God receive his soul.

Congress Must Do Something Immediately to Alleviate the Unemployment Problem in Labor Surplus Areas

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. VAN ZANDT. Mr. Speaker, on Monday, March 14, 1955, I appeared before the so-called Neely subcommittee of the Senate Committee on Labor and Public Welfare in connection with the unemployment problem in the coal, railroad, and related industries and which exists in my congressional district. My statement follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, MARCH 14, 1955, BEFORE THE NEELY SUBCOMMITTEE OF THE UNITED STATES SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE

Mr. Chairman, I want to congratulate you and the members of this committee for making possible the appearance here of those of us in Congress who represent areas of the Nation with a substantial labor surplus.

These hearings are timely and of utmost importance because they focus the attention of Congress and the Nation on the evils of unemployment.

Furthermore, these hearings will reveal that thousands of good Americans are living today on unemployment insurance benefits, public assistance, and surplus commodities.

Mr. Chairman, I want it definitely under-

stood that I am not opposed to the principle of reciprocal trade. My votes on that subject since becoming a Member of Congress support that statement.

However, when it became apparent that reciprocal trade agreements were permitting cheaply manufactured foreign goods to destroy the jobs of American workmen I could not conscientiously continue my support of such a program.

Mr. Chairman, I supported the perli-point and the escape-clause amendments which were written into the reciprocal-trade laws

and which we were told would safeguard the jobs of American wage earners.

In addition, I looked upon the creation of the Randall committee with high hope that it would provide relief to certain American industries from unfair competition resulting from a flood of cheaply manufactured foreign goods.

Regardless of the peril point, the escape clause, or the recommendations of the Randall committee, no checkrein has been placed on foreign imports and especially the flood of foreign residual oil which has just about wrecked the economy of coal-producing areas in Pennsylvania, West Virginia, and Mary-

Because of the geographical location of the coal-producing areas in these three States, for years and years their mines supplied the eastern seaboard with coal.

However, since 1946 foreign residual oil from Venezuela began to flood the eastern seaboard with the result that it has displaced coal from Pennsylvania, West Virginia, and Maryland, thus destroying the jobs of thousands of coal miners, railroaders, and others in related industries.

The following chart fully describes the economic losses to American industry and labor from the importation of foreign residual oil for the period from 1946 through 1954:

Item	1946	1947	1948	1949	1950	1951	1952	1953	1954
Economic losses to American industry and labor occasioned by United States imports of residual oil 1946-54, inclusive: 1. United States imports of residual fuel oil	45	54	53	75 18	120	119	129	136	132
fuel ofi: 3. Coal producers	\$37 \$21 \$19 \$12 (1)	\$54 \$28 \$27 \$14 (¹)	\$64 \$30 \$31 \$15 (1)	\$87 \$45 \$43 \$23 (1)	\$139 \$74 \$68 \$36 (1)	\$141 \$75 \$72 \$38 (1)	\$151 \$86 \$77 \$43 (1)	\$160 \$92 \$81 \$46 \$41	\$153 \$84 \$74 \$44 \$10

1 Not available.

Mr. Chairman, this chart speaks for itself because it reveals the tremendous increase annually since 1946 in the importation of foreign residual oil.

In addition, it also discloses the millions of tons of coal displaced annually; the revenue lost to coal producers and the railroads; the loss in taxes to local, State, and the Federal Government; and more important than anything else the wages lost by coal miners and railroaders.

Mr. Chairman, I am not attempting to tell you or this committee that the unemployment in the coal, railroad, and related industries is wholly chargeable to foreign residual oil. It is, however, a powerful factor.

The following chart shows the decreased use of coal by the railroads of the Nation and by other domestic users:

> Consumption of bituminous coal [Thousands of net tons]

Year	Railroads (class 1)	Retail dealer deliveries	Total		
1946	110, 166	100, 586	500, 386		
1948	109, 296 94, 838	99, 163 89, 747	545, 891 519, 909		
1949	68, 123	90, 299	445, 538		
1950	60, 969	86, 604	454, 202		
1952	54, 005 37, 962	76, 531 68, 393	468, 904 418, 757		
1953	27, 735	61, 295	420, 285		
1964	17, 370	52, 616	362, 980		

Source: U. S. Bureau of Mines.

You will observe the drastic decrease in the amount of coal used by the railroads which is the result of the dieselization of their motive power.

The loss in domestic use or in retail deliveries is chargeable to the use of substitute

Mr. Chairman, from the information furnished in my testimony you have evidence as to the basis for the unemployment in the coal, railroad and related industries.

As you know, those of us in Congress from coal-producing areas have advocated a quota limitation on the importation of foreign residual oil, because we feel it is justified and the only way we can get relief.

Mr. Chairman, you have heard from spokesmen for the coal industry for the past week and there is nothing more I can add to their expert testimony.

For that reason, I want to talk about the unemployment situation in my own congressional district which comprises the counties of Blair, Centre, and Clearfield in central Pennsylvania.

When I first came to Congress in 1939 I opposed reciprocal trade agreements on the grounds that they were destroying the jobs of coal miners in my congressional district in Pennsylvania. At that time, imported Russian coal had captured some of the eastern seaboard coal markets from coal producers in my congressional district.

In voicing my opposition to the importation of slave-minded Russian coal and other cheaply manufactured foreign products, I predicted that such a reckless policy would create ghost towns out of many communities in my congressional district and throughout the Nation.

Mr. Chairman, my prediction in 1939 has become a reality.

Practically all of our deep mines in central Pennsylvania are closed and thousands of miners have been out of work for several years.

In fact, many mining towns have been abandoned and their empty and dilapidated rows of houses stand as a ghastly monument to the destructive effects of the importation of foreign residual oil.

Because they have nowhere to go, only a few of the unemployed in the coalfields of central Pennsylvania have left the area.

The result is that today, according to the United States Department of Labor, my congressional district is classified as a critical area because of a very substantial labor surplus.

In fact, over 18 percent of the civilian labor force is unemployed.

This unemployment is not confined to coal miners and railroaders but includes those employed in affected related industries.

The three countries that comprise my congressional district represent one of the most acute unemployment areas in the United States.

This unemployment problem that exists in my congressional district did not happen overnight. As I mentioned a moment ago, it started back in 1939 and were it not for World War II and the Korean war which stepped up the demand for coal the unemployment problem we have today would have been acute in the intervening years.

In a few words, World War II and the Korean war simply delayed the day of reckoning.

Mr. Chairman, these unemployed people in my congressional district have exhausted their rights to unemployment insurance, liquidated their savings accounts, borrowed on or have taken the cash value of their insurance policies and today are living on public assistance and surplus commodities.

In order to become eligible for public assistance many of these good Americans were required to permit the State to place a lien against their home for the amount they receive in public assistance benefits.

To give you some idea of the overall picture of unemployment in my congressional district let me call your attention to the following chart that describes the number of families and persons receiving surplus commodities:

Surplus commodities

County	Number of families	Percentage of all fam- ilies	Total number of persons	Percentage of county population
Blair Centre Clearfield	10, 801 2, 939 9, 988	26. 8 15. 9 42. 2	32, 561 9, 362 37, 179	23, 3 14, 2 43, 3
Total	23, 728	28.8	79, 402 1, 020, 963	27. 1 1 9. 7

⁴ Of State population of 10,498,012.

As you know, Mr. Chairman, before you receive coupons for surplus commodities you have to be certified as eligible by a local welfare agency.

Therefore, these figures are official and have been verified not only by the State of Pennsylvania but also by the county commissioners in each of the three counties in my congressional district.

Surplus commodities by carload lots to Mar. 1, 1955

County	Beans	Beef	Butter	Cheese	Dried milk	Rice	Short- enling
Blair	2 1/2 4	16 4 5	21 3 16	19 5 14	18 5 16	1,12	10
Total number of carloads	61.9	25	40	38	39	234	3
Grand total, 184 carload lots.		W - W			18.45		

Mr. Chairman, there is no denial of the fact that these figures are startling and are an answer to those who smugly insist that there is no acute unemployment problem in the labor surplus areas of the Nation.

Think of it, Mr. Chairman, in the great industrial State of Pennsylvania out of its 10½ million residents, nearly 10 percent, or 1,020,963, are living on surplus commodities.

In my congressional district out of a population of 292,000 nearly 28 percent, or 79,402 persons, are receiving surplus commodities.

Yes, Mr. Chairman, these figures are startling for they truly portary the extent of unemployment in Pennsylvania and in my congressional district.

To be more specific, in my home city of Altoona, Pa., out of a metropolitan area population of a little better than 100,000 nearly 10,000 persons are unemployed, 6,000 of whom are railroad employees, with 4,100 of them having exhausted their rights to railroad unemployment insurance benefits on January 10, 1955.

I regret that every member of this committee is unable to visit Altoona, Pa., and talk to these unemployed Americans as they stand in line to pick up their surplus food coupons.

If it were possible for you to talk to them, you would hear the tragic story of their plight as citizens of a nation that boasts of its high standard of living.

Mr. Chairman, the residents of my congressional district faced with this acute unemployment problem are not sitting idly by and doing nothing to help themselves. Almost every community has an active industrial committee, and thousands of dollars have been raised by public subscription in an all-out and long-range program of rehabilitating the industrial economy of the area by attracting new industries.

As you know, Mr. Chairman, in the effort to attract new industries to a community the competition is really keen.

While these various community industrial groups exert every possible effort to attract new industries, no stone is being left unturned to assist the unemployed in finding jobs. In this effort we have the cooperation of Federal and State employment services as well as the Railroad Retirement Board.

Regardless of this determined effort to relieve the unemployment situation, we are faced with the fact that only a handful have found employment elsewhere in central Pennsylvania; while several hundred having

despaired of getting employment in Altoona have migrated to other States. The bulk of the unemployed are still in central Pennsylvania and especially in the Altoona area where they are living in hope that employment conditions will improve.

Mr. Chairman, these unemployed who have remained in central Pennsylvania should not be criticized, for let us remember they represent the second and third generation of families that settled in the central Pennsylvania area years and years ago.

They have their family roots in central Pennsylvania, many owning their own homes or having nearly completed the purchase of them.

In plain words, these good American citizens who have helped build their community, State, and Nation through toil and taxes, should not be expected to leave the great industrial State of Pennsylvania and roam over the United States in gypsylike fashion seeking their daily bread.

To those who would suggest that these families be relocated at Government expense, I say to you that you are advocating the principles of state socialism which dictates when and where you may sow and reap.

Mr. Chairman, as the Representative of these people in the Congress of the United States, I have introduced a series of bills in this Congress designed to provide relief for the unemployment situation, not only in my congressional district but also in other labor surplus areas of the Nation.

There are two bills in particular in my series of legislative proposals that I would like to call to this committee's attention.

First is H. R. 860, a bill to provide for programs of public facilities construction which will stimulate employment in areas having a substantial labor surplus.

The other bill is H. R. 4628 which will authorize the Small Busines Administration to make loans to municipalities having a substantial labor surplus to assist them in their efforts to promote the establishment and location of new industries or to aid in expanding existing plants.

These two bills are pending before House committees and if approved by this Congress would help considerably to alleviate the unemployment problem and bolster the sagging economy of many areas of the Nation.

Mr. Chairman, while we attack this unemployment problem on all fronts almost daily the situation becomes more acute as our unemployment rolls increase because of the fact that as the day go by more of our deep shaft mines are being closed with the result that more miners, railroaders, and employees in related industries are thrown out of work.

The closing of our mines, Mr. Chairman, is traceable to the ever increasing imports of residual oil from Venezuela which started in 1946 with 45 million barrels and reached a total of nearly 132 million barrels in 1954.

In fact, from 1946 through 1954, inclusive, a total of 863 million barrels of foreign residual oil flooded the eastern seaboard of the United States displacing 209 million tons of bituminous coal resulting in the loss of \$492 million in miners' wages and \$271 million in railroader's wages.

We should add to this loss in income the loss in taxes to Federal, State, and local political subdivisions.

Mr. Chairman, you will remember that earlier in my discussion I talked of ghost towns and all through my remarks I have stressed the unemployment of thousands of good Americans who have exhausted their rights to unemployment-insurance benefits and are existing on public assistance and surplus commodities.

I repeat, this condition prevails in the United States where we boast of our high

standard of living.

Mr. Chairman, the principal benefactor from the flood of foreign residual oil is Venezuela whose residents are enjoying unbridled prosperity.

Let me read to you Hal Boyle's syndicated column of January 14, 1955, titled "Venezuela Seen as the Texas of South America."

"VENEZUELA SEEN AS TEXAS OF SOUTH AMERICA

"(By Hal Boyle)

"CARACAS, VENEZUELA.—Leaves from cruising notebook: Venezuela today is the Texas of South America.

"So much money is being made here that visiting Texans actually get an inferiority complex, and the United States dollar feels like 50 cents.

"Just to be sure he wouldn't be mistaken for an ordinary bum, one new millionaire from the interior of the country came to town with calling cards that bore this message printed after his name; 'Capital: 6 million bolivars.' That's nearly \$2 million.

There is so much wealth flowing around that even tourists get a break. If you kick a diamond out of a rock here, the Government lets you keep it tax free unless it is worth more than \$1,700. You can also go pearl diving and keep any pearls you find.

"The visitor has a dazed sensation he is caught in a midcentury Klondike gold rush. The atmosphere of quick money is overwhelming, and tales of riches made overnight

are a bolivar a dozen.

Venezuela is bigger than Texas and Oklahoma combined and larger than any European country except Germany. Its chief income is from cil-no land except the United States produces more—but it also has iron ore deposits rivaling the famed Minnesota Mesabi Range. It also has cowboys and Indians. 16,000-foot-tall mountains, jungles, beach resorts, and the world's highest waterfalls.

"Although the nation has a population of 5½ million, the government spent half a billion dollars in 1954 on vast public-works projects and still ended up with \$80 million left in the till. Its huge modernization program calls for the future expenditure of \$800 million alone for a new 2,640-mile railway network to open inland mineral and agricultural areas for further development.

"Foreign investors from the United States and Europe are pouring untold more millions into the industrialization of the country. It has taken in more than 100,000 immigrants from Europe the last 10 years.

"Caracas, the 388-year-old capital, is now one of the world's greatest boom cities. Fifty years ago milkmen herded cows through its ancient streets. Today they are jammed by thousands of new high-priced motor cars.

"You reach the city from the nearby port along recently completed 11-mile highway cost \$71 million, which Caraquenos that proudly boast is, mile for mile, the most expensive ever built.

"Nearly a million people live in the metropolitan area, and so many new buildings are going up construction workers have no time even to take Sundays off to go to the bull fights.

"Dominating the heart of the city is Centro Bolivar, Venezuela's 'Rockefeller Center,' which will cost \$300 million. Its twin 300foot towers, housing government offices, have four traffic levels beneath them.

"Caracas also has a baseball park the size of Yankee Stadium, the new \$8 million Hotel Tamanaco, a technicolored \$30 million polyclinic hospital, and a university as modern as any in the world.

"But the city has abysmal poverty as well as tremendous wealth. The shantles of the poor still crowd many of the raw red hills that stud Caracas. The government has torn down thousands of these eyesores and replaces them with forty 15-story apartment buildings at a cost of \$24 million. Workmen can rent the apartments for \$6 to \$30 a month, own them after a period of 20 years.

"In 1955 the government plans to tear down 6,500 more shacks, spend \$2 million more on apartment projects for low-income workers.

"Oddly, many uprooted workmen's familles are unhappy in their fine new apartments.

" 'The old shacks had a small yard in which families could raise a pig and a few chickens, explained our guide. 'It is all but impossible, of course, to raise a pig in an apartment, and many of the old people in particular get lonesome for their old way of life. They don't feel as free as they did.'

'Progress always has its price, and to some the price doesn't seem worth it."

L'r. Chairman, what a contrast it is to compare living conditions in Venezucla with the coal fields of Pennsylvania.

May I add that the prosperity enjoyed in Venezuela is to a great extent at the expense of the misery and suffering of residents of the coal-producing States of our Nation and especially of my congressional district.

At this very minute a quarter of a million ton tanker ship is tied up at an east coast dock carrying disaster to the coal, railroad, and related industries of this Nation, in much the same manner as rat-infested vessels brought disease into our port cities in years gone by.

This foreign tanker with its bunker space filled with residual oil is dumping it in violation of every American concept of fair com-

petition.

As a matter of fact, even if the miners of our Nation would work for nothing and the railroads transported the coal for practically nothing, the coal industry could not compete with this unfair competition from foreign residual oil because its price is continually manipulated downward in order to capture the eastern seaboard coal market.

Mr. Chairman, it is being said in defense of residual oil that the oil companies have been requested to restrict voluntarily the amount of residual oil imported quarterly. Those who have considered the possibility of voluntary cutbacks on imports of foreign residual oil insist that it is impractical and that the idea has been abandoned.

They further state that such voluntary control may be in violation of antitrust laws and thus the proposal presents a complicated legal problem.

It has also been said that if any restrictions are placed on the importation of foreign residual oil we will offend Venezuela.

Let me state, Mr. Chairman, that every time a coal miner loses his job because of unfair competition from foreign residual oil a railroader has also been added to the list of the unemployed.

As far as I am concerned, it is about time we start adopting some of the policies foreign nations apply against us in protecting the jobs of their industrial workers.

Mr. Chairman, I appreciate the opportunity accorded me this morning to appear before this committee and to tell you of the plight of the unemployed in my congressional district.

Your willingness to listen to an analysis of our problem renews our faith and confidence in our representative form of government.

I sincerely hope that as a result of these hearings remedial legislation will be enacted at the earliest possible date.

Another Freeze?

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Tuesday, March 15, 1955

Mr. MAGNUSON. Mr. President, on Sunday, March 13, 1955, I appeared on a

nationwide television program Face the Nation, to discuss the study and inquiry into the radio and television field currently being considered by the Senate Interstate and Foreign Commerce Com-

One of the panel members of this program was Mr. Sol Taishoff, keen observer, and publisher of the authoritative magazine Broadcasting-Telecasting. who raised various questions concerning the so-called television freeze.

Because of the importance of this matter and the long experience Mr. Taishoff has had in this field, I ask unanimous consent to have printed in the RECORD an editorial entitled "Another Freeze?" which appeared in the March 14, 1955. issue of Broadcasting-Telecasting.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER FREEZE?

If the FCC falls for the scheme of its staff department heads for the imposition of a new freeze (called chill) on VHF authorizations, the individual members might as well head for the hills. They would never be able to withstand the wrath of an outraged public in the areas that would be "chilled," as expressed through their duly elected representatives in Congress.

The scheme, reported in this issue, is harebrained. Its proclaimed purpose is to maintain the status quo of the UHF situation during the interim period when the Commission is considering possible remedial ac-tion. And what is that action?

Commissioner Frieda B. Hennock proposes, and the staff supports, an eventual move of all TV to the UHF band. At the FCC session last Tuesday, when the staff proposal was smuggled in, the discussion covered a possible 10-year transition from VHF to UHF, with stations operating on both bands dur-

ing this transition period.

The discussion also covered possible "selective deintermixture", but obviously this would be from VHF to UHF, since the longrange plan contemplates giving VHF-the established service that got there firstback to the Government to allocate to other services. The FCC probably has the legal authority to deintermix, but it would find itself embroiled in the courts at the very outset by applicants who in good faith had applied for available assignments, spent their funds for hearings, only to have the allocations rug jerked from under them.

Five years ago-before the end of the great freeze, and when there were only 100odd stations on the air-the then FCC Chairman Wayne Coy sent up a trial balloon on a move of all TV to UHF. There were then about 3 million TV receivers in use. The project got nowhere. Even in those days it involved too great an upheaval to warrant serious consideration.

The FCC is under pressure from Congress to do something for UHF. But it can't pass miracles. It should be evident that neither UHF nor VHF, standing alone, can provide optimum, saturation service. VHF has the greater coverage, and can provide service to rural and remote areas which could not be served economically by UHF's situated in the larger cities. A transition to UHF would mean the loss of even fringe service to those who seek it most-the remote dweller.

The FCC should forget about schemes that would artificially curtail or eliminate service. The "public interest" yardstick should be reason enough. The FCC can't ordain an equitable allocation so that one or more services will be provided everywhere. There are many VHF assignments that are going begging. More than 2 dozen previously authorized have been turned back. The reasons are economic.

And so it is with UHF. There are quite a few UHF stations that not only are not complaining, but wish the breast-beating would cease. They are doing well, even with VHF competition. First Storer, and now NBC acquires its second UHF station, while CBS is surveying the field for its second. This certainly supports the view that UHF is technically adequate.

UHF could be helped substantially if manufacturers would produce all-band receivers. Chairman Magnuson of the Senate Commerce Committee, proposes to call in the leading manufacturers in the hope of working this out. We hope he does it soon.

Meanwhile, the FCC would be well-advised to stick to its assigned task of allocating channels, both VHF and UHF, consistent with the demad and with its rules. It is not the function of Government to wet-nurse citizens who venture into unfamiliar fields unprepared to weather the red-ink stretch, as did all of the pioneer VHF's. Broadcasting epitomizes free competitive enterprise and the risks it entails.

Sixteenth Anniversary of the Independence of Slovakia

EXTENSION OF REMARKS

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. KEARNEY. Mr. Speaker, today, March 14, is the 16th anniversary of the independence of Slovakia. Throughout the world this anniversary will be celebrated by the Slovak people. On March 14, 1939, the Slovak Parliament in Bratislava proclaimed Slovakia an independent state. It was the climax to feelings of national consciousness which had their beginnings as early as the 16th century. Although for long centuries generations of Slovaks lived on their own land under foreign rule, they cherished the deep faith that the time would come when Slovakia would become an independent country and Slovaks might rule themselves.

The solemnity with which Slovaks everywhere greet this 16th anniversary of their independence springs from the fact that it must denote still another year during which the people of Slovakia have endured the material enslavement of their land under the mockery called by the Communists the people's democracy. However, that the years of independence were so few has only strengthened the age-old determination of this proud people to resist to the end the forces which now aim to stifle the very moral principles upon which democracy and freedom are based.

I know that I speak for the American people when I say that the people of Slovakia have our deepest sympathy and admiration in their heroic resistance to the regime of physical exploitation and the amoral ideology which the Soviet Union has attempted to force upon them. We join them on this anniversary of their independence in the fervent hope that their opposition will prevail, and achieve once again the establishment of a free and democratic nation.

Family of Lt. John Buck, of Armathwaite, Tenn., Imprisoned Airman, Hopefully Await Return of Son Now in the Hands of Reds—Neighbor of Cordell Hull and Sgt. Alvin C. York, Lieutenant Buck Is Heir to Heroic Tennessee Tradition

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. EVINS. Mr. Speaker, the hearts of the Nation are with the American boys who are being illegally held and imprisoned by the Chinese Reds—and with the families of these men, with whom our Nation prays and hopes that the happy moment of reunion will come soon.

In this connection, Mr. Speaker, there recently appeared in the Sunday magazine of the Nashville Tennessean an excellent article by Mr. H. B. Teeter about the family of Lt. John W. Buck, of Armathwaite, Tenn., who is one of the American boys imprisoned by the Reds. Mr. and Mrs. Noah Buck, the parents of Lieutenant Buck, as this article states, have every faith that their son will return and that his fine character and American outlook will be unchanged. We believe with them that such will be the case, because Lieutenant Buck represents the finest in American manhood.

Under unanimous consent, I insert this article by Mr. Teeter, Family Prays and Hopes for Son, Prisoner of the Reds, along with my remarks in the Appendix of the Record.

The article follows:

TENNESSEE FAMILY PRAYS AND HOPES FOR SON (By H. B. Teeter)

Many times each day, an elderly man and woman glance down a winding road which disappears around the shoulder of an apple orchard in Fentress County.

Noah Buck and his wife believe their son will come walking down the road again, some day, back to his home in Armathwaite.

They will see him walking, head erect, chest thrown back—the way they remember him in boyhood and young manhood. Their confidence has not wavered since their son, Lt. John W. Buck, disappeared behind the bamboo curtain in January 1953. They remain confident today, even in face of knowledge he is held prisoner by the Chinese Reds.

"If we did not believe that, if it had not been for our prayers, we could not have lived through the past two years," said Mrs. Buck, now 73, a sweet-faced, smiling woman whose pioneer parents helped settle this rugged mountain country.

"He will be the same Woodie Buck he always was," said the father, now 77, who swears by the American principles his son learned as a boy.

Lieutenant Buck is heir to an heroic tradition, neighbor and friend of the great Sgt. Alvin C. York, relative of Tennessee's stalwart Cordell Hull. He is also from the line of famed Sam Houston.

He has been held prisoner of the Chinese Reds since his American B-29 was shot down near the Yalu River in North Korea. The Tennessean was 1 of 14 men aboard the plane. Three died.

He was not heard of for 18 months. Then last August the Chinese revealed he and the others were alive and being held as political prisoners. He received a 4-year sentence from a Red tribunal which recently sentenced 13 American airmen on espionage charges. Thus the Chinese play their cruel and patient game.

It has been 15 years since Buck enlisted in the Air Force. As a bombardier during World War II, he is credited with sinking two Nazi submarines. His mission over North Korea in January 1953 was to drop pamphlets—not bombs.

At their comfortable home in Armathwaite, Mr. and Mrs. Buck the other day told how their son grew straight as a pine tree on their farm.

"When he was no more than 3 years old, he liked to be out in the fields with me," the father said. "By the time he started to school, his ambition was to run faster, fight harder and play better than the other kids."

The Buck home was and is a religious home, neighbors told this reporter.

"Woodie Buck grew up with more stuff in him than anybody I know," said Junior Hicks of Armathwaite. "He was a fighter. I was afraid he had been killed by the Chinese after he was shot down. If he had anything to fight with, he'd have fought to the finish."

"He wanted to be big and strong," Noah Buck said. "He put up a sack full of sand and used it as a boxing bag. He was a fine swimmer, too."

Although Buck has been gone from Armathwaite for most of 15 years, his boyhood friends recall that he was an excellent pistol shot and probably the best amateur boxer in the section. He was a good student and a better-than-average baseball player, they say.

"He was as good a boy as there ever was," the mother said.

"And a good farmer, too," the father added.
"Why, I kept a mule just so Woodie would have something to plow with."

What may have happened to Buck during his long months of imprisonment by the Chinese is anybody's guess. Have the Chinese changed him from the clean-cut, friendly mountain boy whose main ambition in life was to serve his country?

Not according to Sgt. Alvin C. York, America's hero of World War I. York knew Buck when he attended the Alvin C. York Institute at nearby Jamestown, and he has known the Buck family all of his life.

"He was one of the finest boys in this part of the country," York said.

Mrs. Buck is a cousin of Cordell Hull, Tennessee's great Secretary of State. Noah Buck's grandmother was a niece of Sam Houston. John Buck grew up with 4 sisters and 1 brother. The brother, Clyde, is postmaster at Armathwaite. The sisters are Mrs. Ray Dunford of Armathwaite, Mrs. Lula Richardson of Morristown, Tenn., Mrs. Edna Range, and Mrs. Ann Berry of Dayton, Ohio.

Mr. and Mrs. Buck received the first letter from their son last September, after long months of anxious waiting and uncertainty. They had no way of knowing what he was enduring at the hands of the Chinese Reds, or even if he were alive.

Perhaps there were weeks on end when John Buck was put to severe tests by his captors. American prisoners who have returned tell terrifying tales of brainweshing by the Chinese Reds bent on obtaining false confessions.

The letters Mr. and Mrs. Noah Buck receive from their son are not in the language of the Chinese. They sound like an American boy who hasn't changed.

These letters do much to bolster their

In his first letter, received last September, Buck told his parents that he now weighs 190 pounds and is in good health.

"Ma, I want you and dad to live to a ripe old age. You are both in your 70's and shouldn't be working.

"Hire two good men to clean up the place. Clean up and reseed the pasture fields. Might want to raise cattle when I get home.

"Put a new lawn around the house. Clean out the fence rows and repair the fences. * * Don't worry about me for I will be all right."

Sounds just like the Woodle Buck we knew, the neighbors say. The old folks are confident it will be the same Woodle coming down that lane one day again.

Iowa State College—The First Educational Institution To Benefit From the Land-Grant College Act

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. SCHWENGEL. Mr. Speaker, in view of the fact that this subject matter concerns an important educational institution in Iowa and, because of the national significance of this subject, the entire Iowa delegation—Representatives Cunningham, Dolliver, Gross, Hoeven, Jensen, Lecompte, and Talle—joins me in extending these remarks in the Record.

I wish to call the attention of the Congress to a very important fact of history which has been distorted recently. This misinterpretation is of particular concern to this body because it involves an act of Congress, the Morrill Act of 1862, popularly referred to as the Land-Grant College Act. This important legislation was initiated and implemented by the Congress of the United States and signed by President Lincoln on July 2, 1862.

On February 12, 1955, the Postmaster General of the United States issued a commemorative postage stamp bearing the names of Michigan State College and Pennsylvania State University and the dates of their founding, 1855 to 1955. I salute these two institutions on the occasion of their centennial celebrations and hope that their next hundred years will be as successful and as resourceful as the first hundred.

It also seems to me that the Postmaster General has established a fine precedent in issuing this 100th anniversary stamp for two of our outstanding institutions of higher education. Each of our State universities, in fact, should be so honored. This, I think, should be called to the attention of the great and noble State universities in order that they too can celebrate their 100th year with the issuance of a commemorative United States postage stamp.

There was a grave error and a distortion of historical fact, however, on this Michigan State College and Pennsylvania State University stamp. Across the top of this stamp runs the statement

"First of the Land Grant Colleges," but this is not true.

These two institutions were not first of the land-grant colleges. Iowa State College was the first educational institution to become an official land-grant college.

First, there was no such thing as a land-grant college in 1855 since the national legislation creating them was not enacted until 1862. Granted there were agricultural colleges which later were designated for the functions of the Morrill Act, but they were not land-grant colleges until the several State legislatures accepted the terms of the Morrill Act and officially specified which State educational institution was to be the agricultural and mechanical arts college.

Second, as you can verify by the accompanying documented table, the Iowa State Legislature accepted the terms of the 1862 act on September 11, 1862, and by this action became the first State to accept it. At the same time, Iowa State was designated as the State's landgrant institution, thereby becoming the first educational institution to benefit from the Morrill Act of 1862 which provided for the creation of our land-grant colleges.

If these institutions, which had the greatest democratizing influence on higher education in this country, are to be honored as they should be, this gross error of historical fact that appears at

the top of the Michigan State College and Pennsylvania State University commemorative stamp must be corrected.

I have pointed out that Iowa State College was the first educational institution to be a land-grant college because the State legislature accepted the 1862 act on September 11, 1862. When you study the accompanying documented table, you will also discover that Kansas State accepted the act on February 3, 1863, and created and designated Kansas State Agricultural College on February 16, 1863, to be its land-grant college. This was 10 days before the Michigan Legislature accepted the act and designated Michigan Agricultural College as its landgrant institution.

Also, you will notice that six State legislatures preceded the Pennsylvania State Legislature in designating their official land-grant colleges. Although Pennsylvania accepted the Morrill Act on April 1, 1863, Pennsylvania State College was not designated as the official land-grant college to receive the State's funds until February 19, 1867.

These are the facts of history and I ask that the Congress of the United States officially set the record straight and advise the Postmaster General of the inaccuracy that appears on the commemorative stamp issue of February 12, 1955.

See attached documented statement confirming above subject matter.

Let's Stop Kidding About Civil Defense

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial that appeared in the Newark (N. J.) Star-Ledger under date of March 13, 1955, entitled "Let's Stop Kidding About Civilian Defense":

Last month, the Atomic Energy Commission revealed the H-bomb's awesome capacity for destruction. One bomb can kill just about everybody in a 7,000-mile-square area, roughly the size of New Jersey—unless they are prepared for it.

What kind of preparation is the right kind?

Nobody's answered that question yet. And the answer must be detailed, definitive, and decisive.

President Eisenhower the other day suggested more and more realism in our CD tests. But how are we going to be realistic if we don't know what to do?

Val Peterson, the national CD boss, suggests that it might be a good idea for homeowners to dig shelters. What kind of shelters? Where? In the basement or in the yard? How big? What supplies should be stored in them?

Just think of a new homeowner. Should he incorporate shelter plans right in the blueprint? If it's really vital, the Government should encourage it. It might even offer a tax inducement to people who build shelters the way it offered a tax inducement to people who built factories during the war.

Remember, civil defense is not merely passive defense. Our entire military concept is based upon massive retaliation. We are going along on the assumption that no enemy will dare attack us, because our retaliation will be fearful and complete.

But retaliation is based on the idea that an enemy attack will not destroy us. must be able to rise from the first attack and strike back.
We will not be able to do this without

adequate civil defense.

If the Government wants the public to stop joking about CD, then it better get serious itself. Not just the people in the street are confused. The Governor of Massachusetts says that the States don't even know what to do with their National Guard units in case of attack.

Let's get going in Washington.

A Proposed Tax Credit Plan To Aid Students in Institutions of Higher Learning

EXTENSION OF REMARKS OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. CRETELLA. Mr. Speaker, under unanimous consent, I insert in the RECORD a very informative article dealing with a proposed tax credit plan to aid students in institutions of higher learning. Legislation in support of this proposal has been introduced by my colleagues, the Honorable Donald L. JACKSON, of California, and the Hon. PETER FRELINGHUYSEN, JR., of New Jersey, and I want to associate myself with them in this proposed plan.

The article which I refer to was issued by the American Council on Education and contains facts and statistics which certainly should alert the members of the Congress to this very important problem with which many of us today are

confronted:

A Proposed Tax CREDIT PLAN TO AID STUDENTS IN INSTITUTIONS OF HIGHER LEARNING

The one fact concerning American manpower on which everybody agrees is that serious shortages exist in professions and vocations for which a college education is essential. The most comprehensive recent study, made by Dael Wolfle for the Commission on Human Resources and Advanced Training, shows that the supply of college graduates to meet immediate needs is insufficient in the natural sciences, engineering, home economics, dentistry, medicine, nursing, school teaching, and college teaching, and that demands are increasing in social science and the humanities. Furthermore, it is noted that as the population increases the demand for professional workers increases at double the rate.

With national security resting in the balance, the United States is less strong than it might be, because, as Dr. Wolfie says, "it wastes the abilities of many of its most capable sons and daughters." His investigations show that of the students in the upper twofifths of high-school graduating classes—a group of approximately 342,000 a year-only 51 percent enroll in college. He cites evidence indicating that of the remaining 49 percent, half are probably prohibited from continuing their education by lack of funds. THE INCREASING COST OF COLLEGE EDUCATION

The financial hurdle to a college education grows higher each year, as colleges and unive.sitles, both publicly and privately sup-ported, increase tuition and fees in a detern 'ned but usually unsuccessful effort to keep pace with the rising costs of instruction in

the face of decreasing proportionate income from other sources. One recent study reported by Francis J. Brown in Educational Sociology shows an increase, in the decade 1942-43 to 1952-53, of 65 percent in tuition and fees of publicly supported institutions and 78 percent in privately supported institutions. Substantial further increases have been put into effect in many institutions since 1953.

It can easily be demonstrated that the added income from students has not permitted colleges and universities to be lavish in the expenditure of funds. A recent study by the National Education Association based on data for 1952-53 cites the average salary for beginning college teachers as \$3,000 a year and the average for full professors as approximately \$7,000. One of the reasons for the low salaries is that colleges and universities are still doing their utmost to assist needy students. A recent survey of 25 colleges with enrollments under 3,000. made by Treasurer John M. Schlegel, of La-fayette College, reports that total student aid increased from \$1,730,000 in 1948-49 to \$4 million in 1952-53. Only 36 percent of the aid was endowed. "This means," he says, "that these 25 institutions poured into student aid in 1952-53 from operating funds an average of \$102,000 per college." That money could have been used for faculty salaries or other purposes if those colleges had been content to serve only the children of those financially able to pay the full tuition fee.

THE EXTRAORDINARY EXPENSE TO FAMILIES DURING COLLEGE YEARS

In other words, through circumstances which the colleges and universities cannot control, the cost of their services to the youth of America has risen to a point where it is beyond the reach of many families and an extreme financial sacrifice to many others. The plight of thousands is described by Robert W. Murphy, general counsel of the Borg-Warner Corp., in an article in the March 1953 issue of College and University Business:

"If one heeds the voice of experience, he should consult the father of a boy or girl in college. * * * Multiply even \$1,500 by 4 years, and \$6,000 by 4 children (or select any number from 1 to 12), and it is obvious that a sizable minimum is required. This amount must be set aside after taxes.

"For example, with four children, assumthe minimum amount required is \$24,000, if the taxpayer should be in a 30percent tax bracket (which is certainly not unusual for a middle-income family), this would mean that in order to save \$24,000 for educational expenses, he must earn \$35,000; if he is in the 50-percent tax bracket, he must earn \$48,000-all in addition to his regular day-to-day living expenses. These amounts provide only the basic education leading to a bachelor's degree; the sum that a parent must set aside if he contemplates educating his children in the professions becomes astronomical."

Addison B. Clohosey, testifying before the House Ways and Means Committee in June 1953, on behalf of the Research Institute of America, stated:

"Unless something is done to give relief in the way of allowable deductions for college and educational expenses for children, we will surely kill the educational program in this country

"It costs between \$2,000 and \$2,500 per year to maintain a child at college away from You don't have to have a large income for this to mean that you must earn \$4,000 or \$5,000 per year for each child whom you want to give a college education.

"I firmly believe in balanced budgets, but I don't believe that you can unbalance the budgets of the private citizens for as long a period as we have without killing incentives and destroying the very structure we are fighting to saye."

Gerald W. Harrington, attorney, from Providence, R. I., testifying at the same hearing, stated:

"If we are interested as a community, as a government, as a society in preserving college education as we have known it, in preserving it as an opportunity for anybody to have an education no matter what strata of society he may come from, if we are interested in preserving college revenues, then we are interested in increasing the ability of the individuals to pay tuition. By the viduals I mean principally the parents of children who are going through the process of college education.

One way that we could at least help the individual parents to meet these tuition costs, it seems to me, is by granting a deduction to the individual parents for moneys expended on tuition for the education of

their children."

The Honorable Carl Elliott, Member of Congress from Alabama, testified at the hearing in support of his bill providing for the deductibility of tuition as follows:

"It is necessary for parents to begin saving at an early date if they are to be able to send their children to college. As costs skyrocket, it becomes increasingly difficult to save money. The small margin between that which is earned and that which is needed to meet the essentials in the average household today is approaching the vanishing point. The greatest portion of this margin evaporates in taxes."

GENERAL ADVANTAGES OF THE TAX CREDIT PROPOSAL

If substantial tax relief were given for student fees paid to tax-exempt public and private educational institutions, many parents would reappraise their financial ability to pay the costs of a child's education and more children would have the advantage of the opportunities which our country is dedicated to keep open. Parents in the \$8,000. \$10,000 and \$12,000 a year brackets, who now require partial scholarships to keep their children in college, would be able to forego these scholarship funds, thus making them available for those children coming from homes of lesser financial ability. Some institutions, without curtailing the support given to superior students from low-income homes, could conserve some of the operational funds now used for scholarships and make them available for faculty salaries and maintenance of plants, thus improving the quality of instruction.

The plan proposed, which has been studied, in several different forms, by numerous educational groups for more than a year, is based on a formula suggested by the resolutions committee of the taxation section of the American Bar Association at its 1954 convention. Briefly, the plan provides that 30 percent of student tuition and fees actually paid by the taxpayer be applied as a tax credit on the amount of income taxes otherwise payable. This means that all taxpayers who pay a given amount of tuition and fees would receive the same tax benefit in dollars, regardless of their income tax bracket.

There is now general agreement among those who have been involved in the study that this tax credit method is much suncrior to the previously suggested plan of making the cost of tuition and fees deductible from income. The tangible advantage to those in low-income brackets is evident.

The following will illustrate the relative effects of the two methods. If we assume a \$500 tuition, and such tuition were made deductible, then the taxpayer in the 20-percent bracket would save \$100 of taxes, while the taxpayer in the 50-percent bracket would have \$250 of taxes. If, on the other hand, 30 percent of the tultion were allowed as a tax credit, then both the parent in the 20percent bracket and the parent in the 50-percent bracket would deduct \$150 (30 percent of \$500) from his Federal tax bill.

The idea that the Federal income-tax laws should be amended to permit some tax relief for the cost of higher education is not new. In the 83d Congress alone, 10 bills were introduced by Members of the House and Senate, some of one political party and some of the other, from Alabama, Illinois, Kentucky, Minnesota, Missouri, New Jersey, New York and Rhode Island, all advocating some form of such an amendment. The Ways and Means Committee named the subject, College and Educational Expenses, as 1 of the 40 topics included for formal presentation in its hearings during the summer of 1953 on the 1954 Revenue Act.

There is no uniformity to the bills heretofore introduced in Congress. Some proposals call for a deduction of all expenditures involved in education, including travel and subsistence. Others are limited to tuition, laboratory fees, and other direct university charges. Some permit the deduction without limit, others only that of expenditures in excess of the \$600 dependency exemption, and still others use a ceiling of \$2,000 per student. Some are limited to college and university education. Others would apply also to secondary schools. Some would be limited to professional or graduate schools, and still others to refresher courses and other postgraduate schooling for those already engaged in professions. All are in the form of deductions from income rather than in the leveling form of a partial tax

SPECIFIC OUTLINE OF THE PLAN

An attempt has been made to analyze the problem afresh and to draft a bill which will be sound in principle and detail. The proposed bill would have the following features:

- (a) It would be limited to payments made to the institutions themselves for educational services and facilities, and would avoid the complication and confusion of attempting to cover payments for travel, housing, and meals, even though these may be indirectly involved in education. These latter items are partially covered by the \$600 deduction already allowed for a dependent.
- (b) The payments involved would be only those made to educational institutions which meet the tests for special tax treatment under the present income-tax laws. These are set out in section 151 (e) (4) and section 170 of the Internal Revenue Code of 1954 defining tax-free educational institutions.
- (c) The bill would apply only to higher education—that above the 12th grade—including colleges, graduate schools, professional schools, junior colleges, technical institutes, teachers' summer courses, and the like.
- (d) In order to eliminate any possible feeling that the bill would discriminate in favor of taxpayers in higher brackets, it would provide that 30 percent of the student fees would be taken as a tax credit on the tax bill. Thereby the cost to the Government would be approximately the same as if the student fees were made deductible, but the relief to all taxpayers would be the same regardless of their tax bracket.
- (e) A ceiling of \$450 for each student would be placed on the amount of the tax credit. This would mean that that portion of any tuition above \$1,500 per year would not result in any further tax credit. It would be hoped that this ceiling would be sufficient to cover the tuition charges for graduate and professional education as well as those at the college level.
- (f) There would appear to be no occasion for limiting the taxpayer entitled to receive the tax credit to any particular relationships with the student. The neighbor or employer of a promising but financially poor boy or girl frequently proposes to pay his or her

tuition to make higher education possible, provided the tax payment can be made deductible, but this is difficult under present laws. It would be expected that the tax credit plan would bring out more funds in the nature of scholarships to those unrelated to the taxpayer but in whom the taxpayer has some phllanthropic interest.

(g) No tax credit would be allowed on amounts for tuition and fees supplied in the form of scholarships, fellowships, or grants from sources other than than the taxpayer himself. It would be assumed that payment of tuition and fees would be the first charge against such a scholarship, fellowship, or grant.

ESTIMATED LOSS OF REVENUE

The loss of revenue to the Treasury cannot be estimated with accuracy, partly because the statistics on which an up-to-date analysis must rest are unavailable. A rough approximation may be suggested, however, using as a base complete statistics for the academic year 1951-52, the latest compiled by the United States Office of Education. The plan, as explained above, would not permit credit to be taken by the taxpayer on any amount supplied by the Federal Government or any other outside agency. In other words, if part or all of a student's tuition and fees is paid in effect by the Federal Government, a State, an industrial concern, a foundation, or an educational institution itself, no tax credit would accrue to the taxpayer on the amount of such a payment. Hence a number of substantial deductions, some of which defy refined estimates, must be made from the gross income of the in-stitutions from tuition and fees.

In 1951-52 the total amount received by 1,851 institutions of higher education for tuition and fees was \$593,491,000. Of this, \$146,900,000 was received from the Federal Government on behalf of veterans. In the same year the institutions made cash contributions to students for scholarships, fellowships, and prizes of approximately \$39 million, of which at least 90 percent was probably applied toward tuition. A survey of industrial scholarships made in 1952 for the college entrance examination board, admittedly incomplete, gave a total of approximately \$5,500,000. The State of New York alone grants \$4,500,000 in scholarships annually. In addition, the Federal Government annually pays tuition and fees for up to 14,000 students in the Naval ROTC, offers fellowships through the National Science Foundation and other agencies, and so forth. Significant programs of scholarships and fellowships are also supported by philanthropic foundations. When all these deductions are made, it can confidently be estimated that in 1952 the total of tuition payments against which the 30-percent tax credit would be computed would have been less than \$400 million, making the revenue loss less than \$120 million as of that year, assuming that all families that paid tuition had net incomes sufficient to make them subject to income tax.

Several of the factors involved in the above computation have changed substantially since 1952. On the one hand, the number of veterans in college with support from the Federal Government has decreased; on the other, the amount of scholarship aid given by the colleges themselves and by industry has greatly increased. The idea that these opposing factors may not be far out of balance is supported by an increase in college enrollment this year roughly approximating that anticipated on the basis of college-age population studies.

RELATIONSHIP TO OTHER STUDENT-AID PLANS

In the future the proposed plan will afford partial assistance to thousands of veterans who, in accordance with President Eisenhower's recent proclamation, will be denied the educational benefits of Public Law 550

It is not claimed that the proposed tax relief will entirely solve the problem of opening the door of higher education to all qualified youth. Very special attention, for example, needs to be given to the children of families with incomes below the Federal in-come-tax brackets. The plan would, however, give immediate encouragement to thousands of families now doubtful of their ability to send their children to college, and would permit them to plan confidently for the future. Furthermore, it would make it possible for thousands of students now in college, who may be expected, under present circumstances, to drop out for financial reasons, to continue to graduation. The plan is so drawn that if a Federal scholarship program should be approved, to take effect 2 or 3 years hence, there would be an automatic adjustment to restore, in corresponding amounts, the income-tax liability of all affected taxpayers.

ENDORSEMENT BY EDUCATIONAL ORGANIZATIONS

One obvious effect of the proposed studentald plan is that the taxpayer supporting a student in a high-tuition institution would receive a larger tax credit than one supporting a student in a low-tuition institution. The result, encouragement of increased student enrollment in all types of institutions, is considered to be in the public interest. It helps to preserve the balance between private and public colleges and universities. and thus to continue to call on private sources to supply funds for endowment and current operations of private institutions. It is clearly desirable in the interests of American democracy that children of lowand middle-income families, as well as children of the well to do, have the opportunity to attend both private and public colleges and universities. For that reason, as well as for others advanced above, the plan here proposed is supported in principle by the Association of State Universities, the Association of American Colleges, the American Alumni Council, and other educational groups; and it has been specifically endorsed in detail by three committees of the American Council on Education, which represents the entire range of public and private, low-tuition and high-tuition institutions existent in this country.

THE PROPOSED AMENDMENT TO THE INTERNAL REVENUE CODE

The following amendment to the Internal Revenue Code has been recommended for adoption by the 84th Congress:

"STUDENT AID BILL

"To amend the Internal Revenue Code of 1954 to provide a partial tax credit for certain payments made to a public or private educational institution of higher education

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

"Section 1. Findings and policy: The cost of higher education has greatly increased because of inflation and other economic forces. As a result the charges to students have increased, and will of necessity continue to increase, since educational institutions in general find themselves in financial difficulties which have led to low faculty salaries, neglect of maintenance of plant, and curtailment of funds for other essential purposes. Under these circumstances it is in the national interest to accord income-tax relief to student charges for education. This would help open the opportunities for higher education for many students who would otherwise be financially unable to afford it; encourage teachers, members of the learned professions, and others, to refresh and improve their education for the greater service of the public; and facilitate the efforts of institutions of higher education to meet the growing demands made upon them.

"SEC. 2. The Internal Revenue Code of 1954 is hereby amended by the addition thereto of the following new section:

"'Src. 39. Educational expenses for higher education

" '(a) General rule: There shall be allowed to an individual, as a credit against the tax imposed by this subtitle for the taxable year, 30 percent of payments by the taxpayer to one or more educational institutions during the taxable year for the cost of education above the 12th grade of the taxpayer and of any other person or persons.

"'(b) Limitation on amount of credit:
"'(1) The credit allowed by subsection (a) shall not exceed \$450 on account of such cost of education paid by the taxpayer for the education of any one person, but the total credit allowed shall be the sum of the credits on account of the payments made by the taxpayer for the education of himself and for the education of other persons.

"'(2) For the purpose of calculating the credit allowed by subsection (a), the payments referred to therein made by the taxpayer for the education of each person shall be reduced by the amount of any scholar-ship or fellowship grant, as defined in section 117 (a) (1), which is received by such person during the taxable year and which is not includible as gross income of such person under section 117, and by the amount of any education and training allowance, as defined in part IV of the Veterans' Readjustment Assistance Act of 1952, which is received by such person during the taxable year: Provided, however, That if such scholarship, fellowship grant, or education and training allowance is applied in whole or in part to the payment of the cost of educa-tion of such person, the payment by the taxpayer of the remaining cost of educa-tion of such person shall not be reduced pursuant hereto by reason of that portion of such scholarship, fellowship grant, or education and training allowance so applied.

"'(c) Definitions-for purposes of this

section:

"'(1) The term "cost of education" means amounts paid to an educational institution for educational services and educational facilities (expressly excluding board and hous-

irg) furnished by such institution.
"'(2) The term "educational institution" means an institution as defined in section 151 (e) (4), contributions or gifts to or for the use of which are deductible under the provisions of section 170.'

"SEC. 3. The amendments made by this act shall apply only with respect to taxable years beginning after December 31, 1954."

Americanization

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Itecorp, I include the following editorial from the New York Daily Mirror of Tuesday, March 15, 1955, which is a fine statement on a continuously reoccurring subject of discussion:

AMERICANIZATION

New York City's population represents the fertilization of our people by wave upon wave of immigrants—pioneers who came into it bewildered, not a little frightened, not knowing the language, the customs, or the traditions of the place.

First came the Dutch, then the English, the Irish, the Germans, the Scandinavians, the Jews, the Italians, the Slavs, the Chinese-every race, color, religion, and nationality of man has found a home here, has created a family here that has enriched our city and has helped it to grow.

Each second and third generation became distinctively American. Some foreign languages ceased to be the mother tongue of the family and, if known at all, became a sec-

ondary language.

The principal instrument for Americaniza-

tion is the public school.

This truism in no way detracts from the Catholic, Episcopalian, Lutheran, or Jewish public schools which are numerous hereabouts, nor the many independent schools which are special and comparatively costly institutions.

That the school system in New York achieves excellent results can be measured by the college entrance scholastic aptitude tests, but even more by the fact that second and third generation Americans are so productive in business and professional activities and in public service.

Second generation Americans have done well in this city.

New York has, in recent years, been inundated by another wave of immigrants, the Puerto Ricans. These differ from previous newcomers in one respect: They are already American citizens; they come from American territory. They are a Spanish-speaking folk, of a generally lower economic standard than is current in New York but not lower than other immigrants at other periods.

Culturally they are not different from other immigrants; in fact, they might be regarded favorably in this respect because their literacy is higher than that of many of their predecessors.

Here enter the public schools. This huge population of Puerto Rican children needs to be educated as American children, as New York children. They are going to live and work here and they need to speak English. Their home conversation will be in English. In time, the second and third generations will adjust to our ways and contribute valuably to the life of our city and its growth. There is no reason to assume that their history will be different from any other immigrant group, if they are given a square deal.

This is no subject for petty politics or for partisan nonsense. It is a sociological question of mass absorption which has been wellhandled in the past, as the judges of our courts, many of them descendants of recent immigrants, attest. It should be well-handled now and the board of education is the best available public agency to do this job.

Pinchpenny policies of Albany, legislators who know little or nothing of our city, its special conditions and problems, can be very costly to the generations to come.

To avoid ambiguity, we have put this discussion not on humanitarian grounds but on the basis of practical, common sense and past experience-which is where it belongs.

Disposal of Synthetic Rubber Plants

EXTENSION OF REMARKS OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by me

before the House Armed Services Committee, March 11, 1955:

Mr. Chairman and gentleman of the committee, I want to express my appreciation to the chairman and to the members of this committee for the opportunity to testify here today on this very important matter. I would not ordinarily presume to take up the time of this great committee if the matter under consideration were not so vital to the small-business community of the country and if I were not a member of the Select Committee on Small Business of the House. And lest there be any misapprehension as to why I have been selected to testify on behalf of the committee, let me say it is not because of any particular or even general expertness with the intricate problem you are considering, but rather it is because I happen to be chairman of the subcommittee of the Small Business Committee which has jurisdiction over the supply of raw materials, such as rubber.

I listened to Mr. Vinson's splendid state-

ment yesterday, in which he so ably recalled the history of the event's leading to the construction of the synthetic rubber plants and of the efforts to effect their disposition. There are very few Members of the House of Representatives who have the vast experience, background, and knowledge of the gentleman from Georgia, not only with respect to matters within the particular sphere of the Committee on Armed Services, but on almost all of the complex problems with which Members of the Congress must deal. It is difficult, therefore, to take issue with him on any subject, and it is with much trepidation that I face the task of having to do so in this complicated field. I am sure that if there is any disagreement between us, it is attributable to the difference in information furnished us or more probably to the unavailability of essential information.

Essentially, it was the lack of necessary information which troubled our committee, and which in great measure led to the action by our chairman, the Honorable WRIGHT PATMAN, of Texas, in filing the resolution to disapprove the sales. There are many questions which have not yet been answered and which must be answered before we can say that the Commission has complied with the safeguards established by the basic law,
I should like to make it clear at the outset

that our committee does not disapprove of the fundamental policy requiring the sale of the rubber facilities. We favor their disposal to private ownership, but under such terms and conditions as will assure the use of the facilities for the continued security of our Nation, the reimbursement of our taxpayers for their investment in the rubber facilities, the protection of all segments of our free enterprise economy, including the small-business men, and resistance to further enhancing the dominating position in their industries of giant corporations who have regarded the antitrust laws of the United States as trifling obstacles in their economic progress. In short, Mr. Chairman, we believe that the guaranties and safeguards established by the criteria set forth in the basic legislation have not been adequately observed by the Rubber Disposal Commission. It is for that reason that we voice our objection to approval of the sales.

The chairman yesterday listed the standards imposed by the law on page 7 of his report. Determination of the question as to whether the disposal of the facilities is consistent with the national security is within the province of this committee and will receive your very capable consideration. There is no need, therefore, for our committee to touch on this point.

And while the attention of our committee technically should not be devoted to the criterion as to whether the full fair value for the facilities has been received, our grave doubt that the sales prices approved by the Commission reflects the fair value of the facilities compels us to ask you to give that matter your particular consideration. Ask yourselves this question: If the companies buying the facilities were the owners and wanted to sell the plants, would they accept for those plants the same price they are offering the Government? We doubt it. We think that rather than checking book value or reproduction cost as good, hardheaded businessmen, the companies would lock first to the carnings of the facilities. the profit-making potential of the business? What will it earn? As a matter of fact, that is exactly what Congress intended should be done. This was emphasized in the Senate hearings (p. 179-181) and in the report of the Disposal Commission. Presumably, this is what the Commission said it was going to do. On page 15 of their report they say: "A fundamental precept of the disposal program was that the sale of the facilities should return to the Government a price that would truly reflect the value of the facilities as a going industry."

Again, on page 17, the Commission says: "While other standards, such as original cost, replacement cost, depreciated values, and the precedent of previous Government surplus property sales were considered, it was the decision of the Commission that because the disposal program made possible the purchase of a going profitable business, for negotiating purposes potential earning power should be the prime factor in the establishment of an appropriate price. In its earning power studies, the Commission did not give usual weight to the past earnings of the facilities. These plants had been operated as one integrated program. For example, for reasons of economy and efficiency, many costs were averaged and pro-duction was scheduled, for program reasons, in a manner different from that a private owner will follow."

Why didn't the Commission discuss earnings? If earnings were the primary basis for the Commission's evaluation of the worth of the facilities, why did not the Commission furnish the Congress with the underlying data showing the earning potential of the facilities, rather than actual and reproduc-

tion costs?

Our committee had to make a special effort to obtain this information and received it only in part. I have attached to my state-ment as exhibit A, the Disposal Commission's estimates of the rates of return which the facilities' purchasers can expect, based upon the negotiated sales prices. We do not know what assumptions were taken by the Commission as to volume of production, sales prices of end products, the costs of production and distribution, the amortization of investment for tax purposes, the amount of the Federal income tax, and other factors significant to the estimated rate of return. Moreover, the Commission has not divulged the rate of depreciation which it used in reaching the percentage of return the companies would earn upon their purchase price. Under the new tax law the purchasers have the right to accelerate depreciation. example, if the Commission used a 20-year depreciation base, it is obvious that the 10.44-percent return to Petroleum Chemicals, Inc., the first company on the list, for the puchase of butadiene plant 706 will be increased substantially if a 10-year depreciation base or even a 5-year depreciation base is used. This is true, as well, of all the purchasers. Furthermore, if the companies increase the selling price of rubber from 23 cents to a competitive position with natural rubber around 30 cents a pound, the number of years for recovering their investment will again be substantially reduced. Mr. Chairman, isn't it optimistic to say the least, to assume as the Commission did that the purchasers will be satisfied to maintain the price of rubber at 23 cents?

Thus, the companies have not only 1 means of leverage to increase their profits, but 2: the depreciation base and the price of rubber. The Commission's reports are singularly silent with respect to the value of the facilities if the purchasers begin to vary these two factors from the levels assumed by the Commission. Mr. Chairman, the data showing such variations are perhaps the most vital and essential facts the Congress needs in order to determine whether the full fair value of the Government's rubber facilities has been received.

There are other questions about full fair value which may properly be asked by this committee for answers by the Commission:

1. Copolymer plant 1056 has the same capacity as copolymer 956; why did 1056 sell for \$233,000 less than 956, particularly when the book value of 956 is less than that of 1056 in both gross and net value?

2. Why did copolymer plant 983a sell for

2. Why did copolymer plant 983a sell for \$1.5 million less than copolymer plant 983, although both have approximately the same

capacity?

3. Why did copolymer plant 127 sell for approximately two-thirds of the sales price of copolymer plant 129, although 127 has approximately 130 percent of the capacity of 129?

4. Why did copolymer plant 1278 sell for approximately two-thirds of the sales price of copolymer plant 129, although 1278 has approximately 200 percent of the capacity of 129. Parenthetically, in this comparison it will be noted that the higher price was paid by one of the big four rubber companies. Was there an agreement between them not to bid on copolymer plant 1278?

5. Why were the initial bids on copolymer plants 129, 983, and 1278 acceptable as full fair value whereas the initial bids for other copolymer plants were considered to be too low? Why did the Commission establish acceptable bids of varying prices without regard to the capacities of the plants?

 Why did copolymer plant 1278 sell for approximately the same price as copolymer plant 127, although 1278 has 150 percent of

the capacity of 127?

7. Why did butadiene plant 1503 sell for approximately 17 percent of the price of butadiene plant 485, although the capacity of 1503 is slightly higher than 485?

8. Did greater competition for butadiene plant 1063 raise the sales price by \$9 million over the initial high bid? If so, did lack of competition for other plants depress

their sales prices?

9. Why did butyl rubber plants 572 and 1082 sell for exactly the amounts of the initial bids by the only bidder, since the other facility (butadiene plant 485) purchased by this bidder was sold after competition and resulted in a sales price 12 percent higher than the initial bid?

These are questions which in the opinion of the Committee on Small Business should be answered. Answers are not obtainable from the Commission's report.

So much for the question of fair value. Turning now to other criteria of the law with which the Committee on Small Business is more directly concerned, let us consider the safeguards in points 1 and 3 of Chairman Vinson's statement:

"1. The program had to be designed to best afford small-business enterprises and users, other than the purchaser of a facility, the opportunity to obtain a fair share of the end products of the facilities sold and at fair prices.

"3. The recommended sales must provide for the development within United States of a free, competitive synthetic rubber industry and not permit any person to possess unreasonable control over the manufacture of synthetic rubber or its component materials."

The Commission expresses confidence that a fair share of synthetic rubber will be made available to small business. The report says

(p. 14): "First, a large segment of GR-S capacity has been placed in the hands of Shell Chemical Corp. and Phillips Chemical Co., neither of which is a rubber fabricator. Consequently, they have no need for their GR-S output, and must sell to the market generally. Secondly, in each contract of sale for a copolymer plant, the Commission has required of the purchaser a commitment that he will make available to small-business enterprise a certain specified amount of his production."

On its surface, Mr. Chairman, this would appear to be a satisfactory assurance that GR-S would be supplied to small-business enterprises in even greater quantities than under present operation by the Government. The Commission apparently assumes that the total maximum capacity of Shell and Phillips, 152,000 long tons, would, because of the non-rubber-fabricating nature of these companies, be made available to an open market. Add to this the 90,000 long tons to be put on the open market by other prospective purchasers under contract commitments, and one arrives at a figure of 242,000 long tons annually to be sold in an open market under maximum capacity conditions, and presumably available for purchase by small business. The 242,000 long tons is approxi-mately 35 percent of the total annual maximum capacity of 689,000 long tons for all the facilities proposed for sale.

It takes only a brief glance at the facts to cast serious doubt upon the validity of the Commission's conclusions.

The first assumption is that of maximumcapacity operation, on the basis of which 35 percent of GR-S production is to be sold on the open market. What is maximum capacity, Mr. Chairman, and how is it determined? It has been alleged that the theoretical technical rating of several of the plants concerned is unattainable in practice. If this be so, the maximum-capacity concept is to that extent a fictitious measurement device. Moreover, while maximum-capacity production is estimated at 689,000 long tons annually, the plants in question actually produced only about 478,335 long tons during 1954. In estimating the amount to be sold on the open market after sale, is it not therefore more realistic to use 1954 production figures, rather than so-called maximum capacity as a base for calculation? Should we not have reasonably expected the Disposal Commission at the very least to attempt to forecast probable production and demand levels for the near future, rather than resorting to an ideal-type model which could have only theoretical significance to justify its position?

The second assumption of the Commission-that Shell and Phillips, both nonrubber fabricators, will place their entire output on sale in the open market, for purchase by small or large companies-takes on meaning only if viewed in terms of the probable marketing pattern which such openmarket sales will produce. Here one can prognosticate, to some extent, on the basis previous experience. This experience shows that for the California plants proposed to be sold to Shell, there has in the past been a 90-10 division of total production-90 percent of sale to the Big Four fabricators. and 10 percent to other users. A similar situation has prevailed at the facilities to be purchased by Phillips. How, then, can the Commission have us believe that these distribution patterns will not persist after sale is made? And how, given the likelihood that they will persist, can it be said that the full production of these two companies will be placed on an open market?

To complete this phase of the argument, Mr. Chairman, let me share with you what is certainly one of the most curious aspects of this whole quection. Let us assume that sale of the plants is to be consummated on March 25. Assume further that production for the next year continues at approximately

the level of 1954, that the distribution pattern of the Shell plants is a 90-10 between Big Four and other users, and that Phillips' production is divided 40-60 based on that company's statement that a "major portion" of its production will be made available to small business. It can then be shown, Mr. Chairman, that small business during the coming year, even in the expectation of a competitive situation, will have available for purchase less of the total market than in previous years. This may sound incredible, but if you will follow these calculations the point may become clear.

Under a condition of maximum capacity, there would be approximately 242,000 long tons available to all purchasers in the open market. Of this total, based on present distribution data, about 110,000 tons would be purchased from Shell and Phillips by the Big Four. This would leave a total of 132,000 available for all other users. But those conclusions are based upon operation at maximum capacity, a condition which has rarely existed-if ever-and certainly did not exist during 1954, the year to which the Commission should properly have turned for a realistic appraisal. However, if we take 19 percent of actual capacity during 1954, rather than of the maximum capacity concept of the Commission, we find that there will be available for the use of small-business enterprises only 88,000 tons. Thus we see that the rubber available for purchase by small business under the proposed sale would seem to be approximately a third less than was available during 1954 under Government operation. If these calculations be correctand they were made on the basis of the Commission's report-small business has indeed cause to fear the proposed sales.

The Commission makes a second basic assumption, which our committee is unwilling to accept. It states that the big oil purchasers will compete with the Big Four rubber purchasers. It says (p. 20) that its plan places "rubber-producing capacity in the hands of nonrubber fabricators-corporations with no captive demand which will have to look to the general market for the sale of their product." It cites both Shell and Phillips as examples. Yet, in the report of the Commission itself on page 158 of the supplement, Shell states that it "has contracts with the Firestone Tire and Rubber Co. and with the Goodyear Tire & Rubber Co., Inc., which provide for the payment of a commission to Shell Oil Co. as compensation for Shell's assistance in promoting the sale of their products to Shell dealers, commission distributors, and jobbers."

Does not the pattern of manufacture of synthetic rubber and its distribution as an end product under the disposal plan become clear in the light of the above statement by Shell Oil Co.? Shell will manufacture synthetic rubber which will be supplied to both Firestone Tire and Rubber Co. and the Goodyear Tire & Rubber Co. for manufacture into tires and inner tubes. Shell will then distribute through its retail gas stations and outlets the same Firestone and Goodyear tires. Shell, therefore, will have complete integration from the point of manufacture of styrene to the final point of sale to the consumer. Shell will have a captive demand and a captive market. Firestone and Goodyear, instead of competing with Shell, as is assumed by the Commission, are a part of this integrated unit.

The effect upon small business is twofold: The Shell dealer, commission distributor, and jobber will be policed by Shell to see that they sell no brands in competition to Firestone and Goodyear. For this Shell will receive a promotional fee. This means a squeeze at the point of distribution upon both the small manufacturer of rubber tires and the small distributor whose brands will not be handled. It also means a squeeze upon the so-called independent Shell leader.

If such a dealer were to attempt to exercise his true rights as an independent businessman to receive and sell whatever products he believed would bring him the most security and the best profits, his 1-year lease with Shell would be canceled and he would be driven out of business. Complaints of this nature have been persistent and voluminous before our House Select Committee on Small Business, and are now currently the subject matter of an investigation.

The pattern of integration and monopoly which has led to these complaints will be immeasurably strengthened if the present disposal plan is adopted without providing adequate safeguards to small business.

Under the Commission's program, as is so graphically shown in the case of the Shell Chemical Co., this pattern can be used for many other types of monopolistic and discriminatory practices aimed at the destruction of small business. First of all, the promotional fee which Shell receives from Firestone and Goodyear, is in the nature of a direct discriminatory rebate. With Shell as both the supplier of synthetic rubber and distributor of the tire manufactured from that rubber, the opportunities for such discriminatory rebate and discounts is increased many fold. Secondly, since there is a completely integrated unit from the time of the production of styrene to the distribution of the tire, there is no possibility that factors of free competition will have an effect upon the setting of prices. Instead both the price for, and the production of synthetic rubber and tires, is subject only to the will and whims of Shell, Firestone, and Goodyear.

The situation is strikingly similar to that found to exist by the Department of Justice in the ownership of petroleum pipelines by major oil companies. Independent oil companies by law were of course allowed to use the pipelines to distribute oil to their refineries or retail outlets. But, at the same time, through control of the pipelines, the major oil companies were able to charge exorbitant prices. The effect of such prices was twofold. First the independents were forced to increase their own cost through such high prices and thereby lower their margin of profit to virtually a nonexistent level. At the same time, although the oil company owners of the pipeline paid the same high price for rates, they received back as dividends or income from their ownership not only their own money paid for rates, but also the money pald by the independents. The Department of Justice, branding this practice a system of discriminatory rebates, filed suit. In the case of United States v. Atlantic Refining Company, the district court entered judgment enjoining the owners of the pipelines from receiving a return in excess of 7 percent of the valuation of the pipeline.

A similar discriminatory practice is possible if not inevitable under the Commission's disposal plan. The small rubber fabricator or user may be said to be free to purchase synthetic rubber from the large integrated companies. But such large integrated companies are likewise free to charge as high a price as they desire. A high price will have no effect upon them since they will receive it back in dividends or income. But the high price may very well drive out of competition those small fabricators and users who today are so desperately trying to survive.

This situation is not confined to Shell. Instead it is a general rule throughout the Disposal Commission's plan. The Commission points with pride, if without facts, to its statement that the Copolymer Corp. is representative of small business which will promote free competition in the rubber industry. Copolymer Corp. consists of Sears Roebuck, Armstrong Rubber Co., Armstrong Rubber & Manufacturing Co., Dayton Rubber Co., Gates Rubber Co., Mansfield Tire &

Rubber, Sieberling Rubber Co. The Armstrong Tire & Rubber Co. is owned 50 percent by Sears, Roebuck & Co. and 50 percent by the Armstrong Rubber Co. and is under contract to produce tires for Sears Roebuck. Dayton Rubber Co. is also under contract to produce tires for Sears Roebuck. Thus, again, the Copolymer Corp. brings into one integrated unit the manufacturers of synthetic rubber, the manufacturers of tires made from that synthetic rubber, and the distributor of the tires.

In the past discounts given to and demanded by Sears Roebuck & Co. have been declared illegal. Under the disposal plan, however, identical discount and rebate practices could be carried on which undoubtedly would be immune from law. It is not only small business but also the consumer who would suffer from such practices.

Similar conditions are found among the participating companies in the American Synthetic Rubber Corp. The great majority of such participating companies are representative of big, not small business; the great majority have a lengthy background of antitrust and FTC violations, as was pointed out by Congressman Celler yesterday. The great majority under the disposal plan will not only be the manufacturers of synthetic rubber but also the purchasers and distributors of the manufactured product.

There is again the likelihood that these integrated companies may discriminate against their competitors who must purchase the synthetic rubber at high prices and who will not receive back any of that price in the form of income or dividends.

The most naked combination between and integration of the oil distributors and the tire manufacturers are found in the proposed purchases of the copolymer plants by Goodrich-Gulf Chemicals, Inc., and Texas-United States Chemicals, Inc. Goodrich and Gulf together will manufacture synthetic The synthetic rubber will then be sold to Goodrich to manufacture tires. Under past contracts, Gulf will distribute the tires for Goodrich to the ultimate consumer at Gulf's service station outlets. Goodrich and Gulf are therefore fully combined and integrated in the manufacture of synthetic rubber to the final point of distribution at the Gulf service station. Gulf will of course allow its dealers to handle only tires ap-proved by Gulf. The vicious price squeeze and discriminatory practices which have already been mentioned in connection with integration of Shell Chemical Co. through Firestone and Goodyear are readily

The Commission's disposal program also allows United States Rubber and the Texas Co. to combine as a purchaser. Texas-United States Chemicals, Inc., the purchaser of the copolymer plant at Fort Neches, Tex., is 50 percent owned by the Texas Co., and 50 percent by the United States Rubber. United States Rubber in turn is owned and con-States Rubber III with its owner and trolled, together with General Motors, by the Du Pont Corp. owns the Ethyl Corp. in equal shares with Standard Oil Co. (New Jersey). In the past Standard and Du Pont, through the Ethyl Corp., maintained a system of nationwide price fixing of retail gasoline until stopped, at least temporarily, by the United States Government. The United States Rubber Corp. has in the past, and also still does, sell its tires to all of the Standard companies through the Atlas Supply Co.

Finally and almost unbelievably, the Disposal Commission's plan allows Goodrich, Guif, the Texas Co., and United States Rubber to combine together to purchase and operate the largest and most efficient Government-owned butadiene plant.

With these sales, the Government is turning over an entire industry to a few select companies. Can we say it will be a free, competitive, synthetic-rubber industry as the law requires? I don't believe so. With such interlocking and integrated patterns it is rather silly to talk about free competition. It is even more ridiculous to talk blandly about the protection of small business. The Commission's report makes crystal clear that no serious study or attention has been given to the problems of small business. One wonders whether by the bestowal of its blessing upon this merger movement the Congress will not participate in the economic demise of many small, now thriving, rubber fabricators. I have attached as exhibit B to this statement the letter I recently received from a small fabricator in Connecticut which reflects his fears about the proposed sales.

The small-business producers need protection in their procurement of rubber was graphically shown in hearings held by the Senate Select Small Business Committee in March and April of 1951. Because of the condition of short supply in that year, and because of an inequitable allocation formula by the United States Government, the plight of the small-rubber-business man became desperate. The chairman of the subcommittee issued a statement, reading in part:

"There are grounds for grave doubt that available supplies of rubber are being allocated equitably among small and large manufacturers of rubber products. I have personal knowledge of several small companies which are on the brink of bankruptcy because they cannot obtain sufficient rubber to operate at a mere break-even point. The larger companies, on the other hand, seem to be experiencing little difficulty in continuing operations. We intend to explore this situation fully."

The hardships suffered by small rubber users in 1951 because of the condition of short supply indicate the difficulties that small business may suffer in the future because of the predicted conditions of the long-range short supply of both natural and synthetic rubber. It is of great importance at this time, therefore, to provide adequate

safeguards for the small rubber users in the event our supplies of rubber become scarce. The only protections given under the present disposal program are the general statements by the proposed purchasers that they intend to give small users certain percentages of their total production. Such statements, even if made with the best of intentions, are entirely inadequate. As a matter of simple contract law they provide no effective remedy whatsoever for the small-business man in the event he fails to get his fair share of synthetic rubber in the future. He cannot sue the synthetic-rubber producers and even if he could, he would undoubt-edly be out of business before a final determination was ever made. He can complain to the Government, but it is open to ques-tion whether under the proposed contracts the Government will be able to help him.

Mr. Chairman, in conclusion let me again express my appreciation for your patience and graciousness in listening to my long statement. Obviously, this is a most imporconsideration. In determining what we shall do, we are called upon to balance two desirable public policies: the first is that the Federal Government should not engage in this type of business; the second is that while we favor the disposal of such facilities to private ownership, we must be sure that the facilties will be operated under such terms and conditions as will enhance the security of our Nation, will reimburse our taxpayers for their investment, and protect all segments of our free enterprise economy, including small business.

These principles of public policy are not necessarily in conflict with each other. Both are desirable and can be achieved. As a matter of fact, the Disposal Act requires that both be observed. The Commission's plan, however, gives only token observance to the vital safeguards implicit in the second principle.

Disposal commission's estimates of return based on proposed sales prices

While it is true that the plan provides for a sale of the Federal Government's rubber facilities, it is equally true that it does so in a way which will not strengthen our free enterprise system but will actually place it in jeopardy. If we approve the proposed sales, we will be hurting our competitive free enterpise system, not helping it—and hurting it irretrievably, I fear.

There must be a better solution than that proposed by the Commission, one which will make possible the effective operation of both principles. Although this matter has been pending for some time there are too many unknowns—the risk is too great to dismiss it by saying: "This is the best we can get; let's take it." It is not the best we can get.

If the sales were not approved pending the determination of a more appropriate proposal, the Nation would not suffer and the industry would not suffer. The Government is now making a profit of \$50 million a year from the rubber plants. They are being operated by private enterprise for a fee, for the most part by their prospective purchasers, under what the Commission describes as "a partnership of industry and Government." Nobody would be hurt during the relatively brief period in which another plan could be formulated.

There is much more involved than the sale of a one-half-billion-dollar Government investment. We are dealing with the more pertinent question of protecting the freedom of our entire business community by preventing its economic strangulation through an undesirable concentration of industrial power and wealth. We must keep our free enterprise system free.

Mr. Chairman, the Select Committee on Small Business, for whom I have been designated to make this statement, recommends that this committee report the Patman resolution favorably to the House.

Thank you.

EXHIBIT B

FAIRFIELD RUBBER Co., INC., Norwalk, Conn., March 7, 1955. Representative Suner Yares, New House Office Building,

Washington, D. C.

Dear Mr. Yates: I had the pleasure of talking with your Mr. Gibbons this morning and asked him to convey to you my opposition to the sale of the rubber plants to the large rubber manufacturers. The small rubber manufacturer has built his business on the

fact that he could purchase his rubber just as cheap as the large manufacturer—for there was a free rubber market for natural rubber and a fixed price to all by the Government for synthetic rubber. Now the several hundred small manufacturers will be at the mercy of a very few large manufacturers.

The small manufacturer must now purchase his rubber in a market where the price is set by his large competitor. If the latter chooses to raise the price of rubber and then take only a profit on the rubber

and not on the finished product he forces the little fellow out of business—for the little fellow must necessarily raise his prices when rubber price is raised in order to maintain his profit. But the large manufacturer is making his profit on the rubber and need not raise the price on his finished product.

The fact that 20 percent of the rubber manufactured will be in the hands of other than large rubber manufacturers has little bearing on the matter for this 20 percent would doubtless go along with any raise in

rubber price for it would mean more profit to them.

We are utterly opposed to the sale of these plans to rubber manufacturers. Your assistance would be greatly appreciated. Very truly yours.

FARRIELD RUBBER CO., INC., GEO W. WINCHESTER, Sr., President.

Resolution on Postal Salaries

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a resolution unanimously endorsed by 2,000 postal employees, at a public meeting held on March 13, 1955, at the Central Commercial High School in New York City, sponsored by the joint conference of Affiliated Postal Employees:

Whereas there has been introduced in the United States Senate, S. 1 by Senator Olin D. Johnston, and in the House of Representatives, H. R. 1592 by Representative James H. Morrison, bills which provide for a 10 percent increase for postal employees with a minimum of \$430, retroactive to August 23, 1954; and

Whereas S. 1 with amendments has been reported favorably by the Senate Post Office and Civil Service Committee; and

Whereas the House Post Office and Civil Service Committee has reported H. R. 4644 which provides for a 6 percent increase together with a job reclassification schedule to which we are strongly opposed; and

Whereas the New York Joint Conference has clearly stated that it will not support any increase less than the 10 percent-\$430 figure and is opposed to the job reclassification plan contained in the bill reported out by the House committee; and

Whereas it is of the utmost importance at this time to rally the strongest support in both Houses of Congress for the 10 percent \$430 bills and against job reclassification; Be it therefore

Resolved, That 2,000 postal employees assembled at a public meeting sponsored by the joint conference of Affiliated Postal Employees of Great New York and northern New Jersey at the Central Commercial High School, 214 East 42d Street, New York City, on Sunday, March 13, do piedge their active support for the enactment of S. 1 and H. R. 1592, and determined opposition to H. R. 4644; and be it further

Resolved, That we call upon our United States Senators to pass S. I as reported out by the committee without further amendment, and we call upon our Representatives to substitute H. R. 1592 or S. I for the report of the House committee; and be it further

Resolved, That we call upon the Government Employees Council and the national officers of the various affiliated postal unions to work for the enactment of this program; and be it further

Resolved, That we endorse and support the legislative conferences called in Washington by the affiliated groups; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to the United States Senators representing the States of New Jersey and New York, to the Congressmen of the Greater New York and northern New Jersey area, to the president of the American Federation of Labor, to the Government Employees Council (AFL), to the national officers of all affiliated postal unions, and to the public press.

Lake Diversion as an Irrigation Measure

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. SHEEHAN. Mr. Speaker, proponents of increased lake diversion from Lake Michigan are noticing that the drive for passage of H. R. 3210 is rapidly picking up momentum. This measure, introduced by Congressman Thomas O'Brien, of Chicago, proposes an additional diversion of 2,500 cubic feet per second of water from Lake Michigan down through the Chicago Sanitary District Canal. It is supported by like bills introduced by all the Republican and Democrat Members of Congress from the Cook County area.

For many years there has been opposition on the part of certain groups to diversion of water from Lake Michigan by the city of Chicago for sanitary purposes. Yet, it was readily brought out in hearings held over the past several years on proposals for additional diversion, that the high levels of Lake Michigan, coupled with the reversal of the flow of several Canadian rivers, has flooded Great Lakes shore areas and caused serious property damage.

Recently, new factors have given strength to the cause of increased diversion as proposed in the O'Brien bill, not the least of which is the growing interest of other people in the use of Great Lakes

The following article written by Chester Manly, which appeared in the Chicago Tribune for March 6, clearly points up the new look which is being given the potentialities of Great Lakes diversion, one of which is the use of this excess water for crop irrigation. The article is as follows:

URGE DIVERSION FROM LAKES TO IRRIGATE
CROPS—EXPERTS CITE BENEFITS IN DRY

(By Chesly Manly)

Leading agriculturalists and water conservationists of the Great Lakes region, one of the world's richest farming areas, are advocating the diversion of water from the lakes for supplemental irrigation in dry periods when crop yields are reduced.

Industrial development and population growth in this region, already the most productive on earth, will be accelerated when the St. Lawrence seaway opens the Great Lakes ports to the world's ocean commerce. This in turn will increase demands for water, not only along the lake shores, but in inland areas where the ground water supply already is inadequate.

RELY ON IRRIGATION

Although the normal rainfall in the middle west varies from about 30 to 48 inches a year, 8 years out of 10 have one or more periods of moisture deficiency affecting crop yields. Many farmers rely upon irrigation

to increase yields in normal years and to prevent failures in time of drought.

In doing this the farmers of the Great Lakes region are resorting to a practice as old as agriculture itself.

Concern about means of increasing crop production may seem paradoxical at a time when the United States has \$7 billion invested in agricultural surpluses, but there is no assurance this country will always produce more food than it needs.

WEAPONS OF WAR

Moreover, in its struggle for supremacy with world communism, the United States will be fortunate if it continues to produce a surplus of food, which the Communists use as a weapon of war. The population of the world, now estimated at 2.5 billion and expected to reach 4 billion by 1980, is increasing far more rapidly than the food supply.

With a total land area of 5.5 billion acres, Russia harvested from 386 million acres in 1952. This is only a little more than the acreage harvested in the United States, which has a smaller population and a much larger yield per acre. The United States has about 20 percent of its land area in cultivation.

When Georgi Malenkov toppled from the seat of power in Moscow, he confessed guilt and responsibility for the unsatisfactory state of affairs that has arisen in agriculture. Nikita Khrushchev, who appears to be the new No. 1 man in the Soviet hierarchy, recently acknowledged that Communist Russia, in 1953, had fewer cattle than czarist Russia in 1916, despite an increase of 50 million in the number of mouths to feed.

These basic facts of the world situation emphasize the importance of irrigation, not only in the Far West, where it is necessary to produce anything at all, but also in the Middle West, where artificial watering when needed during the growing season greatly increases yields.

WATER IS ABUNDANT

H. B. Tukey, head of the department of horticulture at Michigan State College, told a water conference at Elyria, Ohlo, last November that the possibility of an abundant water supply exists throughout the Great Lakes region. "We need only imagination, coupled with ability and energy, to develop a population center and civilization unlike anything the world has yet seen," Tukey said.

He advocated construction of a canal across northern Michigan, to connect Lake Michigan and Lake Huron and tap their waters for distribution to most of the State. "No strawberry grower would embark in growing strawberries in southwestern Michigan without first arranging for supplemental irrigation," he said.

R. E. Weingert, who grows 200 acres of sweet corn and 100 acres of potatoes near Kent, Ohio, in Portage County, told the Elyria conference supplemental irrigation last season increased his gross income \$70,-000. "To accomplish this, it took an investment of \$20,000 in equipment, plus \$7,500 in operating expense, including fuel and depreciation," Weingert said.

Weingert obtains part of his water from a 12-inch well 70 feet deep and part from the Cuyahoga River. He applied the equivalent of 3 inches of rainfall last season. Many other farmers would like to install irrigation systems, but are handicapped by a lack of water, he said.

CITES SEWAGE VALUE

Strawberries as large as tomatoes and tomatoes the size of grapefruit could be raised on farms near the Chicago drainage canal in Cook, Du Page, and Will Counties if the effluent of the sanitary district's sewagetreatment plants were used for supplemental irrigation and fertilizer. This treated effluent, averaging 1.1 billion gallons a day, is rich in nitrogen, an essential ingredient of plant life. It would provide supplemental irrigation equal to 3 inches of rainfall, as well as growth-stimulating nitrogen, for 13,503 acres a day.

NATURAL AQUEDUCT

The drainage canal and Illinois River, running diagonally across the State to the Mississippi River, would be a ready-made aqueduct from which water could be widely distributed in Illinois if the Great Lakes States and Canada should agree upon a controlled diversion program for supplemental irrigation and other water uses.

The diversion of water for irrigation in downstate Illinois, outside the Great Lakes watershed, would be opposed by Canada and the other Lake States now, but this opposition might be overcome under a regional control system for the maximum use of Great Lakes water.

The lake levels could be permanently regulated, within a range of about 2.5 feet between high and low stages, if their outlet capacities were increased and control works were installed, at a cost of \$75 million to \$100 million, as part of the St. Lawrence seaway program.

LARGE LAKE AREA

The surface area of the lakes, approximately 95,000 square miles, is 32 percent of their total drainage area of 298,000 square miles. If the entire land area of 202,900 square miles in the watershed should be supplied with 3 inches of water from the lakes it would be equal to about 6 inches from their surface. Thus, there is no question about the adequacy of the water supply.

Irrigation is far less extensive in Illinois than in Michigan and Ohio. A survey made by W. J. Roberts, of the State water survey division, in 1951 indicated that the land receiving supplemental irrigation in Illinois, estimated at 9,000 acres, was not more than 5 percent of the acreage artificially watered in the Midwest.

Roberts found that 164 systems, with a total pumping capacity of 25,000 gallons a minute, were in operation, and further information indicated that 40 additional systems were operated. Ground water supplied 45 percent of the pumpage, the remainder coming from rivers, ditches, lakes, and ponds.

USE WELL WATER

Forty-ive percent of the irrigated acreage was in Cook and Kankakee Counties. Gladioll growers in eastern Kankakee County have been supplementing rainfall with well water since 1923.

There are more than 30 irrigation systems in the area east and north of Chicago Hzights, where onion and potato growers have invested heavily in sprinkler systems. They depend upon drainage ditches and ponds for their water supply, which is insufficient in dry spells. Some Illinois hybrid seed corn producers have found irrigation profitable.

According to the Roberts report, a manufacturer's representative estimated the average cost of an irrigation system in 1951 was \$72 an acre, although some elaborate installations cost much more.

PROFITABLE INVESTMENT

"Use of irrigation systems in Illinois has been limited to farmers who have seen that supplemental moisture would materially increase the cash return from their land," the report stated. "They look upon irrigation systems as instruments for increasing their yields rather than insuring them.

"Obviously a farmer growing hybrid seed corn at \$7 to \$12 per bushel can afford to invest several thousand dollars per field in a modern sprinkling system. With care he may double his yield and pay off his investment in 1 or 2 normal years. "Truck farmers show a great appreciation for supplemental irrigation. Critical deficiencies in rainfall can arise at any time during the growing season, and the application of one-half inch of moisture at a critical point during the growing season may forestall a complete crop loss."

Small Business Administration

EXTENSION OF REMARKS

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the Recond, I include the following statement of Mr. George J. Burger, vice president of the National Federation of Independent Business before Subcommittee No. 2—Small Business Administration and Problems Related to Procurement, Loans, Disposal—of the Select Committee on Small Business of the House of Representatives on March 8, 1955.

I have served as a member of the Small Business Committee during my entire tenure in the Congress, and I have known Mr. Burger to be an effective and sincere spokesman for many of our small-business men in the United States over these

Without either concurring in or dissenting from the substantive views expressed by Mr. Burger on behalf of the National Federation of Independent Business, I submit for the information of the Members these most interesting and constructive remarks:

SMALL BUSINESS ADMINISTRATION

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our national headquarters are located in Burlingame, Calif. We also maintain division offices at New York City, Cincinnati, and Chicago.

It must be understood by Members of Congress that no officer or group of officers is permitted to speak for the federation as to its position on any legislative or economic problems unless so directed by a nationwide poll of our members. The entire membership is polled and the results of these polls give the executive officers the authority to act in behalf of the members,

The federation has a vital stake in the successful administration of the Small Business Administration Act. It will be found from the record of the hearings before the House and Senate Banking and Currency Committees in May 1953, that the federation's position was in full support of the proposed legislation with only one exception. We recommend that full control of the agency rest with the Administrator and that he be subject only to control of the Congress of the United States. Our position today, through nationwide vote, remains the same as it was in May 1953.

The federation has in its employ approximately 200 field representatives who are calling on small-business men every day of the business week and they are in a position to get first-hand information on the success or failure of the Small Business Administration in carrying out the will of

Congress. Further, the federation, through its head offices at Burlingame, Calif., and its Washington office, reecives considerable numbers of requests for information from our membership as to procedure under the Small Business Admiinstration Act as to loans. In fact it can be safely said that better than 80 percent of the inquiries as they apply to SBA from all sections of the Nation rest on the needs for financial assistance. Washington office alone, during the life of the act, has assisted many hundreds in giving them the necessary information on procedure to follow in their contacts with SBA. At the same time, we have kept the Members of Congress acquainted with information coming from their districts on such inquiries.

We have a very vital stake in the success of the Small Business Administration Act. We are not unmindful of the fact that if there are deficiencies in the administration of the Act, it would act as a boomerang to the federation. Consequently, we are watching developments to bring about a successful administration of the Act, and let it be understood for the record that the closest liaison and cooperation has existed between our office and the head office of SBA for a year or more.

Our interest in the act itself began shortly after its approval by Congress. As is my custom every year, I visited the head office at Burlingame, Calif., in September 1953, and made it my business to confer with the regional director of SBA in Los Angeles, and in October 1953, with the regional office at Kansas City, Mo. In both of these visits, to be certain we had the story correct, I insisted that a third party be present at the conferences. At the completion of the conference, I directed the third party to make his report on the conference and then I made my own individual report. The comparison was then made. We found a wretched situation existing in the administration of the act which we believed was far from the intent of the Congress.

Upon my return to Washington, I immediately contacted the Administrator, Mr. Mitchell, and arranged for a conference, which took place in his office on October 23, 1953. His various assistants were present during the 2-hour conference and I believe the present Administrator, Mr. Barnes, who was then general counsel, was also there.

I advised Mr. Mitchell of our findings,

I advised Mr. Mitchell of our findings, namely that the great majority of small-business institutions could not qualify for loans due to the regulations instituted by the Policy Board. The regulations provided for loans only for those institutions in essential war work or essential industries. We found that the formal application which was presented to the applicant for completion brought about a situation where the applicant would attempt to answer the questions in the form and would finally throw it up in disgust.

At the conference I put the question to Mr. Mitchell as to who was setting the loan policy and was any policy he proposed vetoed by Treasury or Commerce Department heads. He asked me to give him the privilege of reserving an answer until a later date.

His assistants urged, because of the importance of my findings, that a joint conference be arranged for with Treasury and Commerce officials and the SBA, at which time I could relate again the story I had told on October 23, 1953. This conference took place on the afternoon of October 26, 1953, in the office of Mr. Randolph Burgess, who, I believe, is Assistant to the Secretary of the Treasury. I also believe that Mr. Lothair Teetor, of the Department of Commerce, was present at this conference. I brought out in this conference two particular cases, one of a small battery manufacturer in the State of Minnesota and the other, a small furniture producer in the State of Georgia. In

the first instance, applications for loans were denied because it was ruled they were not in essential business.

The outcome of these joint conferences was that a few days later a change was made in the management of SBA and then on November 16, 1953, the entire policy was changed to permit all small business to participate in financial aid through the Small Business Administration Act.

Shortly thereafter, Mr. Wendell Barnes was appointed administrator and up to this very moment, we have had no reason to register any objections to the present policy being carried out by the Small Business Administration insofar as financial aid to small business is concerned. The federation makes no recommendations one way or the other on any application for a loan. The application must stand on its own merits.

I believe it was just about a year ago that the present chairman of the subcommittee, as a members of the Subcommittee on Small Business, held hearings on the west coast, one in San Francisco and another in Los Angeles. In both instances, federation offi-cials appeared and gave testimony, and at one of these hearings the committee ques-tioned the federation witness on the advisability of raising the SBA loan ceiling to a higher bracket than the \$150,000 limit. Following up the committee's suggestion, we polled our nationwide membership and the vote was in the negative. Knowing of our obligation to our members as to a successful administration of the act, again in one of my annual visits to the head office, in 1954, I held conferences with the directors of the regional offices in Los Angeles and San Francisco. At the conferences in these areas, federation president, C. Wilson Harder, accompanied me. I also conferred later with the regional director in Portland, Oreg. that time, a federation man was also with Then again, before returning to Washington, I conferred with the regional office in Minneapolis.

In these recent conferences, not alone with the regional directors of SBA but also with small-business people en route, we found two serious situations we hope have since been corrected. One was the rejuctance of banks in certain areas to look with favor on the Small Business Administration Act. In some areas it was reported that correspondent banks were afraid to step in because they were fearful of antagonizing the larger banking institutions. The second was the failure of the regional offices of SBA to have enough available material such as Government specifications or blueprints of specifications. There was a limited number available and when they were gone, that was the end of it. In some areas, arrangements were made with the public libraries where these documents were available. However, it was most difficult sometimes for a small-business institution to have to go down and look up copies and make analyses of them, etc.

It is our hope that the committee will make certain that all available information as to Government bids, forms, specifications, blueprints, and so on are available at all regional offices so that those small-business institutions who are interested in participating in Government contracts may have such information in advance to permit them to qualify.

I have been present at all the hearings of this subcommittee and the subcommittee is to be commended for the careful study it is making of the proposition so that the act will deliver to small business what Congress intended.

We are not satisfied with the share that small business is receiving from the Defense Department. It is our belief that the administration should take a more aggressive stand in its demand for an equal share—and we mean equal—to be allocated to small business of this Nation. During the present

hearing, we particularly noted the splendid statement of Congressman Riehlman, where he warned the Defense Department of the advisability of recognizing small business and giving it the necessary share of business. As he put it, this important segment of our economy should be maintained from the standpoint of security. I recall a similar warning issued by the late William Jeffers in 1943, when he was Rubber Administrator. He made the suggestion before a Senate committee, that from a security standpoint, there was an increasing need to keep small business functioning in that industry. I am glad to note also that Mr. Riehlman made the comment that all members of the committee concurred in his observation.

I was more than pleased to note the statement presented by Mr. Robbins, Assistant Secretary of the Treasury, in which he said: "The Treasury believes that under the provision of the act, and under existing policies, SBA has established an excellent record since its lending machinery went into operation. The Treasury believes that in the light of that record, the life of the agency should be extended for a further period of 2 years."

It is also to be noted in the statement made by Mr. Hamlin, Small Business Adviser for the Department of Defense, that he stated: "It is our view that the Small Business Administration is presently serving the best interests of the Nation in this way and that it can continue to do so. For these reasons, we recommend the continuation of the Small Business Administration beyond June 30, 1955."

We also note with considerable interest the statement of Mr. Teetor of the Commerce Department before the committee, taking no position on the agency except, as he stated: "The ultimate responsibility for the execution of this program rests with the President. Congressional investigations of the RFC make clear the potential danger of abuse of discretion and authority inherent in a governmental-loan program. The establishment of policy to govern the agency's action by the Administrator and two officials of Cabinet rank provides a workable and effective channel to keep the President informed and a safeguard to assure that the general program reflects the views of the Executive, always, of course, within the framework set by Congress in the enabling legislation." Does this mean that the Department of Commerce believes the SBA is a good agency just so long as the Department can keep its fingers in the pie? In our opinion this would be no good for a successful administration of the act. Control should rest with the Administrator and the Congress itself.

In conclusion, Mr. Chairman, the federation makes certain recommendations for the committee's consideration:

1. We believe that any and all top employees of SEA should have full and thorough knowledge of the basic problems of small business. They should have a human feeling for the problems facing small business. This should be a requisite before they go into a position.

2. The regional advisory boards appointed by the agency should meet more often with the regional directors so that the directors will have more direct information on what is going on in their areas.

3. We believe the committee should reexamine the appointments made to the national advisory board as it may be found that some of the members of that board are a long way from an understanding of small business or being representative of small business.

4. A more aggressive action on the part of SBA to secure a greater share of Government business, and particularly to exercise its right to take prime contracts where same can be channelled through groups of small business

in the respective industries. We found in many areas that competent small engineering firms, for example, would be able to handle effectively prime contracts, singly or in groups, and possibly at lower cost to the Government. We urge special action by the committee in its direction to the agency on this.

5. We believe that the committee should explore the privilege extended to the regional offices in making loans up to \$50,000 without consulting Washington. We would like to have the committee satisfy itself that in this permission there are no impediments and that it means just what it says.

Finally, Mr. Chairman, on a recent nation-wide poll of our membership presenting the question pro and con on the continuance of the Small Business Administration, the results of the poll were 76 percent for, 22 percent against, and 2 percent no vote. This poll further disclosed that the membership wanted the agency's control to rest entirely in the hands of the Administrator with no control being exercised by the Treasury or Commerce Departments.

Thank you for the opportunity, Mr. Chairman, to appear before your committee and express our views in behalf of small business of this Nation.

Federal Aid for Housing

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. MULTER. Mr. Speaker, I direct to the attention of our colleagues the following editorial which appeared in the New York Times of March 14, 1955:

FEDERAL AID FOR HOUSING

As required by the Federal Housing Act of 1954 Mayor Wagner, in a detailed presentation forwarded to Washington and made public here yesterday, has documented New York City's need of further assistance on slumclearance, its proof of having a "workable" program, and its competence to advance such a program.

We support this argument, as presented by Mr. Wagner. We shall go beyond it: We believe that, because New York is the favorite port of entry and residence of the large Puerto Rican migration—which, as the mayor says, has "sorely emphasized and accentuated our acute shortage of adequate low-rent housing"—this city has a special claim on the Federal Government for help.

Mr. Wagner states as the record of Federal, State-, and city-helped housing since 1946 the provision of decent apartment units for 60,000 families in public-housing projects and 24,000 families in quasi-public projects. Now under construction or scheduled under approved programs are 34,600 public-housing apartments and 18,900 quasi-public, mostly under title I of the Housing Act, the redevelopment projects for which Governmentpurchased land can be written down in price for private-enterprise housing and business use after clearance. But the end of need is not in sight. A rock-bottom estimate, by the mayor's report, is about 440,000 apartment units.

While there has been, as the mayor admits, considerable criticism of various phases of the city's handling of the housing problem from local sources, it must be admitted too, we believe, that a better-rounded, more competent, more forceful attack within the areas criticized is being made or is taking

form. The relocation of tenants displaced by new building and the overcrowding permitted in old buildings are among these areas subject to criticism. The mayor's estimate that more than 250,000 families face future displacement from stepped-up enforcement of existing and proposed housing codes gives a clue not only to the wretched conditions in which thousands of families are living here but also to the grave, baffling question that lies ahead, of where these families will go.

Consoli lation and Improvement in Post
Office Department Needed

EXTENSION OF REMARKS

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. MASON. Mr. Speaker, a bulletin prepared by Mr. Paul O. Peters, a well-known economist and research consultant, should be of interest to the Members of Congress and to the Nation at large. This bulletin points up the fact that the Post Office Department has been losing millions of dollars each year by operating post offices that serve no real need—post offices that can and should be abolished entirely, and the mail delivered by extending present rural mail delivery routes.

The Post Office Department is now in the process of making surveys looking toward the abolishment of unnecessary post offices scattered all over the United States in order to provide mail service both efficiently and economically. This should have been done years ago.

Mr. Peter's bulletin of Monday, March 14, 1955, follows:

IMPENDING PAY RAISES FOR POSTAL EMPLOYEES RECALLS SALARIES PAID IN 1822 AND STRANGE PHILOSOPHIES THAT HAVE ARISEN—MANY POST OFFICES DO LESS THAN \$100 VOLUME A YEAR

With general agreement on the part of the Eisenhower administration and the Congress that postal employees are entitled to some salary adjustment at this time it is interesting to recall that back in the year 1822, the official register of the United States listed the salaries of deputy postmasters, which was the title of local postmasters at that time.

In New York City the salary and compensation was \$2,000 a year. At present the New York City postmaster draws \$13,770 which is very moderate considering the business of the New York office reached a volume of \$194,092,577 in postal receipts in fiscal 1953.

While there are more than 40,000 post offices in the United States and the Territories and island possessions there are many fourth-class offices in which the postal receipts total less than \$100 a year.

Efforts to close such offices usually run into trouble because the Congress back in 1851 enacted legislation stating: 'No post office now in existence shall be discontinued, nor shall the mail service on any mail route in any of the States or Territories be discontinued or diminished in consequence of any diminution of the revenue that may result from this act and it shall be the duty of the Postmaster General to establish new offices and place the mail service on any new mail routes, established, or that may hereafter

be established, in the same manner as though this act had not passed." The act, which sponsored a reduction in postal rates, was thereafter taken as a policy declaration by Congress.

Of the 40,000 post offices in the United States about 400 take in less than \$100 a year. In Kentucky there were 98 offices with receipts of less than \$100 in 1953; two other offices at Omaha and Tygarts Valley had receipts of \$100 even, and Portersburg and Rexville took in \$101 each.

The Postmaster at Barrys Lick, Ky., deserves a medal from Congress because he is easily the most honest postmaster in the United States, or the most stupid, whichever way the facts are considered.

In 1953 this particular postmaster reported total receipts from his office of \$99. At that figure his salary was \$326.40. By buying and destroying just \$1 in postage stamps, this particular postmaster could have raised his salary from \$326.40 to \$522.24, a gain in salary of \$195.84 for a \$1 investment, which could be interpreted as a minor swindle. But what of that. Bigger men than small fourthclass postmasters have been known to do much worse things to Uncle Sam's Treasury.

PAUL O. PETERS.

Bonner Plan for FMB to Have Regulation of Domestic Shipping Deserves Support

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. PELLY. Mr. Speaker, the following editorial which appeared in the Marine Digest, a weekly magazine with a wide circulation in maritime circles of the Pacific Northwest, supports the position of our distinguished colleague from North Carolina, Mr. Bonner, that regulation of coastwise and intercoastal shipping properly should be under the legal jurisdiction of the Federal Maritime Board:

BONNER PLAN FOR FMB TO HAVE REGULATION OF DOMESTIC SHIPPING DESERVES SUPPORT

Waterborne commerce officials from coast to coast will hall with enthusiasm, Representative Herrezer C. Bonner's recommendations that the regulations of coastwize and intercoastal shipping be transferred from the Interstate Commerce Commission back to the Federal Maritime Board, Congressman Bonner should be given the support of the entire shipping industry.

Under the dominance of railroad interests, the Interstate Commerce Commission has, either purposely or unintentionally, succeeded in wrecking the coastwise and intercoastal shipping industries.

intercoastal shipping industry.

As chairman of the House Merchant Marine and Fisheries Committee, Congressman Bonnes is in a position to put his recommendation into action. From the standpoint of waterborne commerce, the sooner this is done the better.

Fourteen years of Interstate Commerce Commission regulation of intercoastal and coastwise shipping has produced a record that speaks for itself and certainly paved the way to again give the Federal Maritime Board jurisdiction over this important phase of American shipping.

No doubt there are many factors which have contributed to the sorry con-

dition of our domestic shipping industry. As chairman of the Merchant Marine and Fisheries Committee, the gentleman from North Caroline, Mr. Bonner, is to be commended for urging a change which would seem to me to be the first step toward the solution of a most complicated and difficult problem.

Playing Politics With the Tax Structure

EXTENSION OF REMARKS

HON, HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. CSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the Record an editorial from the Times-Union, of Rochester, N. Y., for March 11, entitled "Playing Politics With the Tax Structure." Carefully pinpointing the flaws and booby traps in the tax-cut proposal now before the other body, it describes succinctly the difference between constructive and reckless tax legislation. Lincoln once said that you cannot fool all of the people all of the time, but the pending tax cut proposal has not fooled anyone any of the time. It is plain, unadulterated politics of a kind this great Nation cannot afford and should not

The editorial follows:

indulge.

PLAYING POLITICS WITH THE TAX STRUCTURE

Some day Democratic leaders are going to have to take a look at two of their prime subjects for partisan oratory and see if they hang together.

One theme is an ever-expanding, evergrowing, ever-buoyant economy to provide jobs and goods for an ever-growing population.

The other is that every tax bill must soak the big fellow and let the little fellow off as nearly scot free as the coming election—and there's always a coming election—permits.

The two things just simply don't hang together. Either the tax structure will be such as to permit and encourage an ever-expanding economy, or we're all in trouble, big and little.

There are some who play the little fellow for a sucher by ignoring what the experts call the incidence of taxation; that is, legislators may levy a tax at a certain point—say, on corporations—but if the tax can be passed along, as it usually can in prices, it falls on the little fellow anyway. But the soak-the-big-fellow taxers go on hoping they can continue to fool the little fellow by cutting his personal tax.

The new Democratic compromise tax-cut plan is a case in point. It appears to grant a personal income tax cut while raising more total revenue through repealing two items in last year's tax-revision bill.

in last year's tax-revision bill.

The word "appears" is used advisedly. It would allow family heads to pay \$20 less for themselves and \$10 for each dependent except the wife (or husband). But the catch is that to claim the allowance the family head would have to renounce the existing split-income provision under which a husband and wife file a joint return, putting each in a lower bracket.

To get more income, the plan repeals the new depreciation allowance for plant owners and the exemption from double taxation of the first \$50 of a shareholder's income from dividends. Both these provisions relate directly to the economy's ability to expand. The depreciation rate is a direct aid to plant expansion and modernization. Last year's formula was not pulled out of a hat. It was the consensus in a 20-year study of the influence of this tax factor on economic growth.

Double taxation on dividends implies that investment should be penalized. On the contrary, the staff of the Joint Committee on the Economic Report estimates that in 10 years investment in plant and equipment must increase to \$60 billion a year to keep pace with population growth. Kelta Funston says that to finance this new stock issues at a rate of five to six billion dollars a year will be required.

Rather than penalize investment, the tax structure should encourage doubling the 20 million Americans who now own shares in their country's productive enterprises.

The times comes when a choice has to be made between economic health and playing politics with the tax structure.

Income-Tax Exemption to Taxpayers Who Support Aged Dependents

EXTENSION OF REMARKS

HON, JAMES C. MURRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. MURRAY of Illinois. Mr. Speaker, under leave to extend my remarks, I want to bring to the attention of the House the need for an amendment to the dependency provisions of the Internal Revenue Code of 1954 to provide taxpayers who support aged dependents with the same treatment as taxpayers who presently support children under the age of 19 years of age or children who are students. I have introduced bill H. R. 4316, which will effectuate this

end

Under the present dependency provisions of the Internal Revenue Code of 1954, dependents must receive over one-half of their support in the calendar year from the taxpayer before they may be counted in computing the taxpayer's exemption from income tax. Additional tests, beyond that of half of their support, also are provided. The tests are, that the dependent receive less than \$600 per year gross income, or that, no matter what his income, he is less than 19 years of age or is a student—with no age limit specified.

The amendment which I have proposed would allow a taxpayer to claim a dependency deduction for an aged or blind or disabled parent, without regard to the parent's income, if the taxpayer contributed over one-half of the parent's support for the year. The amendment also would allow the same treatment for the blind, without regard to age. The treatment of children and students as dependents would be paralleled by treatment of the aged, the blind, and the disabled.

In computing their own income tax, the aged and the blind are given larger exemptions under present law than are allowed to children or students on their earnings.

But, in turn, students who hold scholarships which in fact provide support are allowed to exclude the amount of that support in determining their dependency status. It is only reasonable that the additional living costs of the aged, the blind, and the restricted market for their services which they face. be recognized as it is now in the tax law in determining the exemption allowed to them on their own income. With respect to their own income, they cught to be treated, as they are, more liberally than children and students who are in preparation for entry into their years of broad opportunity for earning. The more liberal tax treatment of the income of the aged and the blind ought not stand in the way of giving those who support them as good treatment as that given to taxpayers who support their children.

If a taxpayer now is supporting an aged parent who receives OASI payments of, say, \$700 per year, he may claim the parent as an exemption because OASI benefits are not gross income for tax purposes. Similarly, if the income is from railroad retirement, from certain military pensions, or from taxexempt securities, it is not included in gross income. It can be received in amounts above \$600 by the parent and the parent can continue to be counted as a dependent of the taxpayer. But, if the income is from work, from rentals of property, or from interest on savings bonds or corporate bonds, or dividends, or a civil-service annuity, and amounts to \$600 or more, the taxpayer under present law cannot claim as a dependent the parent who receives the income. The results to which the present law leads may be seen in the following instance. A parent begins at age 65 to receive an annuity to which he and his employer have contributed. The annuity is, say \$600 per year. During a period of, say, 3 years, the annuity is a return of capital and is not included in the parent's gross income. At the end of the 3 years the annuity continues in the same amount as before, but now becomes entirely income, since all capital has been returned. The recipient is not taxable by reason of his \$1,200 personal exemption at age 65 or older. But the son who is supporting him loses an exemption of \$600, and his taxes are potentially increased by at least \$120.

The proposed amendment would correct this situation, so that the taxpayer who supports his parents who have no income, or whose income is from wages, dividends, rents, taxable interest, and so on, will be given the same treatment as the taxpayers whose parents have OASI benefits, tax-exempt interest, or other sources of income which the tax law excludes from gross income. And it will make the income tax of the taxpayer who supports his aged parents no heavier than the tax of the taxpayer whose children work or go to school.

The revenue loss resulting from this amendment probably would be some millions of dollars each year. No estimate of the amount is attempted because we lack information about the number of persons who support their parents as

well as information about the sources of income of the aged.

The loss of revenue is justified because it is a result of allowing taxpayers to keep money which they use for a public purpose. The Government considers the support of the aged to be a purpose of such high rank that it has established both a tax and trust fund arrangementthe OASI-and a contractual arrangement with the States-the old-age assistance program-to seek this purpose. The extension of Government programs to help the aged will be somewhat less urgent as a result of this amendment. The expense of collecting taxes and paying them out to the aged will be somewhat reduced by exempting from tax those who are using their own resources to meet the problem directly.

This amendment will ease the problem of supporting dependents when that support becomes most costly, and when it is more essential that financial worries be minimized. It will also remove the conflicts about working that arise when a few dollars additional from occasional work will cost the person providing the support as much as \$120 per parent.

The proposed amendment is less liberal than many would desire. What reason is there for making it applicable at age 65 rather than 64, or 60? A more liberal—lower—age limit could be justified, because the possibilities of staying in the labor force and being independent taper off sharply long before age 65. The age 65 is chosen only because it is commonly used in other sections of the Internal Revenue Code, the retirement income credit, for example; and in OASI and civil-service retirement legislation.

I hope that this body will give serious consideration either to the amendment that I have proposed or some other legislation which will correct this patent inequity in our income-tax structure.

Banking Legislation in Albany

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Herald Tribune of March 14, 1955, is deserving of the attention of the Congress:

BANKING LEGISLATION IN ALBANY

For the third consecutive year, the senate and assembly at Albany have before them bills which would permit savings banks to open branches in the growing suburban areas of cities in New York State. This year, both the New York State Federation of Labor and the New York Home Builders Association favor the proposed legislation.

The New York State Banking Department has supported the measure in the past and there is no indication of any change from that direction. More than 11,000 individuals in Nassau County responded in favor of the spirit of the proposal as a result of one bank's public information campaign.

Opposition to the bill this year, as in preceding ones, has come from the smaller commercial banks upstate which are apprehensive of losing deposits if savings banks were able to compete in their areas. There is also the difference of taxation between commercial and savings banks which has kept the controversy alive for so long.

The question of public interest would seem to be the overriding consideration of the legislators concerned with this issue. It hardly seems fair to deny savings banks the right to take part of the business which may be had in the ever-growing suburbs, while supermarkets, department stores, and an innumerable array of merchandising and service organizations may cash in on the bonanza.

Historical Pageant Proposed for Trenton, N. J., Rich in History and in Knowledge of Its History

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the city of Trenton, N. J., and the area surrounding it was the site of many stirring happenings in connection with the American Revolution and the Hessian barracks are maintained today on their original location just a short block from the State House. I have often thought that this area would surely provide as fine and moving a historical drama as that carried on at the national park at Roanoke Island, or the Paul Green drama Faith of Our Fathers, which marked the sesquicentennial of the Nation's Capital, both of which were arranged and sponsored by the National Park Service. National interest has been aroused by St. John Terrell in the Trenton area through his yearly reenactment of the drama of Washington Crossing the Delaware.

Conrad L. Wirth, director, of the National Park Service, in response to my inquiry on the matter replied in part as follows:

I am pleased to learn of your interest, that of the city of Trenton and of the State, in the possibilities of producing a community patriotic pageant in this area which would be similar to other such pageants being pre-sented with success in the East and other parts of the Nation. It has been the experience of the National Park Service that these outstanding dramas have been sponsored and presented by communities and local patriotic organizations, which have frequently received State support. The Lost Colony is given within the boundaries of Fort Raleigh National Historic Site by the Roanoka Island Historical Association, formed primarily to present this pegeant, and under a cooperative agreement with this service. The other Paul Green dream which you mentioned, Faith of Our Fathers, was presented by the National Capital Sesquicentennial Commission by agreement with National Capital Parks. In another instance, an interesting historical pageant is being presented by a local organization on a permit basis at Kings Mountain National Military Park, in South Carolina.

Mr. Wirth goes on to advise me as follows:

In the case of the Revolutionary pageant which you propose for the city of Trenton, the Service would like to suggest that, since the proposed site at the old Hessian barracks appears to be in State ownership, the city and State would undoubtedly be interested in acting as joint sponsors of the undertaking. We shall be glad to send them the names of officials sponsoring pageants in Service areas. Should the city and State officials wish to explore this project further, I suggest that they communicate with Mr. Elbert Cox, regional director, of our region one office, 900 North Lombary Street, Richmond, Va., and arrange a meeting. Your interest in writing me about this proposal is appreciated.

I include here an article from the Trentonian by that newspaper's very capable Washington correspondent, Cyril J. O'Brien, as well as a letter from a constituent, Mrs. M. P. Shuman, a teacher of history and social science in the Trenton Public Schools:

TRENTON GOES TO WASHINGTON—THOMPY PLUGS THIS AREA FOR HISTORICAL PAGEANT

(By Cyril J. O'Brien)

Washington, March 2.—The historic light that promises untold opportunity for Trenton peeked brightly this week from under the bushel that has been clamped tightly over it by more than a hundred years of indifference.

The break in the bushel was a letter from Congressman FRANK THOMPSON, of New Jersey, to the National Park Service of the De-

partment of the Interior.

At Roanoke Island, Va., a pageant, Lost Colony, is attracting thousands upon thousands of visitors each year, and at Willamsburg, Va., the historic pageant has become so nationally famous it is now a must for any sightseer in the east.

But Trentonians who sit on the powder keg of all pageants continue to sit, or go to Williamsburg to watch a pageant. Even their own Hessian Barracks—site of the very turning point of the War of Independence—draws a pitiful handful of visitors each month, who look, chat, go home, and perhaps forget it. And around Trenton, there are names like Monmouth, Princeton, Molly Pitcher's Well, the Iwo Jimas and Normandies of the Revolution. There is enough history, legend, romance a few minutes from the statehouse to arouse as much patriotic fervor as a Russian bomber.

CITES AREA'S HISTORICAL ASPECTS

"The city of Trenton, N. J." Representative Thompson wrote the Interior Department, "and the area surrounding it was the site of many stirring happenings in connection with the American Revolution, and the Hessian Barracks are maintained today on their original location just a short block from the statehouse. I have often thought that this area would surely provide as fine and moving a historical drama as that carried on at the national park at Roanoke Island, or the Paul Green drama, Faith of Our Fathers, which marked the sesquicentennial of the city of Washington.

"National interest has been aroused by St. John Terrell through his yearly reenactment of the drama of Washington crossing the Delaware. Another important factor to be considered is the heavily populated metropolitan areas of Trenton, Philadelphia, and New York, which would undoubtedly be a strong financial basis on which to base an undertaking of this kind."

The Congressman asked for assistance in the form of studies which would be a real help in planning a pagcant and a program for the Trenton area.

Conrad L. Wirth, Director of the National Park Service, made it clear that his service could not sponsor such a program, but it was ready to give some help, and to advise sponsors. Wirth also suggested that this might well be a joint State-city undertaking.

The query of the Congressman made it clear that the help and the opportunities are there for opening to the world a pageant of history, romance, legend, and reality unmatched in the Nation. The people of Trenton would reap the harvest, but it will be up to someone or some group in Trenton to pick up the ball and carry it.

Hightstown, N. J., March 3, 1955.
Congressman Frank Thompson, Jr.,
House of Representatives,
Washington, D. C.

Dear Frank: I started out to write to tell you that the entry in the Freedom's Foundation contest that won our school (Junior One) the recent prize (George Washington gold medal) at Valley Forge on February 22 contained your voice on a record that was made from our Story of Trenton broadcasts last spring. I wanted to thank you again for your help and interest.

This morning, in the Trentonian I noticed in Cyrii O'Brien's column an article about your interest in renewing interest in historical—particularly Revolutionary—Trenton.

Because I have been cochairman of the Committee on Historic Sites in Trenton, I have become well acquainted with an active committee that is interested not only in erecting historic markers but in preserving our history in general. It occurred to me that this committee might be very helpful to you in the development of your pageant idea.

I think we should go farther than having the pageant. I think we should erect an historical museum for the city in Stacy Park near the Douglass House and get a group of industrialists to finance it and use it as a resource for study, guide service, and coordinated classroom activity.

My book on the history of Trenton is being printed at the Rutgers Press at present and may help us considerably.

Sincerely,

ELEANORE NOLAN SHUMAN Mrs. M. P. Shuman,

Slovak Independence Day

EXTENSION OF REMARKS

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. MACHROWICZ. Mr. Speaker, yesterday was celebrated throughout the world as Slovak Independence Day. On this day it is fitting and proper that we Americans pay due tribute to the gallant Slovak people for their brave resistance to godless communism and their loyalty to traditions of true democracy and freedom. On this day we also express our words of hope and faith that their desperate struggle for liberty and national independence will ultimately bring victory and that justice will prevail for that oppressed nation.

At the conclusion of World War I, President Woodrow Wilson announced the principle of the right of self-determination of every nation. The preamble of the Charter of the United Nations restates that principle by reaffirming faith in "the equal rights of men and women and of nations, large and small."

Mr. Speaker, as a member of the House Committee on Communist Aggression I have had occasion to hear shocking testimony of the betrayal of the Slovak nation by the Communists. I have heard evidence of the brutality of the Soviet bolshevization of Slovakia. thousands of Slovaks were deported to Siberia and died there, innumerable Slovaks perished in prisons and concentration camps or while in forced labor in the uranium mines of Joachimstal. Four bishops and some 800 priests, nearly 30 percent of their total number in Slovakia, have been placed in prisons and forced labor camps, many without even a trial or sentence. Freedom and human rights have been almost completely abolished, and most of the living population are being gradually starved to

The Slovak people have earned a better and a more just fate. They look today with confidence to the great American Nation, in whom they see their greatest hope as well as the guaranty that international communism will be defeated and that the Slovaks will regain freedom and national independence with a free democratic and unified Europe.

On this Slovak Independence Day I express the hope and prayer that the day of freedom and justice for the Slovak people may be near at hand.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DORN of South Carolina. Mr. Speaker, the terrific fight made in the House against extension of the reciprocal-trade agreements is bearing much fruit throughout the country. The people are beginning to see as never before the fraud that has been pulled off on the American people under the high-sounding phrase "reciprocal trade." Under the administration of reciprocal trade, farm exports have fallen off. Our farmers are no longer fooled by this hoax.

I received a letter this morning which I quote in part:

Surely, we have made the Congressmen understand that the wage differential between the American mills and foreign mills is so great that we cannot exist under the American standards and have to compete with foreign standards, particularly with Japan.

The thing that does not seem to have penetrated, however, is the fact that the cotton farmer does not have to rely on a tariff but can sell his cotton to the American milis behind an embargo wall which is 100 percent tariff, with the exception of a limited amount of special cotton that comes in. It is only just and right that the American mills should use American cotton to produce goods; and as you say in your statement, the American mills use about 70 percent of the American raw cotton. How the farmer falls to understand that if foreign goods come in he is breaking down his quota

or embargo on raw cotton, because every bale of goods that comes in is the same thing as a bale of cotton coming in, I do not know.

Some internationalists and shippers who cater to the foreign trade try to blind the farmer with the idea that he will get a bigger export market. The truth of the matter is that the foreign mills usually buy 25 percent American cotton. If we accept foreign goods, we are accepting 75 percent of cotton grown outside of the United States which comes in here and competes not only with the cotton textile employee but with the cotton farmer, ginner, American shipper, etc.

I am genuinely alarmed at the prospects of the GATT and reciprocal-trade results if they go through as it now looks they will.

Mr. Speaker, as further indication of dissatisfaction among our people, both workers and farmers, I commend to the House the following editorial from the Edgefield Advertiser, of Edgefield, S. C. Edgefield is the county seat of Edgefield County, a great cotton-producing region for over 150 years:

FOREIGN INFLUENCES COMING CLOSER HOME

The steadily growing influence of foreign countries over the affairs of American people is to be seen in far too much of our national legislation, court rulings, and trends that reach into every American community. It is almost startling how much the States and the people in the communities have given up in way of governing their own destiny.

Of late we note the United States foreign trade and tariff program steadily shaping up according to the demands of foreign countries.

It should be remembered that continued lowering of the tariffs, for example, will have far-reaching effects on local industries operating here in South Carolina and in Edge-field County. Textiles imported into the United States at low prices, textiles that are produced under sweatshop conditions in foreign industrial plants, will of course gain a ready market here because of their lower prices. The consequence will be a drying up of the American domestic market. Cotton and other textiles produced here in South Carolina and in Edgefield County will face such competition as to cause the lowering of wages and a depression in the raw-materials market, including cotton.

The United States tariff is the basic protection of American textile wages and largely of our standard of living; for here in South Carolina all of us are now largely dependent on our manufacturing plants. The farm families, in many cases, have members working in these plants; town people working in textile plants, and business depend heavily on the payrolls of these industries.

The American Legion Post, No. 77, brought this issue to the fore last week when it passed resolutions calling everyone in this textile-industry area to contact Members of Congress in an endeavor to hold the line against the flooding of American markets with foreign-produced textiles.

Alaska Air Service

EXTENSION OF REMARKS

HON, E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. BARTLETT. Mr. Speaker, Mr. William Schulze, aviation writer for the

Seattle (Wash.) Post-Intelligencer, had some questions to ask in his February 23 column which are very pertinent to the States-Alaska case now pending before the Civil Aeronauitcs Board. Here is what Mr. Schulze wrote:

Believe it or not, one branch of the Federal Government is preparing to increase States-Alaska air service, while another branch of the same Government is reported about to decrease it.

Reports from Washington, D. C., continue to indicate that the Civil Aeronautics Board will order elimination of 1 or 2 of the 4 commercial scheduled airline services between Seattle and Alaskan cities. But the Air Force finds air transportation so vital to defense that it will launch new military air-freight service to Alaska on or about March 1.

I was tipped off at Ladd Air Force Base, Fairbanks, a week ago that the Military Air Transport Service will begin daily freightonly flights north from McChord Air Force Base, Washington State.

SERVICE NECESSARY

It was indicated to me that the Air Force finds necessary this new air-freight service, in addition to that provided by the four scheduled airlines. We can't believe that the Elsenhower administration really wants to increase Government competition with private industry, but. * * * Well, you figure it out.

Too Much War Talk

EXTENSION OF REMARKS

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. SMITH of Wisconsin. Mr. Speaker. I agree with an editorial that appeared in the Janesville (Wis.) Gazette under date of March 11, in which the writer stated that there is too much war talk in high places. Certainly our people are being frightened by the constant reference to the possibility of war. To me this is a strange coincidence and comes at a time of the year when the Congress is considering appropriations for defense purposes. If these reports are designed to scare our people and Congress into appropriating vast sums for military purposes, a good job is being done. However, I do not believe it is in the national interest to do so.

Mr. Speaker, I am including as part of my remarks, the editorial in question and I commend it to all Members of the House:

TOO MUCH WAR TALK IN HIGH PLACES

For the past several weeks it has been apparent that the United States is headed toward a showdown with Red China because of the strong position taken on protection of Formosa. Even that stand is well understood in the light of the broader policy of resisting any expansion of Communist influence into new areas.

In his nationwide broadcast this week, Secretary of State Dulles made it clear that armed conflict with the Chinese may not be far off. The situation could be saved if the Reds refrain from making military movements against the Nationalists. Otherwise, it is quite plain, invaders will run head-on into American military forces.

Dulles went a step further, however, and told the Chinese that air and sea forces of the United States are ready and waiting "with weapons of precision which can utterly

destroy military targets."

Such warnings to a potential enemy may have an influence, or be a part of a grand strategy. Apparently Dulles and the administration believe that they may have an effect. As citizens, however, there is some feeling that too much "big talk" by officials in high places is unlikely to produce any such result. There is fairly good reason to believe that the Red Chinese have some information along the lines contained in Dulles' warning. If their own intelligence services fail to back up these warnings, they are unlikely to be influenced, even though they are making a wrong guess.

Most Americans are fully aware of the war dangers, and accept the claims of Dulles and others that we have at hand the means to carry out the defense policies which we have set out for ourselves. These same claims, however, seem likely to scare potential enemies who may be determined to put them to the test. Meanwhile, it serves little to plug the war theme to the extent that it leaves neither side any choice but conflict.

If we are prepared for any emergency, the Chinese probably know it, and if they don't, oral claims from Washington are unlikely to convince them. It is one thing to be ready at the trigger and another to repeat threats about shooting. The question now is whether we can avoid shooting by talking, or by talking make sure that we shall be shooting. We may be firm today, but certainly we are not quiet. Our intentions are fully known, and we can only wait to know what we must do. Meanwhile perhaps the less fussing and threatening the better the chances for peace.

Four Hundred and Fifty Colleges and Universities Operating at a Deficit

EXTENSION OF REMARKS OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, Dr. Wilson Compton, president of the Council for Financial Aid to Education, recently reported that just about half of the Nation's 900 private colleges and universities are operating in the red. Some 200 of them are "wobbly" and are afraid that unless they obtain substantial and immediate financial help, they will be in serious trouble. Inflation has doubled and even tripled the expenses that the educational institutions must

Today it costs the student from \$2,000 to \$3,000 a year to go to some of the better private institutions. Some 200,000 of the superior high-school students, in the upper half of their graduating classes, do not go to college. Half of these, it has been estimated, do not attend because they are unable to meet the high costs of education.

Fortunately, private sources, such as business and industrial concerns, are now giving more to the colleges. General Foods, General Electric, Standard Oil Co. of New Jersey, Westinghouse, are giving generously. The Ford Foundation's grant of \$50 million will help greatly.

I have introduced in the Congress a bill, H. R. 2211, developed about 2 years ago by the United States Office of Education in cooperation with some 30 leading national organizations in the field of education to establish a program of financial aid to students in higher education. I have sponsored this bill because of my conviction that the minimum need for this Nation in the world of today is to hold its own in all ways against Russian communism and to attempt to win friends in other countries. It is very important that we develop ways and means to bring to the hundreds of millions of people who are still free and who look to us for leadership a true picture of our form of government so that in the struggle that is going on for the loyalty, the minds, the hearts, and the souls of men throughout the world they will turn to us rather than to the Russians. Strong and courageous leadership is needed. My bill will assist in the development of the kind of leadership without which we may well lose the cold war.

I include here an article by Dr. Benjamin Fine, education editor of the New York Times, entitled "Financial Problems of Private Colleges Are Pointed Up by Ford Foundation Grant." In this article Dr. Fine ably discusses some of the problems our private colleges and universities are facing today:

EDUCATION IN REVIEW-FINANCIAL PROBLEMS OF PRIVATE COLLEGES ARE POINTED UP BY FORD FOUNDATION GRANT

(By Benjamin Fine)

The Ford Foundation's grant of \$50 million to raise college teachers' salaries again has focused attention on the financial plight of our colleges and universities.

The Ford plan is to operate on a contingent basis; that is, each college will be expected at least to match the money that the Ford Foundation is to give. Some colleges will put up 2 or 3 times as much as their Ford grant. It is expected that between 50 and 100 colleges and universities will be in the program at the start.

College and university presidents last week were greatly heartened by the Ford an-nouncement. They suggested that this action would stimulate the institutions to seek more funds from other sources, would help maintain academic standards, and improve morale on the campus.

LIBERAL ARTS GROUP PRESSED

For several years the colleges and universities, particularly the independent liberal arts institutions, have been hard hit financially. Some 40 to 50 percent of them are operating at a deficit.

The colleges recognize that their financial problems are tied in rather closely with factors beyond their own campuses. There is general agreement on the major causes behind the plight of the colleges. These include:

1. The cost of everything has gone up. The colleges need more buildings, laboratories, classrooms, libraries, administration facilities. Inflation has doubled and even tripled the expenses that the colleges must

The colleges estimate that it would cost \$6 billion to construct the buildings that will be needed in the next half dozen years. That kind of money simply is not available.

2. Fewer veterans are now going to college. After World War II the veterans flocked to the campuses, literally swamping the classrooms and almost driving out the civilian

students. But that has not taken place after the release of the Korean veterans. To begin with, the numbers were much smaller. many Korean veterans had completed their college work before being drafted. The draft law permitted the superior students to postpone their service until after college graduation. Also, the method of financing the veterans has been changed. Instead of giving the tuition fees to the colleges, the Government, under the GI bill. makes monthly grants directly to the student-vet-Some educators believe that this favors the public colleges that do not charge high tuition fees.

3. More students are looking for scholarships. Because the cost of going to college has jumped so drastically-by more than 100 percent in the last 15 years-many students need financial help. Some colleges report that from 30 to 50 percent of their

students receive scholarship aid.

4. Research projects are becoming more numerous and more costly. Although the Federal Government or private industrial concerns give money for research, too often the grants do not cover the cost of operating these projects. While the colleges are ready to continue with the many research contracts that they carry, they are now worried lest the projects eat away some of the money that is so badly needed for operating ex-In some instances the concerns that award research grants to the colleges now also make additional allowances for the adequate maintenance of these programs.

WHAT RELIEF IS SOUGHT?

What is being done to ease these problems? Many things. Colleges are increasing tui-tion fees. The Ivy League colleges have jumped their fees during the year, and now charge from \$800 to \$1,000 for tuition alone. When room, board, incidentals, and general fees are added it will cost the student from \$2,000 to \$3,000 a year to go to some of the better private institutions.

Educators fear that if tuition rates go up any higher many college-caliber students will simply be priced out of the college

market.

We know that now 200,000 of the superior high-school students, in the upper half of their graduating classes, do not go to col-Half of these, it has been reliably estimated, do not attend because they are unable to meet the high costs.

In addition to raising their fees, colleges have been looking to industry and to the

foundations for help.

The Council for Financial Aid to Education was set up not long ago to help coordinate the efforts of the colleges to raise money. Headed by Frank W. Abrams, former chairman of the board, Standard Oil Co. of New Jersey, the council has taken an active part in focusing attention to the financial problems that beset the colleges.

In more than 30 States the private colleges have banded together to seek funds from corporations and foundations. joint effort, unique in educational circles, is now in full stride. Although the total sums raised to date have not been large, the 500 or so colleges in these groups have learned to work together in the raising of funds.

Dr. Wilson Compton, president of the council for financial aid to education, in a recent survey, reported that just about half of the Nation's 900 private colleges and universities are operating in the red. Some 200 of them, according to recent reports, are wobbly and are afraid that unless they obtain substantial and immediate financial help, they will be in serious trouble.

MILLIONS NEEDED NOW

The council president pointed out that at least \$30 million is needed right now to overcome the operating deficits of the private colleges in financial trouble. The head of

the Rockefeller Foundation, Dean Rusk, said further that colleges and universities need a minimum of \$300 million to \$400 million of new money, if they are to keep going and maintain adequate teaching standards.

More and more colleges have been turning toward their own alumni for financial assistance. Dr. Compton pointed to the need of self-help when he told the colleges: "The success of our common effort to strengthen and fortify our American higher education will depend substantially on what the colleges and universities do for themselves. What they do for themselves depends substantially on what their alumni do."

The 1953 Fund Survey of the American Alumni Council showed 685,263 alumni giving to their colleges and universities. These alumni contributed a total of \$16,443,756 to the 302 college funds reached in a survey by the council. Nevertheless, college officials feel that still more help can come from the alumni.

Private sources, such as business and industrial concerns, are now giving more to the colleges than ever before. For example, General Foods Fund has given \$270,000 to higher education. The Standard Oil Co. of New Jersey gave \$450,000 to 138 private institutions. General Electric is providing funds, matching the money given by its employees to the colleges. It is estimated that last year business concerns and corporations gave \$350 million to higher education, compared with \$250 million in 1950. In 1936 business gave about \$30 million.

THE OUTLOOK AT A GLANCE

What is the outlook? The colleges and universities believe that they will get the support to continue to function adequately. They are worried by what may happen if the enrollment doubles by 1970. Will the public colleges and universities become the dominant force in higher education? Already the swing is in that direction. More students are entering public institutions, proportionately, than ever before. A dozen years ago the ratio was 48 to 52 percent in favor of the private colleges.

Today it is just the opposite. Significantly, of the entering students last year, about 65 percent went to public colleges, 35 percent to private. In the long run that trend may be the most important development in the field of higher education in this country.

Tribute to Miss Margaret L. Keefe

EXTENSION OF REMARKS

HON, ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. CRETELLA. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the Dial, a newspaper published by the Hamden High School, Hamden, Conn. It pays tribute to an outstanding superintendent of schools, Miss Margaret L. Keefe, and truly exemplifies her tireless efforts and devotion to the Hamden school system, as well as her contribution to many other civic and educational organizations.

Miss Keefe, in her 42 years of service to her community, has played a magnificent part in the progress, pride and public spirit of Hamden. Her contribution will remain as a monument to her tireless efforts. She has been an inspiration to the youth of that town and if the country was privileged to have more like her, I am sure we would have a better America.

I am indeed pleased to submit this article and add my respects to those of her many friends of Hamden, Conn., one of the outstanding towns of my district:

MISS KEEFE ENDS 42 YEARS' SERVICE

Margaret L. Keefe, superintendent of schools in Hamden for 42 years, handed in her resignation on Tuesday night, December 7, 1954, to the board of education. David Wyllie, Jr., who is a veteran of some 19 years in the Hamden school system, was named her successor. Miss Keefe's resignation became effective on January 15. She has been ill since the start of the current school year in September. Her failing health was given as the reason for her resignation.

To give you some idea of the progress that has been made in the Hamden school system under the able direction of Miss Keefe, at the time she came into office. Hamden had 13 small schoolhouses, a total of 23 classrooms, and an enrollment of 116 students. Since that time 10 new grade schools were opened, additions to several were made. Hamden High was constructed, and plans for the adoption of the junior high-school program are well under way.

Today, as she steps down as head of the school system, Hamden has 170 school class-rooms, nearly 6,500 students, and almost 250 teachers. Mr. Wyllle, our new superintendent, has played an important role in the planning and adoption of the K-6-3-3 plan of education set down for September of 1956.

of education set down for September of 1956.

Miss Keefe, a graduate of New Britain Normal School, taught at Berlin Junction for a year before her appointment as principal of Centerville School in 1911. The following year, when Tobin accepted a position in Derby, she became superintendent of schools.

Miss Keefe did postgraduate work at Yale, Trinity, and Rhode Island College of Education. She received an honorary degree in 1936 from Albertus Magnus. Both Miss Keefe and Mr. Wyllie have been active in civic affairs. Miss Keefe is an ex-officio member of the board of directors of the Visiting Nurse Public Health Association, an honorary member of the Teachers' League, a member of the advisory council of PTA, of the chamber of commerce, Connecticut Education Association, National Education Association, Connecticut Association of School Superintendents, Civil Defense Committee, Albertus Magnus Circle, director of American Red Cross, Hamden Chapter, Delta Gamma Kappa (honor society of women who are recognized leaders in the profession of teaching), and in 1953 she received an award from the Exchange Club for crime prevention.

Immigration and Nationality Act

EXTENSION OF REMARKS

HON, FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to include the transcript of Mr. Edward R. Murrow's television show of March 8, 1955, See It Now:

Mr. Mussow. Good evening, this is See It Now produced by the partnership of Friendly and Murrow, and presented each week at this time by Alcoa, the Aluminum Co., of This 120-page document is called Public Law 414. It was passed by the 82d Congress over President Truman's veto. Legally, it is called the Immigration and Nationality Act. It is generally referred to as the McCarran-Walter Act because it was sponsored by the late Senator Pat McCarran and Representative Francis E. Walter, of Pennsylvania. This act determines who can and who cannot enter this country and also who can be deported. It is complex and controversial and this is an attempt to illuminate it a little bit. Representative Walter is watching in Washington and he will respond at the close of this report. This was candidate Eisenhower on October 31, 1952.

Mr. EISENHOWER. I believe also that we need to rewrite the unfair provisions of the McCarran Immigration Act to get the bigotry out of it, and don't forget that a vote for my opponent is a vote to continue the Democrat author of that bill as chairman of the Senate Immigration Subcommittee and also chairman of the powerful Senate Judiciary

Committee.

Mr. Murrow. And after the candidate became the President, he continued his opposition to the McCarran-Walter Act in his first state of the Union message.

President EISENHOWER. We are one and all immigrants or the sons and daughters of immigrants. Existing legislation contains injustices. It does, in fact, discriminate. I am informed by Members of the Congress that it was realized at the time of its enactment that future study of the proper basis of determining quotas would be necessary. I am, therefore, requesting the Congress to review this legislation and to enact a statute which will at one and the same time guard our legitimate national interest and be faithful to our basic ideas of freedom and fairness to all.

Mr. Morrow. Again, in this year's state of the Union message, President Eisenhower called for revision of the McCarran-Waiter Act. Now, as chairman of the House Immigration and Nationality Subcommittee, Representative Walter continues as its staunchest defender. CBS reporter Dan Schorr interviewed him in his office.

Mr. Schore. Congressman Walter, you and Senator McCarran are the authors of our current Immigration Act. Senator McCarran is now dead. You survive as a spokesman for Congress on this act. Has it accomplished what you expected it to?

Congressman Walter. It has accomplished much that we hoped would be accomplished, but Dan, remember this. This code came as the result of nearly 5 years of work. There was expended on it over a half a million dollars. The joint committee-and the code was prepared by a joint committee of Representatives and Senators and the technicians that worked on it were the best people we could find and the best people anybody could recommend. It wasn't lightly considered, and I am quite certain that when recommendations for changes are made, if they are, and usually most of the criticism comes around election time, but if there are any criticisms of the law, I am quite certain that they will be of things that we have considered-that is, a joint committee has considered and rejected. Interestingly enough, I'll give you a beat, Dan. There was submitted to me this morning the galley proofs of a staff report just completed by our experts on the operation of this act and it's quite revealing.

It contradicts many of the statements made about this much maligned law. For example, we were told that the enactment of the McCarran-Walter Act would result in the drying up of all immigration. Well, interestingly enough, that did not happen but just the contrary is the fact. The over-all number of immigrants admitted to the United States exceeds by 22 percent the numbers admitted proviously under general law.

Mr. SCHORR. And yet, President Eisenhower, in both of his state of the Union messages, referred to inequities and injus-

tices in this act. How can you explain that? Congressman WALTER. Well, I am certain that when the President made that statement, if there was any basis for it, he would have made concrete recommendations for changes. I've heard a great deal of name-calling and actually that's the sum total of the criticisms of the law. I would like to have somebody point out to me what the inequities are. I am sure that if the President is sincere in his charges, he will have the Attorney General of the United States submit specific legislation.

Mr. Schore. Congressman, you said at one time that you favor the present act because it tends to arrest the tendency toward a change in the composition of the American stock. What did you mean by that and how

would you justify that?
Congressman Walter. No; that is not en-What I was saying at that tirely my view. What I was saying at that time—I think it was a speech I made in Philadelphia a couple of years ago-what I was saying was this—that when this formula of national origins was devised, the men who agreed on it felt that the thing to do. in order to reduce conflicts to a minimum, was to bring into this country people who might become more easily assimilated.

After all, it's been intended that this be a great melting pot. I don't know how well that theory has succeeded because I do see evidence on all hands of hyphenated Americanism. There is no place in America for hyphenated Americanism, and all I was saying was that if people of one racial group were given preferences they would become quicker assimilated according to the size of

that group.

Mr. Schore. Then your act does, in fact, tend to prefer people of one racial group

over another? Congressman Walter. No; it doesn't prefer one group over another. It merely states that according to the percentages, the Anglo-Saxons were given a larger percentage because there was a larger percentage of the type of people who came during that time, and that is only accidental. It is notthe formula is not rigged but it just happens that when the law was enacted in 1924, there was the predominance of these particular

groups. Mr. SCHORR. But one criticism of the act has been that while it is very effective in excluding Communists, it is not equally effective in excluding those of other totali-tarian beliefs such as Nazis and Fascists.

Congressman Walter. Well, that, of course is not true. If they have been a member of any proscribed organization, then of course they are excludable, and it applies to Nazis and Fascists just as it does to Communists. Of course, there is a big difference, too, between the two forms of totalitarianism. I never heard of the Fascists trying to overthrow the Government of the United States through force and violence, There has never been a movement in the United States except a very inept movement by some German groups before the war to accomplish that.

Mr. Schore. May I point out that leaders of the three major denominations in this country-Catholics, Protestants, and Jewshave criticized and attacked your act as being unfair. On what grounds do you think?

Congressman Walter. I don't know what religious leaders are criticizing this law who know anything about it. However, a lot of the old pros, the old immigrant movers whose job it is to move people, and of course they don't like to see any limit placed on their work, find that it isn't as easy to bring people into the United States as they would like it to be. Now, there was a charge made that the law was anti-Semitic. At a hearing on another act, Congressman Javits, the present attorney general of the State of New York, a great American and a distinguished man, who is in my judgment as well qualified to speak for any group of people as anybody who could be selected, because he is not only fair and honest but he knows the problem, when I asked him wherein this law was anti-Semitic, he laughed and said, "Nowhere is there anything in the law that is anti-Semitic."

Attorney General JACOB K. JAVITS. As I recall it, Congressman Walter asked me this question at a hearing upon the proposition of moving to liberalize the immigration policy of the United States which I have advocated for a very long time.

At that time I said obviously there was nothing in the law which was specifically anti-Semitic, but I hastened to add that the law, in my opinion, discriminated against minorities like Negroes and those with Asiatic blood in their veins, and also perpetuated the quota system which discriminates against those who were born in Eastern and Southeastern Europe, and in that respect the law is anti-all people who come from those areas, which have traditionally included a good many Jewish people as well as a very great many people of Italian extraction, Greek extraction, Polish and Russian ex-traction, regardless of where—where they may be living now, and in that sense I have been opposed to the McCarran-Walter Act, and I still am opposed to it. We are anxious to attract good people from behind the Iron Curtain into the free world. There is an enormous influx of those people which comes into western areas like West Berlin. The great attraction to coming into those areas is that they can find a new life in the free world, and if the great leader of the free world, the United States, keeps them out of its own country, obviously it is a disastrous setback to what we hope will be the magnetic attraction to bring them out. And finally, there are very heavy disabilities in the law against citizens who are naturalized as contrasted with citizens who were born in the United States.

This is very much contrary to the whole spirit of this country, and yet it exists and we have the strange situation of where a person might be picked up 20 and 30 years after he is legally immigrated into the United States and shipped out because there is no limitation upon the fact that if he was found to have been guilty of-of some small crime before he came here, which somehow or other didn't get disclosed, or under some summary procedures get into difficulty about having joined some organization quite unwittingly which then turns up on the Attorney General's subversive list. We're not talking about Communists and even fellow We're just talking about ordinary people who have no intention to do anything but be loyal Americans who get themselves in some small scrape and find after building a life here for years that under the McCarran-Walter Act they have to be sent back now, I don't think that's fair and I don't think it's consistent with the spirit of our country.

Mr. Murrow. One of the religious leaders who oppose the McCarran-Walter Act is Archbishop Richard J. Cushing, of Boston.

Archbishop RICHARD J. CUSHING. I feel that our present restrictive immigration policy as reflected in the Immigration and Nationality Act of 1952 is outmoded and out of harmony with the humanitarian, democratic aim of our current domestic and foreign policies. It is an immigration policy based on fear, insecurity, and I also believe on racial prejudice. It is a denial and a reversal of the policy which brought about the creation, growth, and strength of our great democratic country. Most everyone agrees that the most detrimental feature of our present law and the one that is of paramount importance

as far as revision is concerned, is the socalled national origins quota system. It is this system which says in effect that one race is superior to another and that we must therefore limit the admission of the inferior regardless of their individual qualifications or interests or needs, regardless of their refugee or surplus situation, and re-gardless of any family relationships which may be involved. We can and should establish a higher annual quota of admission to somewhere around 250,000, and an equitable substitute for the national origins quota system can be created for the allocathese numbers. This new policy would eliminate, I believe, all discriminations and be flexible enough to take care of special problems and to insure that in any one year the entire quota will be utilized. This problem, like many others as I see it. is identified with the United States of America as the hope of a bewildered world.

Mr. Murrow. From Bishop Cushing, we move to Rabbi Israel Goldstein, president of the American Jewish Congress.

Rabbi ISRAEL GOLDSTEIN. I might say, in passing, that the Jewish stake, numerically speaking, is not very large in this particular matter owing to the unfortunate fact that 6 million Jews have been exterminated by Hitler and 21/2 million Jews are now sealed off in the countries behind the Iron Curtain, and owing to the fortunate fact that hundreds of thousands of Jews have come from European countries into Israel where have found their homes and their freedom. But, nevertheless, our opposition to the Mc-Carran-Walter Act is just as strong and just as vehement as that of any other group, because we condemn the grounds on which it is based. The whole approach to immigration is sort of hostile and the slogan seems to be: "Nothing that is alien is human to The McCarran-Walter Immigration Act, moreover, is hypocritical because while purporting to rectify the exclusion of Asians it actually puts a ceiling of 100 immigrants per year for countries such as Japan, with its 70 millions of population, or India with its 300 millions, and it adds injury to insult by counting against these absurd quotas, someone let us say, born in England of half-Asian parentage, who is not given the privilege of being counted for the English quota but is counted for the Asian quota. If that isn't racist, I don't know what is.

Mr. MURROW, Senator HERBERT LEHMAN was one of the 26 Senators who voted against the bill in 1952. We asked him to comment on Representative WALTER's statement that immigration was up 22 percent since the McCarran-Walter Act.

Senator LEITMAN. Well, Mr. Schorr, in claiming that immigration under the Mc-Carran-Walter Act increased by 22 percent, Congressman Walter is playing with figures—a very dangerous game. that the total legal immigration in the fiscal year 1954 was lower than in any preceding year since 1947 with the sole exception of fiscal year 1953, the year Congressman Wal-TER used as his only basis of comparison. In the 2-year period during which the Mc-Carran-Walter Act has been on our statute books, fiscal year 1953 and fiscal year 1954; total legal immigration was 378,000. during the 2 years preceding the passage of the McCarran-Walter Act, fiscal years 1951 and 1952, total immigration was 471,000. In other words, total immigration was 25 percent greater during the 2 years before the McCarran Act than after. Moreover, over half of the so-called increase in immigration in 1954 over 1953 is accounted for by the increased immigration from Mexico which is not under the quota system at all. I think actually this bill which is claimed to be an immigration and naturalization law is not that at all, but an exclusion, a denaturalization and a deportation law.

You know the McCarran-Walter Act is based on the so-called national origins quota which goes back to 1924. At that time, they drafted a law which permitted a certain percentage of the people in this country who were of certain national origins to come in, and that, in turn, was based on the population, on the census of 1920, where there were thirty or forty million fewer people than there are today. Now, under that-under that quota system which I am very much opposed to, the national origins quota, a certain-number of people were given to England and Italy and Poland and Greece, and the other countries. England and Northern Ireland were given 65,000. Only a very small percentage of those people come in here be-cause the English don't immigrate. They want to stay at home to a great extent, so that these-they're unused quotas which cannot be used by any other country under the present law. On the other hand, a country like Greece has a quota of only 308, most of which are already mortgaged under provisions of the McCarran Act. Italy has a quota of less than 4,000. Poland has a small quota. All the-all the countries of southern and eastern Europe were very greatly discriminated against, and that's one of my very real strong objections to the present act, and why I am proposing to change that in the bill which I've introduced.

Mr. Murrow. Congressman Francis Walter has been watching in Washington. He will make certain concluding comments immediately after this word from Alcoa, the Aluminum Co. of America.

Congressman Walter opened this discussion of the McCarran-Walter Act and he has now agreed to make some comments upon what some of its critics have said. Will you

go ahead, sir, please? Congressman, WALTER. In the very brief time allotted to me to reply to the state-ments made by Mr. Javits and the others who spoke this evening. I shall attempt to take the statements each made and look at the notes that I prepared as they were making them. Now, Mr. Javits was fair in his statement but he is entirely incorrect when he states that a person could be deported for a trivial offense. Actually, a person can be denaturalized only after a verdict of a Federal court. An alien can be deported only for the commission of a felony within 5 years after the alien had been in the United States, or two felonies committed after this alien has come to the United States. As a matter of fact, there are two important cases now in the Supreme Court of the United States that go into this question of the procedures on denaturalization-one from Attorney General Javits' own State of New York. an opinion handed down by Judge Harold Medina, who knows as much about com-munism as anybody, he stated, "It's worthy of note that the act of 1952 was not hastily thrown together. On the contrary, it's a result of years of patient study," and so on. Now, then, we get to the statements made by Archbishop Cushing.

He said that the act is discriminatory and the national origins system is antiquated, and there is nothing in the law that will enable us to deal with surplus populations. After all, when the Congress of the United States enacted the Immigration and Nationality Act, it was legislating in the interest of the United States and not in the interest of other nations. As far as family ties are concerned, it has been the policy of the Committee on the Judiciary, ever since I have been a member of it, to endeavor to reunite families, and I am sure that the record will show that, Rabbi Goldstein seemed to stress the fact that there were nations with large populations who want to send immigrants to the United States. Well, that demonstrates the fallacy of attempting to depart from the national origins system. I certainly don't believe that it would be in

the best interest of the United States to fix quotas according to the size of populations of other countries. Rabbi Goldstein talked about the population of Japan being but 70 million, and they had only a hundred quota—they actually have 185; India, population of 300 million, and only a hundred quota. Well, what about China with a much greater population than either of those countries? Getting to Senator Lehman's statement about juggling figures. He is entirely wrong, because he omitted to say that the years of 1949 to 1952 were the years when the displaced persons program was in effect. Of course immigration was high then under special emergency legislation. The last charge I think that ought to be answered and was not made tonight is with respect to permitting visitors to come to this country.

On tomorrow I am sure an announcement will be made that these Soviet school newspaper editors will be able to come to the United States under the very generous and liberal discretionary provisions of the present law—something that was impossible under the old law.

Mr. MURROW. Thank you very much, indeed, Congressman Walter, for contributing to a degree to the clarification of this complex and controversial issue. Thank you, sir, very much indeed. Good night and good luck.

Buy It Back?

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. BARTLETT. Mr. Speaker, under the above title the Fairbanks Daily News-Miner, the farthest north daily newspaper in the United States, printed on February 12 an editorial which I am very pleased to share here:

A suggestion has been made in Juneau that the Alaska Legislature appropriate \$7 million and offer to "buy back" our Territory from the United States. Of course, this suggestion is made with tongue in cheek. Actually, it is only designed to call further attention to the plight of Alaska with regard to the rights of citizenship which residents here do not possess.

We feel that this suggestion has merits, We do not take it seriously, but, it certainly illustrates the feelings of many Alaskans who are dismayed with the neglect our Nation

is showing the people of Alaska.

We suggest that the legislature go right ahead and make an offer to "buy back" Alaska. Offer the United States 7 million and ask for our freedom. At the same time, point out that we would be a much more prosperous land if we existed as a sovereign nation.

First of all, no one can say that our defense spending income would be cut off, because the United States must defend Alaska to defend itself.

Furthermore, we would enjoy these immediate gains:

1. As a sovereign nation we would be ellgible to obtain money under the "foreign
aid" program. No doubt, if we weren't a
Territory, the United States would be more
willing to finance highways, new schools, and
a quart of milk per day for each citizen. We
are strategically located here in Alaska, and
the United States would be forced to seek
our friendship.

2. As a foreign nation, we could send an ambassador to the United States. If he

issued a protest, no doubt it would arouse much more interest in Washington than anything our delegate to Congress can say or do. Our delegate to Congress hasn't got a vote to cast or trade, but in this day and age, an ambassador is a real important terson.

3. As a foreign nation, no doubt we would be eligible for special assistance to build our badly needed roads. The United States has enacted a law which extends to South American nations financial assistance in constructing highways. However, Congress has been steadily reducing the funds that are appropriated to enable Alaska to expand its road system. We'd like to have some of those super highways that South American nations are building with United States funds.

These are the advantages that would accrue to Alaska if we became independent of the United States. Of course, the move would have certain drawbacks. We would have to go through immigration to get into the United States, we wouldn't be able to vote for the President, we wouldn't have a vote in Congress, and we would have no voice in the affairs of our Nation.

in the affairs of our Nation.

But, wait a minute. We have to go through an immigration inspector right now, when entering the United States from Alaska. We can't vote for our President, and we do not have a vote in Congress. Naturally, under such conditions, we have no voice in the affairs of the United States.

So, Alaska has everything to gain and very little to lose by becoming a sovereign nation. Obviously, our Government is so busy taking care of the underprivileged people all over this world that America has forgotten about our own loyal citizens in Alaska.

The legislature should pass a bill offering the United States \$7 million for a clear title to our own homeland. This move would be advantageous to Alaska and to the Nation. After we were a sovereign nation for a few years and industry has sprung up here because it was not taxed on a frontier at crushing levels designed for America proper, and after we'd had a little assistance in building highways to tap our rich resources, and after we'd run our own "show" for a few years and took steps to correct the Interior Department's mistakes, and after we'd elected our own governor and all our public officials, we could rejoin the United States.

Then Alaska would be a prosperous, productive adjunct to America, and no doubt we would be completely ready for statehood.

We feel the legislature should appropriate that money. It might be the most valuable \$7 million Alaska ever spent.

New Insight Given as Death Approaches

EXTENSION OF REMARKS

OF

HON, BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. WILSON of California. Mr. Speaker, so much has been said lately about heartless business and the exploitation of the workingman, I felt my colleagues would find interest in a recent letter written by a dying workman about his company. This appeared in a Letters to the Editor column in the San Diego Union last week. It was written by a young man named William Neary, an Army veteran, with a wife whom he had met in Italy, and two small daughters.

Bill Neary wrote this as a sort of last service to labor-management relations. In the past, he had served on a union negotiations committee at his plant, the Kelco Co., which processes seaweed into

gelatin and other products.

Bill showed his typically American courage and frankness in discussing his problem. He wrote the letter to set things straight, not to get publicity. He even asked that his name not be printed. The world deserves to know Bill's story. Under unanimous consent, I include his letter as a portion of these remarks:

NEW INSIGHT GIVEN AS DEATH APPROACHES

EDITOR, THE UNION.

A few weeks ago my family and I received the shattering news that I had 2 months to live. The doctors advised me to stop working and conserve my strength, in order to last a little longer maybe.

But, being the bread-winner for a lovely, wonderful wife, and two small children, my problem was now to keep winning that bread

and still conserve my strength.

Now comes the reason for my story

For the last 5 years I have worked for a local company which has always treated me very well and with respect. I didn't know whether to keep my sad news a secret from the company or to be fair and square as it had always been with me in the past.

Well, I told the company my complete

problem.

It came through true blue. I was put on 3-weeks sick leave, with pay, and was told that if I wanted to come back to work, there would be a position for me which would require no expending of energy but would keep my mind off my worries. I would be paid top wages.

Companies are accused of many things, sometimes rightly but all too often unjustly. My company has been called cold-blooded and has been wrongly accused of spreading

kelp along the beaches.

But the point I have tried to bring out is this: My experience convinces me that companies are not run by cold-blooded capitalists squeezing every drop of energy out of us for their dollar paid. I think that if we looked fairly we would find usually that we are working for honest, warm-hearted people, who are willing to pay an honest dollar for an honest effort.

Don't let my experience influence you. Think it over. I can only say thank God for putting a big heart in a local company.

W. Neary.

NATIONAL CITY.

Security Council Sparkplug

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tucsday, March 15, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, a dinner was held at the White House last Saturday, March 12, in honor of Gen. Robert Cutler, who recently resigned as President Eisenhower's special assistant for national security affairs. Although not a well-known public figure, General Cutler has held a highly sensitive and important position. All who worked with him will agree, I feel sure, that he has discharged his heavy responsibilities in a most capable and

highly commendable way. Our congratulations go to him for a job well done.

Under leave to extend my remarks, I should like also to call to the attention of my colleagues an editorial regarding General Cutler which appeared in the Washington Post on March 11, 1955:

SECURITY COUNCIL SPARKPLUG

Robert Cutler has been one of the most important and least-known men in Washington. As Assistant to the President for National Security Affairs, he has had a preeminent part in giving the National Security Council the new meaning and prestige which Mr. Eisenhower has sought for it. curity Council has all but eclipsed the Cabinet on questions of broad strategy. This shy, witty Boston banker has been the ideal staff agent for the President-quiet, unobtrusive, and completely dedicated, and with a singular ability to cut through nonessentials in keeping attention focused on the major problems and in following through on decisions. Through his own choice he has led a virtually monastic existence in the capital, shunning social engagements and contacts even though previously in private life he had been known as the life of the party. Whether this self-enforced seclusion has helped build proper appreciation of the work of the Security Council is debatable, but it certainly has served to keep the Council staff out of embarrassing controversy. Even less is known here publicly of Mr. Cutler's successor, Dillon Anderson, a Houston attorney who has served as a consultant to the Security Council since 1953. We wish him well-and for Mr. Cutler a well-deserved release when he returns to his post as chairman of the board of Boston's Old Colony Trust Co.

The Good Old Hoover Days

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. PRICE. Mr. Speaker, under leave to do so I include herewith an editorial from the Washington Post and Times Herald:

THE GOOD OLD DAYS

Former President Hoover's passion for criticizing the programs of his successors has carried him to such an extreme in the report on governmental lending activities that it is difficult to escape Representative HOLIFIELD'S conclusion that the report is faulty in concept and method. Mr. Holi-FIELD is a Democrat and a member of the Hoover Commission. But two Republican members-Attorney General Herbert Brownell. Jr., and Mobilization Director Arthur 3. Flemming-also dissented, as did Joseph P. Kennedy, former Ambassador to Great Brit-ain, and James A. Farley, former Postmaster General. Mr. Hoover and the Commission majority, in their laudable zest to save the Government money, apparently forgot that one of the reasons for government is to protect the health and welfare of the people who support it. Many of the lending agen-cles which the Hoover Commission would liquidate are performing valuable services for the people without injury to private enterprise.

Considerable money could be saved if the Government ceased making crop loans to farmers, rural electrification loans, Export-Import Bank loans, and housing loans. Money also could be saved if the Govern-

ment raised the interest rate on loans it continued to underwrite. There may be an argument that this should be done selectively. But a sweeping curtailment such as the Commission advocates would not serve the national interest, the business interests of the country, or the groups that have helped expand the economy through use of such loans. Unquestionably there are subsidies in governmental lending activities, but they need to be related to the whole complex of indirect subsidies in which the Government is engaged. The Hoover Commission seems merely to consider the overall cost of Government and conclude that it is prohibitive.

When the Hoover Commission makes such extreme proposals it does damage to its own reputation and to the proposals it has made on other governmental problems. No Congress, whether Democratic or Republican, would ever seriously consider the proposal to abolish the agencies which the Commission criticizes. The report, therefore, can be put down as an unfortunate academic exercise. It strays too far from reality to be of any real value to Congress or the administration.

Keenotes

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Record, I include copy of my weekly column Keenotes of March 11, 1955, which refers to the recommendations of the Hoover Commission dealing with veterans' hospitalization and disability benefits:

KEENOTES

(By Hon. ELIZABETH KEE, of West Virginia)

In this fast-moving civilization of ours, yesterday is sometimes so very, very long

ago. And so easy to forget.

It is particularly easy, it seems to me, to forget "yesterday's hero"—our war veterans—especially when, as right now, we are not engaged in a shooting war. The upsurge of gratitude felt by a whole nation for the sacrifices these boys made for us—the solemn pledges we in turn made them in those yesterdays—all of these can become so cloudy in memory, so easily forgotten now.

As one of the ranking members of the Committee on Veterans' Affairs of the House of Representatives, I have seen this forget-fulness of the veteran show itself many times in many different ways. Whenever it happens, I think of Lear's classic characterization of ingratitude as "how sharper than a

serpent's tooth."

Lear was berating a thankless child. But nations can be ungrateful, too.

This Nation certainly would be ungrateful, I feel, if it were to adopt some of the latest recommendations of the Hoover Commission dealing with veterans' hospitalization and disability benefits.

The new Hoover group, officially known as the Commission on Organization of the Executive Branch of the Government, put a task force to work surveying all of the Government's \$4 billion a year health activities, of which veterans' care is only a part. The group indicated a possibility of saving up to \$400 million a year through reorganization of the Government's various health functions, including modification of some and elimination or drastic curtailment of others.

Significantly, however, more than threefourths of all of these estimated-or hopedfor-savings would come out of curtailment of hospitalization benefits and tightening of disability-allowance procedures for veterans, including the closing of some veterans' hospitals.

On their face, some of the Commission statements on veterans' hospitalization benefits sound somewhat reasonable until a more thorough analysis shows that they are based on what appears to be an implication not merely of widespread but of wholesale and one would almost say general cheating by our war veterans in exercising their rights to hospitalization for nonservice-connected cases.

I cannot subscribe to any such blanket charge or wholesale condemnation of the men who fought to keep freedom alive in

this world.

Perhaps there is one bright side to this

newest attack on veterans' rights.

When the winds blow with freezing fury and life is grim and we are cold and miserable and full of winter weariness, and then, suddenly, we see an undaunted crocus has pushed its way right through the hardcrusted ground, doesn't the heart warm quickly in the happy knowledge that spring is soon at hand? The crocus is always a sure sign.

Similarly, when I saw this official report from the Hoover Commission on veterans' benefits, I suddenly felt as if it was an omen Even though the experimental nuof peace. clear explosions, both here and behind the Iron Curtain, are getting bigger and more awesome day by day, and the situation off Formosa is looking quite menacing, it sud-denly struck me: wasn't it a sign of an upswing in the prospects for peace when in-fluential groups in this country start looking with outright hostility at the tremendous cost of veterans' hospitalization and disability benefits?

Nevertheless, we dare not repudlate the promises we have made to our veterans.

Professional Soldiers Plus Incentives Equal Top Morale

EXTENSION OF REMARKS OP

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 10, 1955

Mr. LANE. Mr. Speaker, the people of the United States depend upon professional soldiers, sailors, marines, and airmen to protect and defend our Nation.

The officers and noncoms are the backbone of our Military Establishment.

They have the special knowledge and experience and steadiness that cannot be drafted suddenly from civilian life in time of emergency.

We need them every day and every hour to handle complex equipment in farflung stations.

Devoted to honor, duty, country. ways faithful. Ready to give their lives if need be, and asking so little in return.

Only respect and consideration.

The disciplined pride of a military man suffers severely when he and his dependents are not reimbursed for the sacrifices that they make by volunteering to serve their country.

At a time when pay and fringe benefits are increasing for civilians, we have

seen the status of our service personnel slip farther and farther behind the average standard of living.

Before this pay-raise bill was passed, a master sergeant with over 18 years of service, received only \$275.18 per month.

Only \$3,300 a year for the highest noncom.

Short rations, at best.

Small wonder that the military service has ceased to be attractive.

We have made it so because of our neglect-our failure to consider the human factors.

The most effective and costly military equipment in the world will not buy us protection if the men to operate the equipment are amateurs, or if their hearts are not in their jobs.

A military pay increase bill will serve to keep the best-trained men in uniform. That is, if it is supplemented by further legislation to increase dependent medical care, survivors' benefits, and to provide.for adequate housing.

The wives and children of professional military men also serve their country in ways that merit our understanding and our gratitude.

The vote in the House-399 for and only 1 against-reflects the overwhelming opinion in Congress that our career men in uniform are deserving of much better treatment than we have accorded them in the past.

We take this action not only for compelling economic reasons, but as a means of expressing to the men and women who have sacrificed the freedoms, the comforts, and the moneymaking opportunities of civilian life in order to dedicate themselves to the protection of all-our admiration and our deep respect.

Those who serve their country before themselves earn the highest honor and consideration.

It is a privilege for Congress to passwith flying colors-the Career Incentive Act of 1955.

Forty-seventh Annual Order Day Dinner of B'nai Zion in Honor of Hon. Abraham J. Multer

> EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. KLEIN. Mr. Speaker, on March 6, 1955, on the occasion of the 47th annual order day dinner of B'nai Zion in honor of our colleague, the Honorable ABRAHAM J. MULTER, of New York, there were many outstanding speakers. A citation was awarded to Congressman MULTER by the Honorable Arthur Markewich, a justice of the supreme court of the State of New York, and nassi-grandmaster of B'nai Zion.

Among the outstanding personalities present to do honor to our colleague were the Honorable HENRY M. JACKSON, United States Senator from the State of

Washington, and the Honorable Carmine G. De Sapio, secretary of state of the State of New York and Democratic national committeeman from New York. Their addresses to the dinner guests and Congressman Multer's acceptance speech were so outstanding and interesting that under unanimous consent I include them herewith. Also included is a copy of the citation presented to Congressman Multer:

CITATION TO CONGRESSMAN ABRAHAM J. MUL-TER: LAWYER, LEGISLATOR, STATESMAN

In grateful recognition of the manifold historic services he has rendered to the American people in their fight for freedom.

In high appreciation of the unflinching loyalty and devotion he has brought to the cause of the State of Israel and his great efforts on behalf of the redemption of land of Israel and the Jewish National Fund, exemplifying the high ideals of social justice set forth in the Bible by the prophets of

Presented on the occasion of the 47th annual B'nai Zion order day dinner, marking the tercentenary of Jewish settlement in the United States, Sunday, March 6, Hotel Commodore, New York.

JEWISH NATIONAL FUND OF America, Harris J. Levine, President. MENDEL N. FISHER, Executive Director.

B'NAI ZION, ARTHUR MARKEWICH, Nassi. HERMAN Z. QUITTMAN, Mazkir. NATHANIEL S. ROTHENBERG, Chairman, Order Day Dinner Committee.

ADDRESS BY SENATOR JACKSON

It is highly appropriate that this B'nai Zion dinner is designed both to mark the tercentenary of Jewish settlement in America and to honor Congressman Abraham MULTER for his impressive service to the American people. I do not know if ABE MUL-TER can trace his ancestry back to these 23 pioneer settlers but I do know that his record in Congress, where I had the privilege of serving with him for 6 years in the House, has been in the finest tradition of American

B'nai Zion, through its great contributions to the Jewish National Fund, has fostered the pioneer point 4 program in the Middle As stockholders, so to speak, in the thriving young State of Israel, you may be proud of the record your investment has helped to make. In land reclamation, re-forestation, and agricultural settlement Israel has made tremendous progress through your efforts.

I wish I could be as optimistic about other areas of the Middle East.

Ironically enough, it is just this phe-nomenal political and economic growth of Israel that has contributed to the present unrest and tension in the Middle East. is no question in my mind but that the success of Israel has been a thorn in the side of the Arab States. Jealous of the progress of their youthful neighbor, the Arab leaders have sought to divert attention from their own shortcomings by the fanning of ancient religious hostilities.

We have seen just last week an unfortunate renewal of this conflict. I want to digress for a moment now and go back a few years to a time when Israel's future was far less certain, to tell you of an incident involving our guest of honor tonight.

You will recall that, following the assassination of Count Bernadotte, certain forces within and outside our State Department took that opportunity to press for a with-drawal of recognition of the new state. A critical situation resulted. Congressman MULTER was in Israel at the time and, at the request of our Ambassador there, flew home to deliver a message to the President which the Ambassador did not feel would reach the White House through normal channels. Without fanfare, ABE MULTER returned to the States and flew to Oklahoma City for a midnight conference with Mr. Truman on the latter's campaign train. His firsthand report resulted in a strengthening of American support for Israel at a time when Israeli morale was at a low ebb.

Economically and politically Israel is far more ready to weather this latest crisis than

she was in 1948.

Having spoken of the attitude of the Arab leaders, I want to emphasize my belief that the Arab peoples have much the same hopes, needs, and aspirations as the people of Israel. As long as these hopes are unfulfilled, the Arab leaders will turn to Israel as a scape-

goat and diversion.

For this reason, it is just as important for Israel to realize that her stability and security depend on the realization of national economic and social needs by the Arabs as it is for the Arabs, in their turn, to understand that poverty, inequality, and back-wardness—not Israel—comprise their greatest enemy.

The nations of the Middle East, many of whom have recently acquired independence, must come to realize that their new-found freedoms are at stake in the struggle between communism and the free world. haps they cannot be united on a positive basis at the present. But they may at least join together in opposition to the threat of Soviet domination. I think that the defense pact between Iraq and Turkey, rati-fied late last month, is the first evidence of this awareness on their part. I hope this may represent a chink in the armor of the Arab League, the influence of which has hardly helped the growth of the Middle East in recent years.

In our preoccupation with the Far East and Europe, we are only beginning to awake to the needs of the Middle East. There is a very real danger, however, in our approaching this area on a purely military basis. We cannot judge the Middle East on the same basis as Western Europe when seeking means to strengthen individual nations against Communist aggression. We are operating on two different levels of economic and social development and must act accordingly.

In short, if we attempt to build a Middle Eastern military fortress without first meet-ing the economic and social issues, we will create a dangerous sense of false securitylike building a fort with walls but no insides.

Our primary aim, before we can consider a serious military buildup, must be to achieve political and social stability. To place arms in the hands of people who are badly housed. underfed, and badly governed is to invite disaster. If communism moves into these areas, it will be primarily because of unhealthy social and economic conditions-not for any lack of guns or grenades. Only through the building of strong economic and social foundations can we develop the will to resist.

The most obvious way to implement this approach is through economic and technicalald programs. I regret to say that our programs of this kind have been diminishing in recent months-a reduction that is closely linked to our increased emphasis on military aims.

As a member of the Joint Committee on Atomic Energy, I am particularly well acquainted with the tremendous possibilities of peacetime atomic energy for the future growth and security of the Middle East.

I believe that the construction of nuclear reactors in the Middle East will do more for the progress and stability of this region than shiploads of military hardware.

A nuclear reactor is nothing more than an atomic furnace, using uranium as a fuel to produce heat, energy, and ultimately elec-tricity. It does not depend on vast stores of natural resources or extensive supply lines for its successful operation. You will understand why when I tell you that I pound of uranium has the energy equivalent of 3,600,000 pounds of coal.

We cannot, of course, work economic and social miracles overnight but the peacetime reactor can come as close to a miracle as anything ever devised by man. These atomic furnaces will produce overnight energy to pump water over arid fields, turn the wheels of new industry, and lay the groundwork for increased productivity in areas where dire want is a round-the-clock reality.

I am not speaking of any dream for the future. We have already built at Oak Ridge an experimental reactor powerplant that has generated roughly 200 kilowatts of electric power-enough to satisfy the needs of a good-sized commercial building. The task from here on out is essentially an engineering and industrial undertaking. With our tremendously superior industrial system, I am convinced we can soon overcome the problems that block the road to commercial

In short, while there is little doubt that our military atomic race with the Russians is a neck-and-neck affair, I firmly believe that we have the present capability of instituting an overwhelming lead in the development and exploitation of the peaceful atom. If we give this effort the all-out crash priority we gave the hydrogen bomb, we will give the lie to the charge that we have given lip service to the peaceful atom. Not only would such a program prove our peaceful intentions, it would also provide a great economic shot in the arm for areas such as the Middle East.

Each American-built atomic reactor shipped overseas will be packaged progress carrying with it the seeds of productivity for an increased standard of living to areas where even the slightest increase in living standards is revolutionary.

I sincerely hope that the administration will consider making this effort on nuclear reactors the keystone of an increased program of technical aid in the Middle East and elsewhere.

The brightest future of this region lies in growing together rather than fighting each other. As you carry on your valuable work in Israel, I hope you will keep this general principle in mind: With the proper moderation, commonsense, and perspective, the Middle East can become the most dynamic region of our time rather than, as it is now, one of the most serious trouble spots of our

ADDRESS OF HON. CARMINE DE SAPIO, SECRETARY OF STATE OF NEW YORK

Chairman, Your Excellency, Congressman, Senator Jackson, Judge Markewich, distinguished guests, ladies, and gentlemen; Senator Jackson stated that it was difficult for him to land here this evening due to the fog over New York City; but that there is no fog in this hall this evening. I agree with you. Senator. There is indeed no fog here tonight; and this is due in great measure to ABE MULTER and the thousands of ABE MUL-TERS who spread sunshine and hope for their fellow men. In fact, Senator, since January 1 of this year, our Democratic weather bureau has dispelled a great deal of fog after 12 years of density.

I am very happy to be here tonight to join with you in paying tribute to a great American and a great son of Israel-my very good friend, Congressman ABRAHAM J. MULTER.

I do not think it necessary for me to remind you, his coworkers and associates in B'nai Zion, of his zeal and dedication in seeking to strengthen Israel and the cau-e of Jewry in America and throughout the world.

It is fitting that this celebration of the tercentenary of Jewish settlement in the United States should be in honor of this distinguished leader of our community.

Congressman MULTER's career has been marked by achievement and success, and yet you know as well as I, that he will never content himself to sit back on his laurels. plously proclaim that he has done enough, and elect to take it easy from here on in.

His vigor, his vision, and his determination keep him going all the time-always driving for new service; for new help to render to those persons and movements

which he considers deserving.

In every sense ABE MULTER typifies the highest ideals of American citizenship and of the fraternal spirit which Bnai Zion represents. His devotion to Israel is founded upon his firm belief that that republic represents not only a haven for the oppressed, but also a bulwark for freedom in the Middle East. His devotion to our country is clearly evidenced by his dedicated public service and by his untiring efforts-both in Congress and in the community-in the causes of fustice and right.

ABE MULTER is held in the highest esteem by people of all faiths who recognize in him those qualities of leadership which make our country and the world a better place in which to live. He epitomizes the best in Judaism and the best in Americanism because he works unselfishly for both, always in the cause of his fellow man.

I am proud to join with you on this occasion and to congratulate you on your noble work and your guest of honor on his high character and great achievements.

Thank you very much.

REMARKS OF HON. ABRAHAM J. MULTER AT THE DINNER TENDERED TO HIM BY B'NAI ZION AT THE HOTEL COMMODORE IN NEW YORK CITY ON SUNDAY, MARCH 6, 1955

Mr. Toastmaster, distinguished guests, and friends, I am grateful beyond the expression of words for the honor you have bestowed upon me this evening. That so many of you should give up a Sunday night for me is indeed a grand tribute. The fact that these very busy public officials and other distinguished members of our community take the time to grace this dais tonight, makes it more difficult for me to express my appreciation. I owe a special word of thanks to Miss Esther Herlitz, Consul of Israel in New York, to the Honorable Henry M. Jackson, United States Senator from the State of Washington. to our Secretary of State, the Honorable Carmine De Sapio, to the Honorable Arthur Markewich, New York State Supreme Court Justice, to the Honorable Emanuel Celler, Member of Congress who spoke not only for himself but for each of my other distin-guished colleagues from the House of Representatives who joined us here this evening, to your genial chairman Nathaniel S. Rothenberg, to Dr. Harris J. Levine, president of the Jewish national fund, to our good friend Harry Hershileld, and to Rabbi I. Usher Kirshblum.

This lovely bible which you presented to me this evening will be a constant reminder of this event, and I can assure you that modesty will not prevent me from many times reading the beautiful inscription which you have placed therein.

To the many nice things you have said about me this evening may I respond with an old quotation from an unknown author: "There is no limit to what can be accomplished if it doesn't matter who gets the credit."

None of the things ascribed to me could have been accomplished except for the inspiration and the cooperation of you who

are assembled here tonight and of thousands of others who are not with us tonight. The hardest tasks become easy of accomplishment when many willing workers cheerfully lend their help. Any small measure of suc-cess that has been mine as a leader is due

to the many willing followers.

I am particularly touched by the fact that this dinner in my honor is dedicated to the tercentenary of Jewish settlement on this

continent.

Most people overlook the true significance of the settlement of the Jews in this country in September of 1654. It would probably have been of no great historical importance if that small band of J. ws had arrived on this continent to settle down unmolested and pursue their occupations and to worship freely. What makes the event important to our country and to the world is the fact that the then Governor of New Amsterdam refused to allow them to stay. solely because of their religious persuasions, coupled with the fact that the Dutch Government promptly overruled him, and directed that they were to be permitted to remain and to worship their God in accordance with the dictates of their conscience. That was the beginning of the writing of our Declaration of Independence and of our Constitution, which guaranteed religious freedom to all.

I am sure that you will all agree that without freedom of worship there could be no freedom of speech, there could be no freedom of press, there could be no freedom of assembly, and what we too often overlook today is the fact that there can be no freedom of thought without freedom of worship. The danger of conformity is that it necessarily destroys all of these freedoms.

If we agree that an attack upon the liberties of free people anywhere is an attack upon the liberties of free people everywhere then we must of necessity in these trying days turn our thoughts to what is happening

in the Middle East. We wonder why the ceaseless efforts on the part of Israel to bring about peace in that area have thus far been frustrated.

Despite the fact that the initial attack was by the Arab States, and all of the fighting that has continued down through the years has been instigated by the Arabs, Israel has constantly not only offered to negotiate peace directly and offered to permit others to negotiate the peace, but she has continually done things against her own best interest in order to promote better feeling between the Arabs and the Israelis. First she allowed Arabs to return to rejoin their families within her boundaries. Then she allowed Arab infiltrators who had no right to enter the country, to remain there. Then she released to Arabs moneys and properties which Israel had a right to hold as indemnity against the damages caused by Arabs. She has continually offered to cooperate eco-nomically with her Arab neighbors.

The Arabs have repeatedly answered by more killings and more robberies, by armed invasion, by guerrilla warfare.

There is only one way to stop the fighting in the Middle East, and it is not by sending arms to any of the Arab States. The attacks by Egyptians on the United Nations, and the destruction by the Egyptians of United Nations supplies intended for their own use, clearly show that even if the Arab leaders want to prevent violence they cannot control their own people.

The time has come when the United Nations not only must protect itself by the use of force, but it must send armed troops into that area to keep the peace. It will have no difficulty in the State of Israel, or from the Israelis. I am inclined to think, although I have not discussed this matter with any Israeli official, that Israel would welcome such armed intervention by the United Nations. It certainly would relieve

her of the tremendous burden of constant military preparedness.

Such armed intervention by the United Nations forces will keep the Arabs away from Irraeli borders and out of the State of Israel.

Met with such a situation the Arabs will

have nowhere to go except to the peace table. The last few days the papers have given considerable space to the Gaza incident coupled with some condemnation of an attack by Israel upon an Egyptian military installation within Egypt's borders.

Let me briefly review the situation leading

up to this incident. Between August 1954 and February 1955, Egypt invaded Israel's borders with military units resulting in 34 armed clashes. As to 7 of these the United Nations officials said there was insufficient evidence on which to base a finding.

As to 27 of them the Mixed Armistice Commission found that Egypt violated the armistice agreement and each time warned Egypt to cease and desist from future violations. Every warning was ignored.

On January 13, 1955, our United States delegate to the United Nations, Amba sador Lodge, said: "These acts are inconsistent with the spirit and intent of the Egyptian-Israeli general armistice agreement, contrary to the Security Council resolution and a retrogression from the stated objectives to which both sides committed themselves."

This was said immediately after the illegal and wholly unwarranted selzure of the Israell ship, Bat Galim. The ship has not yet been released.

On January 24, 1955, the Mixed Armistice Commission said of the conduct of Egypt: "This aggressive action carried out by a unit of the Egyptian Army is in flagrant violation of the general armistice agreement with Egypt" and "notes with extremely grave concern this aggressive action and calls upon the Egyptian authorities to terminate these aggressive acts against Israel."

Egypt, as one would expect of a civilized nation, bent upon peace, immediately responded. That very night armed Egyptians crossed the Israeli border to Haslosha, 3 miles within Israel, and attacked and pillaged the village and committed wanton murder.

On January 27, 1955, Egypt was again condemned by the Commission, saying that it 'notes with grave concern the serious situation resulting from repeated attacks" and "notes once again with extremely grave concern, that despite obligations imposed upon Egypt by the general armistice agreement and a number of mixed armistice commission resolutions, these penetrations and killings of Israel citizens have not terminated" and "calls upon the Egyptian authorities to put an immediate end to such aggressive acts.

Of course, Egypt complied. Less than a week later she attacked with an armed force Rehovot, 18 miles inside Israel and continued the onslaught for several days.

But Egypt had ample explanation and excuse for these deliberate and well planned incursions and killings. Let me read a few brief excerpts: December 27, 1954, Maj. Saleh Salem, Egyptian Minister of National Guidance, said: "Egypt's policy has not ceased to rest on the principle of 'no peace with Israel' in any form and at any time. Egypt will not make peace with Israel, even if Israel were to implement the United Nations resolutions on Palestine." January 9, 1955, he said: "Egypt will strive to erase the shame of the Palestine war even if Israel should fulfill the United Nations resolutions. It will not sign a peace with her. Even if Israel should consist only of Tel Aviv, we should never put up with that."

An interesting sidelight is that the major's name translates from the Arabic to the English as Prince of Peace.

Two other answers came from the Egyptian press, as follows:

From Al Gomhouri (an official publica-tion): "Egypt and the Arabs must turn, in the name of humanity and its culture, to all nations of the world who will aid in wiping Israel off the face of the map." And from Saut El-Arab (the Voice of the Arabs): Egypt sees Israel as a cancer endangering the Arab people. Egypt is the physician who can uproot this cancer. Egypt does not for-get that it is her obligation to take revenge, and she is mobilizing all her forces in anticipation of the hoped-for day."

Statesmen can sit calmly in their secluded debating chambers and say they condemn Israel's massive retaliation or her hot pursuit. Sitting with them, you and I might do lil-ewise.

But transplant any of us to Israel's soil and under similar trying circumstances not a man, nor even a woman, would sit idly by and watch our neighbors, even less our families, set upon by barbarians attempting their annihilation.

You can't stop that kind of dreadful business by arming the Arabs.

Words, warnings, and condemnations have not done so.

Only a strong police force can do so. I apologize for striking so serious a note this evening, but I am genuinely alarmed.

Wherever the Jews have been driven, wherever they have wandered, they have carried in their hearts and on their lips they have taught by word and by deed—the key word of their Torah, their Bible: Sho-

lom-peace. They are being answered again by fire and

by sword.
Unless the free world does something about it, and at once, our entire civilization will come tumbling down around us like the Temple of old around Samson.

Thank you for listening to me, and, again, thanks from the bottom of my heart for the great honor you have bestowed upon me tonight.

The Right To Work Versus the Closed Shop

EXTENSION OF REMARKS

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. SMITH of Kansas. Mr. Speaker, there has been a great deal of comment in the last month in regard to the merging of the AFL and CIO. There is also underway in many States legislation with regard to the so-called right-towork bill.

Labor bosses have been loud in their abuse of these laws. Many advertisements have been circulated in many papers over this highly controversial issue. Much pressure is being exerted on Congress to repeal that section of the Taft-Hartley law which permits the States to pass right-to-work laws.

There recently appeared in the Christian Democrat, a monthly which is published by the Catholic Social Guild of Oxford, England, an article about the Right To Work Versus the Closed Shop.

I deem that it is most timely to present this point of view. This article is reprinted from a report by the National Economic Council, of New York, and reads as follows:

The thorny question of the closed shop or union shop is again to the fore. Father Charles Pridgeon, S. J., dealing with the closed shop in his book Opportunity for Trade Unionists, says that a moral issue of first importance is raised, namely, the freedom of the individual, which is intimately bound up with his freedom to join or not to join a particular trade union.

One is struck at the very outset by the fact that, though the unions, like the Catholic Church, desire 100 percent membership, the church would never try to force people to become Christians; yet the unions themselves, by following a closed-shop policy in certain areas, are doing exactly that—forcing people who do not wish to be trade unionists into a position of having to become so if they want employment.

One of the arguments put forward in support of the closed shop is that, since all workers benefit from union activities, therefore it is only right and proper that all should pay union contributions.

This argument, however, is fallacious for only union membership can provide full union benefits; those who are not union members do not in fact receive these benefits.

Moreover, the argument in favor of the closed shop, flowing from the fact that nonunion members receive increases of pay and better working conditions as a result of union activity, is of purely secondary importance.

The job of the union is the welfare of its members and if, in the process of improving pay and conditions for its members, others benefit as well, then that is quite incidental to the aims of the union. Many people benefit from the activities of the various political parties, but who would support compulsory membership of a political party?

Further, we all benefit from the Armed Forces in peace and war, yet many trade unionists firmly believe conscription to be wrong and unnecessary today, whilst agree-

ing to its need in time of war.

The same argument can be used with regard to the closed shop. In some areas and on some occasions its enforcement may be necessary and justifiable, but, surely, the taking away of the liberty of the individual which this implies is a very serious matter and, therefore, a particular situation must be urgant and grave to warrant such a demand. It may indeed be warranted in a particular industry or area at a particular time; but as a general rule binding all workers irrespective of circumstances, the closed shop would seem to be quite uncalled for.

And who can say that conditions today in this country justify the existence of the closed shop? Unions have greater prestige and strength today than ever before in their history. Agreements between unions and employers are honored on the whole and, if some small firm falls to do so, both sides of industry can now bring pressure to bear on the delinquent.

The main danger of the closed shop is not so much the added power it places in the hands of the union, but, rather, that which is given thereby to the shop steward; for, in a factory, it is the shop steward, not the branch official of the union, who is the holder of real power. Under such circumstances, once the closed shop is enforced, the union member is left with little safeguard against shop steward victimization.

This can be illustrated from many occurrences in closed-shop factories in this country today. In one such factory a man started work at 7:30; at 10 o'clock a shop steward discovered that he was a branch secretary of another union; at 11 o'clock he was informed he as unsuitable and given a week's pay in lieu of notice.

At another factory a man was discovered in possession of propaganda leaflets for another union. He "left" the factory next day. Again, a man who had been in a department of a factory longer than anyone else felt he was not getting his fair share of piecework and complained to his shop steward and foreman about it. As nothing was done, he exceeded the unofficial union level of earnings when on piecework in order to maintain his own earnings. His shop then refused to work with him and pressure was successfully brought against the management for his transfer. Within a fortnight he had left the factory.

Undermining the authority of the convenor or shop steward, which can be interpreted in many ways, has resulted in at least two men being "branched" (that is expelled from the union) and then as nonunion members being forced to leave their place of employment. It might be argued that these men could always appeal to the branch meeting, but what chance of a fair hearing have they when so few turn up to it in view of the fact the shop steward or convenor has so much influence with union district officials and, moreover, is able to pack a branch meeting with his supporters,

Those who are so ready to advocate a closed-shop policy should realize that they are putting into the hands of men, untrained and ill-equipped, the power to deny to another the right of employment.

Neither the unions nor the shop stewards are part of this country's judiciary, yet they have given to them, once the closed shop is enforced, the equivalent of great judicial power.

It is a power which, in the hands of unscrupulous men, can be abused most easily to the point of tyranny.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1933).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, scc. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the Congerssional Record is located in Statuary Hall, House wing, where Mr. Frank Brodle is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 63 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable). 3 copies of the daily RECORD, of which I shall be delivered at his residence, I at his office, and I at the Capitol.

COVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the dally RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Centennial Founders' Day Dinner, Michigan State College

EXTENSION OF REMARKS

HON, CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1955

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address on the occasion of the centennial founders' day awards dinner of Michigan State College, February 12, 1955. The address was delivered by the Honorable John A. Hannah, president of the college, and formerly Assistant Secretary of Defense for Manpower and Personnel. Dr. Hannah is one of our Nation's leading educators.

I have been informed by the Public Printer that the cost of printing the speech will be \$180. Notwithstanding this fact, I ask unanimous consent that the speech be printed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNFINISHED WORK

Let me begin by expressing the appreciation of all of us at Michigan State College to those who have helped us celebrate the most important anniversary in the history of our university. We extend our grateful thanks to all of you—to our convocation speaker and his charming wife, who have come so far to be with us; to those who have done us the honor of accepting degrees; to those who are to receive awards here this evening; to the representatives of our sister universities and colleges and the learned societies; to our other honored guests from government, business, industry, agriculture, education, the press and radio; and to those of our own staff and faculty who have worked and planned to make this a memorable occasion for everyone.

The gathering of this large group of distinguished persons is bound to have a stimulating effect upon those of us who have participated in these ceremonies honoring the man who originated and the men who have perpetuated a great new force for good in American society.

This event has an importance far transcending that normally attached to the celebration of a university's centennial. Despite our pride in our institution, and much significance as we attach to this date we recognize that many of you were impelled to come to East Lansing and take part in today's events by emotions besides your respect for Michigan State College. trying to make this whole centennial year more than a prolonged celebration of an institutional centenary; we recognize that we are observing, not the 100th birthday of Michigan State alone, but the centennial of putting into practice of a great, a new, a revolutionary idea in higher education. honor the pioneers of Michigan who conceived the idea of a new kind of education

and founded this college in the woods near the State capitol, but at that time 27 miles from the nearest railroad as the working embodiment of their hopes and ambitions for a better tomorrow and a better world. We recognize that they were but the intellectual and spiritual heirs of hundreds and thousands of men and women who had been thinking and working over many decades to devise an effective educational instrument with which to accomplish widespread and increasing good for marking

increasing good for mankind.

We revere men like John C. Holmes, and Bela Hubbard, and Joseph Williams, and Kinsley S. Bingham, and the other stalwarts of early Michigan. An eternal debt of gratitude is owed to them for their courage and foresight in establishing the Michigan Agricultural College as the first of the people's colleges. But on this Founders' Day we honor a much larger company, including both men with names distinguished in English and American history, and men whose

names are now forgotten.

Fortune chanced to favor Michigan as the place in which the seeds scattered so widely in the years before 1855 were to germinate and to take root first. Conditions were favorable in many other places as witness the number of basically similar colleges established elsewhere within a few short years. The best evidence is in the fact that only 7 years after the Michigan experiment has been undertaken, the Morrill Act creating the national system of land-grant colleges was passed by a Congress preoccupied with the problems of a terrible civil war, and signed by a President weighed down by burdens such as no other President has ever been called when to been

called upon to bear.

On this occasion it seems appropriate to cite a few of those from whom our Michigan pioneers must certainly have acquired inspiration and encouragement, men like John Milton who, writing about education more than 3 centuries ago, gave a definition of education which remains one of the best ever proposed. His definition, you will recall, was

this:

"I call, therefore, a complete and generous education that which fits a man to perform justly, skillfully, and magnanimously all the offices, both private and public, of peace and war."

Modern educators—or some of them—might criticize education as Milton conceived of it because it would not be pupil-centered, but I think we must give credit to Milton as one of the founders because he was interested in preparing men for full participation in the society in which they lived, which certainly is a traditional objective of education at the land-grant colleges and universities.

There are many others deserving of mention: The leaders of the dissident religious sects in colonial days which looked upon widespread literacy as a barrier against retreat into narrow dogmatism; the founders of Harvard and other early universities with their concern that the colonies have an educated clergy; Jefferson with his broad liberal ideas of education, and his labor of love in establishing the University of Virginia as an institution far advanced for its day; the unrecorded thinkers and doers who brought William E. Channing, an outstanding pulpit orator of his day, to declare in a sermon:

"The grand doctrine, that every human being should have the means of self-culture, of progress in knowledge and virtue, of

health, of comfort, and happiness, of exercising the powers and affections of a man, this is slowly taking place as the highest social truth."

Men such as these deserve to be honored as Founders of the new kind of education which became practically available just a century ago. There are many others, including Justin Morrill, the son of a Vermont blacksmith who was determined to make available to the children of other poor men the education he had been denied; Abraham Lincoln, the son of a restless backwoods farmer, who knew from his own bitter experience the shortcomings of our educational system from the viewpoint of the common people; these and many more deserve their place on the list of Founders to whom we pay tribute tonight.

I am sure you agree that it is by the happiest of coincidences that the day of this celebration should fall upon the birthday of Abraham Lincoln, the man of the people, who must have taken deep personal satisfaction in setting his pen to the Morrill Act, knowing full well that he was performing a great act of emancipation for the common people from which he had come.

It is one of the strengths, and one of the glories, of the land-grant college tradition that this new kind of education was developed and made available in response to a persistent public demand. We have in history no comparable example of an educational agency deliberately designed, created, and put into use specifically to do the will of the American people, to serve them as they wanted to be served. We in the landgrant colleges and universities would do well to remember that our institutions are the creatures of the people in the most specific sense, and I believe that history records that they have prospered and retained the affection of the people in direct proportion to their success interpreting the changing needs of the common people of America, and in serving those needs as the people themselves want them to be served.

The temptation on an occasion such as this is to recount the achievements of the century now passed into history, and to revel in the satisfaction which comes from association with a successful enterprise. But a prolonged review would be out of place to this audience which knows as well as, or better than I, the many magnificent accomplish-ments of higher education in America. But perhaps it would not be out of place to mention briefly some of the accomplishments of our society toward which higher education in general, and the land-grant colleges in particular, have contributed heavily in the century since 1855. We would not all agree in every particular in preparing such a list but I think we could single out at least three achievements upon which we would

I am sure no one would quarrel with the first, which is the achievement of spectacular material gains, a higher standard of living than man has ever known. We would all agree that these sectacular gains came within our grasp as a people only when we decided to make the advantages of education available on the broadest possible scale. Thereby, we multiplied the native skills of the American people and made possible the miracles of invention and mass production with which we constantly astound the rest of the world. We could not have achieved

these every-day miracles had we not opened the doors of educational opoprtunity wide, thereby creating not alone the trained working force required, but also the desire for the goods and services produced. This we have done by broadening perspectives and stimulating the ambitions of millions of people.

The application of science to the art of agriculture has been an underlying factor in our industrial growth. As long as the great majority of our people had to be employed in the production of food and fiber we could spare few hands for the mills and shops. A century ago, something like 85 out of every 100 workers were necessarily engaged in agriculture, leaving only 15 to do the rest of the Nation's work. Today, thanks to the application of science, only 12 workers out of each 100 are needed on the farms to grow the food and fiber for the rest of our people. The other 88 are free to man the machine and sell the goods and provide the services which spell prosperity, comfort, and even luxury by standards elsewhere, for the people of the United States.

How great has been the contribution of the land-grant colleges I leave to your own estimation. Certainly they deserve of the credit in the field of agriculture, and a good share in the field of engineering and

the associated industrial arts.

A second achievement to be claimed for the century just ended is the achievement of a high degree of social mobility. In appraising this contribution of education, we must remember that, as President Conant pointed out this afternoon, an outstanding feature of the American system has been its insistence upon equality of opportunity. was to achieve that equality that the founders established here the revolutionary college which was to grow into this university. They, and others of like mind, were determined that the sons and daughters of the well-to-do were not to have the advantages of higher education to themselves alone: they established as a major goal the affording of equal opportunities to the children of the industrial worker and the farmer as well.

As a result, for decade after decade, the children of the poor and the well-to-do have attended primary schools, secondary schools, and colleges and universities together; they have studied together, recited together, played together. Day after day, they have participated in repeated demonstrations that good marks and diplomas do not depend on wealth or social position, but depend upon the ability and the ambition of the individual. Generation after generation of young Americans have grown up with the certain knowledge that they need not remain in the economic or social classes to which they were born; they could climb upward as far as their intelligence and initiative could carry them, and by the same token could fall as far as their sloth and irre-sponsibility allowed. There has been no artificial traditional limit upon opportunity; the transition from rags to riches has long been commonplace in America.

In this healthy climate we Americans have nurtured and developed a unique way of life. Almost unnoticed either here abroad, we have come closer to achieving the classless society of broad equality among people than have those nations which have sought to build such a society by law and dictatorial decree. For this magnificent achievement, the American system of edu-

cation deserves much credit.

A companion achievement, closely associated with that of social mobility but deserving mention as the third to be singled out this evening, is that of political stability. We have demonstrated, by millions of examples, that our political and social system does make it possible for a man or woman to achieve a full and happy life. We have examples by the millions that caste and class and sect are meaningless terms for those with intelligence and ambition, and in the fullness of time, we will be able to say with equal pride that color, too, has ceased to be an unfair handicap for the able man. This has kept us remarkably loyal to our basic political and economic system.

Here in these facts we have our strongest defense against the subversives of either extreme who would pervert our system of living together to suit their twisted minds and unholy desires.

We dare not claim that more and more education is the only cure for the ills of the world. We can, however, say with pride that by our consistent efforts to insure equality through education, we have woven unequaled strength and stability into the fabric of American society.

But enough of looking to the past. It is all too easy to take too seriously the flattering things we say about ourselves, and about the accomplishments of education in general, and the land-grant philosophy in particular. The coins of yesterday will not pay the bills of tomorrow; indeed, we need to find out whether they will still be legal It is in the future that we must do the unfinished work to which our centennial theme dedicates our efforts.

Peering as best we can into the cloudy future, what are likely to be the needs of the society which education is pledged to serve? Does the fundamental philosophy of the past as it has been molded and reshaped by events of a century still qualify as the rule by which to guide our actions?

In assaying the ability of our fundamental

philosophy to meet the needs of the future. let us apply the tests suggested by the three major achievements we have claimed for

higher education in America.

First, will we continue to need trained people, and an ever-increasing proportion of trained people in our population? The answer is most assuredly "Yes." We are in a bitter struggle for survival with a politicaleconomic system which has placed high stakes on education as a major device with which to gain its nefarious ends. We have been warned repeatedly that Communist Russia is training more scientists than we in the hope of eventually reversing our relative positions in the scientific fields, and thus gaining mastery over us through utilization of horrible engines of war. Our very will to survive dictates that we keep the lead in this nightmarish race until such time as mankind's good sense works out a scheme to outlaw aggression, war, and this constant flirting with mass destruction.

Moreover, our society grows steadily more complex and complicated. There have never been too many educated people; now we face the challenge to train enough merely to keep this ponderous and complicated machine moving efficiently. Certainly our expanding economy, judging from past experience, will impose a demand for increasing numbers of young people trained in the tra-ditional professions and vocations, and in many of which we do not even dream today,

Yes; we certainly can expect that the fu-ture will find use for the young people trained by our colleges and universities to serve in a wide variety of fields; here we are on sure ground.

Next, will we need to continue to strengthen our social structure to give it still more mobility and adaptability to meet changing conditions? Here there is much to be done; not yet have we achieved all that we should achieve, not so long as we have a single person in need of medical care beyond his resources, a single mistreated child, a single family deprived the the heritage of hope. As yet, equality of opportunity is still no more than the goal toward which we have taken tremendous strides. As yet, too many qualified young men and women find educations and the choice of life work beyond the possibility of realization; too many barriers of race and creed remain; intolerance and bigotry have not been banished from the Here, there is much for education to do; it is for us to hope that the record of the past will persuade the future to entrust to our institutions the responsibility of completing the work thus far advanced.

It is essential that the movement go forward, for now not our eyes alone are focused on our work; throughout the world, eyes are turned upon America to see if she is qualified for the role of leadership to which she has fallen heir. Alien eyes watch closely to see whether we make steady progress in solving our own social problems. What other nations see will go far in determining whether they finally accept our leadership, or reject the philosophy of freedom and opportunity we offer to them, and turn elsewhere for leadership. Only people with an educated understanding of our strengths and weaknesses and with a will to make the improvements we need, can guide America through this critical period. I am sure you agree that such people can best be produced in large numbers in our colleges and universities: the question for us is whether we can produce

them in the numbers required.

In the area of political stability, we are not as sure of our position. We must honestly face up to the fact that there has been some loss of confidence in colleges and universities in recent years. I feel that this results in part from our colleges and universities losing confidence in themselves, in their fundamental aims and purposes. If this were not true, we would not hear so much talk about the "climate of fear" in which some faculty members profess to find themselves. From my observation, this condition about which they complain has been grossly exaggerated. True, there have been attempts at political intimidation. But on the other hand, there have been some embarrassing examples of bad judgment and headstrong insistence on academic rights without much thought about academic responsibility, and the two have just about balanced each other, the only net result being that there has been planted in the public mind some suspicion about the essential integrity of colleges and universities.

Actually, this suspicion, if it does exist. might be attributed in part to a misguided attempt to blame someone for the feeling of insecurity which seems to be widely prevalent. The psychologists may not agree, but it appears to me that American people have been caught up in a net of frustration out of which they cannot find their way easily. Perhaps hurt bewilderment would be a more accurate description of their emotional condition. At any rate, they look at the tremendous expenditures in blood and treasure in two world wars and a localized but bitter war in Korea, at the billions they have sent overseas to help friendly and erstwhile enemy countries alike restore their economies, at the experts they have commissioned to help other countries move a little faster along the road to the good society, and what do they have to show for their efforts?

After making all of these expenditures, what do they see in return? The avowed enmity of a large portion of the world, the reluctant friendship of a much smaller portion, the close alliance of a still smaller portion, and the true understanding friendship of only a very few of the world's people. Knowing their own motives to be primarily altruistic, no wonder the American people are frustrated or bewildered. To be hated, pitied, tolerated—this, for Americans, is poor return on a colossal investment.

They have found, in short, that our wonderful shiny machines have not won for us the respect and affection of the world. They have learned that all of our wealth cannot buy us the peace and security we crave. Having devoted so much of our time and energy to the development of our great industrial system and the improvement of our standard of living, it is no wonder that we feel insecure when we find that we cannot depend on material possessions alone to give us our hearts fondest desires.

Who is to blame if Americans have been led to place too much importance on material possessions, to depend too much upon science to solve all the problems of the world? is not the time or place to assess blame, except to say that colleges and universities, as the source of many of our scientific miracles, and as pretenders to intellectual leadership, must accept their share. It is axiomatic that he who claims the credit for a particular plan or process is liable for blame if the plan fails or the process goes awry. It should not surprise us when those who sang the praises of the scientists for making all of our industrial and agricultural wonders possible are quick to say that those same scientists are to blame when they find that with all our worldly goods, we are still discontented and insecure.

The national malady of insecurity should be a matter of concern for our colleges and universities. We have as our responsibility the training of the leaders of this country; it is we who have encouraged them to take the materialistic view of life. As an example, it is we who have countenanced the stripping of the cultural subjects from the scientific curricula and graduated engineers who knew engineering and little else, biologists who knew biology and little else, chemists who knew chemistry and little else, and narrow specialists in many fields. The landgrant colleges, with their strong technological traditions, have been as guilty as any in this distortion of education.

If our national feeling of insecurity can be attributed to a slackening of national reliance upon material things, then there is great hope for America, because our churches and our educational system can do something to remedy the situation. In these times when we find that material advantages do not automatically bring peace and security in their wake, perhaps we can bring the American people to agree with Emerson that "a rush of thoughts is the only conceivable prosperity that can come to us."

In view of the conditions of the day and the prospects for the future we are forced to the conclusion that a considerable revamping of our educational machinery and a revision of our attitudes are desirable if we are to meet successfully the challenges that press upon us. We must come back to the realization that colleges and universities, public and private alike, are operated and supported, not alone for the benefit of the students, as individuals, but for the good society will reap from having those students trained for lives of greater usefulness.

To accomplish this end, it is essential that the devotees of the liberal arts tradition and the protagonists of the practical compose their differences once and for all, each conceding that the other has something good to offer, and that education cannot be complete without both.

My plea is for a definition of education to fit the times. Let me suggest that an educated man in today's world is one who is trained and conditioned to be an effective citizen. He need not necessarily be a man who has attained wealth, or outstanding professional distinction, or high public office. Indeed, he may not be known beyond the borders of his own community.

But he will have been educated to contribute to the economic well-being to the limit of his creative and productive skills; he will have been educated to contribute to social stability by his understanding of the world around him and by his tolerance for the rights and opinions of others; he will have been educated to contribute to the moral stability of his Nation by his acceptance and practice of such fundamental principles as personal honor and integrity, belief in a good God, and government by law instead of by men; and he will have been educated to contribute to the political stability by his reasoned, thinking approach to public issues, his rejection of demagogic appeals, and his ability to lead or to follow with equal intelligence.

If we keep some such definition in mind, we as educators will not think so much in terms of graduating engineers, or accountants, or doctors, or agriculturists, or lawyers, or teachers, as of graduating educated men and women, trained to be effective citizens of our democracy and of the world, men and women ready and willing to assume leadership in a Nation crying for more intelligent direction and guidance in a world full of confusion, insecurity, and doubt.

It is both disconcerting and humbling to realize that the founders we honor on this occasion saw clearly the need for education of this kind, and spoke plainly to those who would heed. From the numberless pages of reference I draw but three abbreviated examples of their wisdom in charting the course of American education.

The first is the familiar injunction from the Ordinance of 1787 establishing the Northwest Territory, of which Michigan was once a part;

"Schools and the means of education shall forever be encouraged as a means of preserving the lasting values on which successful popular government are built."

The second is the equally familiar statement from the Morrill Act providing for the liberal and practical education of the common people in the several pursuits and professions of life.

The third is from a source less familiar to most of you. It comes from the writings of Bela Hubbard, one of the Michigan farmers who worked successfully to establish the first agricultural college here just 100 years ago. After describing the technical courses which should be offered in this new kind of college, that backwoods farmer added this significant word of caution: "Nor should the claims of literature and the fine arts be wholly neglected, as tending to polish the mind and manner, and add greater luster and dignity to life."

How wisely they thought. How plainly they spoke. How well advised we of this sophisticated modern age would be to take their counsel as we move into the second century of service to the American people. We could pay these Founding Fathers no greater honor than to acknowledge the wisdom of their words and the clarity of their vision. Armed with such wisdom, warmed by such understanding, we can march unafraid to meet the challenges of the unknown future, sustained by the faith that as we serve God's children we perform the will of God.

Civil Trials for Soldier Crimes

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, March 16, 1955

Mr. WILEY. Mr. President, on February 12, 1955, there appeared in the Christian Science Monitor an article entitled "Civil Trials for Soldier Crimes," written by Neal Stanford. It is an enlightening article, especially in view of widespread misrepresentations which

have been made regarding the status of forces agreement. This article might well be read by all of us with profit.

Also, there was published an article entitled "Pity the Poor Facts," written by Roscoe Drummond, in the New York Herald Tribune of March 6, 1955, in which he discusses clearly the misrepresentations in relation to the case of Pvt. Richard T. Keefe, which has been heralded all over the country. The facts about the case are clearly stated in the activation. I say again both of these articles can be read with profit by those who want the truth and the facts.

I ask unanimous consent that both articles be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor]

CIVIL TRIALS FOR SOLDIER CRIMES

(By Neal Stanford)

Washington.—This is a report on the Status of Forces Agreement and the most celebrated case to arise from it—the Richard T. Keefe trial. It comes from the judge advocate's office of the Army and is essentially a verbatim report of the trial. It is reported in detail because of the considerable publicity of this particular case and frequent charges that the treaty legislates away the rights of American citizens.

The treaty is a product of the cold war, of a situation that calls for the stationing of American military personnel abroad in so-called peacetime. One article of the agreement covers the question of criminal jurisdiction over troops. In substance it provides that when a soldier commits a crime in the performance of duty, he is triable by the courts-martial of his own country, but that for any crimes committed when off duty he is subject to the jurisdiction of the courts of the country where he is stationed.

This agreement is reciprocal—that is, the rights which one of the NATO nations secures for its troops abroad, it must give to foreign troops on its own soil.

The Keefe case came before the Assize

The Keefe case came before the Assize court in Orleans, France. The substance of the case, which Private Keefe admitted as true, follows:

"Private Keefe and Private Scaletti arrived in Orleans together, coming from a period of confinement in a United States guardhouse in Germany. They went to the center of Orleans without permission. After drinking various alcoholic beverages, Keefe lost all but 2,000 francs of his money in a dice game. It was then after dark, and both decided to go to Paris.

"They entered a taxicab with the purpose of getting out on the main highways to hitchhike a ride to Paris. About 1 mile out they had the cabdriver, Fernand Henault, stop the cab. Scaletti then got in the back seat and removed two shirts from their baggage. Scaletti placed his shirt around the driver's neck and Keefe placed his in the driver's mouth. Keefe struck the cab driver. Keefe and the driver rolled out onto the ground.

"Scaletti started the cab and both got away. They then drove to Paris where they abandoned the taxi. After several days in Paris they started hitchhiking south. They were arrested at Nogent-le-Rotrou by the French police.

"The victim, a 65-year-old taxicab driver, was incapacitated from work for 30 days. He had an injured nose, his false teeth were broken, and he had numerous cuts and bruises."

"The jurors deliberated for an hour. Under the French penal code the important questions were: Was the crime committed at night? On a public highway with violence? With violence that left injuries? The answers to all the questions were in the affirmative. The penalty was set at 5 years' seclusion—the minimum sentence for such a crime. The maximum could have been life imprisonment."

This is the case that is being widely advertised as an example of the American Government's sacrificing the constitutional rights of its soldiers abroad by treaty. The fact, however, is that, if there were no treaty. American troops abroad would be subject to foreign courts for crimes committed when on duty as well as when off duty.

Actually what has happened even under this Status of Forces Treaty is that nearly 9 times out of 10, even in cases of American service personnel abroad committing crimes when off duty or AWOL, the local authorities have turned the accused over to American

military authorities for trial.

During the first year of the treaty there were roughly some 2,000 American soldiers accused of crimes over which local courts in NATO countries had jurisdiction. Of these nearly 1,800 were surrendered to United States jurisdiction. Of the remaining 200 only 42 were sentenced to imprisonment. Of those 42 sentenced 33 got suspended sentences. Thus only 9 American soldiers out of some 2,000 were actually imprisoned abroad after trial by local courts—and none for more than 5 years—which was the sentence in the Keefe case.

The Status of Forces Treaty passed the Senate 72 to 15. It was supported by President Eisenhower, Gen. Omar Bradley, then Chairman of the Joint Chiefs of Staff, by Adm. Arthur W. Radford, current Chairman of the Joint Chiefs, and by such Senators as William F. Knowland, Republican, of California; Alexander Wiley, Republican, of Wisconsin; Leverett Saltonstall, Republican, of Massachusetts. But it was attacked then, and also during the Keefe case, as a miscarriage of justice, a denial to American soldiers of their constitutional rights.

Generally it can be said that the local foreign courts are more lenient in their sentences of American service personnel than a United States court-martial would be. In the Keefe case, the 5-year sentence was less severe than usually handed down by United States courts-martial for comparable of-

fenses.

[From the New York Herald Tribune] PITY THE POOR FACTS

(By Roscoe Drummond)

The Supreme Court decision in the case of Pvt. Richard T. Keefe, an AWOL soldier convicted in a French court of assault and theft, will probably not silence the extremist advocates of the Bricker amendment to restrict the treatymaking powers of the President and the Senate.

For several months these advocates have been recklessly using the Keefe affair to try to whip up public opinion to believe that the Government has given away through treaty, personal rights guaranteed by the Constitution. A typical Bricker-amendment argument went this way:

"The question is: Can a foreign government—in this case France—arrest an American GI, try him before a French court and give him the works (solitary confinement, 5 years of hard labor and possible exile to a French penal colony) for what would be a

minor offense under American law?"

Actually the French court did none of

these things.

A facet of this case reached the Supreme Court because Mrs. Gladys Keefe appealed to the American courts to hold that the Status of Forces Treaty, recognizing the right of France to try in peacetime an American soldier for a crime committed against French law, deprived her husband of his constitu-

tional protection. The Federal court of appeals ruled that Private Keefe's constitutional rights had not been infiringed, and the Supreme Court has now upheld this verdict.

The purpose of this column is to try to set out, as faithfully as possible, the facts which have been distorted with such abandon by those who use the case to bolster their argument that the Senate cannot be trusted to use its treatymaking powers wisely.

The offense: The assertion is repeatedly made that Private Keefe committed only a minor crime; that he simply purloined a French taxicab; that, as one writer put it, he was engaged in a bit of "high jinks." The evidence, which the soldier admitted in court, was that Keefe and another American soldier entered Orleans after completing a period of confinement in an American guardhouse in Germany. They got drunk and lost most of their money in a dice game. At about midnight they went to a railroad station, hired a taxi driven by a 65-year-old Frenchman, and when they were several miles from town, they attacked the driver, beat him until he was unconscious, dumped him on the road, and drove to Paris, where they left the cab.

The trial was observed by a representative of the United States Army, who reported that the accused "enjoyed every safeguard of a fair trial."

The sentence: The French criminal code provides that if a theft is committed (1) at night, (2) by more than one person, (3) on a public highway, and (4) with violence that leaves injuries (the French taxi driver sustained a badly damaged nose, broken false teeth, cute, and bruises requiring hospitalization and was incapacitated 30 days), the minimum penalty is 5 years, the maximum life imprisonment. Private Keefe and his colleague were given the minimum sentence. Recent sentences against French persons for similar offenses have ranged from 10 years

The treaty: When NATO was created the 14 member nations had to determine the status of foreign military forces in friendly territory in time of peace. The United States agreed that if an American soldier commits a crime in the performance of duty, he is tryable by his own courts-martial, but that for crimes committed off duty and off post, he is subject to the courts of the country in which he is stationed. The same applies to foreign troops in the United States.

The NATO countries have applied this provision of the Status of Forces Treaty with great tact and restraint. In a recent 6-month period there were 1,987 American soldiers accused of crimes over which the local courts in NATO countries had jurisdiction. Of these, 1,787 were surrendered to United States military jurisdiction. Only 200 were retained in the local courts and, of these, only 42 were sentenced to imprisonment, sentences on 33 of the 42 were suspended, and only 9 American soldiers were actually imprisoned.

These are the facts. They do not seem to me to support the proposition that the Constitution needs to be changed to keep the President and the Senate from giving away American rights,

Red Indoctrination of American Troops

EXTENSION OF REMARKS

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES
Wednesday, March 16, 1955

Mr. SCHOEPPEL, Mr. President, there was published in the Saturday Evening Post of February 26, 1955, an article entitled "This Was Queer Stuff To Give the Troops." I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WAS QUEER STUFF TO GIVE THE TROOPS

It is a grimly ironical fact that many of the Communist Party's members, fellow travelers, and sympathizers were led toward communism by their own Government during the Second World War. They fell victims to indoctrination by Reds who infiltrated the Army's Information and Education Division and then dosed the troops with pro-Communist pamphlets and lectures.

The Information and Education Division was meant to enlighten the GI's and bolster their morale. But Communists could not be kept out of the I. and E., despite the efforts of some of its personnel who tried to check the danger. The White House insisted that Reds were harmless and must be treated by the Armed Forces as if they were liberals. As a result, some of the weekly Fact Sheets or Army Talks, issued to discussion leaders, were dripping with propaganda in praise of Stalin and the Chinese Communists.

Is it any wonder that many of our soldiers, having been sold this bill of goods, found it hard later on to get unsold? Most of the harm was done to the troops who were guided by discussion leaders in the weekly orientation sessions. But some noncommunist discussion leaders were themselves victimized. one of them, Benjamin H. Haddock, now an ex-communist, has testified before the House Un-American Activities Committee: "I became interested in the Communist Party through men who were in the Information and Education Section of the Army."

Haddock, a college graduate, took part in the invasion of the Gilbert Islands, and afterward volunteered to do I. and E. work because life there was so boring. Other I. and E. men there and later in Hawaii converted him to communism. So, on the day after his discharge from the Army, Haddock "walked into the (Communist) party office in San Diego and asked for an application form and signed it." Later he woke up and quit the Reds.

At Camp Upton, N. Y., a prominent Communist Party official, Simon W. Gerson, came back from overseas service and was made the "administrative noncom" in charge of I. and E. work. Mind you, this wasn't a case of concealment. The Army knew that Gerson was a Communist leader. He had been arrested repeatedly in the previous 17 years. He had been city hall reporter for the Daily Worker and later had become the center of a long dispute in New York, when the president of the Borough of Manhattan-Stanley M. Isaacs, a Republican—appointed him his confidential assistant and press secretary. Yet after all this notoriety, the responsible officers at Camp Upton picked Gerson as their boy.

In Washington a psychiatrist, Lt. Col. Julius Schreiber, was Chief of the Programs Section of the I. and E.'s Orientation Branch. He had charge of planning orientation programs for camps, ports of embarkation, transports, and overseas Army installations.

From 1933 till the war, Dr. Schreiber was a medical officer in the Army Reserve. Besides, from 1933 to 1936 he was the doctor at a Civilian Conservation Corps camp. Yet he refuses to say whether he was a Communist Party member from 1933 to 1941. He says he has not been a member since 1941, but as Chief of the Programs Section in I and E, he lectured weekly to 93 officers.

Among the officers whom Lieutenant Colonel Schrieber personally brought into I. and E. was Stephen M. Fischer, a San Francisco

newspaperman. Fischer told the Jenner committee that he joined the Communist Party in 1940, but left it in the fall of 1941. The Army described Fischer's duties as follows: "He recommends and initiates subject matter, directs and conducts research work, and does actual writing of weekly Army Talk fact sheets and orientation discussion guides for distribution to all Army units in continental United States and to all overseas theaters, * * * This officer's duties carry great responsibility because of the global use to which the materials are put. And this great responsibility was entrusted to a former Communist.

Despite the official excuse that the Kremlin was our ally, there could never have been such a flow of poison from the I. and E. if the Reds had not had a large hand in perparing the stuff and distributing it to the GI's.

Restriction of Imports of Certain Commodities

EXTENSION OF REMARKS OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Wednesday, March 16, 1955

Mr. DIRKSEN. Mr. President, on the 2d of March 1955, I joined with the Senator from West Virginia [Mr. NEELY], and other Senators in offering an amendment to House Resolution 1. The Governor of Illinois addressed a letter to me on the subject, and I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SPRINGFIELD, ILL., March 10, 1955. The Honorable Everett M. DIRKSEN, The United States Senate,

Washington, D. C. DEAR SENATOR: It has come to my attention that you have joined with Senator NEELY, of West Virginia, and others in offering, under date of March 2, 1955, an amendment to House Resolution 1, having as its purpose the restriction of imports of commodities whenever such imports threaten to retard the domestic development and expansion or maintenance of domestic production of natural resource commodities or other commodities which the President shall determine to be essential to the national security, and also to establish specific limitations upon the importation of crude petroleum and petroleum products and residual fuel oil.

The people of the State of Illinois are vitally concerned by the subject matter of this proposed amendment, inasmuch as large segments of our population and industrial areas are vitally interested in the production of oil, coal, and fluorspar. It cannot be questioned that the production of each of these resources is essential to the national

At the December 1954 meeting of the Interstate Oil Compact Commission, held in Chicago, December 2, 3, and 4, I made this statement, which I desire to quote:

"It is further in the public interest that we consider at least two of the vital problems now confronting the oil-and-gas industry in the United States. I say it is in the public interest because I know of no other industry which is more vital to our national security and constantly expanding economy. Further, I know of no industry which, in the past, has surpassed this industry in discharging its duties and obligations in supplying the requirements of our Nation, both in times of peace and in war. Yes; even to the extent of providing adequate producible reserves to meet any foreseeable emergency. All of this has been accomplished by a competitive industry, under a free economy and subject only to reasonable regulation under the provisions of the conservation laws of the several States. This great accomplishment has been realized by a financially sound industry, sufficient in itself to absorb the tremendous risks incident to discovery and development of additional reserves. fundamental premises underlying the success of the oil-and-gas industry in discharging its duties and obligations in the public interest are now threatened.

"In order that the industry continue to find, develop, and place in production re-serves adequate to meet the requirements for our national security and our growing civilian economy, it must be able to sell the petroleum which it discovers and is able to produce.

"It has only been a few years since the United States was a net exporter of petroleum and its products. Today we are importing over a million barrels of crude oil and its products daily. To meet this tremendous dumping of petroleum and its products on our markets, those States having market demand pro ration laws have been forced to repeatedly reduce their allowables and in other States, such as our own, we have been subjected to pipeline pro ration-

"The Independent Petroleum Association of America and the National Petroleum Council have gone on record in establishing a national policy that importation of oil shall only supplement and not supplant our domestic production. With a shut-in capacity in the United States exceeding the amount of current importation of petroleum and its products I cannot come to any other conclusion than that importation is supplanting domestic production. There are many evidences within the industry that this conclusion can only be true."

Development in Illinois is being retarded by excessive oil imports and tremendous secondary recovery programs are being indefinitely postponed pending proper stabilization of adequate markets for domestically produced oil.

Likewise there are many evidences within the great coal industry of the State of Illinois that this industry has suffered greatly from policies in force in the past.

Without burdening you with a great deal of available statistical information, I would like to point out that from the year 1945, with a total of 73,446,930 tons of coal mined within our State, we have from year to year progressively declined to the point that in our production only amounted to the total of 41,775,752 tons. During the same period the number of employees in this industry has progressively declined from a total of 31,109 to 16,665.

Coal is produced in 37 counties in the State of Illinois. During the years 1951 to 1954, both inclusive, a total of 33 strip mines employing 381 persons were abandoned. During this same period of time 77 under-ground mines, with a total of 11,649 employees, were abandoned.

There have been many indirect impacts from this on the general economy. To illustrate: in 1953, 38,544,560 tons of coal were shipped by railroad. In 1954 only 34,805,136 tons were handled by the railroads. Formerly prosperous mining towns are now ghost towns with consequent repercussions upon general business in the mining areas.

Two counties in southern Illinois, namely, Hardin and Pope Counties, are almost solely dependent, industrywise, upon the production of fluorspar. These two coun-

ties heretofore have accounted for 55.2 percent of the domestic production of this important ore. Heretofore approximately 90 percent of the total available workers in Hardin County were directly employed in the fluorspar industry, and recent figures disclose that over 50 percent of the fluorspar miners in this county are now unemployed. There are only 35 to 40 mines of all types operating in Hardin and Pope Counties

Fluorspar is an essential raw material in the metallurgical, ceramic, and chemical industries, and I am advised that it is an important factor in the manufacture of atomic bombs. Such critical materials must be adequately protected so that this important industry shall not be destroyed.

I want to assure you of my deep appreciation of your interest and effort in this matter and sincerely trust you and your associates will be most successful in your en-

Sincerely,
WILLIAM G. STRATTON,
GODET Governor.

Reclamation Projects

EXTENSION OF REMARKS

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES Wednesday, March 16, 1955

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following news items and editorial comment from the Rocky Mountain News, of Denver, Colo., a daily newspaper which is widely circulated. It is edited by Mr. Jack Foster, who has distinguished himself in the field of journalism.

The items are:

First. A Black Day for Reclamation. which is made up of two parts: (A) The Colorado Story, by Mr. James Daniel, Washington correspondent for the Rocky Mountain News, and other Scripps-Howard papers, and formerly city editor of the Washington Daily News; (B) the California Story, which is a United Press dispatch that does not carry a byline. Both items datelined Washington, March 10.

Second. An Associated Press dispatch. datelined Washington, March 10, headlined "Let's Not Be Stiff-Necked," and expresses a statement attributed to California's attorney general, Edmund G. (Pat) Brown.

Third. An editorial entitled "Hysterical Sharpshooting: It Can Kill Reclamation," from the Rocky Mountain News of March 12, written by Mr. Foster.

I commend the reading of these items to my colleagues in the Congress.

While I cannot endorse all that former Commissioner Straus is reported to have said, he does furnish material for serious reflection. I challenge immediately any inference that the Republicans are out to destroy reclamation, and I point out that, as these items show, reclamation projects proposed by the Administration have been stopped not by party rivalry, but by sectional disagreements and misunderstanding.

It might be pointed out to Mr. Straus that perhaps much of the unwillingness

on the part of the Congress to embark on further reclamation projects now is caused by suspicion created in many minds by the past handling of projects already authorized. Congress should not, and will not, in my opinion, vote a blank check for any purpose.

But the record of the Congress is clear as to their intention to further reclamation projects found necessary to the utilization of natural resources and the creating of necessary power for development. There are many of us here today, and there have been many Members in past sessions of the Congress, who believe and have fought for the principle that it is not a governmental sin for the United States to sell power to tax-paying entities, individual or corporate, so that legitimate business enterprises might merchandise the energy to the consumer, as well as bear the cost of distribution and services.

The President made it very clear in his state of the Union message, on January 6 of this year, when he elaborated on the principle of partnership when he said:

This policy of partnership and cooperation is producing good results most immediately noticeable in respect to water resources. First, it has encouraged local public bodies and private citizens to plan their own power sources. Increasing numbers of applications to the Federal Power Commission to conduct surveys and prepare plans for power development, notably in the Columbia River Basin, are evidence of local response.

Second, the Federal Government and local and private organizations have been encouraged to coordinate their developments. This is important because Federal hydroelectric developments supply but a small fraction of the Nation's power needs. Such partnership projects as Priest Rapids in Washington, the Coosa River development in Alabama, and Markham Ferry in Oklahoma already have the approval of the Congress. This year justifiable projects of a similar nature will again have administration support.

Third, the Federal Government must shoulder its own partnership obligations by undertaking projects of such complexity and size that their success requires Federal development. In keeping with this principle, I again urge the Congress to approve the development of the upper Colorado River Basin to conserve and assure better use of precious water essential to the future of the West.

The budget recommends funds for the Bureau of Reclamation to start five irrigation and water-supply projects.

There being no objection, the news comments were ordered to be printed in the RECORD, as follows:

A BLACK DAY FOR RECLAMATION—QUARRELING MAY WRECK ALL RIVER PROJECTS

(By James Daniel)
THE COLORADO STORY

Washington, March 10.—Michael W. Straus, the Democrats controversial Reclamation Commissioner, Thursday pleaded for unity of the eastern and western slopes of Colorado and of the upper and lower basins of the Colorado River.

Mike Straus, a storm center in the Rooseveit and Truman administrations, who was often accused of trying to build a Federal empire with his reclamation projects, said present disunity is destroying the West.

"The reclamation program is being liquidated," he said. "Reclamation has never gone forward as a whole except with a united West supporting

it.
"When you engage in hysterical sharp-shooting, as the eastern and western slopes and the upper and lower basin States are doing, reclamation stops.

"The upper States and California, too, have not got a single new project, and they won't get one as long as they engage in political war under the disguise of talking about confused water rights."

Mike was interviewed outside the House Interior Committee hearings on the upper basin bill project, at which he has been an occasional, unhappy spectator.

Digs at Ike

"I recommend the upper basin project," he said.

Good Democrat that he is, Mike put in his digs aplenty at the Eisenhower administration.

He said that the White House is for the upper basin bill only because it senses that a day of reckoning is at hand. The West, he said, is waking up to the fact that no new starts have been made in reclamation under the Republicans.

"They're just carrying forward what they found started when they came in. In the 8 years before 1953 the average national expenditure for reclamation was \$300 million a year. Since then it has been around \$150 million a year.

Getting backlash

"The Republicans are now getting the political backlash of this from the West, which believes in and to my way of thinking must have these resources development projects. "Half a century of reclamation experience

is being liquidated."

To the private power industry, Mike Straus was a particular affliction. Thursday in discussing the gloomy prospects for the \$1.5 billion upper basin development plan on account of sectional quarrels, Mike gave the private power group another twist.

Law is nullified

"The reclamation law is a public power law. That is written into it. Everybody knows that it is a public power law and has to be.

"The present administration disbelieves in public power and considers it creeping socialism and has so said in many instances. "The law isn't being repealed. It is just

being nullified."

As long as those in the West who realize the harm disunity is doing "sit on their can and do nothing." Mike said, "you can't blame Congress for not passing anything."

THE CALIFORNIA STORY

WASHINGTON, March 10.—Chairman Clair ENGLE, of the House Interior Committee, Thursday warned opponents of the upper Colorado River project their tactics could bring to an end all reclamation in the West.

The California Democrat spoke out during subcommittee hearings on the proposed billion-dollar power and irrigation project in five Western States.

He objected particularly to a leaflet—Representative William A. Dawson, Republican, of Utah, called it a propaganda sheet—claiming taxpayers will have to put up \$5,000 for each acre of land to be irrigated by the project.

Told by Dawson that the leaflet was prepared and distributed by the Colorado River Association of Los Angeles, Engle replied:

"As a Californian, I vigorously disapprove of it."

Unity progress

Meanwhile Attorney General Edmund G. (Pat) Brown, of California, said he had made progress in his efforts to unify the fight against the upper Colorado project. He ended a 4-day visit after conferring with the California congressional delegation and Government officials.

Government officials.

Dawson produced the leaffet during cross-examination of Wilbur A. Dexheimer, United States Commissioner of Reclamation, and O. E. Larson, regional commissioner from Denver.

Dawson called the \$5,000 figure fantastic. He asked if Dexheimer had any idea how the association arrived at the figure.

The Commissioner said he could not understand either the association's method or logic.

The leaflet, printed in red and white, noted in big red type:

"See what this will cost. It's your money."

Typical propaganda
Representative A. L. Miller (Republican,
Nebraska) said it was "typical of the prop-

aganda being put out that reclamation is bleeding the country white." Turning to Representative John P. Saylon (Republican, Pennsylvania), a leader in the

(Republican, Pennsylvania), a leader in the fight against the Colorado project, Miller added:

"We spent \$7,245,000,000 on flood control up to 1952 and flood control doesn't pay back one cent of interest, even in Pennsylvania * * without the reclamation projects in the West, many easterners would be starving to death because we could not have produced the food."

ENGLE said he thought MILLER'S remarks were excellent, and added some of his own.

In the past 5 years, he said, the Nation has spent as much in Europe under the Marshall plan as has been invested in reclamation in the last half century.

No returns

In contrast to the reclamation projects which returned money from their power features, he said, the Treasury did not get back "one plugged nickel" from the money it poured into Europe.

Waving an arm in the direction of Dawson and the leaflet, ENGLE said people who sponsor that kind of thinking are endangering the whole reclamation program and could bring an end to all reclamation in the West.

LET'S NOT BE STIFF-NECKED

Washington, March 10.—California's Attorney General, Edmund G. (Pat) Brown expressed apprehension over the opposition of southern California interests to the upper Colorado project.

Brown told a news conference he is a little afraid if we take too stiff-necked attitude it may prejudice our own projects.

The attorney general came to Washington to discuss water development problems with Members of Congress.

Brown said he was told by Senator CLINTON ANDERSON, Democrat, of New Mexico, that if California continues opposition to the upper Colorado development there will not be another project started in California so long as he remains chairman of the Senate Reclamation Subcommittee.

Brown said he plans to discuss the matter with Gov. Goodwin J. Knight upon his return to California.

He said he plans to review the status of Northcutt Ely, Washington attorney who is acting as a special assistant California attorney general and attorney for the Colorado River Board, a southern California group.

The attorney general said there has been a question as to whether Ely, who is opposing the upper Colorado project before congressional committees, should be speaking for the whole State or for the Colorado River Board only.

Brown also said he will press for early decision by the Supreme Court in the

Arizona-California dispute over Colorado The President's Proposed Road Program River water rights.

HYSTERICAL SHARPSHOOTING: IT CAN KILL RECLAMATION

The future of Federal reclamation-and with it development of the West-hangs in the balance.

Immediately at issue is the great upper Colorado Basin development project, logical and orderly outgrowth of the river development which began with the Colorado River Compact more than 30 years ago.

Disunity in the West itself is giving oppo-

nents of reclamation a field day.

Hysterical sharpshooting, Michael Straus, former reclamation Commissioner, had called

Disunity in Colorado, pitting western slope against eastern slope in a senseless quarrel over division of water resources, is a factor.

Disunity in the river basin, pitting upper basin against lower basin in a senseless quarrel over water resources, is another factor.

Opponents of reclamation and of development of the West, especially with Federal assistance, leap with unconcealed glee into the fracases built on these disunities.

And the blunt truth is that they fly at any details-major or minor-by which they hope to throw a block against such developments as those contemplated in the lifesaving upper Colorado project.

It must be remembered that the water resources in the Colorado River rise in large measure right here in Colorado, even as the reclamation works by which these and other waters are harnessed in the service of mankind are born and nurtured in the reclamation headquarters right here in Denver.

It was only logical and proper that the massive Hoover Dam and other important projects should be built in the lower basin and put to vital uses the waters allocated to that area.

There never could have been a Hoover Dam had Colorado and Wyoming and Utah and New Mexico undermined and undercut the whole idea in a rage of disunity such as has been marking the upper basin proposals.

It is crystal clear at this moment that only in unity and common purpose can the West

continue to march forward.

"When you engage in hysterical sharpshooting, as the eastern and western slopes and the upper and lower basin States are doing, reclamation stops," Straus warned.

"We spent \$7.245 million on flood control up to 1952 and flood control doesn't pay back cent of interest-even in Pennsylvania," said Representative A. L. MILLER, Republican, Nebraska, in a barb obviously intended for Representative John P. Saylor, Republican, Pennsylvania, who has been a leader in the fight against the Colorado projects.

Even to California-bitter opponent of upper basin hopes and aspirations-the

future is becoming clear.

Attorney General Edmund G. (Pat) Brown, of that State, put his finger squarely on the issue when he told a news conference in Washington this week that a "too-stiff-necked attitude" on the part of his own State may well sound the doom of further projects for California.

There is no question about that.

The mere fact that Federal assistance is necessary to carry out the gigantic reclamation projects is evidence enough that they are too big for any State-too big for any region.

The upper Colorado River Basin development is vital to the future of Colorado and the other upper basin States.

But this is just as clearly on the record: The principle involved is every bit as important to California, to Pennsylvania, and to the rest of the Nation, which also must look to flood control and to development.

EXTENSION OF REMARKS

HON, GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the following statement made by me on America's Town Meeting of the Air on a national broadcast at Wilmington, N. C., March 13, 1955:

The United States has the world's finest road system. It consists of approximately 3 million miles of roads and streets, on which more than 58 million motor vehicles are operated. This means that we have 1 motor vehicle for every 700 feet of roadway. have practically the same road system today that we had in 1930, when we had only half the number of vehicles on our highways. At present, we are adding 3 million cars to the highways each year. Automobiles are no longer a luxury but an absolute necessity; therefore, better roads on which the cars must travel are also an absolute necessity. Because of present congestion, it is estimated that 25 percent of the gasoline consumed in metropolitan areas is burned waiting for traffic to move.

I come from the Detroit, Mich., area—the automobile capital of the world. Naturally, the growth, use, and dependence of the American people on the motor vehicle is well known to me. Today our entire economy and way of life is patterned around our automobile.

The motor and allied industries now furnish one-seventh of our gross national product. We must find a way to finance additional adequate highways to accommodate the increased use of motor vehicles and increase in population, or this one-seventh contribution will decrease.

The all-important question is how to finance a greatly expanded highway program. The highway user now pays the bill. That the American people are willing to pay the extra expense for a good road and an adequate road is evidenced by the fact that people are using toll roads in ever-increasing number. Road building is expensive. There are two ways in which we can pay for roads. First, pay as you go-that is the method we are now The other-to use credit financing. The latter method is simply buying something we need and paying for it on the installment plan. This applies in large measure to the sale of automobiles, of which I in every 3 Americans is now the owner.

One of the methods of credit financing can be illustrated by the toll roads. The other is for some level of Government to use the income from the use of highways to secure service borrowings to build the needed improvement for highways and pay for it as it is being used. Such income is the tax on gasoline, oil, and excise taxes. A bill, H. R. 4261, introduced by me, proposes to make use of the latter type of financing at the Federal level. This will encourage and speed the construction of the interstate highway system, estimated to cost \$27 billion, and which system is proposed to become the sole responsibility of the Federal Government. This system of nearly 40,000 miles of roads represents only 1.2 percent of the total roads and streets of the Nation, but carries 20 percent of all rural traffic and connects 90 percent of our cities having a population of 50,000 or more. The proposal to build this interstate system over a period of 10 years, and to make such system adequate for traffic over the next 30 years.

The proposal to borrow \$21 to \$27 billion to construct the interstate system and to issue bonds to run 30 years has caused some concern as to whether or not such a program is feasible and practical. However, we are now paying more car insurance than we are paying for construction of highways, and it should be noted that 38,000 people lost their lives in traffic accidents last year and nearly \$4 billion was lost in property damage through accidents on our highways. When these facts are taken into consideration, I believe we could well save, in the long run, in addition to the excessive operating costs occasioned by present conditions. by going into debt for improved and safer highways.

The \$11 or \$12 billion in interest which would accumulate over the 30-year period amounts to less than one-fourth of a cent per mile of travel by the average vehicle, and the savings in having this new type of road system would amount to at least 1 cent a mile in operating costs alone. When we understand this situation, I think it can be plainly seen that the American people would gain by financing our much-needed highway system.

The balance of the \$101 billion estimate of highway needs set forth in the Clay report is for financing accumulated and accruing deficiencies on our other roads and streets during the next 10 years, and represents the of construction expenditure which should be paid for as we go.

In my bill, H. R. 4261, Federal funds are provided to those systems at the same level as provided in the Federal Highway Act of 1954, and the bill provides for paying the Federal share of these classes of roads from current revenues on a pay-as-you-go basis. In my opinion, this is the only way by which this Nation will ever connect its population centers by a modern and safe nationwide system of highways and have it done within a reasonable period of time. I am certain that when our people understand this program, which is designed for their convenience, their comfort, and their safety, and when they realize the savings on these modern highways, they will decide to provide for these roads and this highway system, and we will all enjoy the satisfaction of seeing a new era in road building in this Nation, which will be the greatest since the invention of the automobile.

"The easy conveyance of men and goods from place to place" has always been and always will be one of the three essentials "which make a nation great and strong."

Tobacco Allotments

EXTENSION OF REMARKS

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks into the RECORD, I should like to include the following letter from Mr. R. F. Forth, publisher of the Hurricane Breeze, Hurricane, W. Va.:

MARCH 15, 1955.

DEAR DR. BURNSIDE: The people of this community seem to be greatly pleased with what you are doing to help them to increase their meager tobacco allotments. This action of yours will help the farmers of the Fourth Congressional District, as all of the counties in this district are mainly tobaccoproducing counties.

Your words concerning the desperate straits most farmers are in certainly were true. We know of hundreds of farmers who have to depend entirely upon their tobacco money for clothing, medical expenses, and the education of their children. In fact, we would say conservatively that 95 percent of the farmers in this and surrounding communities have no other cash crop, and are practically reduced to a state of poverty already, because of their small incomes, and we do not know what they will do if their tobacco crops are further lessened. There is nowhere else they can turn, because, as you know, there is no great field of other employment they can seek in this State.

On January 21, 1955, after the tobacco allotments had been sent to the farmers by our county committee, we published a pretty strong article against same. * * *

We feel so strongly about this matter because we know that the economy of this whole section of the State is affected by the farmers' incomes. When the farmers suffer, all other business suffers. We also are in a position to know practically all the farmers in this county, and honestly feel that everything humanly possible should be done for them, instead of against them.

We sincerely appreciate your efforts in this matter and know that you will work diligently to help better this deplorable condition. We know that 100 percent of the farmers are standing squarely behind you.

Respectfully,
THE HURRICANE BREEZE,
R. F. FORTH,

Colorado River Project

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Railroad Brotherhoods California legislative board and an editorial from the newspaper, the Sacramento Union, in opposition to any diversion of the flow of the Colorado River which would adversely affect the flow of that river to the State of California:

RAILROAD BROTHERHOODS CALIFORNIA LEGISLATIVE BOARD, March 7, 1955.

Hon. James Roosevelt,

Member of Congress, House Office
Building, Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: This will advise that the officers and members of the brotherhoods throughout the State are concerned with the threat to California water rights as contained in the so-called Federal Colorado River storage project bills, H. R. 270 and S. 500, and the Frying Pan-Arkansas project bills, H. R. 412 and S. 300.

We understand that hearings are now in progress on these bills and that, further, they will require the unified opposition of all of our congressional delegation in order to defeat the efforts of those who seek to take away some of California's legal share of Colorado River water, reduce the power output of Hoover Dam, destroy the honest and legal intent of the Colorado River compact, while at the same time seeking to saddle California taxpayers with an additional tax burden for so doing.

We have full confidence that our legislature will move toward solving our non-frederal and immediate water problems this session. In the meantime, we must cooperate and safeguard all of our most valuable water resources on which our economy depends.

It is hoped that you will do your utmost in opposing the measures above referred to and that you will consider them as dangerous to our welfare as we do. Our members throughout the State will be grateful to you for your efforts.

Very truly yours,
G. W. BALLARD, Chairman.
WILLIAM V. ELLIS, Secretary.

[From the Sacramento Union of March 7, 1955]

COLORADO WATER

We are asked by the editor of the editorial page of the Deseret News of Salt Lake City to support the Colorado River storage project, which citizens of Colorado, New Mexico, Wyoming, and Utah regard as their "last water hole." We're opposed to the project. It would cost a billion and a half dollars, half of which would be spent on a dozen irrigation projects, at an average cost of \$1,000 per acre, and half to build 6 large reservoirs which would store 48 million acre-feet, or over 3 years' flow of the river.

DISASTER FOR ALL OF CALIFORNIA

The novel feature of this scheme, aside from its cost (twice that of TVA and 8 times that of the Boulder Canyon project), is that, unlike any other project, the 6 power reservoirs are to be built below, not above, the irrigation projects, and none of the stored water will be used in the upper basin for irrigation. They are power dams.

This is a serious challenge to California, whose people have invested \$750 million in works which are dependent upon the waters of the Colorado River system. These include the Hoover Dam, Parker Dam, the Colorado River aqueduct; the Palo Verde Irrigation District, and the All-American Canal.

More than 5 million people live within the areas served by the Colorado River in California. The assessed valuation exceeds \$12 billion. Two and a half million acres are under irrigation. The economy of southern California is dependent on the permanent availability of those waters.

availability of those waters.

The Metropolitan Water District will outgrow its present Colorado River supply, which is 1,212,000 acre-feet per year, in about 25 years on present forcasts, and must look to the Feather River or elsewhere for additional water.

The proposed Colorado River storage project implies the destruction of about a third of the value of the Boulder Canyon project, to enable construction of a new project in the upper basin which will generate power at twice the cost and irrigate lands at many times the cost of the power and irrigation furnished by Boulder Dam.

Our Strength for Defense

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. VAN ZANDT. Mr. Speaker, Adm. Arthur Radford, United States Navy, Chairman of the Joint Chiefs of Staff, delivered the following address, March 15, 1955, before the Committee of One Hundred, Miami Beach, Fla.:

OUR STRENGTH FOR DEFENSE

In spite of widespread gloomy forebodings which have been expressed so often, I believe that world events have been steadily forcing America into a position of greater strength. Our defensive capabilities now are greater than ever before.

One matter of greatest importance, forcing us into this stronger position of which I speak, is the nature of the Communist threat against us. That there is need for continuing vigilance and military readiness on our part is readily apparent from a glance at the world situation. Almost every week there is fresh evidence of the unchanged fundamental objective of the Kremlin.

From the military viewpoint, there seems little reason to doubt the magnitude of Communist military capabilities in terms of manpower, weapons, and fighting qualities. Particularly have they been making great strides in the development of their air forces and nuclear weapons.

This in no way, however, describes the full scope of the Communist threat. The struggle is not one of military power only. In many respects, the other more sinister and devious techniques in the political, economic, scientific, and psychological fields of human endeavor are more dangerous. Such techniques include war by propaganda and subversion, by proxy, and by infiltration.

And, those techniques have been supported by the largest, most callous military power in the world. Communist military strength has given impact to infiltration and subversion, terrifying into submission those who lacked the strength and the will to resist. The capture of satellite countries, the dragging of whole nations behind the Iron and Bamboo Curtains, the maintenance of puppet regimes, and the high degree of Soviet influence in world affairs—all have been made possible in great measure by Soviet military power.

Usually down through history, we have had a reasonably clear understanding of an enemy's capabilities, but a less clear understanding of his intentions.

Today the easiest question to answer concerns Soviet long-range intentions. Here it is abundantly clear that Moscow schemes to create one Communist world with all that it means—one giant Red World Union of Soviet Socialist Republics. This is a clear and flat assessment of Communist intentions. It is a total menace.

And with Red China, there is a parallel. Red China wants one completely Red Asia—one which includes Formosa and the Pescadores. They have so stated—not once, but many times. This, too, is a clear statement of Communists intentions.

But Communist short-range intentions are not always so clear. In fact, they are subject to quite a bit of change. They are flexible and often fitted to the particular opposition they expect to encounter.

Right now, our eyes are focused a good deal of the time on the tensions around Formosa and off the China coast. But this is an old familiar pattern. In the past, in similar fashion, our eyes have been focused on other sensitive areas—areas like Czechoslovakia, Greece, Berlin, Iran, Korea, and Indochina—usually quite cleverly—first one and then another.

The result is that, today, the creeping expansion of communism backed by guns and bombs and several millions of troops—unrestrained by solemn agreement, or moral restraint—is a long-term challenge to everyone of us.

Accordingly, the bonds with our allies are being strengthened—in NATO, in the London and Paris Accords, in the Manila and Rio Pacts, and in our mutual defense treaties. These bonds reflect our concern for Soviet military capabilities. More than 40 free nations, including our own, have

allied themselves in regional defense arrangements.

I think we all know the basic policy of the United States. Our object is peace, not war, We want a real and lasting peace, and we are working for it. No country has demonstrated more restraint or more sincere willingness to explore, discuss, and study possible courses of action to prevent war from starting than has the United States

Until the Communists emphasize by deeds and actions, and not just by words and promises, that they really believe in peace, too, then we have no alternative but to keep ourselves strong and in a high state of preparedness.

Now, I do not hold with those persons who contend war is inevitable, or that it is instinctive to mankind. If we despair in the hope of averting war, we could become accessories in the events that lead to another.

Nor do I hold with those who think war can be prevented simply by the renunciation of war on the part of those of us who hate it.

In fact there is little to choose between those who would transform the world into warlike garrison states and those who would put all their trust in the semantics of peace. Both are unwitting apostles of war. Historically their divergent paths have led again and again to disaster.

Our best assurance against the inevitability of another war being forced upon us lies in the collective combination of free nations always working for peace, but maintaining constantly a strong defensive posture. That calls for allied unity, firm resolution, and a willingness to make sacrifices and share in the risks.

So there may be no misunderstanding I want to make it clear that while the Joint Chiefs of Staff are charged with giving military advice on national security matters, and for preparing plans for war in whatever form it might take, our fundamental objective is to discourage war and to maintain national security. Our efforts are aimed at making military aggression so prohibitive that no one logically can choose it as a course of action

Reality requires us to face the Communist There are no real grounds for bethreat. lieving that the threat has materially diminished. War could come almost any place any time. It could be a big war or a limited war. It could be initiated secretly by a small handful of men whose only allegiance is to themselves-men who are contemptuous of religion and who owe no accounting to world opinion.

Under such circumstances, it is my earnest conviction that the President has asked for the proper security program, one in which the dangers we face are reduced to an acceptable degree.

In general terms, the President has recommended a defense structure which will serve the needs of national security over an indefinite period. He has suggested an Armed Forces strength on the order of 2,850,-000 at an annual budget cost of approximately \$34 billion. Within this framework, he has put emphasis on the development and maintenance of those forces and facilities for which the United States, uniquely among free nations, is best suited.

The proposed strength levels are based upon world conditions as they are now. They are based on the improved military preparedness of other free countries of the world, the end of active fighting in Korea and Indochina, improved weapons systems, better utilization of manpower, expected improvements in the future, the continuing Communist threat, and a whole host of other factors.

At this point I would like to interpose a few words about figures. In determining our required force levels, there are naturally a number of intangibles with which planners must reckon. One of the greatest intangibles

is just exactly where, when, or how the next

shooting war might be forced upon us.

If we knew we were going to face a major onslaught in the next 6 months, then we would need additional manpower and appropriations

On the other hand, if we were guaranteed that we were not going to be forced into a war for the next 20-25 years, then I would say our force levels could be reduced.

But, of course, we cannot guarantee such a course of events and therefore must be prepared for the possibility of war. Of one thing we can be certain: The provision of adequate military strength is indispensable to our future safety.

Moreover, it is imperative that from here on out, our country have a defense program that is reasonably stable-one that is not materially disturbed by every hot and cold effort of an unfriendly nation, or wishful thinking on the part of ourselves or a friendly nation.

Large upswings or downswings in force levels have disastrous effects upon our defense planning, just as they do on business. The services have been plagued over the years by sharp inclines and declines where we increase in size rapidly and tremendously, and then decrease even more rapidly. Not only has it been wasteful but it also has involved serious risks which militarily, I do not be-lieve we can afford to take at this time.

The stability in overall numbers is, course, only the first step. Our next step must be to achieve stability of personnel within these numbers. It is not good enough to level off at 2,850,000 if we continue to have an inordinate personnel turnover rate. For this reason, several measures now before the Congress-measures like the proposed Career Incentive Act-are designed to induce larger numbers of qualified officers and men to accept and want the service as

As a matter of fact, the stability in all the Armed Forces-stability which is being made possible by the President's program—is probably the most important single defense policy we want to see adopted. It will permit planning, orderly procurement, and efficient operation. It will give us a defensive posture which will be readily appreciated and understood by the rest of the world.

And, should important changes in the world situation make it necessary, the Joint Chiefs of Staff would step forward with recommended changes in our force levels. You can count on that.

Let me list for you just a few of the key strengths which go into the makeup of our defense program.

First. We have a strong retaliatory capability, and we are going to keep it strong. We have a long-range Strategic Air Command without peer in the world, and carrier task forces unmatched by any other nation. Our country is particularly well suited for providing these two vital elements of the free world's capacity to counter an aggression.

Second. We have strong land, sea, and air forces which can be used in a variey of situations whenever and wherever required.

I have often pointed out that we are not placing undue reliance upon any one weapon, or one service, nor are we anticipating just one kind of war. We have modern jet tactical air forces which can carry either high explosives or atomic bombs, depending upon what the target requires. We have naval forces which can clear the sea lanes, and Army forces which can do their part toward the accomplishment of military decisions when and where required. We have armored, airborne, amphibious, and other modern forces, all of which are important to our national defense.

In fact, the United States forces we plan to maintain are the most powerful—the most potent—forces, individually by service and

collectively as a team, that our Nation has ever undertaken to maintain during a period when we were not actually engaged in a shooting war

In this connection, the proposed National Reserve plan will go a long way toward helping to provide the right structure for building an adequate Reserve strength to complement and reinforce our forces in

Third. We have allies. Collectively, our allies are stronger than ever. United States Armed Forces are a part of the allied team. It is not easy for any single nation to match the power that can be marshaled by Communists and their resources. Therefore, we have to think of using our power in a way and in the place which will provide maximum safety to free nations as a whole.

To meet local aggressions, a growing reliance can be placed on those allied forces now being strengthened in many areas of the world. At the same time, we stand ready with our forces to continue military assistance and cooperation with our Thus, within limits, the pattern of our own forces conforms to that of a member in several great alliances.

Fourth. We are continuing to improve our continental defense system. Due to the nature of the Communist beast, and due to the destructiveness of modern weapons now available to the Communist bloc, the United States could be seriously damaged by sudden attacks upon us.

Therefore, we have been hard at work, in conjunction with our Canadian friends to the north, pushing the program with all practicable sped at a rate consistent with our developing technology. We will continue to improve our air defenses, and our radar, communications, and computing systems which will provide increased effectiveness against attack. Both Canada and the United States are making invaluable contributions to this important undertak-

Fifth. We have an industry-science-military team which, in my opinion, presents an unbeatable combination. In my present position, I derive a great personal satisfaction from this teamwork, and the national strength which it builds.

The threat of modern war calls for constant modernization. Because of their compexity, the time taken to put newer weapons systems through the various stages of research and development into production tends to be longer than in the past. Here science and industry give us a big hand.

Today, the services are organized to utilize our national scientific, technological, and productive abilities. Science helps us to devise new weapons and new techniques. Industry helps us to get them. In this endeavor, we are very much in need of your continued teamwork.

With all that we have, we cannot let ourselves become complacement, or tend to rest upon past laurels. We need to remain steadfast and determined that our weapons systems will be kept ahead of our competitors. It is vital to our seceurity and world peace that we do so.

In this, you and I are partners in defense. Our product is national security.

Gentlemen, those are some of our more important military strengths. We can review this defensive power we have with mixed feelings. We can derive satisfaction and confidence from its built-in strengths to protect our way of life. We can also be sobered by the contemplation of modern weapons systems in the hands of callous and ruthless enemy in the years which lie ahead.

Yes, there are inescapable difficulties and dangers posed by Communist powers whose aims and policies are so diametrically opposed to our own. In a lawless world, we must be prepared for a fight at any timeand we must be prepared with weapons and other means better than those which are likely to be used against us.

Thus, our Armed Forces today are situated in many parts of the world, representing the strength of this Nation in defense of human justice and freedom. Our capabilities serve to prevent war through their deterrent effect. They are also the foundations of an effective defense if the aggressors should strike.

In essence our Armed Forces are geared to the preservation of our way of life. We must never forget that our most precious possessions are the lives of our citizens and the principles for which they stand.

In my judgment we have an adequate, properly proportioned defense program—one in which you can place your confidence. We have a good strong defense team. We can and will continue to improve it. And in all cases you can count on our Armed Forces team to carry out their tasks and missions with skill, determination, and a complete loyalty to the American people.

Will Congress Repudiate Forced Repatriation?

EXTENSION OF REMARKS

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. BOSCH. Mr. Speaker, on February 8, 1955, I introduced House Resolution 137 calling for the creation of a select committee to investigate the forced repatriation of millions of anti-Communist prisoners of war and civilians by American military and civilian authorities from 1945 to 1947. I have been very gratified at the response I have received as a result of this action.

Under leave to extend my remarks, I include an article by Julius Epstein, entitled "Will Congress Repudiate Forced Repatriation?" which appeared in the Tablet, Brooklyn, N. Y., March 12, 1955:

WILL CONGRESS REPUDIATE FORCED REPATRIA-TION?

(By Julius Epstein)

Ten years after the conclusion of the Yaita agreement—almost to the day—on February 8, 1955, Congressman Albert H. Bosch, of New York, introduced House Resolution 137, calling for the creation of a select committee to investigate the forced repatriation of millions of anti-Communist prisoners of war and civilians by American military and civilian authorities.

There can be no doubt that—from an ethical point of view—House Resolution 137 should be considered as one of the most important resolutions ever introduced in the American Congress.

Our Government vigorously fought against the principle of forced repatriation of prisoners of war in Korea. Together with its allies, it won this battle after both the Truman and Eisenhower administrations had declared forced repatriation to be "a crime against humanity" and a "violation of international law and custom."

But we have never purged ourselves of the very same crime, committed by our own military and civilian (UNRRA and IRO) authorities right after the war in Germany, Austria, and even on our own soil. Hardly one of those forced back by our authorities to Soviet-controlled countries escaped death or the slave-labor camp.

CARDINAL FIRST TO PROTEST

It is to the everlasting credit of Eugene Cardinal Tisserant that he was the first to protest forced repatriation. He did it as early as March 5, 1946, in an interview granted the Rome correspondent of the New York Times. Cardinal Tisserant also protested against the UNRRA practice of refusing aid to those anti-Communist displaced persons who violently refused to be forcibly repatriated.

Cardinal Tisserant's protests—as those of other prominent people—were in vain.

To give one more example of those unsucessful protests: On January 31, 1946, Gen. A. Denikin, former commander in chief of the Russian armies (1917-20) wrote a six-page letter to the then General Eisenhower, a historical document, the last two paragraphs of which read as follows:

"General, there are the provisions and paragraphs of the Yalta Treaty, but there are the traditions of free and democratic people—the right of asylum—there are military ethics, which prohibit the use of violence even on the defeated enemy, and finally there exist the Christian morals which call for justice and pity.

"I take the liberty to address myself to you, General, as a soldier to a soldier, with the hope that my voice will be heard."

Neither Cardinal Tisserant's nor General Denikin's voice was heard. Forced repatriation went on for another year and a half.

Thousands preferred death to forced repatriation. A wave of suicides accompanied the shameful policy of our military and civilian authorities who insisted on forced repatriation of those who had only to expect death or slave-labor camps behind the Iron Curtain.

SEES ETHICAL OBLIGATION

Now, at last, Congressman Bosch, a man of great moral courage, undertook to carry out an ethical obligation of the first order: To purge ourselves of a genocidal crime and therefore to reestablish new spiritual and moral relations to all the anti-Communist peoples behind the Iron Curtain.

In the remarks Congressman Bosch made on the floor of the House before he introduced his resolution, he said:

"Recently there appeared in the December 14, 1954, issue of the American Legion magazine an article entitled 'How We Served as Partners in a Purge,' which appears in the Appendix of the Congressional Record of January 10, 1955, at page A83, inserted by my colleague, the gentleman from Illinois, Hon. Timothy Sheehan. This article clearly demonstrates the need for a clarification of the wherefor of such a program.

"Repatriation, in and of itself, is a question of deep concern and distress. It is in the interest of our Nation that we determine this issue and cleanse the national record for all time.

"It is for that reason that I am today introducing a resolution for the creation of a committee of the Congress to conduct an investigation and study of the forced repatriation program carried out by our military and civilian authorities in the years 1945-47. I sincerely trust that this resolution will be favorably reported and a committee appointed at the earliest possible moment in the interest of justice."

QUOTES RESOLUTION

Among the reasons for the creation of a select committee to investigate forced repatriation, as listed in the preamble of Congressman Bosch's resolution, are the following:

"Whereas the forced repatriation to Sovietcontrolled countries of millions of anti-Communist prisoners of war and civilians by American military and civilian authorities in the years 1945-47 in Germany, and in other countries, brought death and misery to untold thousands of these anti-Communists before Soviet firing squads, on Soviet gallows, and in the Siberian slave-labor camps; and

"Whereas this forced repatriation of prisoners of war and civilians cannot be justified by the agreement on prisoners of war signed at Yalta on February 11, 1945; and "Whereas this forced repatriation was in

"Whereas this forced repatriation was in violation of the rulings in implementation of the Yalta agreement on prisoners of war, made public by the Department of State on March 8, 1946; and

"Whereas the forced repatriation of prisoners of war who had enlisted in the enemy's army was in contradiction to the opinions of The Judge Advocate General of the Army, as expressed during the last 40 years; and

"Whereas the forced repatriation of millions of anti-Communist prisoners of war and civilians represents an indelibie blot on the American tradition of ready asylum for political exiles; and

"Whereas the forced repatriation and annihilation of millions of anti-Communist prisoners of war and civilians of Russian, Ukrainian, Polish, Hungarian, Baltic, and other origin is still poisoning our spiritual relations with the vigorously anti-Communist peoples behind the Iron Curtain, and is therefore impeding our foreign policy: Therefore be it

"Resolved, That there is hereby created a a select committee * * *."

URGES POPULAR SUPPORT

There can be no doubt that millions of former and present displaced persons in this country as well as all over the world will enthusiastically welcome such investigation as proposed by Congressman Bosch.

That goes especially for those 20,000 to 30,000 former displaced persons, now living under false identities and documents in this country, who are still threatened by deportation. These displaced persons had to change their documents, especially their names and places of birth while in German and Austrian displaced-persons camps in order to avoid forced repatriation to Soviet-controlled countries where only death or deportation to slave-labor camps would have been their fate. Only a new law or an amendment to the McCarran-Walter bill could clear them and make their entry into the United States legal. They now hope that an investigation of the forced-repatriation program will also lead to such legislation.

A mysterious conspiracy of silence has so far prevented the American press from taking any notice of the momentous Bosch resolution.

It is all the more important that those readers of this article who are in favor of the Bosch resolution express their opinion in wires and letters to Congressman Bosch and to their own Congressmen.

Among the Members of Congress who have already expressed, in different degrees, their interest in an investigation of the forced-repatriation program are Congressmen Madden, Sheehan, Flood, Dondero, Gwinn, Feighan, Machrowicz, Kluczynski, and Bentley, as well as Senators Wiley, Eastland, Kilgore, and Hruska.

The Secretary of Everything

EXTENSION OF REMARKS

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. FORAND. Mr. Speaker, under leave granted me I offer for printing in the Record, as a part of my remarks, an article written by Thomas L. Stokes that appeared in the Washington, D. C., Sunday Star of March 13, 1955. The article follows:

THE SECRETARY OF EVERYTHING: TREASURY CHIEF HUMPHREY HAS BECOME DEMOCRATS' No. 1 TARGET IN EISENHOWER ADMINISTRA-TION

It was coincidence that the Democratic Digest appeared on the stands with the cover of its new number a picture of Secretary of the Treasury George Humphrey, labeled "Secretary of Everything" at the time that the same Secretary Humphrey was exchanging blows with Democrats in Congress over their bills to grant tax relief to persons of small income.

For this issue of the Democratic National Committee's pocket-sized magazine had been planned before Speaker of the House Ray-BURN sprang his 20-bucks-a-head tax cut scheme and before Mr. Humphrey had accepted the gage of battle with his countercharge of fiscal irresponsibility.

But it all added up to this:

Democrats have singled out the Treasury Secretary as their No. 1 target in the Eisenhower administration. This is for the very practical political reason that, being a bigbusiness man himself and being active in so many areas of this administration that he deserves the "Secretary of Everything" title, he lends himself to the big-business background that Democrats are trying to paint in for this administration.

As for the Secretary, he has accepted the role of chief administration gladiator and

seems to enjoy it.

From experience with him in the tax battle, during which he has appeared before both House and Senate tax committees, Democrats have discovered something in his personality which they hope to exploit to their advantage. This is the Secretary's somewhat elevated, schoolteacher, doctrinaire attitude toward Members of Congress which is coupled with a twin propensity to belittle the ideas of others as "silly," "foolish," "irre-sponsible," "political," and such, as he did in appearing before the House Ways and Means Committee and the Senate Finance Committee.

Anybody who knows Congress well knows that its Members don't appreciate lecturers, nor do they like to be looked down the nose This was illustrated by the gleeful way an aide of Senate Democratic Leader LYN-DON JOHNSON was dashing about the Senate showing an account of Secretary Humphrey's latest "silly-political-irresponsible" outburst. This he had sputtered angrily when, during his appearance before the House Ways and Means Committee to testify about an error in last year's revision of the tax laws, he had been asked about a compromise on the Rayburn \$20-a-head tax cut that had been worked out by Senator Johnson and other Senate Democratic leaders. Democratic needlers on the House committee had angled for just that reaction.

"That blowup by the Secretary ought to stiffen Democratic ranks in the Senate and make some votes for the compromise," was the comment among Senate Democratic promoters of the Johnson proposal. The latter, along with providing modified tax cuts for small taxpayers, would repeal two provisions in last year's law sponsored by the Eisenhower administration to help wealthy stock-owners and business. Thus Democrats would make up revenue lost by tax cuts on small incomes. It is these provisions, one a tax credit for dividends and the other embodying more liberal depreciation allowances, which Democrats have harped on constantly in their claims that the administration's 1954 tax law was chiefly to aid the big taxpayers.

Secretary Humphrey stood However. stanchly by them, saying they were responsible for providing jobs and bringing about business improvement.

When the Treasury head was before the House Ways and Means Committee, which was the occasion of his second silly-irresponsible political outcry, he was on the defensive from the moment he sat down before the committee. He had come to confess a serious mistake by his Treasury experts in a section they recommended for last year's comprehensive overhaul of our revenue laws, which Congress had adopted, by which businesses could get a windfall that he conceded would amount to a sizable loss in revenue. Representative MILLS, Democrat, of Arkansas, quoted tax-expert estimates of losses up to a billion dollars. The Secretary also had to admit that he did not know of this windfall loophole until Mr. Mn.Ls had told him about it a few days ago, though his own Treasury aids had found it some time before and were checking to see what its effect might be. The Secretary also admitted that there were 40 other loopholes in which revenue might be lost. He will submit an explanation of them in a few days so the committee can correct them as it is correcting the other two.

Nor did it help the Secretary's state of mind to be reminded by Democratic committee members that they had warned in a statement last year about the haste with which the committee, then Republican-controlled, was rushing through highly technical changes. Their statement said: "We fear that, in the hasty manner in which this most complicated legislation has been handled, we will have to spend many weeks straightening out the law in the future, if

the bill becomes law."

That is exactly what the committee has got to do now.

After FOA What?

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, as the Foreign Operations Administration is scheduled to go out of existence this coming June 30, the question of how its functions are to be carried on will receive increasing attention from the Congress. In studying this question, I have found an article by Mr. Marquis Childs in the Washington Post of March 15 to be a cogent analysis of the many factors involved. I think it is appro-priate to call the attention of the Congress to Mr. Childs' excellent discussion:

WASHINGTON CALLING (By Marquis Childs) AFTER FOA WHAT?

At a closed session of the recent SEATO conference in Thailand, Secretary of State John Foster Dulles held forth on the scope of America's military strength in the Pacific. Given the potential of modern weaponsthat is to say nuclear weapons—the United States has in the area today, according to Dulles, greater armed might than at the peak of the Pacific buildup in World War II.

The question, which he did not go into, is: How much of this potential strength can be brought to focus for purposes short of all-out war? In the field of economic aid and cooperation the same question is pertinent.

The United States has the greatest industrial plant, technology, and know-how in the world. But how to share this develop-

ment on any meaningful scale is a problem that has not yet been met except in the most limited fashion. Dulles could talk about economic assistance for Asia at the SEATO Conference only in general terms, since on that front in the cold war there is a new upheaval, with all plans temporarily in abeyance.

This is another illustration of the stopand-start approach which not only wastes money and effort but raises doubts about America's determination to stay the course to the end. The Foreign Operations Administration, which has charge of technical assistance, refugee aid, and other obligations, is due to go out of business on June 30.

Since economic aid is to continue, FOA's functions will have to be put somewhere else in Government. Unless, it should be added, Congress votes to keep the agency in business. It was created by the Eisenhower administration. Although time is running out, not even a tentative plan seems as yet to have been worked out. It will not be easy, since FOA has a total of 6,731 employees 1,657 in Washington and the balance, 2,770 Americans, and 2,304 foreign nationals, in offices overseas.

Dark congressional suspicions center on FOA. There is a general distrust of economic aid among conservative Republicans and Democrats alike. Congress always suspects a new agency of seeking to perpetuate itself. And FOA's Administrator, Harold Stassen, is not exactly popular on Capitol Hill.

But it is not merely a bureaucratic snafu that cuts across the aid program. Both Dulles and Stassen last fall projected a greatly expanded program for Asia which got oversimplified in the headlines as an Asian Marshall plan. This was repudiated on the insistence of Secretary of the Treasury George M. Humphrey, who is firmly opposed to giving away American dollars on any sizable scale and thereby throwing the budget further out of balance. Thus the impression was of marching up the hill and then marching right back down again.

American motives and intentions are also at issue in the aid program, as an analysis of current and proposed expenditures makes plain. In the budget for the next fiscal year is \$3.5 billion for "mutual security." Of this sum, \$1.4 billion is for direct military assistance—guns and planes for America's military partners—administered by the Defense Department. Six hundred million dollars is for direct-forces support which FOA administers.

The remaining \$1.5 billion is for economic aid in various forms. Included are the relatively small sums that the United States contributes to several United Nations agencies in the assistance field. The balance goes for various forms of economic help, and it is here that Congress is likely to cut.

More and more the stress has been on giving our military allies what they need to fight communism at America's side. Dulles put this frankly in his recent speech on returning from Asia. It is reflected, too, in the allocations of aid for the current Government year.

To Members of Congress increasingly reluctant to vote big sums for foreign outlay it seems perfectly logical to help those who are standing with us. But to Asians in the uncommitted countries-India, Burma, Ceylon, Indonesia, who take literally what we say about wanting to help all free countries—this has the look of rank discrimination. Is your aid really to help underde-veloped peoples raise their standard of living, they ask, or is it a carrot held out to persuade us to go along with your system of alliances?

To most Asians, America is a land of incredible power and prosperity; a power that sometimes seems menacing and sometimes beneficent. We live, in Asian eyes, on a lofty plateau. It is a lonely plateau, too, and that is the root of the matter, since it is a peril to live so far above the rest of the world. Some far more imaginative means of sharing—perhaps through a combination of private investment and Government cooperation—must be found and soon.

It's 10 Years Today

EXTENSION OF REMARKS

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. BOSCH. Mr. Speaker, it has been 10 years since the Sudetan Germans were expelled from their homeland, but they have not given up the desire and hope to return. Under leave to extend my remarks, I include an article entitled "It's 10 Years Today," taken from the January 17, 1955, Sudetanland issue of the Suedost-Echo, newspaper of the Germans from southeast Europe. This article was translated from the German language by the Library of Congress:

IT'S 10 YEARS TODAY

(H. H.) This year marks the decennium of our expulsion. Millions of East and Southeast Germans who, robbed of everything but the shirt on their backs, were expelled from their homeland and who suffered the most outrageous injustice and deepest humiliation of our century, will again raise their voices to demand the return to them of the homeland of which they were robbed. They will be joined by the many hundreds of thousands of refugees and emigrants who fied to safety in the west for fear of physical destruction.

Ten years is along time. They have alleviated pain and closed many wounds. They have also buried many a hope. But they have not rendered void the crimes committed against innocent human beings, nor have they been able to shake their right to restitution and return to them of their homeland, which is an inalienable and inviolable right. The expellees will stand by it, even if they have to wait another 10 or 20 years. They will pass it on by way of heritage to their children and children's children if they themselves should die before justice is

Those who see evidence of lust for revenge in this determination to maintain a legal claim and who imply the existence of agressive intentions, on the part of the expellees, distort or simply don't know the facts. For at stake are not plans for reconquest or nationalist intransigence, but elemental human rights. And lack of respect for human rights, one of which—probably the most sacred—is the right to a person's homeland, would mean corruption of the moral conscience of the world.

The horrors of war were visited upon the expellees in their most terrifying form. The expellees don't want another war; they know that such a war would cause uncontrollable disaster. However, this does not make them pacifists in the sense of spiritual and political capitulation of the West to Soviet imperialism. When they were driven from their homeland in 1945 and squeezed into the warravaged and impoverished territory of Western Germany, the expellees did not fulfill the expectations of the Kremlin: They did not become Communists, in spite of the despair which filled their hearts. The fact that Western Germany and the rest of Western Europe have not succumbed to communism is partly due to the expellees.

The full significance of this fact as concerns the free world must be duly recognized, as it involves the moral and political right of millions of refugees to the restoration of their former legal status, and as it encourages the expellees to demand the return of homeland. The free world is confronted with a responsibility which must be met: It is up to the free world to support the cause of the expellees-not by unleashing another war, but by becoming strong enough in order to prevent it and, by virtue of such strength, forcing the restoration of the former legal Coexistence of the free world with the Soviet Union should not become a principle underlying the foreign policy of the free world, until and unless the oppressed peoples have had their freedom restored to them. Otherwise, coexistence would mean the approval and perpetuation of gross violations of the law.

Ten years have passed since that dark year of 1945. No wonder that people here and there lose heart. How long should they wait? Isn't their hope of returning to their own country a mirage, which confuses their thoughts and keeps the pain alive, without anything being done toward removing the cause, once and for all, by fulfilling their desire? Wouldn't it be better if, in order to find inner peace, they were to turn their backs to and forget their homeland?

Nobody denies that similar thoughts are alive also in the minds of the refugees and expellees. For it is not easy to lead two lives: one in the present, with all its mental and physical demands; and the other, an imaginary one, in the past and future. The post is still aglow; the memories are still alive; home and farm, scenery, towns and cities, and the peaceful world of our homeland—those are things we can still see it with our mind's eye. But we do not see the future of our homeland, nor do we see the road which will lead us back—when?—to it. It is hard to be patient and not to lose hope; the more so because the 10 years—now lying behind us—have not brought us closer to our goal.

Everyone of us is tempted to give up, at one time or another. But it is also the duty of everyone of us to fight that temptation. Duty—in the sense of inner responsibility, and in the sense of a right which we must not give up because, by doing so, we would be giving our approval to an act of enormous injustice. Unless we insist on the recognition of our legal claim, and unless we constantly remind the world of it—who else would be doing so?

It is even more difficult for us southeast Germans to keep our hopes up than for the large numbers of East Germans whose claim for their homeland is identical with Germany's right to restoration of its Eastern frontiers which were crippled by force. The Soviet masters have wrought extensive structural changes in our countries of origin. Economic, agricultural and sociological revamping has taken place which has radically changed the areas in which we used to live—changes which may not be possible of correction. Will it be possible to restore the southeast German (language) island groups and to assure them an existence in the future as organic "tribal" communities?

We don't know. But that does not release us from the obligation to search for solutions, and the law is on our side in this respect. This right to return to our homeland has not been jeopardized by our becoming citizens of Germany. No committee-inexile has the right to berate us for accepting German citizenship on the basis of legislation enacted by Bonn. We are finding ourselves in an emergency which calls for our acceptance of German citizenship. Nobody, not even a committee-in-exile, can tell us how long the emergency of our homelessness will last; in order to overcome this period of homelessness we have a right to avail ourselves of the legal relief offered us by Ger-

many. The point was made, explicitly, that this (German citizenship) does not jeopardize our right to return to our homeland. We were expelled from our homeland against our will—which is and remains the deciding factor.

We are sticking to our claim to our homeland. And, together with millions of other refugees and expellees, we shall not abandon hope. No matter how long we'll have to wait.

Reaffirmation by Michigan State College of Its Historical Heritage as First Agricultural College in the Nation

EXTENSION OF REMARKS

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1955

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release dated March 11, 1955, issued by the department of information services, Michigan State College, East Lansing, Mich., reaffirming the historical heritage of Michigan State College as the first agricultural college in the Nation and pioneer for the entire land-grant college system established under the Morrill Act of 1862.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

Michigan State College Friday issued an official statement reaffirming its historical heritage as the first agricultural college in the Nation and pioneer for the entire landgrant college system established under the Morrill Act of 1862.

The statement was in answer to charges by Representative Schwerger, Republican, of Iowa, that the United States Post Office Department had made "a gross error of historical fact" in issuing a commemorative stamp honoring Michigan State and Pennsylvania State University as "first of the land-grant colleges." Both institutions are celebrating their centennials this year.

Alvie L. Smith, centennial director at Michigan State, expressed surprise at the statement by Representative Schwenger, and termed it "regrettable." It is unfortunate, he added, that Iowa State questions could not have been raised in October 1954, when the issuance of this stamp was first announced.

Michigan Agricultural College was founded February 12, 1855, as the first agricultural college in America, and the pattern for the land-grant college system established 7 years later under the Morrill Act. Not only was MAC the first agricultural college founded in the United States, but as other States created land-grant colleges from 1862 on in the image of the East Lansing institution, they drew heavily on the faculty and graduates of Michigan Agricultural College for their teachers and presidents. These are historical facts, not claims, Smith said.

Iowa State claims to have been the "first land-grant college" because they were the first to accept the provisions of the Morrill Act in September 1882, even though they did not open their doors until 1869.

The commemorative stamp was issued by the United States Post Office Department to honor the founders of the new concept of higher education, Smith pointed out, even though the later institutions made significant contributions in the development of this educational philosophy.

The clearest and most authoritative statement on this matter was given in 1950 by Russell I. Thackrey, long-time executive secretary of the Association of Land-Grant Colleges and Universities. Here are pertinent excerpts from his statement:

"The question of the oldest land-grant college might be debatable in a strict sense, but here are the facts: Michigan State College, established in 1855, is unquestionably the oldest agricultural college, and thus was the prototype of the land-grant institutions. It was closely followed by the Maryland Agricultural College (now the University of Maryland) which was chartered in 1856 and Iowa Agricultural College (Iowa State College) in 1858.

The picture is complicated a little by the fact that six State legislatures acted to accept the provisions of the Land Grant Act before Michigan did, the first being Iowa in September 1862. Thus, Iowa State was the first to be designated by its legislature as a land-grant institution but I think it is generally recognized that Mich-Igan State as the first agricultural college of its type actually in operation deserves the distinction of being called the first landgrant institution."

Michigan State takes great pride not only in its pioneering role with respect to the entire land-grant college system but in its equally important role in the establishment

of Iowa Agricultural College. When Iowa Agricultural College began its classes in 1869, it was on the pattern of Michigan Agricultural College and with a president imported directly from the East Lansing campus, according to Dr. Madison Kuhn, Michigan State College historian and author of the forthcoming book Michigan State:

The First Hundred Years. In 1868, Kuhn points out, the governing board of Iowa Agricultural College sent a committee to visit several of the then operating land-grant colleges. The published report of this group, as quoted in E. A. Ross'

A History of Iowa State College, 1942, read:
"Of these, the Michigan exhibit was found to be the agricultural college par excellence in aim, organization, course of study, and apparent results. A large portion of the report was devoted to this institution."

First president of Iowa Agricultural College was A. S. Welch, member of the governing board of Michigan Agricultural College for several years, and who was recommended for the post by Dr. T. C. Abbot, third president of the East Lansing college.

Kuhn adds another interesting footnote Auth adds another interesting locations to this discussion by pointing out that the Michigan legislature actually accepted the provisions of the Morrill Act in 1859 when it was approved for the first time by the United by Presi-United States Congress but vetoed by President Buchanan. In effect, then, the State of Michigan was the first to approve the provisions of the Morrill Act-even though it repeated its action in 1863 to make it completely official.

On Second Look, It Isn't a Bogey Man

EXTENSION OF REMARKS

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, I have been requested to insert the following editorial from the Palo Alto Times in the Congressional Record, and I am happy to comply:

ON SECOND LOOK, IT ISN'T A BOGEY MAN

A flurry of alarm has been stirred up by the move to get representatives of North Atlantic Treaty nations together to talk about how they can collaborate more closely for the good of all.

The alarm is not justified. No "one world" organization can be forced on us by this meeting. No trick can be brought out of the bag to reduce the sovereignty of the United

The resolution introduced in Congress last month by Senator KEFAUVER calls merely for a meeting "to explore and to report" on ways in which nations now bound by the North Atlantic Treaty might further unite—"federally or otherwise"—against common dan-

Common dangers include the resurgence of Germany as a military power, Communist ag-gression, and distrust in many parts of the The democratic nations are capable of meeting the world situation effectively.

If we are afraid to apply the democratic process to the search for more efficient methods of working with our free North Atlantic neighbors, we seem to justify this distrust.

That the proposed exploratory convention will be democratic there can be no doubt, The delegates are not to be diplomats directed by governments, but citizens. These citizens will explore, come to conclusions, make recommendations, and report to their own people and the parliamentary bodies of their own countries.

These duly elected bodies and the people will make the decisions.

The New Orleans Conference on Inter-American Investment

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, March 16, 1955

Mr. WILEY. Mr. President, I have in my hand the text of a notable address which was delivered by Dr. Milton Eisenhower at the recent historic Conference on Inter-American Investment at New Orleans. I had previously referred to this very important conference on the floor of the Senate on February 9 as recorded on pages 1161-1163 of the Record. I also have in hand several splendid editorials on the Conference's work.

As regards this particular New Orleans speech, may I mention that Dr. Eisenhower has rendered important services to our Nation in many fields, not the least of which is his worthy contributions to the strengthening of inter-American relations, His memorable mission throughout the hemisphere was an impressive aid to Pan-American solidarity and understanding. As senior Republican member of the Senate Foreign Relations Committee, may I say that naturally it is Dr. Eisenhower's Inter-American work which has come particularly to my attention, but I have observed with interest his significant efforts in education and other areas.

The Eisenhower family is a great family-and it was great even before its most famous son came to occupy the highest office in our land. All America wishes it well-wishes well of all the dear ones of

the President of the United States and of course our Chief Executive himself.

Each of the Eisenhowers and the relatives of the Eisenhowers have stood on their own feet independently making their own fine careers, and America is deeply aware of that fact.

I ask unanimous consent that the text of Dr. Eisenhower's splendid and forthright New Orleans address be printed in the Appendix of the RECORD, to be followed by the text of editorials from the New York Times and the Christian Science Monitor, which were carried while the New Orleans conference was underway.

There being no objection, the address and editorials were ordered to be printed in the RECORD, as follows:

ADDRESS BY DR. MILTON S. EISENHOWER AT INTER-AMERICAN INVESTMENT CONFERENCE, NEW ORLEANS, FEBRUARY 28, 1955

On one thing all participants in this conference must be agreed: Good relations between the United States and the nations of Latin America are imperative as we seek to build a cooperative peace characterized by freedom and rising levels of well-being.

Most of us would agree, too, that in this hemisphere economic cooperation is the key to better relations.

Fortunately, we are making considerable progress in this regard. But in my judgment more individuals and agencies, both public and private, must be made aware of the problems involved, the pace of progress must be accelerated, and the rules of the game must

be made more stable and certain. The trade of the United States with the Republics of Latin America is now about \$3.5 billion in each direction each year. As a market for our exports, Latin America is as important to us as all of Europe, and more important than Asia, Africa, and Oceania combined. As a source of our imports, the other American Republics have greater importance than Europe or the other continents. And of course the United States is just as essential to the Latin American States as a market for their products, and as a source of their imports.

Such trade is mutually advantageous. All

Almost 30 percent of all United States private, long-term investment is in Latin Amer-This investment of some \$6 billion is larger than the amount invested in any other part of the world except Canada.

Loans to Latin American nations by the Export-Import Bank and the International Bank total about \$1.5 billion.

These investments are also mutually advantageous. While one can cite instances in which such capital has been mistreated, on the whole it has earned a good return. At the same time it has helped develop the jungle and the desert, provided work at good wages, carried with it technical and managerial skills and, by increasing the output of minerals, foods, and manufactured goods, helped build prosperity in our sister republics.

If these facts are as obvious as I assert them to be, why aren't economic relations essentially perfect? Why must we meet to discuss possible methods of improvement?

One might as well ask why all citizens within a single country are not wholly agreed on the basic elements of an on-going economic program. Whenever human beings work together, and particularly when the elements involved are as manifold and complex as they are in hemispheric economic relations, there are bound to be differences and difficulties.

Thus, in the United States there is little knowledge of Latin American needs, attitudes, and capabilities, and in Latin America serious misunderstandings of the economic policy and capacity of the United States.

Some of this later misunderstanding is a natural consequence of our assistance programs in Europe and other parts of the world. While leaders in Latin America understand that much of our aid to other areas has been to help rebuild resources which were destroyed at the very time that Latin American nations were enjoying an unprecedented prosperity; that our economic and military aid to other areas has benefited Latin America as much as it has the United States; and that the American people during the past 15 years have made unprecedented sacrifices for the welfare of all free nations-while these facts are usually recognized, nonetheless our assistance to other areas has coincided with the need for tremendous sums of new capital in Latin America, and loans to them, though sub-stantial, have not satisfied their aspirations. Unsatisfied aspirations can cause many persons to be critical, even though the facts do not justify that criticism.

A tremendous social ferment exists today throughout Latin America. The population is increasing at a rate double that of the world increase. Productivity is also increasing. The net situation is that production per person is increasing about 2.5 percent a year. That, too, is a world record.

But this praiseworthy rate of improvement is beginning at a low level. It is therefore understandable that the peoples of Latin America want to make still more rapid

They want to overcome illiteracy, to improve and expand their agriculture, to industrialize, to diversify their export trade and thus become less dependent on the sale abroad of 1 or 2 commodities. The need for highway, rall, water, and air transportation is critical in many regions. Insufficient productive energy is a serious impediment.

A high share of the essential improvements calls for capital—great quantities of it. It is difficult to exaggerate the need for investment funds.

Much of the capital must come from local savings. A good deal must come from the United States.

Unhappily, the need for foreign capital is accompanied in some areas by a rising tide of nationalism.

In some respects, this surge of nationalism is commendable, for it indicates a growing pride in achievement and an impatient desire to raise standards of living dramatically and immediately.

But ultranationalism, with its blindness to true long-time interests, is a major retrogressive influence in some countries, often closing the door to the very help and cooperation which are so desperately needed. It leads to laws and practices which prevent the entrance of foreign capital so essential to development.

Ultranationalism is being fostered by Communist agitators. These conspirators persistently chant the theme that foreign investment, private or public, is in reality a form of imperialism.

The situation in Latin America is uneven: In some countries the attitude toward investment of United States capital is wholly favorable. In a few, there is mild resentment with respect to the withdrawal of earnings or original capital. In other areas, Communist propaganda has convinced a good many persons that the use of foreign capital for productive purposes somehow impinges upon the sovereignty of the nation in which the capital is invested.

But in all this there is a great inconsistency: While some condemn foreign investment as an actual or potential evil, while others adopt practices and legislation that frighten or make almost impossible the entrance of foreign capital, and while still others want capital but only on unattractively restrictive terms, nearly all but the avowed Communists insist that an incoming flood of private and public capital is essential if they are to meet their just aspirations.

Two things are abundantly clear: First, foreign capital, properly handled, does not compromise the sovereignty of the host country. The United States used unbelievable quantities of European capital from its founding to about 1918. That capital did not impinge upon our sovereignty. And we repaid it all, with interest.

Second, foreign private capital cannot be driven. It must be attracted by conditions conducive to private investment.

Attracting foreign private investment does not mean the granting of special privileges—that is, privileges not extended to domestic investors (other than those pertaining to remittance of earnings from countries having exchange controls). Rather, attracting foreign investment involves primarily the avoidance of unnecessary restraints or discriminations which have the effect of repelling investment, and the establishment of stable financial and political climates which permit, if not encourage, both domestic and foreign investment under conditions of normal business risk.

Each country in Latin America must compete for foreign private capital with applicants from all over the world, including applicants within the United States. Success in such a highly competitive field requires adequate assurances of fair treatment, security, and a reasonable return in relation to alternative investment opportunities.

With multiple opportunities open to them, investors naturally give attention to such factors as unstable financial policies. In several countries, such policies have resulted in serious inflation, severe exchange restrictions, currency devaluations, and even the peacetime imposition of price ceilings—all of which have hindered balanced economic growth.

Inflationary policies not only discourage private investment from abroad; they also greatly affect the management of local funds—encouraging speculation in real estate and in inventories as a hedge against further declines in the purchasing power of money, and thus dissipating resources which otherwise might be used for productive development.

Internal financial stability is basic to a solution of exchange problems and to the maintenance of conditions which are conducive to economic growth.

There is now a strong trend toward financial stability in many other areas of the world. Hence, a renewed emphasis on achieving stability in the Latin American countries appears to be imperative if capital, competitively sought, is going to flow in the desired direction.

Because conditions vary so widely country by country, many thoughtful persons have reasoned that a bilateral treaty between the United States and each government of Latin America is the best approach to establishing conditions conducive to investment. feel this is true because, first, each treaty can deal with the uniquely individual problems of a particular country; second, the treaty can be in force for a long period of time and thus can reduce the risks of changing political policies; third, the country desiring to obtain private funds may be willing to give assurances or preferences to the United States that it might not be willing to grant to other countries, such as Russia; fourth, the foreign country can retain control over such local problems as partnership interest in the enterprise, and, fifth, the United States could, if it seemed wise to do so, grant preferential treatment to a particular country.

These arguments seem compelling, and yet only two Latin American countries now have treaties of this type with the United States.

treaties of this type with the United States.

Many contend that if a treaty is to encourage the flow of private capital, it must, as a minimum, provide for nondiscrimination against United States investors, and for just compensation in case of expropriation or confiscation. They realize that several countries have constitutional provisions which those countries believe make it impossible for them to enter into agreements without such serious qualifications as actually to nullify the compensation provisions treaties, but contend that this legal point has been overemphasized. They also feel that some nations wish to restrict unduly, by treaty, the fields into which United States capital may enter, or want to limit too greatly the manner in which United States companies may conduct their opera-

Other individuals who are also intimately familiar with the sweep of problems involved in the economic relations of the American nations, argue that too much attention has been given to such things as treaty assurances against confiscation. They argue persuasively that the one thing which would help most to stimulate the flow of capital would be a mechanism for guaranteeing the convertibility of currencles—that the fear of not being able to withdraw capital or earnings because of nonconvertibility is the great impediment.

All these ideas merit exploration. Certainly, I would like to see several additional Latin American nations open negotiations with the United States in the immediate future with the avowed purpose of finding sufficient areas of agreement as to make bilateral treaties truly valuable.

But the further exploration of the efficacy of bilateral treaties should not detract from what the nations desiring capital must generally do to attract capital, or from what the United States might generally do to encourage investment in Latin America.

During the past year, the United States has in manifold ways recognized that both private and public lending for sound development projects in Latin America should go forward on a substantial scale. Thus the Government announced new policies designed to encourage more activity by private investors, and to make possible an expanded program of Government lending.

Primary emphasis has been placed, as it should be, on measures to encourage private investment. Of course, the best incentive the United States can give to private investment in Latin America is the maintenance of stable trade relations and a high level of economic activity in our own country, thus halping to assure similar conditions in those countries—and in a moment I shall return to this point. Another opportunity to encourage private investment has to do with tax policies. * * *

But we cannot be content with encouraging an increased flow of United States private capital. Public loans should finance those sound projects for which private financing is not available.

In a report of November 1953 to the President I recommended that lending by the Export-Import Bank be intensified. That has been done. Our Government has assured the nations of Latin America that we will do our utmost to satisfy all applications for sound economic development loans for which capital is not reasonably available from private sources or from the International Bank.

This change in policy is more important than most seem to realize. Public lending, intelligently managed, can stimulate the development of certain key enterprises—such as transportaion—which will make possible the growth of private industries and businesses, and for those private capital should be found. In such situations, public lending can initiate chain reactions.

The new Export-Import Bank policy was announced in the middle of 1954. Since then, the bank has authorized 22 loans in 10 Latin American countries, for a total of more than \$158 million. These included loans to private, governmental, and mixed borrowers. They involved agriculture, aviation, railways, highways, power production, municipal water systems, mining, steel production and a variety of industrial enterprises.

The International Bank for Reconstruction and Development, also active during the past year, authorized loans to 6 countries, totaling more than \$111 million.

These figures show that substantial public credits are now being extended. At present, interestingly enough, both the Export-Import Bank and the International Bank, with ample funds to lend, are prepared to process applications greatly in excess of those now on hand.

The President has announced that, as agreed at the Rio Conference, the administration will support the creation of a new international financing agency. He has asked approval of Congress for the United States to participate in an International Finance Corporation, as an affiliate to the International Bank. The new corporation will stimulate private investment abroad by making loans without governmental guaranties. Its proposed capital of \$100 million will enable it to undertake operations greatly exceeding that amount by participating with private capital in jointly financing productive enterprises.

I said a moment ago that no other single thing would contribute so much to economic stability in Latin America and thus to the flow of private capital for new enterprises as stable trade relations with the United States. In my report to the President on this whole problem, I recommended as strongly as I could that the United States adopt and adhere to trade policies with Latin America which possess stability and a minimum of mechanisms permitting the imposition of increased tariffs or quotas.

A policy of reduced tariff barriers and expanded trade will contribute more toward the strengthening of the economies of all American Republics than any other single measure which could be adopted. Assurance of access to the great market of the United States is the most effective guaranty of economic stability in Latin America. Similar assurance that the other nations of this hemisphere can continue to buy much of our surplus production is one essential of economic prosperity in the United States.

Economic development is just as dependent upon access to technical knowledge and experience as it is upon access to capital and markets. Our technical-cooperation programs have been effective in Latin America. This is true of the programs we have undertaken directly with many Latin American governments, and of those conducted by the Organization of American States and the United Nations.

In 1953 I urged that United States participation in these programs be expanded. I am happy to say that United States funds for direct help in Latin America were increased from \$20.4 million last year to \$26 million this year and will likely be increased still more next year. Our contribution to the technical program of the Organization of American States has been increased from \$1 million to \$1.5 million annually.

The United States has recently gone to the aid of several Latin American neighbors when they faced economic emergencies. * * *

Frankly, I think we can take considerable satisfaction in the steps our Government has taken during the past year to help our sister republics and to improve permanently the economic relations among the nations of this hemisphere.

These steps have made the investment of private and public funds in Latin America more attractive.

And these steps have been exhaustively analyzed in two historic inter-American conferences. They appear to be acceptable to the overwhelming majority of Latin American leaders. At the conclusion of the Rio Economic Conference, a statement, unanimously issued by the heads of the 21 delegations, said:

"We leave this Conference with the satisfaction of having proved that the American nations here represented are in complete agreement as regards their great objectives in the economic field. These may be summarized as a determination to speed up the progress of each and every one of them within framework of freedom and justice, through substantial intensification of our inter-American economic, financial and technical cooperation."

Finally, may I say that the new United States policies have the enthusiastic, bipartisan support of all our people. The things we have said we will do are being done.

Let no man, no leader, here or anywhere in the hemisphere doubt the sincerity, the intention, the determination of our Government and our people to do all that is feasible to promote good economic relations and thus build a stronger family of nations in this hemisphere.

The President has underscored this determination. In his message to the delegates of the Rio Conference he said that, in the American family of nations, the United States will seek to be more than a good neighbor. It will be a good partner

good neighbor. It will be a good partner. This signifies more than a difference of words. It emphasizes a new approach to the problems with which we and our friends in the hemisphere are wrestling. This new approach is a logical evolution of the good neighbor relationship. As good neighbors each American republic tried in the economic field to adopt policies and pursue courses which would not prejudice the interests of the other members of the total community. Each sought in good faith to respond constructively to requests for cooperation and assistance from the others. In our own country this bipartisan policy gave meaningful direction to our hemisphéric relations.

That policy has logically carried us to the relationship that exists between us today, one which is so close that it can no longer accurately be described as that of neighbors. So interdependent are our destinles today that each American republic must recognize its direct, continuing and even selfish interest in the solution of the critical problems of every other member of the family. We must now be dependable partners in a great and lasting enterprise—the peaceful independence, the prosperity, and the happiness of all our peoples—peoples with great cultural diversity but with interdependent common goals.

This partnership concept is, I believe, shared by our neighbors. It found expression last year at two conferences involving all members of the Organization of American States, and also in regional conferences in which interdependence and mutuality were the keynotes.

It was almost historic accident, so far as I personally am concerned, that less than 2 years ago I should have represented the Government and people of the United States on a mission designed to improve relations, and especially cooperative economic relations, among some 20 interdependent nations, I knew upon my return that whether mutually helpful cooperation perceptibly improved would depend upon attitudes yet to be formed, actions yet to be taken. Fortunately, most developments since my trip and report have exceeded my fondest hopes.

As I said in concluding my 1953 report, "Working together, the nations of this hemisphere can, if history should so decree, stand firmly against any enemy in war, and prosper mightily together in times of peace."

[From the New York Times of March 2, 1955] STAKES IN LATIN AMERICA

The Inter-American Investment Conference now being held in New Orleans has importance far beyond the business deals it stimulates. It will help assuage the feelings of Latin Americans from the Rio Grande to Patagonia who think their self-appointed good neighbor is neglecting them for nations both more favored and more remote. The conference also marks a refreshing departure from the usual conference procedure. Instead of generating high-sounding official programs and pronouncements which, fettered with redtape, bog down in budgets and appropriations, this conference aims at specific agreements between practical businessmen free to act without political by-your-leaves and consequent delays.

Political instability, of course, has been one of the main deterrents to United States investment in Latin American countries. But much can be—and is being done already—by enlightened United States concerns to insulate their investments from the shocks of such disturbances. Most effective is a policy aimed not to compete with local interests in a preempted static market but to expand the existing market by creating new demands—and, through increased native employment; creating the wherewithal to satisfy those needs.

Such a program may neglect the quick gain, but it makes for a continuing, even though smaller, rate of profit and one that is guaranteed by local gratitude for local benefits received. Furthermore, a demonstration of the fruitful North American formula for economic progress—high productivity through more efficient methods, lower unit costs and higher wages—stimulates native interests to follow suit, thus widening the circle of local prosperity and trade with us.

[From the Christian Science Monitor of March 2, 1955]

INVESTING IN LATIN AMERICA

When 400 businessmen with capital to invest meet 400 others with projects needing financial sponsorship, something constructive is bound to happen. Such is the theory behind a 4-day meeting now taking place in New Orleans. In that trade-wise city businessmen from the United States are joining some of their opposite numbers from Latin America in an attempt to bring demand and supply together. Both groups have given evidence of being aware of the large political and social significance of the gap that exists between Latin America's need for fresh capital and the volume of it that she has been able to muster or attract. Their present task is to start trying to close that gap by concentrated bargaining on specific projects.

The United States Government is giving the conferees strong support. Their efforts conform to the Eisenhower administration's policy of encouraging private capital to carry as much as possible of the international work of country-by-country development. In a special message to the conferees, President Eisenhower has stressed this Nation's intention to maintain a program of direct and indirect governmental help, while emphasizing that one of its greatest aims is to create an atmosphere conducive to self-help and private development.

The countries seeking capital will gain by making their own contributions to an atmosphere friendly to private investment. Private capital will voluntarily leave the United States in increased volume when

foreign opportunities seem relatively more profitable than domestic opportunities. Domestic projects enjoy many advantages in attracting capital. Capital invested at home does not face the risks of expropriation, of tax discrimination, of being frozen into illiquidity by government fiat or of inadequate legal protection that capital invested abroad has often confronted. Foreign projects have to offer advantages correspondingly great.

Among the most beneficial results of the New Orleans conference may well be a demonstration to our own businessmen that discouragements to private capital have been eliminated in more cases than is generally understood and a demonstration to Latin-American businessmen that more work needs to be done to abate the discouragements that remain.

Statement of AMVETS' National Commander Rufus H. Wilson, Regarding Hoover Commission's Recommendations Concerning Veterans' Administration's Medical Activities

EXTENSION OF REMARKS

HON, JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. VAN ZANDT. Mr. Speaker, the following interesting letter from the pen of Rufus H. Wilson, national commander of the AMVETS, appeared in the March 10, 1955, issue of the Washington Evening Star, Washington, D. C., concerning the so-called Hoover Commission's recommendations on Veterans' Administrations medical activities.

National Commander Wilson speaking as he does, for the veterans of World War II, reveals some interesting discrepancies in the findings of the Hoover Commission.

The letter follows:

RETORT TO HOOVER REPORT

Neither the cartoon nor the editorial in the Star of March 2 relating to the "hot off the press" Hoover Commission recommendations concerning Veterans' Administration medical activities add to your historic policy of fair play and commonsense.

Never in history has so important a commission said so much with so few facts to back it up, and all in the name of economy. Of course, I realize it isn't important that I, as the national commander of one veterans' organization, feel this way. But I suggest that it is important that my view is shared by some pretty fairminded people, including the executive and legislative personnel in Government whose objections will come to light in the very near future.

light in the very near future.

The Hoover Commission's recommendations on VA medicine are, in our opinion, doomed to failure—a deserving fate. They are doomed because they fail to tell the whole truth. When you consider the following, we

hope you will agree:

1. The Hoover Commission distorts the truth when it implies that disability compensation is a \$2 billion part of the cost of Federal medical care. Disability compensation is paid as a result of impaired earning power caused by disability incurred in military service. Thousands of recipients of dis-

ability compensation have never even seen a Veterans' Administration hospital, let alone having been a patient in one.

2. The Hoover Commission falsely alleges that there is gross abuse of the VA medical system. The House Veterans' Affairs Committee and the Veterans' Administration itself have definite proof as a result of exhaustive surveys and studies that present regulations have almost eliminated abuse.

3. The Hoover Commission implies half truths when it talks about 20 million veterans who are entitled to hospitalization in VA hospitals. It conveniently glosses over the fact that only 109,000 VA beds were available last year. And it doesn't explain how all of those 20 million veterans who they say were so grossly abusing this program could have possibly squeezed into those 109,000 beds.

4. The Hoover Commission either deliberately, or with ignorance, indicates that only nonmedical VA personnel determine how much compensation or pension a veteran is entitled to. The basic truth known to every one interested in veterans' affairs is that doctors are an integral part of every Veterans' Administration disability determination.

5. The Hoover Commission blandly recommends investigation of every non-service-connected hospitalization case to see if the veteran applying for such hospitalization can afford to pay for it. It purposely, or with ignorance, overlooks a 2-year old policy of the Veterans' Administration that has almost entirely done the very thing it recommends. And this policy, incidentally, was recommended by AMVETS over 3 years ago.

6. The Hoover Commission inhumanely ignores the fact that of the 65,000 non-service-connected cases in VA hospitals, 40,000 are neuropsychiatric cases, 13,000 are TB cases, and the vast majority of others are chronic cases such as cancer, heart trouble, sugar diabetes, etc. And the Hoover Commission had this information right before it when it wrote its report.

7. The Hoover Commission extensively refers to isolated quotes from a General Accounting Office report of 1952 which is detrimental to the VA medical program. It then deliberately fails to quote likewise from a more recent report of the House Veterans Affairs Committee which showed the GAO report to be fallacious in almost every extent.

8. The Hoover Commission says that national veterans' organizations are opposed to goldbricking. It fails to say that extensive surveys by those same organizations conclusively proved that goldbricking is almost nonexistent in VA hospitals.

The Hoover Commission recommends periodic review of veterans' disability compensation claims, leaving the erroneous impression that such reviews are not now made.

10. The Hoover Commission recommends the closing of some Veterans' Administration hospitals. It also recommends no new construction. It falls to even humanely indicate where this Nation should place the veteran patients, service connected and non-service connected alike, presently in those hospitals.

RUFUS H. WILSON, National Commander, AMVETS.

(EDITOR'S NOTE.—The Star has confidence in the findings of two Hoover Commissions and their task forces regarding needed reforms in the veterans' health and hospitalization programs. Its editorial and cartoon were based largely on those findings. After further inquiry as to points raised in Mr. Wilson's letter, the Star stands on its editorial position that the Hoover Commission has revealed "much that needs correction" in the field of Federal health and medical services.)

A Highly Successful Kansas Farm Family

EXTENSION OF REMARKS

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article published in the Sunday, March 13, Kansas City Star.

The Kansas delegation had the privilege the fore part of this week of entertaining their 10 master farmers selected by the Kansas Farm Bureau. I wish to call attention to the accomplishments of Roy Neher, Oswego, Kans., and his family. They typify the high standard of farm families with which Kansas is blessed. This story from the Star briefly outlines some of the accomplishments of this highly successful family:

Joins Sons as Winner—Oswego, Kans. Man Takes Share of Honor as Farm Expert— As Result, Roy Neher, Who Has Been Successful Leader of Young People, Gets Trip to Capital

Osweco, Kans., March 12.—Because he had helped his four sons and many neighbor boys win outstanding recognition for themselves, Roy Neher of Oswego is enjoying a prize—a trip to Washington.

It began 13 years ago when Mr. Neher's oldest son, Dean, brought home a pure bred Guernsey helfer as a 4-H project. Soon Roy Neher had stocked his farm with pure bred Guernsey cattle, and had become an active 4-H club leader. His wife was a coleader and the four sons active members.

ALL TO M'PHERSON

Mr. and Mrs. Neher had become acquainted as students at McPherson college, so the sons attended there. Dean graduated, spent 1 year in Europe as an agricultural adviser, and now is working toward a Ph. D. degree in physics at the University of Chicago on a Danforth Foundation fellowship.

Gerald, the Neher's second son, graduated from McPherson, did advanced work in agriculture at Cornell, and in Bible at the seminary of the Church of the Brethren in Chicago. He is now serving as a missionary in Nigeria, Africa. Both Dean and Gerald are licensed ministers.

THIRD SON IN TURKEY

Lyle completed 2 years at McPherson, and is now spending a year as an agricultural adviser in Turkey. He has won local honors as a cattle judge and is recognized as an authority on Guernsey cattle.

Doyle will graduate from the Oswego high school this spring and will enter McPherson next fall. He, too, is an expert cattle judge.

While his sons were getting advanced training and winning honors for themselves, Mr. Neher was getting more training and winning honors for himself, such as Labette County dairyman of the year; president of the Kansas Guernsey Breeders Association, 1953 and 1954; member of the Labette County extension board; and owner of the cow ranking first in dairy production in Kansas.

THREE PHASES OF HONOR

Mr. Neher's trip was won on three units of work: family life, community activities, and farm management. His community work included 4-H club leadership, member of the Oswego school board, and an elder in

the Church of the Brethren at McCune, Kans

His farm accomplishments were soil improvement, livestock improvement in quality and production, improvement in poultry, improved buildings and work in artificial insemination of dairy cattle.

During his trip to Washington, Neher will

During his trip to Washington, Neher will visit with his Congressmen and hopes to visit with President Eisenhower.

Those U. N. Awards

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. OSTERTAG. Mr. Speaker, the question was raised in this body earlier this week as to what funds were used by the United Nations to pay indemnities, amounting to approximately \$180,000, to a group of former American employees of the U. N. who were fired after they invoked the fifth amendment on questions concerning their loyalty to the United States.

I have made a rather extensive investigation of this matter, Mr. Speaker, not only to determine how and why these awards were made, but also to determine how they were paid and whether the indemnities would be regarded by the Internal Revenue Service as damages, in which case they would be tax free, or as income, in which case they would be taxable. Finally, I made inquiries to determine whether, if the indemnities were regarded as income, the United Nations would then pay the State and Federal taxes due on them. As members of this body know, United States employees of the U. N. are reimbursed for all income taxes they pay to the United States Government, and to the New York State government, so that, for all practical purposes, their salaries are tax free. In lieu of taxes to our own Government, however, they contribute to the U. N. Staff Assessment Fund, and it was from this fund that these awards were paid. Since the awards range from \$6,000 to \$40,000, the State and Federal taxes on them would be substantial. My inquiries have established, in brief, that first, the Internal Revenue Service has held that the awards are income, and therefore taxable; and secondly, that the United Nations will not pay the taxes thereon.

I should like to add this further word, Mr. Speaker. In my judgment, the disposition of these loyalty cases constitutes a shabby blot on the U. N. escutcheon. In firing, and then rewarding these individuals, the U. N. pursued completely contradictory courses. It could not have been right on both counts. Either these people were loyal, in which case a great injustice has been done to them; or they were disloyal, in which case they should never have received these handsome indemnities.

The size of the awards is, of course, unimportant. The principles involved go to the very foundations of our concepts of equity and justice.

I am certain the Members of this body will be interested in the exchange of correspondence I have had on this matter with our Ambassador to the United Nations, Henry Cabot Lodge, Jr., and with Commissioner T. Coleman Andrews, of the Internal Revenue Service. It is appended herewith:

DECEMBER 6, 1954.

Hon. HENRY CABOT LODGE, Jr.,

United States Ambassador to the United Nations, New York, N. Y.

Nations, New York, N. Y. DEAR CABOT: I note in the press that our Government has agreed to pay the awards made by the United Nations Administrative Tribunal to 11 United States citizens who were former employees, and that the awards will be paid from the staff assessment fund. This letter is to request further data with respect to this matter; namely, (1) a copy of the statement made by Senator FULBRIGHT agreeing to the awards; (2) a copy of the resolution jointly sponsored by the United States and Argentina with respect to the creation of a board of judicial review, with, presumably, appellate jurisdiction over the Administrative Tribunal; (3) a report on the status of the resolution and the steps through which it will have to pass before such a board is actually established; (4) data about the staff assessment fund-what it is; who contributes to it; how contributions are made; is it voluntary or compulsory; and what the fund is used for. press reports that the fund is a United Nations tax levied on all employees' salaries in lieu of the national income taxes, and that the special indemnity fund is to be carved out of this, and maintained at a level of \$250,000. Have the U. N. employees agreed to this, and if so, what contingencies other than the dismissal of the 11 Americans have persuaded them to the creation and maintenance of such a fund? Finally, I should be grateful for a clarification of the tax status of U. N. employees, vis-a-vis their respective countries. It was my understanding that their income taxes were remitted to them by the U. N., but the press reference to U. N. taxes in lieu of national income taxes raises some question in my mind about the status of these employees.

This is rather a large order, but I know you agree that the matter is rather far-reaching in its implications, and I am therefore anxious to secure as much data as possible with respect to it.

With kindest personal regards to your good self. I am

Sincerely yours,

HAROLD C. OSTERTAG,

Member of Congress.

NEW YORK, N. Y., December 22, 1954. Hon. Harold C. Osteriag,

United States House of Representatives.

Dear Harold: This is in further reply to your letter of December 6 concerning the United Nations Administrative Tribunal awards question which was before the United Nations General Assembly.

Final action on the matter was completed by the General Assembly at its closing plenary session on December 17, and I am now in a position to give you a full report on it.

The resolution passed by the Assembly on this matter on December 17 (copy enclosed) represents the culmination of vigorous efforts made in compliance with House Concurrent Resolution 262, which (a) called upon the United States delegation to "take all possible steps to prevent the General Assembly of the United Nations from authorizing or approving the payment" of awards made 2 years ago to 11 Americans, and (b) provided that the United States "should not be compelled to contribute any of its funds" in payment of these awards and "that no part of the funds heretofore

appropriated, or hereafter appropriated by the Congress for the United Nations shall be used for the payment of such awards."

The record is clear that all possible steps were taken within existing legal procedures to prevent the payment of these awards. These steps commenced, of course, long before the passage of the House concurrent resolution. The United States delegation fought against the payment of the awards throughout the eighth session of the General Assembly. The State Department's Legal Adviser fought before the International Court of Justice to establish the legal right of the Assembly to refuse to pay the awards. Finally, after the International Court denied that right in its opinion of July 13, 1954, so that payment became inevitable, the United States delegation to the ninth session of the Assembly continued to maintain the position that the awards were unjust and indeed outrageous and that the opinion of the International Court of Justice, though it should be respected, was erroneous

Thus, all possible means of opposition to the awards—except outright defiance of the opinion of the International Court—were used in a fight carried on over 2 years. Outright defiance of the opinion of the International Court would clearly have left the United States standing almost alone on the issue and would have resulted in the payment of the awards from appropriated funds contrary to the intent of the House concurrent resolution.

With reference to that intent, the majority leader of the Senate speaking on August 20, 1954, said that the resolution "does not go to the point that United Nations funds from other sources should not be used for such payment of damages, but that funds appropriated by the American Congress, from the American taxpayers, should not be used in this particular type of situation."

Accordingly, the United States delegation, having exhausted all efforts to defeat payment of the awards completely, made certain that the awards would not be financed from funds heretofore or hereafter appropriated by the Congress. It saw to it that a special fund was set up financed from staff assessment—the internal United Nations tax on its employees—from which past and future awards would be paid. The creation of this fund was bitterly attacked by the Soviet bloc, which alone opposed it in the plenary session.

The United States delegation then went further-beyond the directive of the House resolution-to assure that in the future the administrative tribunal would not have the last word in making awards such as those made to the 11 Americans. It carried on a long and difficult, but finally successful, fight to establish the principle that awards of the tribunal should be subject to judicial review. Though this principle was defeated in committee, it finally won acceptance in the plenary, and action to establish the review procedure will be taken by the next session of the Assembly after thorough study is given to the matter by a special committee. Of course, the United States will be represented on this committee.

The General Assembly resolution of December 17 as a whole—including the establishment of the special fund and the provisions for judicial review—represents a real victory for the United States and a defeat for the Soviet bloc. The resolution as a whole was approved 52 to 5, with only the Soviet bloc opposed.

An important element in this victory was the fact that the United States was able to make clear its opposition to the opinion of the International Court of Justice and at the same time avoid the necessity of insisting that the Assembly disregard it. As you know, one of our strongest weapons in exploiting Soviet propaganda and motives is,

from time to time, to challenge them to submit specific issues to the International Court for decision. Their inability to accept such a challenge constantly exposes to the world the true nature of their charges and actions. Had we not been able to secure the adoption of the resolution of December 17 and had we found it necessary to insist that the Assembly refuse to comply with the opinion of the Court, we would have lost this very important weapon against the Soviets.

Now, let me reply to your requests for

specific data:

(1) I am enclosing copies of three statements made by Senator FULBRIGHT on this matter. The first was made in committee on December 3, when the original United States-Argentine resolution was introduced. The second was made in committee on December 9 after the committee voted to accept an amendment to the United States cosponsored resolution which struck out the acceptance of the principle of judicial review. The third was made in the plenary on December 17 in support of the United States cosponsored amendment to restore the judicial review principle. This amendment carried and is embodied in the final resolution.

Also enclosed is a copy of the statement made by Senator SMITH on December 9 in support of the United States cosponsored

resolution.

(2) I am enclosing copies of the original United States-Argentine proposal (A/C.5/L. 317), the resolution adopted by the committee on December 16, and the resolution voted by the plenary on December 17.

(3) I have already covered the question of the status of the resolution. The steps provided for the creation of the judicial review machinery are spelled out in the resolution of December 17.

(4) The provisions for the creation of a new special indemnity fund from staff assessment proceeds are contained in part "O" of the enclosed resolution of Decem-

The staff assessment fund is derived from an internal income tax levied by the United Nations on its employees. Payment of the assessment is compulsory. The plan was adopted some years ago by the Assembly for two reasons. The first was to avoid the inequality of take-home pay of Secretariat employees which would result if they were subject to varying systems of national income taxation. To meet this situation, it was recommonded to governments that they exempt their citizens employed by the United Nations from national taxation; and, in anticipation that this would be done, it was provided that there be substituted an internal income tax applying equally to all Secretariat employees. The second reason for the establishment of a staff assessment plan was the recognition that it was undesirable for United Nations employees to be a tax-free group of individuals, a situation which would result if they were exempted from national taxation.

The proceeds of staff assessment have been treated as miscellaneous income of the Organization and are at the disposal of the General Assembly to meet expenses of the Organization. Thus, the consent of the staff is not required. The Secretary General has proposed for study by member governments a plan whereby staff assessment proceeds would be placed in a special fund from which credits would be given only to those governments which have exempted their citizens from national taxation.

Of the governments whose nationals are employed by the United Nations within the boundaries of their home countries, the United States is the only one which has failed to provide exemption from national taxation. To avoid a situation in which Americans employed by the United Nations

would be subject to double taxatlon—staff assessment plus United States income tax—the United Nations has each year reimbursed to these Americans the income tax paid by them to the United States. Other member governments have, of course, been most unhappy about this situation because it has resulted in their contributing to the payment of United States income taxes. It is for this reason that the Secretary General has made the proposal mentioned above concerning the handling of staff assessment proceeds in the future.

I hope I have covered all the various questions you had in mind. If not, please do not hesitate to call upon me for further infor-

mation.

Sincerely yours,

HENRY CABOT LODGE, Jr.,

United States Representative
to the United Nations,

United States Treasury Department,
Washington, D. C., February 8, 1955.
Hon. Harold C. Ostertag,
House of Representatives,

Washington, D. C.

My Dear Mr. Osterrac: This is in reply to your letter of January 5, 1955, in which you request information concerning the treatment, for Federal income tax purposes, of amounts approved by the United Nations General Assembly for payment to a group of 11 Americans whose employment with the United Nations was terminated after they refused to answer questions concerning their lovalty.

Information available to us indicates that in each case a claim was presented for salary, remedial relief, and reimbursement of legal costs. In making the awards consideration was given to the extent to which each applicant had expectation of continued employment by taking into account the terms and nature of the contract of employment and evaluating the applicant's chances of earning a livelihood after separation from the United Nations.

Section 61 (a) of the Internal Revenue Code of 1954 provides a general definition of gross income which states that except as otherwise provided in the Internal Revenue Code, gross income means all income from whatever source derived, including, but not limited to, compensation for services, fees, commissions, and similar items. Section 22 (a) of the Internal Revenue Code of 1939 was to the same effect.

It is our opinion that the awards are compensatory in nature and that the amount thereof, in each case, is includible in the gross income of the recipient for the year in which such amount was received.

The legal fees expended by each of the individuals concerned are deductible in the year in which such fees are paid in accordance with the provisions of section 212 of the Internal Revenue Code of 1954 and section 23 (a) (2) of the Internal Revenue Code of 1939.

Very truly yours,
T. Coleman Andrews,
Commissioner of Internal Revenue.

New York, N. Y., February 14, 1955. Hon. Harold C. Osterrag,

House of Representatives.

DEAR HAROLD: Thank you for your letter of February 9 and the enclosure.

I have looked into the question which you raise and can assure you that the United Nations will not pay the Federal income tax on the awards.

With best wishes and kind personal regards.

Sincerely yours,

HENRY CABOT LODGE, Jr., United States Representative to the United Nations. Pan Americanism and Merchant Marine

EXTENSION OF REMARKS

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the Record, I should like to include the following address by Arthur E. Tarantino, Esq., at American Legion Club, Seat Pleasant, Md., February 21, 1955:

PAN AMERICANISM AND THE PART PLAYED BY THE MERCHANT MARINE IN THE DEVELOP-MENT OF IT

(Address by Arthur E. Tarantino, counsel in the Office of General Counsel, U. S. Maritime Administration, Washington, D. C.)

When the invitation to talk before you was extended to me by Mrs. Plumley, I accepted it gratefully, because I could see no better way to thank the American Legion for the public support it has given to the American merchant marine than to come here before you and acknowledge it publicly.

No other group of citizens who have been so closely tied by experience to the national defense demands of the Nation has ever appreciated and acknowledged the dependence of the Armed Forces of the United States upon the American merchant marine as has the Amercan Legion. To my mind and recollection, the American Legion has been most vocal and articulate in bringing before the American public the complete dependence of our armed services upon the merchant marine. After all, who is more qualified to express an opinion in this regard than the men of the American Legion: we fought two major wars on foreign soil and you know how our men and supplies got there.

The topic selected for my talk this evening is pan Americanism and the part played by the merchant marine in the development of it. This might well have been changed to the American merchant marine and the part played by pan Americanism in the development of it, since more than 90 percent of the foreign commerce of the Americas is carried by sea.

With every step in the advancement of pan Americanism there has been corresponding progress in the solution of the problems concerning marine transportation between the countries involved.

The first efforts toward setting up an understanding among the American Republics were made by Simón Bolivar. The first conference of independent American countries was held in 1826. Originally, the most important concern of the countries taking part was to find some kind of common defense in case of war. The first practical application of the theory of western hemispherical integrity of international consequence was issued by President Monroe when he uttered the theory of the Monroe Doctrine and proclaimed that the American Continents were "henceforth not to be considered as subject for future colonization by European powers."

After the 1864 conference, members devoted most of their efforts to simplifying the rules of international law. However, it wasn't until 1889 that real progress commenced to be made. At that time, the first conference to include all the independent nations of the Western Hemisphere was held in Washington, D. C.

One of the chief accomplishments of the 1839 conference was the creation of the Pan American Union. From that time on, most of the discussions were about trade and commerce.

The Pan American Union is the permanent body of the International Conferences of the American States. As such, it prepares the program and regulations of conferences, helps to get treaties and other agreements ratified, and carries out resolutions passed by the conferences.

The Pan American Conferences have done a great deal toward promoting understanding and cooperation among the American Republics. For quite some time, the South American countries had looked upon Uncle Sam with suspicion. They felt that the "giant from the north" wanted only to win profits and economic advantages from the countries of the south.

However, in 1933, with the announcement of the good-neighbor policy, this attitude was changed considerably and events subsequent to that showed that the United States really believed in the good-neighbor policy.

The first Inter-American Maritime Conference was held in the Pan American Union, in the city of Washington, in 1940 for the purpose of bringing about a better understanding on the part of all the delegates concerning the nature and scope of the maritime and related problems of the Western Hemisphere, and the factual considerations underlying such problems. That conference was not only successful in bringing about such an understanding but it also succeeded in promulgating practical proposals for continued cooperative study of the existing and future problems of the maritime industry.

Recommendations coming out of the Inter-American Conferences not only advanced the interest of international relations but also promoted the cause of maritime transportation.

For example, with respect to tourist travel—it was the manifest feeling on the part of many of the delegates that, in the interest of international relations, everything practicable should be done by the various Governments to bring about a more widespread acquaintance of the peoples of the various nations with each other, especially by promoting tourist travel. How better can tourist travel be promoted than by encouraging the construction and operation of more passenger vessels in such quantities and at such cost as would make ocean travel available to all citizens?

With respect to ocean freight rates—proposals submitted by the delegates, in the main, had as their objective the bringing about a reduction of rates on particular routes or in particular areas, the fixation of rates on prescribed bases, or the regulation of rates by national or international governmental agencies.

Although it is recognized that any commission on maritime services of an international character could possess no direct authority over rates and fares, how better could the United States accept the proposals than to give impetus to the maritime conference systems as approved by the Shipping Act of 1916, as amended? This act did not bar maritime conferences; it affirmatively established their legality and gave to the then Shipping Board the power to exempt such conferences from the antitrust laws of the United States. Steamship agreements and conferences are not confined to the lines engaging in the foreign trade of the United They are as universally used in the foreign trade of other countries as in our own.

Maritime conferences were conceived not for the purpose of enabling a group of lines to dominate a trade but in order that steamship lines might not destroy each other.

Conferences are not solely for the benefit of the shipowner. To the merchant the conference means stability of rates and assurance of regular, frequent, and dependable service; it also means equality of treatment

for all shippers, large and small, to a degree which could not be accomplished by legislation.

Conferences undeniably act as a brake upon rates. However, it must be borne in mind that this brake acts not only to prevent the decline of rates to ruinous levels during times of shipping depressions but also checks the rise of freight rates during emergency periods. A review of the freight rates shows that nonconference carriers who previous to the war were cutting the rates of conference lines charged rates much higher than the conference shipowners at the first available opportunity. Further, charter rates which were not subject to conference control were advance proportionately many times greater than the conference rates.

Experience since World War II, immediately before the Korean War, and immediately after the Korean War, had indicated that it is the nonconference carrier who is the cause for high and low fluctuations in ocean-freight rates.

ocean-freight rates.

The principle of the conference system as it exists in the United States foreign trade, briefly, is that through conferences shipowners of many nationalities are permitted to take common or join action in order to prevent destructive competition which would destroy their services and stability of rates which are so essential to the orderly conduct of trade. This principle is not applicable to nonconference members and as a result they are exposed to destructive competition which cannot be prevented. The Federal Maritime Board, as successor to the United States Shipping Board, supervises the activities of the conferences to see that the powers which they are permitted to use are not abused, and as a result the public interest is protected.

Ocean shipping is an integral part of foreign relations, since it is essential to the international exchange of goods. The desirability of maintaining adequate ocean transportation facilities for the implementation of the cultural, economic, and political contacts between the American Republics is axiomatic.

The impact of the use of the mercantile marine as a means of carrying American prestige abroad was brought home to the United States in 1936 when President Roosevelt, in the midst of his good-neighbor policy, attended an inter-American conference in Buenos Aires and was literally shocked to see the poor quality of United States flagships serving South America's east coast, and on his return to Washington he ordered the then Maritime Commission to place at the head of its program the establishment of a first-class liner service between our Atlantic coast and South America's east coast. The President realized the meaning of United States prestige as reflected in its ocean ship-We were trying to impress our Latin-American friends, yet we were showing ships far behind those of other nations. Our ships are our ambassadors and throughout the world, not only in South America, we impress, or we fail to impress, as we show ourselves.

The result of President Roosevelt's order was the establishment of our good-neighbor fleet in 1938, and it was fortunate we started that service because the war came and the need of the solidifying action of the Americas was tremendous. We should have been in a sorry position if we had not had good friends south of the border. Europe was cut off as a travel center, so our South American ships carried thousands of travelers to Latin America.

Residents of the United States travel extensively, and through travel gain much from the contacts they make with the people of other nations. Travel, like trade, is based upon mutual gain, whether the gain is material or cultural in essence. Travel brings

people together, permitting the interchange of ideas, and helps promote understanding between different cultures. It enables the residents of one nation to appreciate much more fully and to understand more completely the psychological factors that tend to differentiate the ideas and the customs of other people as compared with their own.

The main artery to the pan-American trade and travel lies in the Republic of Panama, to whom we are indebted for that strip of land 10 miles wide in which we have built the Panama Canal.

Panama is the youngest republic in the Western Hemisphere. It is the Isthmus of Panama which joins the Americas. Panama has been a thoroughfare for many hundreds of years. It is not only the crossroad of ocean traffic, but is a center of air travel as well. Although it is about the size of the State of Maine, it contains the greatest canal ever built by man.

The Panama Canal is the great factor in the economic life of Panama. It brings substantial revenue to the republic through purchases made by people connected with the canal, and it draws tourists from all parts of the world. It saves every ship going from the Atlantic to the Pacific at least the 7,873 extra miles which it would have to sail if it went from ocean to ocean by the usual route around the Strait of Magellan.

Some interesting statements concerning the Panama Canal are as follows:

1. The canal runs from a northwesterly to a southeasterly direction. Ships leave the canal and enter the Pacific at a point about 20 miles east of where they enter on the Atlantic side.

2. Two hundred and forty million cuble yards of earth were excavated to build the canal. A wall 5 feet thick and 10 feet high could be built around the world with all this

3. More than 5 million cubic yards of mud is dredged from the canal each year to keep the channels clear.

 A hyacinth patrol is maintained every year which pulls out and destroys over 25 million water hyacinths yearly to keep the channels open.

5. The width of the locks is the determining factor in deciding the breadth of certain vessels which when constructed will have occasion to be used in both the Atlantic and Pacific Oceans.

The Panama Canal is the cord which ties Pan Americanism together, north, south, east, and west. It is the instrument which has made it possible for our mercantile houses to contribute substantially and permanently, to the economy of the South American countries. The resultant growth of South American industry has increased the demands for American products-all available for delivery by our mercantile marine. In this matter the United States faces the competition of Europe. However, to the extent that our shipping handles the cargoes and other commercial traffic, this Nation stands to strengthen its Pan American ties. Our national defense as well as our commercial well-being depends upon our success in this.

As confirmation of this, the last Economic Conference held by the 21 member nations of the Pan American Union near Rio de Janeiro, November 22-December 2, 1954, after realizing that the Americas have not fully utilized the great potential of maritime transportation available to it, demonstrated its great interest in, and appreciation of, the importance of maritime transportation to their economies by urging the American Republics, as a matter of inter-American policy, to cooperate in the improvement, development, and most efficient operation of their transportation facilities.

In addition, the conference uttered a declaration of maritime policy to the effect "that it is the policy of the American Repub-

lics that their national merchant marines, composed of vessels flying their flags, transport a substantial part of their foreign trade."

The members of the Pan American Union, like the American Legion, were fully aware of their dependence on the merchant marine in time of emergency and in testimonial thereof has asked that a study by the member nations be undertaken to determine the greatest possible coordination of the transportation facilities of the Americas in time

Thank you for your interest, and good night.

Perilous Tax Plan

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. CURTIS of Missouri. Mr. Speaker, Under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "Perilous Tax Plan," which appeared in the St. Louis Globe-Democrat on Monday, March 14, 1955:

PERILOUS TAX PLAN

If the Senate approves this week the Democratic compromise tax cut plan it will be making a moral decision that is a good deal more important than the revenue involved. It will be saying in effect there need be no limit whatever on capricious politics-playing. It will be saying broken promises or damage to the business economy need never inhibit the lawmakers' bare-faced scramble for votes.

No observer misses the fact the proposed \$20 or \$10 individual cuts are aimed primarily at freeing up to 5 million low-income persons of all Federal income taxes. compromise version would recoup the Treasury's revenue loss by repealing last year's slight reduction in corporate and dividend taxes and a new corporate depreciation allowance schedule.

Consider these points: What becomes of the ability-to-pay and broad-base theories of taxation if it is fair to excuse several million from paying any taxes whatever? Even if the lowest brackets pay no more than \$5 each, is it wise in the long run to create a group of voters who are totally indifferent to the mounting cost of Government?

The 1954 tax overhaul bill was the result of years of study. Is it to be immediately hacked to pieces by political whimsey and

vote-grabbing?

The new depreciation law led many firms to plan plant expansions, to borrow money, to undertake long-range programs. What of the injury done these job-providers when Congress reverses itself. The day business and investors become too dubious of Congress' tax law integrity to expand, on that day will unemployment and an economic downslide begin to mushroom. The proposal for a longer extension of corporate and excise rates increases those doubts.

The dividend reversal completes the picture of tax-law venality. Though that change, last year, primarily favored thou-sands of little stockholders and pensioners, it had to go too-else how could the Democrats recreate the hoary political myth that "evil big business" and "bloated stockholders" can and should pay the cost of freehanded government?

It is to be hoped there is enough real statesmenship in Congress to squeich this trend toward unabashed political tinkering with the basic tax laws on whose dependability a health economic system must be able to rely.

Dixon-Yates: Now You See It, Now You Don't-Misrepresentation of Newspapers' Opinion

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. PRICE. Mr. Speaker, for a long time now, interested parties behind the nefarious Dixon-Yates contract have been attempting to purify it in the minds of the public. The most recent attempt has been a brochure prepared by a highpowered New York public relations firm, which contains numerous editorials and reports from news columnists purporting to be in defense of the contract. I am not able to say just how many of these carefully selected editorials definitely state the final opinions and views of either the newspapers or the news writers, but I can point out at least one definite misrepresentation of a newspaper's position. To do this, I include herewith an editorial from the St. Louis Post-Dispatch of Saturday, March 12, 1955.

If the sponsors of the Dixon-Yates contract had desired to be fair in the presentation of their case, the brochure should have contained a sampling of editorial opinion not all weighted in favor of Dixon-Yates. In taking the Post-Dispatch as an example, the publicrelations experts chose one editorial which complimented the mechanics of Mr. Dixon and Mr. Yates in a presentation on a TV program Meet the Press, but which expressed no opinion of the Dixon-Yates contract. The public relations experts made no mention in their elaborate 23-page brochure of the very frequent editorials in the St. Louis Post-Dispatch criticizing the many defects in the Dixon-Yates contract and expressing the opinion of the newspaper on the manner of execution of this contract.

The editorial from the Post-Dispatch follows:

Now You SEE IT, Now You Don't

We are in receipt of a 23-page brochure from the public relations firm of Hill & Knowlton, in New York City, headed "Editorial Views on the Atomic Energy Commission's Contract for Electric Power with the Mississippi Valley Generating Co. (Dixon-Yates)." The brochure contains editorials from 29 newspapers, columns by Roscoe Drummond and Dorothy Thompson, and a news story from Time magazine.

One of the 29 newspapers represented in the brochure is the Post-Dispatch. The editorial which Messrs. Hill & Knowlton have chosen to represent the Post-Dispatch's views is entitled "Meet the Dixon-Yates" and was printed last December 6.

In this editorial we said that Edgar H. Dixon and Eugene A. Yates turned in a good performance in their appearance on the TV program Meet the Press. We expressed no opinion of the Dixon-Yates contract.

In some 40 other editorials this newspaper has dealt with that contract point by point as the controversy has developed. We have criticized its execution by Presidential flat, its negotiation in secrecy, its lack of competitive bidding, its extravagant cost, its intrusion of the executive branch of government upon the legislative branch, its ill effects upon independent agencies (principally AEC and TVA), its threat to the entire public power program nationally, etc.

Not a word from any one of these two-

score editorials was chosen by Dixon-Yate's public relations firm to represent the Post-Dispatch's editorial views on the contract. Sweet are the uses of public relations.

The Spirit of St. Patrick

EXTENSION OF REMARKS OF

HON. JAMES G. DONOVAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. DONOVAN. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial by Harry H. Schlacht entitled "The Spirit of St. Patrick," published in the East Side News in New York City on Saturday, March 12, 1955:

THE SPIRIT OF ST. PATRICK (By Harry H. Schlacht)

Next Thursday, March 17, is St. Patrick's Day.

It will be a great day for the Irish.

All honor and glory to them. For on that day we shall weave the Sham-

rock into a garland of glory for Emerald Isle. It is the land with the heart of a child and the smile of a god.

It is the country of scholars, the abode of poetry, and the nursery of liberty.

It is the cradle of heroes, the home of martyrs, and the isle of the immortal saint. Scattered o'er the world are the children

of Erin-

Who will dwell upon the charms of Killarney's lakes and falls,

Who will speak of the refreshing waters of Shannon,

Who will hear the melody of the harp ring through Tara's hall,

Who will recall the music of the pipers in the hush of twilight. Who will feel the warmth of the crackling

fire on a winter's night. St. Patrick wrote the narrative of his life

on the tablets of human hearts. The touch of nature made him akin to all

the world.

He preached the gospel of Christianity and taught among the hills and dales.

He made the highways and byways his pulpit.

He would illustrate the principles of the Trinity by plucking a shamrock from the roadside and using the three leaves on the one stem to symbolize his religious concepts.

For the shamrock is the symbol of unity, and marks the union of one God and the

three divine persons.

For more than 1,400 years the Irish people have held aloft for all the world to see the torch of liberty and spiritual freedom lit by the illustrious St. Patrick.

The Irish are ardent believers in tolerance. They typify such virtues as faith, hope, and charity.

They bring everywhere love of and bellef in God.

They are the stalwart champions of the democratic way of life.

They spurn every form of human enslavement.

They give strength and vitality to our Nation.

They have made the principles enunciated in our Declaration of Independence living and vibrant things.

Conspicuous are the pages of our country's history with their deeds and courage.

They have fought through the centuries on a thousand blood-bought battlefields and have crimsoned the seven seas.

The Bible says: "By their fruits ye shall know them."

Let us with pride and joy call the roll of

honor. The Irish fought gallantly under Gen. George Washington in the War for Inde-

pendence. They fought, too, for the preservation of the Union under General Meagher at the

battle of Fredericksburg. They were at the Alamo in Texas and at Custer's last stand at Little Bighorn in

Montana. And our casualty lists have been sprinkled

with her martyred sons. Yes, the fighting Irish have added new glory to Old Glory as fighters for freedom

on the flaming fighting frontiers. While we applaud the achievements of the Irish in war, in diplomacy, in commerce, in the arts and letters, yet none has been more glorious than the accomplishments of the Irish women in the gentle virtues of mercy,

May God bless them for their loveliness, their radiant charm, beneath which lies the steadfastness of the oak caressed by the beauty of a budding flower whose fragrance rises to greet the morning sun.

Who has not been thrilled by the Irish lullaby or the stirring tunes of When Irish Eyes Are Smilling, My Wild Irish Rose, and Mother Machree?

The greatest gift that ever came to the Irish people was the lovely spiritual mother.

There is no figure in all Irish annals which exemplifies so majestically, and yet so serenely, her love, her faith, and her patience. Generations of her children have gone

forth from the land of their birth under the benediction of her benign gaze. For in her eyes was the light of the day

and the warmth of the sun. She was the gold of all smiles and the salt

love, and motherhood.

of all tears. From her the Irish has imbibed the richness of soul that has made them equal to the tasks of the world.

May she ever remain enthroned in the

hearts of her children. So long as history shall record the story of St. Patrick's mission;

So long as the waters of the lovely Shan-

non shall gently flow to the sea;

So long as the beautiful lakes of the Killarney shall reflect upon their bosoms the blue vault of the heavens-

So long will men and women of the Irish race love their ancient isle, revere their saint, cherish the shamrock, and uphold the principles of national freedom and individual liberty.

Radio Station KSCO, Santa Cruz, Calif.

EXTENSION OF REMARKS OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, in the early morning hours of Tuesday, March 8, fire completely destroyed the transmitting equipment of radio station KSCO in Santa Cruz, Calif. Every electrical circuit was rendered useless. Control panels, transformers, tubes, indeed, the entire complicated technical apparatus was burned to charred junk. Yet, within little more than 48 hoursin spite of the remoteness of this station from normal replacement supply sources-KSCO was back on the air to serve the public.

I believe that this is gratifying proof of the individual recovery potential in the face of sudden disaster. KSCO happens to be a regional key station in the CONELRAD setup, which is needed in times of war emergency. In spite of almost total destruction, the station managed to get back on the air with makeshift equipment, some of it flown in from as far as 3,000 miles away, in just 2 days.

Manager C. V. Berlin and his staff should be congratulated for proving that even grave disaster cannot for long keep us down, as long as the will is there to overcome it with all we have.

Local Service Airlines

EXTENSION OF REMARKS OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "North Central's Record," from Aviation Week magazine, issue of March 7, 1955:

NORTH CENTRAL'S RECORD BOOSTS FEEDER CAUSE

At a time when Congress is carefully studying the case for permanent certification of local-service airlines, the 1954 record of North Central Airlines under the leadership of Hal N. Carr should provide potent ammunition for champions of this type of air

North Central, with headquarters in Minneapolis, serves a network of prosperous manufacturing cities and trading centers in Minnesota, Illinois, Wisconsin, North Dakota, and Michigan with a fleet of 18 DC-3's. During 1953 it operated with a loss of \$114,588 and continued through the first third of 1934 with monthly losses ranging from \$50,000 to \$70,000 and drastic warnings from Civil Aeronautics Board ringing in its Hal N. Carr, formerly executive vice president and director, assumed the presidency on April 15, 1954, and in the remaining 8 months of 1954 organized a cost-cutting and revenue-boosting program that put North Central in the black with a \$170,653 operating profit for the year.

During 1954 North Central increased revenue passenger total by 30 percent; air mail by 12 percent; express by 20 percent; and doubled its charter business. During the first 2 months of Carr's regime, cost per plane mile dropped from \$1.24 to 96 cents. North Central flew 253,571 passengers during 1954 including a record December total of 22,929 in a season when only 10 years ago the midwestern weather used to discourage all but a few hardy air travelers.

COMMUTER SERVICE

North Central's record during 1954 proves there is a definite market for local service air transport when it is properly exploited. A good example is the Chicago-Milwaukee run where these 2 large midwestern cities lay less than 100 miles apart, linked for years by only a scant half-dozen flights daily when

they were dependent solely on trunk airline service. Now, North Central operates 32 flights daily between Milwaukee and Chicago. If the 18 passengers who were aboard on an early morning flight through a typical midwestern snowstorm when we used the service recently are typical examples, this is where a good chunk of Hal Carr's new revenue is derived-from a market in which the

trunk airlines were never really interested.
Addition of the Chicago-Detroit route to North Central's system should give Carr another opportunity to exploit commuter-type air service between two major midwestern cities and their business satellites in the southern Michigan-northern Indiana area. It will be interesting to watch North Central tackle this new problem.

Congressmen, members of CAB, and others interested in the future prospects of local service airlines should study carefully the 1954 record of North Central Airlines as an example of what can be done.

Overseas Air Cargoes

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial, appearing in the March 14, 1955, issue of the New York Times on the operation of the Seaboard & Western Airlines. Mr. Raymond A Norden, the president of this airline, is a constituent of mine living in Jericho, N. Y .:

AIR POLICY DECISIONS

The transportation of overseas cargo by air is steadily increasing. The many American-flag and foreign-flag airlines that carry both passengers and cargo between New York and foreign airports welcomed a newcomer at Idlewild last week. It was the British-flag, all-cargo carrier, Airwork Atlantic.

This country's aviation industry hopes that the inauguration of this regular service, welcome as it is, may serve as a reminder to the White House staff that there are a number of crucial air-route questions awaiting Presidential action. One of the oldest cases still undecided is the Trans-Atlantic Cargo case which has been under consideration for more than 7 years and which has been at the White House since last summer.

Seaboard and Western Airlines filed its application for certification as an unsubsidized all-cargo carrier. It was denied once, and then reopened. Finally, with seventy-odd full days of hearings and a massive printed record of 8,600 pages behind it in this one case, the Civil Aeronautics Board last year accepted a trial examiner's recommendation for the certificate. The Board's recom-mendation was sent to the White House, where the President has the final word on air-route matters involving foreign services.

The airline meanwhile has been carrying on, under temporary authorization, its irregular but impressive services as an allfreight carrier across the Atlantic. But its operation must remain inadequate and its long-range planning must be held in abey-

ance so long as its right to fly is limited.

The long record in the case suffers by comparison with the speed with which the Airwork proposal was approved by United States authorities and was put into operation-all in 9 months, from the date of the initial application here to the moment the first plane touched the runway at Idlewild.

Rubber Plants Giveaway

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, the rubber tycoons of the Nation are smacking their lips over a juicy melon they anticipate on securing from the Government for a song.

Drew Pearson, nationally known columnist, has drawn attention to this melon-patch raid in a series of Washington Merry-Go-Round articles released on March 6 and 16. Under leave to extend and revise my remarks, I wish to insert Mr. Pearson's articles in the RECORD for my colleagues' attention as follows:

The first article on March 6 reads in part:

Washington.—It has been ignored in the congressional hoopla over pay raises and tax cuts, but the Nation's rubber tycoons are quietly waiting for another type of windfall from Uncle Sam—all wrapped up and ready for delivery in exactly 21 days.

The prize is 11 synthetic rubber plants, built by the Government at tremendous expense during World War II, but now about to be sold to private industry for a song.

For some time the rubber companies have cast a covetous eye on these profitable plants owned by the taxpayers. But now they won't have to wait much longer—due to a quirk of law and the anxiety of the Eisenhower administration to "get the Government out of business."

In exactly 3 weeks—on March 27—the synthetic plants will be sold at bargain prices to a group of private companies unless Congress intervenes to stop the transaction in the next 21 days. Strangest aspect of the deal is that a great majority of Senators and Representatives, busily occupied with the tax and pay-raise battles, are completely unaware of what is going on.

However, here are the facts:

The Rubber-Producing Facilities Disposal Commission, appointed by President Eisenhower to sell the Government's synthetic-rubber plants, sent a letter to Congress on January 27 outlining the bill of sale to Firestone, Goodyear, United States Rubber Co. (subsidiary of General Motors), Goodrich, Shell Oil, Phillips Petroleum, and others.

PROFITS FOR UNITED STATES OF AMERICA

Under the law, the deal goes through 60 days later, or on March 27, unless either House of Congress adopts a disapproving resolution before the deadline. The proposed sale price for the 11 synthetic plants—about \$260 million—is far out of line with either their original cost or their current worth.

These factories made a profit of \$73 million for Uncle Sam a year ago. And with the Communists now in virtual control of Indochina and inching rapidly down toward the vital rubber areas of southeast Asia, many military men feel this is no time for the Government to abandon its rubber factories.

Incidentally, not one single small-business concern is among the preferred purchasers selected by the Rubber-Producing Facilities Disposal Commission to take over these plants. Besides the big rubber companies, the list includes Sears, Roebuck; Texas Oil, Armstrong Rubber, Anaconda Copper, Endictt Johnson, and the American subsidiary of Dunlop Tires, Ltd., of Great Britain.

Note.—Congressman Sm Yates, of Illinois, a member of the House Small Business Committee, is making last-minute moves to stop the sale.

On March 11 Mr. Pearson wrote as follows:

Washington.—Some of the facts lurking in the background of our synthetic rubber situation don't look good.

Despite this, the Eisenhower administration continues determined to turn the rubber factories, built at enormous expense to the taxpayer, over to the big rubber and oil companies. In fact, if Congress doesn't act, they automatically are sold on March 26.

they automatically are sold on March 26.

Here are some of the disturbing facts
which Congress ought to take a careful look
at:

Low stockpile: All Government press releases regarding synthetic rubber reserves have suddenly stopped. They used to be published once a month but none since January 20. Reason: The synthetic rubber reserve has dropped alarmingly. Though we're supposed to keep 60,000 tons on hand, today we have only 38,000 tons, which will drop to 28,000 by April 26. (The synthetic factories are to be sold on March 26, delivered April 26.)

Little companies squeezed: The rubber companies ordered a total of 61,000 tons of Government synthetic rubber for March, have other orders of 69,000 tons for April. Yet the factories will produce only 61,000 in March and 59,000 in April. On top of this, production will drop another 45,000 tons yearly after the factories are sold, because General Tire & Rubber hasn't made a deal with the Government to buy the Baytown, Tex., synthetic plant. This certain shortage means that little companies won't be able to buy after April.

Only 22 tire companies consume 72 percent of all synthetic rubber. Of these, the Big Four alone consume 60 percent. But there are scores of other companies needing rubber for other purposes which may not be able to buy it after April 26.

Bonanza for big business: Under the terms of the sale, private companies pay Uncle Sam \$260 million for the rubber factories. Meanwhile the factories are making an annual profit averaging about \$64 million. This means that if the United States Government kept the plants and ran them for 4 years, it would make as much profit as the purchase price.

Another way of putting it: The big boys who are buying the factories pay for them out of profits. In the end the factories cost nothing. It's a good deal if you can get it, and the companies will have it on March 26—unless Congress acts.

"Uncle Sap": Though the best rubber factories are being sold, "Uncle Sap" is keeping the most expensive to operate—at Institute, W. Va. This will be kept on a standby basis, because private industry won't buy it. In other words, the big boys are skimming the cream while "Uncle Sap" takes the curds.

Reds march on: Meanwhile the march of communism into southeast Asia, chief world source of natural rubber, continues.

The Formosa Situation

EXTENSION OF REMARKS

HON, STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 16, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an editorial entitled "Must We Back Up Into a Corner?" which was published in the Charlotte (N. C.) Observer of Thursday, March 10, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUST WE BACK UP INTO A CORNER?

Theoretically Anthony Eden might be right in his contention that tension in the Far East would be eased if Chiang Kaishek would give up the islands off the shore of China. In the words of a very wise man, however, we face a condition and not a theory. Looking at the cold, hard condition we find it impossible to agree with Mr. Eden,

Every retreat the West has made before Communist advances was going to ease tensions, but not one of them had that result. All such retreats have brought more tension, not less. We were going to ease tension by giving up the Tachens, but no sooner had those islands been evacuated than the attacks on Quemoy and Matsu began.

What is the publicly announced Communist objective? Not Quemoy, not Matsu, not any of the offshore islands, but Formosa. The smaller islands are just steppingstones to Formosa. If we delude ourselves that by giving up the outposts we assure the safety of the main bastion, then we have learned nothing about Communists in all of our dealings with them. We have learned nothing about strategy, and nothing about human nature.

Would President Eisenhower, as a military strategist, try to tell us that by surrendering Hawaii to an enemy we could assure the safety of the west coast?

But another issue is involved here, far more important than the immediate defense of Formosa. The reason for the change of leadership in Russia, the reason for suddenly dropping the coexistence line and adopting an aggressive policy was simply this: the West had retreated so many times before the Communist advance that they thought they had us on the run and now was the time to press that advantage.

Formosa was selected to test that theory. We have drawn back once from the Tachens. If we draw back again, the Reds will be convinced that they are right, that we are on the run, and hot pursuit will finish us.

Now, of all times, is the time to stand our ground. If we do stand, the Reds can't take Quemoy or Matsu or Formosa, and they know it. They will not risk their own destruction to prove it, for no proof is needed.

If we keep backing off, sooner or later we shall find ourselves in a corner.

Farmers and Small Business Would Be Hurt Under New Hoover Commission Plan

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. PRICE. Mr. Speaker, I take the floor this afternoon to commend and congratulate the gentleman from California, Mr. Chet Holdfield, for the splendid work he has performed as a member of the Commission on Organization of the Executive Branch of the Government, generally known as the Hoover Commission.

Mr. Holffeld has contributed much to the public good by his alertness as a member of this Commission. I am confident that many of the reports from the Commission are in better form today as a result of the work of Mr. Hoover. I am certain that the public has been served well by Mr. Holffeld's determination to keep them informed as to the contents of the reports and as to their effect on the various segments of our economy.

The farmers of America and small business of America owe to Congressman HOLIFIELD a great debt of gratitude for his efforts in the past few days to make public, through his dissenting report, on the most recent of the Commission's activity calling for the reorganization of Government lending agencies. Congressman Holifield points out, effectively, how many of these recommendations will hurt the farmers and small businesses throughout the country. He has been consistent in calling to the attention of the American public the fact that the new Hoover Commission has gone beyond the scope intended by Congress and has taken to itself the role of policymaker, usurping the power of Congressman Holifield Congress. points out that if Congress should accept the Hoover Commission's recommendations on Government lending agencies we would, in effect, approve a new policy to enforce tighter agricultural credit, tighter credits on housing loans and small-business loans, and enforce re-strictions on the rural-electrification program.

All of these seem to me to be a back-door approach toward eliminating Government cooperation in programs assisting farmers, small business, and home owners. Add to these, thousands of veterans who would be unfavorably affected by other reports from the Hoover Commission.

Under leave to extend my remarks, I include, herewith, an article on this subject, written by Thomas L. Stokes, which appeared in the Washington Evening Star March 15, 1955:

THE NEW HOOVER COMMISSION: HOLIFIELD POINTS OUT THAT REPORT CRITICAL OF AID TO FARMERS, SMALL BUSINESSMEN DIDN'T NOTE SUBSDIES TO INDUSTRY

An open secret around here is the way ex-President Herbert Hoover is seeking to change basic and long-established Government policies through the medium of the Commission on Organization of the Executive Branch of the Government, of which he is chairman.

To any one familiar with Government agencies and their operations, this is made clear enough in the Commission's latest report to Congress this week which contains 48 recommendations affecting Federal lending agencies. But, to make it doubly sure that the public gets the story, it is explained at long last by a Democratic member of the Hoover Commission who also is a Member of Congress, Representative Cher Hollffild, of California.

He takes occasion to reveal what he considers a distorition of the Commission's job as laid down by Congress, about which he long has been disturbed, in the course of a minority report on Federal lending agencies in which he dissents from most of the recommendations. As he sees it, the recommendations which are designed to turn over financing now handled by many Government lending agencies to private banks,

point in the direction of tighter agricultural credit, a slowing down of housing construction, restrictions on the rural electrification program and limitation on other direct or indirect aids provided by the Federal Government.

In the Truman administration, when the Commission was created and Mr. Hoover was delegated to head it, the Commission limited itself to recommendations on ways of making the Government more efficient and its operations more economical—a mechanical, reorganizing job. Mr. Holl-pield thus tells the story of what has happened now:

"The Congress re-created the Hoover Commission to study the present organization and operation of the executive departments and agencies, with a view to better management and economy. I do not believe that the Congress wanted advice from the Commission on public policies of every sort.

"The Commission has construed its congressional mandate otherwise. This report indicates that the Commission is willing to roam far and wide in the field of public policy."

"No matter how wise and well-informed, the 12 Commission members cannot be expected to have more than a casual acquaintance with many of the complex issues posed by this report. The task-force study contributed little, in my opinion, to the deliberations of the Commission."

It is regarded of some significance that James A. Farley, another Commission member, issued a broad, if brief, statement of dissent to proposed policy changes. Though a member of the Roosevelt cabinet, which he left when he broke with President Roosevelt over a third term, Jim Farley never was regarded as a New Dealer, but conservative of viewpoint. He said:

"It is my opinion that this report fails to give adequate reasons for recommending changes in certain Government organizations, functions, and policies which have served a good purpose, especially in fields where private enterprise has failed to meet the needs. I refer particularly to the Farmers' Home Administration, the Commodity Credit Corporation, the Rural Electrification Administration, and the Export-Import Bank, although there are other agencies which this report has dealt with in a similar manner."

Dissents also came from two officials high in the administration and in the President's confidence. Attorney General Brownell objected to turning over REA to private bank financing. He and Arthur S. Flemming, Director of Defense Mobilization, could not go along with cutting off normal short-term export-import loans by the Export-Import Bank, or for reducing or abandoning urban planning and reserve of planned public works by the Housing and Home Finance Agency.

The 10-member task force on Federal lending agencies included four bankers, and its chairman was a partner in Price Waterhouse & Co., certified public accountants—Paul Grady. Mr. Holdfield thought it unfortunate that the Commission again used in the present study a "re-hash" of a report by Price Waterhouse for the first Hoover Commission that was severely criticized by important members of the previous Commission as reflecting a narrow accounting view of broad public policies.

The California Congressman also pointed out that while the Commission criticized subsidies in Government programs for farmers, homeowners, small businessmen and veterans, it said nothing about much more lavish subsidies to big manufacturers, publishing firms, ship operators, airline companies, and the like, or about "the hundreds of millions of dollars obtained by large companies as interest-free loans through the device of accelerated tax amortization." Compared with the latter, the former, he said, "pale into insignificance."

The Synthetic Rubber Industry Should Not Be Sold

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. METCALF. Mr. Speaker, Mr. E. Wayles Browne, Jr., appeared before the Armed Services Committee in opposition to the proposed sale of the synthetic rubber plants. Mr. Browne is not only a trained economist, but he has made a special study of our national rubber policy and his testimony is especially authoritative. His statement follows:

THE SYNTHETIC RUBBER INDUSTRY SHOULD NOT BE SOLD

My name is E. Wayles Browne, Jr.; my address is Bethesda, Md. I am an economist, and have been employed by the Federal Government as statistician or economist in the National Security Resources Board, the President's Materials Policy Commission, and other agencies. I have not been in the Government service for the past year. I speak as an individual, representing no one.

Recently I prepared an economic study of the national rubber policy. My conclusions are that the disposal program does not meet major criteria in the Disposal Act, and that it is not in the public interest to sell the synthetic rubber industry to the present prospective purchasers at this time for the proposed price of \$260 million.

The industry should not be sold, for four major reasons:

First. The combined price of \$260 million for the plants does not represent full fair value, as required by the act. The Government could confidently expect to recover more than \$260 million in the next 4 or 5 years through continued operation, at no increase in the price per pound of synthetic rubber.

The annual reports of the Reconstruction Finance Corporation have shown the following figures for profits and depreciation:

[In millions of dollars]

Fiscal year	Profits	Depre- ciation	Total
1951 1952 1953 1954	11. 9 16. 1 59. 9 42. 1	33.4 40.6 31.4 29.7	45, 3 56, 7 91, 3 71, 8
4-year total	130.0	135. 1	265. 1

It should be stressd that the RFC was not actively seeking to make profits in 1951 and 1952, and was forced to incur extraordinary expenses for reopening the alcohol butadiene and the Institute GR-S plant, and later placing the alcohol plants in standby, as well as using large quantities of high-cost alcohol butadiene.

The 1956 budget gives the following estimates for the present fiscal year, covering only 10 or 11 months prior to transfer.

[In millions of dollars]

Fiscal year	Profits	Depre- ciation	Total
1935	36.0	23.0	59.0

The present high level of GR-S output suggests that 1955 profits may be somewhat above the estimate of \$36 million.

Thus, in 4 years, the Government has received in profits and in recovery of capital through depreciation charges more money from operations than sale would bring in total. Continued Government operation over the next 4 or 5 years (assuming no major depression) can be expected to bring in more than \$260 million, at no higher price for the product than the present level of 23 cents per pound.

Against this, the disposal program would take 10 years to collect the purchase price. The financial plan recommended by the Disposal Commission calls for a total downpayment of \$128.5 million, slightly less than half the total price, with the balance payable in fairly equal installments until 1965.

The Disposal Commission, in its report to the Congress, stated that the sale price amounted to 99.2 percent of the appraised value of the plants (as adjusted), and 96.6 percent of "the unrecovered investment of the American people." These two comparisons are quite irrelevant. The going value of a profitable industry is certainly greater than the depreciated replacement value of the separate plants. The Commissioners, two bankers and a cotton broker, are reported to be sound, conservative businessmen. It seems highly doubtful that they would recommend selling a profitable private enterprise at a slight loss.

The valuation of an industry, as distinct from the valuation of a single plant, cannot be done solely on an engineering basis. The profitability of an industry depends upon the prices of the product, as well as the costs of production. The Disposal Commission has stated that it considered profitability, but it assumed continuation of the present prices. The Chairman of the Disposal Commission has admitted, however, in testimony this week, that the Commission has no assurance from the proposed purchasers that the prices will remain constant at present levels. The higher the price the greater the profitability and the greater the full fair value of

the industry.

Second. The taxpayers would not benefit from the sale, because they could expect to repay to the plant buyers the entire purchase price through higher prices for tires and other rubber products in the next few years. The demand for rubber, in economic terminology, is highly inelastic. In ordinary the customers continue to buy language. tires, baby nipples, rubber footwear, and other rubber products, in about the same quantity whether the prices go up or down. This is because such products are considered necessities, and have no close substitutes. If the industry is sold, the private owners could, and I believe would, raise the price of synthetic rubber. Natural rubber is now selling at about 30 cents per pound, 7 cents higher than the Government's price of 23 cents for both GR-S and butyl. Rubber products are so widely used and are so essential that the consumers and the taxpayers can be considered to be the same people. Public policy, therefore, requires that full consideration be given to the effect of disposal on the taxpayers as consumers; consideration cannot properly be limited to the direct effect upon the Treasury.

The demand for rubber products is well known to the industry to be inelastic. Prices for raw natural rubber have fluctuated violently in this century, from a peak of \$3 to a low of 3 cents per pound. Prices of rubber products have reflected these fluctuations in the price of the raw material, while consumption has been affected very slightly by such price changes. The consumption of rubber from 1919 to date has varied closely with the level of industrial production, with almost no regard for price.

almost no regard for price.

An inelastic demand is the perfect setup for monopoly, or for monopolistic practices by a few large competitors who dominate an industry. The economic term for such competition among the few is "oligopoly." For an oligopoly dealing with an inelastic de-

mand, the incentive to raise prices is almost irresistible.

In rubber, the situation at present is even better for the industry, and worse for the consumer. The present price of natural rubber is above 30 cents per pound. The gap between the Government's price of 23 cents for synthetic and the spot market for natural can be quickly closed—by raising the price of synthetic.

The outlook is for continued high demand for synthetic. The rubber industry has estimated 1955 consumption of natural and synthetic to be 1,330,000 long tons, just a fraction below the record of 1,338,000 tons in 1953. With manufacturers' preferences running more to synthetic than to natural, heavy consumption can easily result in higher prices for synthetic.

The Government's profit per pound of rubber sold, after all costs including research and standby maintenance, was 3.34 cents in fiscal year 1954, and 3.62 cents in 1953. The price of GR-S throughout fiscal 1953 and 1954 was 23 cents; the price of butyl was 20% cents in 1953, and 22 cents for almost all 1954. Butyl was raised to 23 cents at the beginning of the present fiscal year.

Assuming an average cost of 191/2 cents, and a profit of 31/2 cents per pound, at a price of 23 cents, and sales (including captive consumption) of no more than 650,000 tons, profits before taxes in private hands would amount to \$50 million. At an average price of 25 cents, profits would increase to \$80 million; at a price of 30 cents, profits in a single year would exceed \$150 million. While the distribution of costs under private ownership might differ from the present pattern. Government costs have included management fees to the operators equivalent to about three-fourths of a cent per pound. In private hands, these fees would be profits instead of costs amounting to another \$10 million or more.

It has been reported that two of the prospective GR-S plant purchasers have offered sales contracts at 23 cents, and a third has offered to sell at 25 cents. These reports would be fairly good news for the consumers if they could be taken as firm, long-term prices. The papers have not reported all the terms and other fine print in these contracts, however, and the suspicion arises that they be partly designed to facilitate obtaining the approval of the Congress in the present 60day period. While the outsider can only speculate on price policy, I would not expect to see prices for synthetic rubber maintained at this level in the face of rising demand and a natural rubber price level of 30 cents or

Third. Disposal would leave the Government with continuing expenses for maintenance of unsold plants and for fundamental research, without operating income to cover them. Maintenance on the Institute, W. Va., GR-S plant, and on the Louisville alcohol butadiene plant, is clearly essential as partial insurance against a future emergency. Such maintenance costs have not been published, but would probably exceed \$1 million per year for these two plants.

A report on rubber research was prepared for the Department of Defense early this year by the National Academy of Sciences. report stated that some \$40 million worth of fundamental and applied research will be required over the first 5 years after disposal. The panel estimated that private industry would carry about half this sum, in applied research, but probably would do almost no fundamental research. The report noted that fundamental research in synthetic rubber is urgently needed, and recommended that the Government finance it for about \$20 million. The RFC and the Federal Facilities Corporation have been supporting a research program at the rate of \$4 to \$5 million per The effect of disposal on the Government's research program, then, would be merely to remove the source of income to support it. Competitive research, sometimes mentioned as a major virtue of disposal, would seem to be valuable only to the private companies, but not to the Government and the taxpayers.

Fourth. Almost all of the major buyers of the plants, and a number of the lesser participants, have very unsatisfactory antitrust records. They have not been content to rely upon the economics of oligopolies. Instead, in their own words, according to a report on the Canadian 1953 antitrust case on tires "* * the companies replied that they were forced to band together for mutual protection during the depression."

From January 1937 to October 1952, the period covered by the charges in the case (to which they pleaded guilty), was an extremely long depression. This case involved the Canadian subsidiaries of the Big Four rubber companies plus subsidiaries and an affiliate of three other tire companies in the United States.

United States.

Congressman Celler's statement before the House Armed Services Committee covered in some detail the antitrust record of many of the proposed purchasers. Senator Douglas of the Senate Banking and Currency Committee, requested Assistant Attorney General Barnes to have the Department of Justice submit for the Senate subcommittee record a similar statement. I will not, therefore, burden the record by referring to these cases individually.

I have examined these cases for their implications for the future economic conditions in the synthetic rubber industry, if the industry is sold under the present disposal plan. It is my conclusion that the disposal plan will not in fact "best foster the development of a free competitive synthetic industry."

The attention of the committee is invited to the Canadian experience with their Government-owned synthetic rubber industry. Their industry was built with Government money in 1942 and 1943, just as ours was, and the plants were operated under contract by the Canadian subsidiaries of much the same companies that have operated the plants in this country. After World War II, Canada invited bids for disposal of their plans, but found the bids unsatisfactorily low.

Polymer Corp. Ltd. (a Crown corporation similar to our Reconstruction Finance Corporation) gradually took over the actual operation of the plants, staffing them with Government employees, and ran the industry on a straight commercial basis. Manufacturers of rubber products in Canada were free to buy synthetics from Polymer Corp., or to use all natural rubber. (The Canadian Government did not continue wartime controls over rubber usage, as we did). mer Corp. pays income taxes and all other taxes any privately owned company would pay. It has been prospering; it has expanded capacity, repaid capital advances ahead of schedule, and paid dividends into the Canadian Treasury. It has also shipped 10,000 to 20,000 tons of synthetic rubber per year to the United States for the past several ears, in spite of our 10 percent ad valorem tariff on synthetic (but not natural) rubber.

The cry of socialism has been raised against those who object to the disposal of the Government-owned synthetic rubber industry. It is significant that no such cry was raised when the rubber and oil companies were importuning the Government to build this industry in 1939 and 1940 and 1941 and 1942. No such cry was raised when the Government was running this industry at a loss during World War II. Apparently it is socialistic only for the Government to make a profit.

If the Canadians can run a government corporation on a full commercial basis in a competitive market, pay full taxes, and still earn net profits equal to 10 percent on sales and about 7 percent on gross investment as they did in 1953, then certainly the United States could do as well, provided we are not

deterred by scare words.

If it is not possible to fashion an actively competitive synthetic rubber industry, as the report of the Disposal Commission clearly indicates, another solution must be found. There are technical problems which arise from the physical inter-connections from the oil refineries to the butadiene plants to the GR-S plants. The inelastic demand for rubber certainly renders competition, in the economic sense, unlikely. In such a case the synthetic rubber industry under historical American policy is affected and imbued with the public interest, and if sold, must be regulated like any other public utility. The only other alternative is continued Government ownership. To forestall future cries of "tax subsidy", we might seriously consider setting up the industry on the Canadian pattern.

In the event, however, the Congress does not disapprove the disposal plan, another problem arises. This is the question of the Baytown GR-S plant and possibly the three plants in California bid upon by Shell Chemical Co. The Congress should provide that all these plants be kept in operation and not be permitted to shut down, as required by the Disposal Act. I understand that all GR-S plants (except the one at Institute, West Virginia, which is shut down), all petroleum butadiene plants and the styrene plants, are operating at full capacity. Consumption of GR-S is running equal to, or above production. The loss of any of these plants to shut-down could result in a very tight market this year and over the next 3 years, leading to even greater upward pressure on prices. These plants should not be frozen.

Finally, if the disposal plan is permitted to go into effect some action should be taken regarding the 180-day period in the national security clause. This provision is too weak. In a real emergency, such as a second loss of access to the natural rubber supply of Southeast Asia, 6 months is much too long to permit any of these plants to remain out of full production. Yet, there is a loophole even in that period, since the purchasers would be excused from reconverting if they were unable to obtain materials and equipment with which to reconvert. I suggest that all purchasers of plants be required to maintain intact at all times whatever materials and equipment would be required to permit complete and expeditious reconversion.

Mental Health Week

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GARMATZ. Mr. Speaker, in October of 1953, the House Committee on Interstate and Foreign Commerce launched an investigation of the toll of all the major diseases confronting the Nation in order to determine what steps were necessary to combat them. Among the diseases studied were heart disease, cancer, infantile paralysis, tuberculosis, mental illness, and several others. Submitting its findings to Congress in March of 1954, the committee declared in its report that "there is probably no more serious problem in the health field

today than that of mental illness." Permit me to cite you some of the evidence in support of this conclusion:

During the past year, some 2½ million men, women, and children were treated for some form of mental disorder in mental hospitals, at psychiatric clinics or in the offices of private psychiatrists.

On any day during the year, nearly three-fourths of a million people were under the care of mental hospitals alone—constituting more than 50 percent of the 1,400,000 patients in all the hospitals for all diseases in the entire country. This figure for hospitalization of the mentally ill is an alltime high. It represents an increase of 60 percent in the past 20 years.

Another 5 million who went to general hospitals to get treatment for physical ailments or injuries were found to be suffering from some mental or emotional

disturbance as well.

The year also saw more crimes and acts of delinquency committed than ever before—over 2 million major crimes and more than 400,000 juvenile delinquency cases.

Federal, State, and city government expenditures in connection with mental illness were over the billion mark—or about \$3 million every day of the year.

The cost in human misery, wasted, and destroyed lives, cannot be estimated, nor is it possible to compute the secondary financial costs to the individual victims, their families and to the local, State, and

Federal governments.

This array of shocking facts leads to the inescaptable conclusion that mental illness is taking a greater toll than ever before in our history and that it is, with very little doubt, the most serious of all the health problems confronting the Nation today. The shocking nature of the picture which I have just painted for you is compounded further when we consider that the situation is the result not of inevitability but of neglect.

I would like to read to you excerpts from a statement made recently by Dr. William C. Menninger in behalf of the National Association for Mental Health.

I quote:

It may come as surprise to many that mental illness has probably the highest recovery rate of any group of illnesses today. In my own State of Kansas, for example, where citizens and politicians have developed active treatment centers from what had once been merely custodial institutions, 4 of every 5 patients admitted to a mental hospital for the first time goes home within a year of his admission.

The basis for the erroneous impression that the majority of mentally ill patients do not get well is probably the fact that in many of our large mental institutions 60 percent of the patients who enter them never leave. How can this be so? Because Kansas and other States which are rehabilitating their mentally ill patients have invested money in trained people primarily, and buildings only secondly.

This past election American citizens voted more than \$750 million to put up new mental hospital buildings to house patients who in many cases will not receive treatment because there will be no trained personnel to treat them. Each year, we build buildings and when these buildings are filled up, we build new ones. In 1903 there were 150,000 patients in our mental hospitals today there are 700,000. As long as we continue to spend

our money for buildings instead of doing research and training professional personnel to cure these patients, this trend will continue.

But, look at Kansas, as an example of the other side of the coin. In 1946, Kansas had 5,172 mental hospital beds and the United States Public Health Service estimated that it needed nearly 4,000 more. Today, the average population of Kansas' State hospitals has dropped from over 5,000 to 4,551. Yet Kansas actually admitted 75 percent more patients in 1954 than in 1946.

The buildings Kansas didn't have to build would have cost 25 to 40 million dollars, to say nothing of the cost of caring for 4,000

additional patients each year.

There is no reason that every State cannot do this. I don't mean to minimize the size of the problem. Mental illness is still the most expensive, most prevalent, and most neglected health problem in the world. But, given trained personnel and the knowledge that proceeds from research, most mental illness can be cured and, ultimately, can be prevented.

We don't have a fourth of these trained people. We spend less for research in mental illnes than we leave in tips on restaurant tables. Until all of us, as citizens, do something about this—research and the training of professional people—we will continue to build buildings to house patients we could be making well.

Dr. Menninger puts the case simply, sharply and eloquently, and he refutes once and for all any notion that may still exist to the effect that mental illness is hopeless, that nothing can or should be done about it. He places the emphasis correctly on the need for widespread public support of the organizations which are carrying on the first against mental illness. He concludes with a plea in behalf of the National Association for Mental Health, the national citizens' organization which, together with its 400 affiliates, is leading the crusade against mental illness.

On May 1 to 7, Mental Health Week will be observed in thousands of communities throughout the country under the direction of the National Association for Mental Health and in cosponsorship with the National Institute of Mental Health of the United States Department of Health, Education, and Welfare. During Mental Health Week an attempt will be made to rally millions of Americans to the campaign against mental illness. During the balance of that month the National Association for Mental Health and its affiliates will conduct a nationwide fund-raising drive-the Mental Health Fund campaign-to raise money for research, training, improved treatment of the mentally ill, and education. To help provide the maximum success for these events-Mental Health Week and the Mental Health Fund campaignit is my honor and pleasure to submit to this body a joint resolution calling upon the President to proclaim May 1 to 7 as Mental Health Week, to urge widespread participation in this observance, and to encourage enthusiastic financial support for the Mental Health Fund campaign. The joint resolution reads as follows:

Whereas there is presently a great need for nationwide action for the prevention, treatment, and cure of mental illness; and

Whereas the National Association for Mental Health and the State and local mental health organizations associated therewith are

working diligently in the fight against mental illness; and

Whereas the Mental Health Fund is in dire need of public support in order to carry on research in the field of prevention, treatment, and cure of mental illness; sponsor training of expert personnel to staff the mental hospitals and the community mental health services; provide more adequate treatment for the mentally ill, and promote mental health education: Now, therefore, be it Resolved, That the President of the United

States is authorized and requested to issue a proclamation designating the week beginning May 1 and ending May 7, 1955, as National Mental Health Week, and urging the people throughout the Nation to cooperate In the fight for the prevention, treatment, and cure of mental illness, inviting the communities of the United States to observe such week with appropriate ceremonies and activities, and calling upon the public to support the Mental Health Fund,

The Navy's Career Dilemma

EXTENSION OF REMARKS

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, March 16, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by the Honorable Charles S. Thomas, Secretary of the Navy, before the Navy League, at Detroit, Mich., on December 3, 1954. I believe that the Members of the Congress will find this address well worth their perusal.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

THE NAVY'S CAREER DILEMMA

Mr. President, national officers of the Navy

League, ladies, and gentlemen: I am really glad to be here tonight. you perhaps know, I have taken an active interest in the Navy League for many, many years, so I am personally acquainted with its officials, its program, its objectives, and its achievements. The Navy League has done a tremendous job over the past 52 years to assist and help the Navy and I can assure you that help has been appreciated.

I was particularly pleased to see the new 1954 four-way program Mr. Richards and his able program chairmen have inaugurated. This represents, I believe, the league's re-vitalized intention to take a more active, dynamic role in assisting the Navy and the Nation it serves. I am glad that this is so, because seldom in the league's history has there been a greater need or a greater opportunity to help the Navy than there is right now.

Several times, when I was active in Navy League affairs, the thought came to me that the Navy was sometimes remiss with regard to the potential of the Navy League, that it could and should give more guidance and encouragement to the league. So when I be-came Secretary of the Navy, one of my private resolves was not to neglect this vital task.

It is for this reason that I particularly welcome the chance of speaking to you tonight, and to lay before you a very important problem wherein you can do a tremendous job to help the Navy.

To begin, I'd like to read to you a letter I received just a couple of weeks ago, from the

"SECRETARY OF THE NAVY, Department of the Navy, Washington, D. C.

"Dear Sir: Thank you and the members of the United States Navy who are responsible for keeping my husband away from his family for the second year in succession. The morale of this young man could not get

any lower.
"I hope you all have a very Merry Christ-

"Very sincerely yours,

Whether she knew it or not, the young mother who wrote me this greeting hit right at the heart of a problem vital to every citizen of this country, particularly to members of the Navy League. The problem is our reducing ability at the present time to attract enough young men of the country to a career of naval service.

I wish to make it clear that this problem is common to all the services * * * Army, Navy, Air Force, Marine Corps. All are confronted with the same dilemma: Too few present-day young Americans appear to believe that either the patriotic need or material reward is sufficient to make them willing to make military service a career.

The man of whom this young woman has written is 28 years of age, and has been in the service for 9 years. In that time, at the cost of some \$9,000, the Navy has trained him to be an aviation ordnance technician with guided missile experience. salary is \$250 a month, about \$55 a week; a day laborer gets that much or more. In the last 4 years, that young sailor has seen combat duty in Korea aboard an aircraft carrier; he has served with a specialized development squadron in California; with a jet fighter squadron in various areas of the Pacific; for the past 6 months he has been attached to an aviation support squadron in the Hawaiian Islands. He has been married for 4 years, he has 1 child, and this will be his third Christmas away from his family. Are you surprised, as his wife states, that his morale is low? The important point is that when this man's contract with the Navy expires, and he is requested to reenlist for additional service, he will probably refuse to do so, as increasing thousands are doing. In-stead, he will choose a civilian career and probably be paid twice as much and be able to stay at home with his young family, and the Navy will have lost another valuable, trained technician, a man we very badly want to keep, a man our country needs in uniform, a man in whom the taxpayers have invested heavily for the Nation's readiness and security.

The man represents the career dilemma that we would like for you to try and help us solve. In so doing, you will ask, why must the Navy keep this young man away from his family for 2 successive years? Why is it necessary to keep him on sea duty for such prolonged periods? Why will he probably not reenlist? What have we done and what are we doing? And finally, what else must be done about it?

To help you understand the background, you will recall that the Navy had a pre-Korean strength of 315,000 enlisted men. Three years later when the truce was signed, we had expanded this to over 700,000 men. During the past year, we have been reducing to reach an authorized strength of 608,000. This represents a 14 percent overall reduction, but will still leave us with a Navy al-most twice the size of what it was before the Korean war started.

With this 14 percent reduction in numbers of men, however, there has been very little commensurate reduction in our commitments. We still have almost as many ships and squadrons in commission and deployed overseas as during the Korean campaign.

wife of one of our young bluejackets. She In these perilous days, we must keep a fleet wrote as follows:

in the Far East, a division of Marines in Korea and one in Japan. We must keep a fleet in the Mediterranean, a force in the Persian Gulf. While these units are not actively engaged in fighting, they and all our ships must maintain a heavy training schedule in order to insure the instant readiness and vigilance which the world situation has dictated.

Complicating this reduction in strength without a concurrent reduction in opera-tional commitments is the fact that 60 percent of the men in the Navy today have enlistment contracts which expire in the next These personnel can be divided 2 vears. roughly into two groups-the so-called career people who are on their second or subsequent enlistment and the noncareer people serving on their first enlistment. Among our career personnel, only 48 percent are signing up for additional service. This 48 percent today compares with 90 percent only 1 year ago. For the noncareer people, less than 3 percent are signing up. In summary, it is alarming to note that the overall reenlistment rate has fallen from 46 percent in October 1953 to only 7 percent in October

Therefore, because an increasing number of short-term and career-type contracts are expiring and are not being renewed, plus the inevitable losses due to sickness, disability retirement, etc., the Navy estimates it will lose about 375,000 men-or 60 percent of our total strength-during the next 2 fiscal

The critical part of this is that not all of these losses are the apprentices and the unskilled. Many are highly trained technicians, specialists in electronics repair, aviation mechanics, submarines, and atomic weapons, as well as the many other technical trades of the Navy. Many are our key people-our supervisors, our petty officers. ualize the effect on a major civilian industry-Detroit's automobile industry would be a good example-if it were faced with the prospect of a 60-percent turnover of its personnel in only 2 years, many of them key personnel and potential supervisors for future years. This is the problem the Navyand indeed, all of the services-faces today.

To replace these losses, we have only two sources; first to call the Reserves to active duty-obviously impractical in peacetime. Second, to enlist and train new recruits. We are meeting increasing difficulty in doing the latter despite vigorous and increased efforts. To compensate for those leaving the service this year, we will require a total of 145,000 new recruits, or about 12,000 every month. The quota for September was 12,500, and we failed to meet it by 1,700. The quota for October was again 12,500 and we failed to meet that by 4,000. Some of this fall-off is seasonal, but it indicated our increased difficulty of replacing our losses.

Again, I would like to point out that the twin problem of enlistment and recolistment is common to all the services. Accepting 2year draftees in the Navy is certainly not the total or satisfactory answer, for it takes almost 3 months to put a man through basic recruit training, about 4 months more through a technical school if required. Add to this the administrative time of travel, leave, etc.; many a recruit does not reach his first duty station for about 8 to 9 months. He has had some training and indoctrination but he is still inexperienced and unfamiliar with general Navy life. This takes several months more to learn. Just as he reaches the point of becoming experienced and valuable, his 2-year draft term is completed, he leaves the service, and the process must start all over again. It is for this reason that the Navy cannot survive as a first-class fighting service if it becomes a conscript Navy. There must be a base of between 50 to percent of career people. To maintain this

base, not less than 25 percent of those completing their first enlistment and 75 percent of the career people must reenlist.

And what of the quality of the young men who are enlisting? Remember that our naval equipment is becoming increasingly complex and specialized, and demands high caliber personnel with special training to maintain and operate it. All of the armed services need their share of the top talent of the country, and this need becomes more pressing as our naval equipment becomes more complex. Yet of the 8,500 naval recruits who enlisted in October, 35 percent were in the lower quarter mental group. A year ago, we were taking only the required 27 percent of that low mental group. percentage was established by the Department of Defense to fairly distribute among all the services a fair proportion of both upper and lower groups of mental talents. Now, however, instead of taking only its share of the lower mental group, the Navy is taking 8 percent more than required and is still unable to recruit numbers needed. Thus, at a time when the complexity of our modern atomic Navy is demanding increased performance and skill from the individual, the Navy is being forced to reduce its quality

These facts summarize the problem today. But for the future, the prospects are even more serious as our senior supervisors—those who came into the Navy during World War II—complete their 20 years of service in 1960-65 and become eligible for retirement.

What has the Navy done and what is the Navy doing about this problem? Frankly, we have done a great many things. First of all, Admiral Carney and I are both committed to the internal improvement of the Navy—its morals, its leadership, its appearance, its discipline. Over the long pull, we know this will make the service more attractive by giving it greater esprit, which in turn will give to each individual the sense of belonging to a fine and an important organization.

Secondly, we are taking every measure to solve the problem of overcommitmentwhich keeps our fleets almost continuously at sea-by trying to increase the numbers of operating ships, so that each individual ship can spend more time in its home port. Take our Pacific Fleet as an example of how our far eastern commitments adversely affect the career problem. Roughly one-half of the fleet is on station in the Orient at-all times, where it is obvious that around the troubled water of Korea, Indochina, and Formosa, we must keep a strong 7th Fleet. A ship in the 7th Fleet spends 6 months in the forward area, plus 1 month of turnover and transit time. So the ship can expect 7 months out of every 12 in the Orient. But even the other 5 months can't be spent in the home port area. Every time a ship returns from overseas duty, there are large numbers of men scheduled for release or for shore duty. New people must be assimilated and trained. In effect, then, much of the remaining 5 months is spent at sea getting ready to go back again.

One way to alleviate this is, of course, to have a few more ships, so that the 7-month period in the Far East could be reduced. More ships, however, mean more men and more money and neither are easy to come by. However, Admiral Carney and I are doing our utmost to solve this one. If we can, it would do a great deal toward attracting more career people.

As for the personnel situation itself, our Chief of Naval Personnel, Admiral Holloway, is working overtime to alleviate and solve this problem. He has introduced extraordinary methods giving more attention to the individual man and his problems, to reinstate some of the traditional benefits that have been taken away since World

War II. He has taken drastic steps to try and maintain dependent medical care—such things as requiring shipboard doctors when they are in port to serve at the local dispensaries to provide better care for the dependents of our men at sea. He is trying to see that living conditions and housing conditions around our major bases are improved. And he has increased the size of our recruiting staffs and reemphasized our recruiting program to help sell the Navy to the youth of the country.

But all of these actions are still not solving

But all of these actions are still not solving the basic problem—of attracting more young men to make the Navy a career. The civilians and military leaders of our Navy appreciate that with peacetime military forces of over 3 million people we cannot expect all of our personnel to be career people. We realize that a great proportion of our Navy's future enlisted strength must be noncareer, short-term personnel. But it is also true that if the Navy is to remain a first-class organization, it must have a cadre, a base, a foundation of career people.

To provide this strong base of career people, both in talent and numbers, there must be two fundamentals: Motivation by the individual and recognition by the public.

For the individual who is thinking about

For the individual who is thinking about making the Navy a career, there must be two prime attractions—the opportunity to do something useful and worthwhile; the opportunity to improve himself and his for-

For the public, there must be general and genuine recognition of the individual's worth, of his importance, of his tasks, and of his accomplishments.

Why are the Navy and the other services finding it increasingly difficult to attract young men of the country to a career in the Navy?

In the first place, military service is not sufficiently attractive, not only in the material sense, but in the sense of duty to coun-Presently, the personal advantages of civilian life so outweigh those of present day military service that fewer and fewer men care to make the sacrifice. Furthermore, the material inducements which await him as a civilian veteran-education, veteran's benefits-exceed the material attractions of making the Navy a career. When you ask a man to make a career of the service today, you are asking him to spend a large share of his life away from home and family, and not always in the most desirable spots in the The Aleutians, the Straits of Formosa, the Persian Gulf, all may have the poster appeal of romance and adventure to an enlistee, but to an American sailor who has seen some of the world and has matured to the point of decision about his life's work, it doesn't compare with Carthage, Ill.-especially when the wife and kids are back in Carthage. This family angle is increasingly important, for more and more of our men are married, and they are getting married younger all the time. A naval career these days means many long periods at sea of intense work maintaining the readiness of our fleets. It means a change of duty station at least every 2 years with the constant turmoil of moving family and household possessions. It means low pay.

In the second place, more people are not making the Navy a career because of the apathy of the public to the value and need of the career man to the country.

Today, the one really valid argument that can be presented to our people and to the young men in the country is simply but most importantly that they are needed by the service, needed by the country.

As I see it, the problem is to create once again within the country an attitude that a career in the military service is one of the most honorable professions, worthy of the best men in the country, and vital to the peace and prosperity of the Nation. Pride

in our military men, pride in the uniform they wear, pride in the service—must once again be common to every American. Service in the Navy in peacetime must be as warmly and as generally recognized as in wartime. This atmosphere must permeate the general public and be reflected in their attitude toward the serviceman and his problems, in order that the services will attract the best men. If this can be done, more of our best young men will become convinced that the country needs them, and will choose the service as a career.

If this public recognition and appreciation can be brought about, then the American people will automatically take greater care of career men and their families. If international commitments are going to demand that we keep large numbers of men overseas for long periods of time, then the answer may be to give them a little bit of America in the overseas area. This may mean housing, schools, medical care, all of which are expensive. It may mean schooling to provide the technical know-how necessary to maintain and operate our equipment. It may mean more ships in service. In short, whatever the price, we've got to pay that price to gain the caliber and numbers of career talent necessary to keep the Navy strong. Failure to do so can only result in a second-rate Navy.

Now what can the Navy League do to help us? First of all, the league can promote a continuing nationwide program of public education to inform the American people of the gravity of this problem, which as I said, is common to all the services. Second, as part of that same program, the league can initiate a campaign to sell the naval service to our patriotic young citizens as a careera career which in truth is vital to the security and welfare of the country. That campaign must be long range, vigorously pressed through all the public media, and it must not appeal just to materialism but to service and devotion to country. If there were more appreciation and esteem by the American public for military service, more of our young people would understand our country's need of their services and would choose it as a career. As part of that campaign. I think the league should try and sell the American public that if they want a first-class Army, a first-class Navy, a firstclass Air Force, and a first-class Marine Corps, they must pay the price for it.

But most of all, by that program, the league will be helping to create an atmosphere of renewed public pride in peacetime military service.

This is the challenge that I offer to you.

Secretary of Agriculture

EXTENSION OF REMARKS

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mrs. KNUTSON. Mr. Speaker, the

Triangle Farmers Union local of Beltrami County passed a resolution February 5, 1955. Under leave to extend my remarks I include this resolution:

Be it resolved, That Congress be petitioned to the effect that they (Congress) use every legal means at their disposal to obtain the immediate removal of the Secretary of Agriculture, Ezra Taft Benson; and be it further

Resolved, That a petition tentatively entitled "Secretary Benson Must Go" be circulated in such a manner as to obtain the

most possible signatures of all farmers both union and nonunion members who share this sentiment, through all the facilities at the disposal of the local, State, and National Farmers Union.

Right to Work Laws

EXTENSION OF REMARKS OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Wednesday, March 16, 1955

Mr. MURRAY. Mr. President, in the official publication, the Washington Teamster, of February 25, 1955, there is found an excellent article on the socalled right to work laws, written by the Reverend Jerome L. Toner, OSB, industrial relations dean, St. Martin's College, Olympia, Wash,

Dean Toner is a profound student of labor legislation and has written extensively on the subject. In his article in the Washington Teamster, the so-called right to work laws are branded as unsound, schizophrenic, indefensible, and immoral.

I ask unanimous consent that the text of Father Toner's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the REC-ORD. as follows:

When Chief Justice Howard Taft, former President of the United States, solemnly stated in the American Steel Foundries case of 1921 that "a single employee was helpless in dealing with an employer * * * (and that) labor unions (born) out of the necessities of the situation, were essential to give laborers an opportunity to deal on equality with their employer * * * (to obtain) his daily wages for the maintenance of himself and his family," he was stating an economic, social, legal and moral principle categorically contrary to that proposed by the promoters of the right to work laws.

President Herbert Hoover made Chief Justice Taft's policy the law of the land in 1932 when he signed the bill which said that ** * * the public policy of the United States is hereby declared (to be) and that the individual unorganized worker is commonly helpless to exercise actual liberty of contract and protect his freedom of labor, and thereby to obtain acceptable terms and conditions (Therefore) it is necessary of employment. that he have full freedom of association, self-organization and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment (through) concerted activities for the purpose of collective bargaining or other mutual aid or protection."

In the light of these principles and the realities of our times where crimes against men, society, and God are increasingly committed in the name of liberty and freedom of the individual to do absolutely what he chooses whether it be in speed for communism, through actions which bring forth the terrorizing tide of juvenile delinquency, the selection of new spouses at a rate that will ultimately be self-destructive of our civilization, would it not be much wiser for this State and every State in the Nation as well as the Federal Government to turn their attention to the responsibilities and duties of men toward their fellow men, society, and God than to strive to establish liberties which are actually licenses?

The right to work laws, which are actually right to shirk laws are (1) economically unsound, (2) socially schizophrenic, (3) legally defenseless, and (4) doubly immoral.

ECONOMICALLY UNSOUND

The right-to-work laws are economically unsound because they deprive the stockholders and management, employees and union of their individual and collective rights of choosing the most mutually efficient means of profitably operating their business according to the time-tested traditional and legal principles of our free enterprise democratic capitalistic system. The God-given duty and constitutional right to work for a familyliving-saving-wage, which is far more fundamentally important than the "right to work without belonging to a union," is nowhere proposed or held as a bar to the collectivebargaining contract which does not provide for the family-living-saving-wage.

SOCIALLY SCHIZOPHRENIC

(Gr. schizein-to cleave, split; phren-mind, heart. A type of psychosis or mental disease characterized by loss of contact with environment and by disintegration of personality.)

The right-to-work laws are socially schizophrenic because they have lost contact with any realistic understanding of the nature and environment of the legal collectivebargaining realities which force and compel the stockholders, management, all employees, and the union to obey each and every clause and condition of the collectivebargaining contract mutually agreed to by everyone coming under the contract. The right-to-work laws have disintegrated the employees into the frustrating duality of an isolated eonomic individual, absolutely free to do his own will, while, at the same time, his legal and moral personality is absolutely bound by all the terms and conditions of the legal collective-bargaining contract.

LEGALLY DEFENSELESS

The right-to-work laws are legally defenseless because:

(1) They are contrary to the public policy of the United States expressed by Chief Justice Howard Taft, formulated into law by President Hoover, and found in the Wagner and Taft-Hartley Acts "of encouraging practice and procedures of collective-bar-gaining" as an effective process of increasing industrial production and peace.

(2) As the Supreme Court of the United States said in the Hitchman Coal Co. case, "The cardinal error of the ("right-to-work laws) lies in the assumption that the right (to work without belonging to a union) is so absolute that it may be exercised under any circumstances and without any qualifications; whereas in truth, like other rights that exist in civilized society, it must always be exercised with reasonable regard for the conflicting rights of others."

(3) The right-to-work laws unreasonably and arbitrarily make the right of the individual nonunion worker absolute and paramount to the equally basic and fundamental rights of possibly more than a million stock-holders (sic A. T. & T.), their management, more than half a million (A. T. & T.) employees, and their governmentally certified union to make the type of contract which they mutually agree will be the test to preserve the profitable operation of the firm for them, the public welfare, and the common good.

DOUBLY IMMORAL

The right-to-work laws are doubly immoral because, under a mutually agreeable collective-bargaining contract—the only kind under which compulsion of a union-security contract may legally existthe nonunion employee offend against both commutative and social justice.

Commutative justice:

The nonunion employee under a legal collective-bargaining contract offends against commutative justice by refusing to tender

his proportional share of the expenses of the collective-bargaining agent—the union—which he legally elected and hired to improve his wages, hours, and conditions of work.

SOCIAL JUSTICE

The nonunion employee offends against social justice, the essence of which is to demand from each individual all that is necessary for the common good, by refusing to affirmatively participate in the legal processes of industrial democracy through collective bargaining by which, for good or evil. the wages, hours, and conditions of work for himself as well as the rest of the employees are determined. Since the nonunion employees cannot affirmatively vote in the industrial democracy, their nonparticipation may be the means by which substantial harm may come to the firm, public welfare, and common good.

The right-to-work laws logically deceive the American public into believing that these right-to-work laws protect the American workers' constitutional right to work, where, when, and at any terms mutually agreeable to him and to his employer. Such "thorough competition in the goods market," says the chamber of commerce's Economic Intelligence No. 76. for November of 1954, "is indispensable for the survival of capitalism, and probably of democracy. * * * The purpose of collective bargaining is to destroy individual bargaining, to create a labor mo-

nopoly."

The Supreme Court of the United States. along with Congress and other Federal courts, consistently condemn such a philosophy. In the 1944 J. I. Case decision, the Supreme Court of the United States said that "The very purpose of providing by (the National Labor Relations) statute for the collective agreement is to supersede the terms of separate agreements with terms which reflect the strength and bargaining power and serve the welfare of the group. * The workman is free, if he values his own bargaining position more than that of the group, to vote against representation; but the majority rules, and if it collectivizes the employment bargain, individual advantages or favors will generally in practice go in as a contribution to the collective result."

Such a labor monopoly of collective bargaining, which necessarily destroys individual bargaining, come from the Taft-Hartley law, which specifically states that the "Representatives designated or selected for the purposes of collective bargaining by the majority of employees, shall be the exclusive representative for all the employees in such a unit for the purpose of collective bargaining in respect to rates of pay, wages, the hours of employment, or other conditions of employment." The Supreme Court, in effect, made the collective-bargaining monopoly a duty of the certified union in the 1944 Draper case when it said that the union had "* * * the duty to protect equally the interests of the members of the craft (who are not members of the union) as the Constitution imposes upon the legislature to give equal protection to the interest of those for whom it legislates."

The absolute right of the individual worker to do as he pleases and to be free from the monopoly of the collective-bargaining agreement has no Federal bases. In the 1948 National Maritime Union case the United States District said that "This (monopoly of the majority) to be sure, was an abridgement of the minority's fundamental rights, as well as those of the employers, but the importance of the broad public purpose sought to be served (by the NLRA) justified the means employed." "The purpose of the R-L Act" said the circuit court of appeals in the Steel case, "was not to guarantee to employees the right to do as they pleased but to guarantee to them the right of collective bargaining for the purpose of preserving industrial peace."

This absolute right-to-work liberty of the employee to have freedom of choice and to do as he pleases with utter disregard of the will of the majority was clearly condemned by the Supreme Court of the United States in the Draper case when it said that "Congress has seen fit to clothe the bargaining representative with powers comparable to those possessed by a legislative body to create and restrict the rights of those whom it represents."

Since there is no Federal legal defense for the philosophy of absolute freedom of the individual worker, which the right-to-work defenders are trying to sell to the American public, it is logical to establish the basic motive behind the right-to-work employers. W. R. Brown, research director of the Missouri State Chamber of Commerce, writing in the Labor Law Journal of January 1953 said that "right-to-work laws are well worth considering in the search * * for means of curbing the excessive powers of unions over individual workers."

Probably a franker statement was made by J. R. Morris in his Southern Economic Journal article, Compulsory Union Membership and Public Policy, copies of which are widely distributed by the Commerce & Industry Association of New York, Inc., in which he said, "The employer's basic motive in opposing compulsory union membership (and therefore advocating right-to-work laws) is, in essence, that most employers fear a strong union. Specifically, employers are concerned with efficiency, and they fear the closed shop union security will derogate from this because of union control over the work force. Finally, most employers honestly seem to believe that compulsory union membership is undemocratic. Judging from past performance, however, a few management officials probably would regard this as convenient rhetoric."

The bitter battle fought for the destruction of unions waged in the name of the "right to work without belonging to a union" in the 1900-10 "open shop" and the 1919-29 "American plan" wars make the undemocratic charges of the right to work campaigners more than convenient rhetoric. Democracy. be it political or industrial, said Lincoln, is government under God of, for, and by the people and not government by an irresponsible minority of nonunion, nonstockholder, nonvoting citizens or people. The right to work laws, which deprive the stockholders and their management employees and their union from jointly ruling their business, are contrary to the age-old principle of free men, which is that government, political or industrial, derive their just powers to govern from the consent of the governed.

LIBERTY AND DEMOCRACY

In Detroit during the holidays I asked an employer the following question: Is it not a denial of liberty and democracy to compel and force a worker to join a union as a condition of exercising his constitutional and God-given right to work—to earn a family living saving wage?

Here is his humorous and astonishing answer. He said: "It would be just as humorous for me to claim that a union-security contract was a denial of liberty and democracy to a nonunion worker as it is for the Russian Communists to claim that their form of government is the only real free peoples democratic government in the

I asked him to explain. He said:

"In the United States under the Taft-Hartley law, once the stockholders through management and the employees through their governmentally certified union enter into a legally binding collective-bargaining contract, the employer and all of his employees coming under the contract are bound to each and every term, condition, and clause in that contract."

Continuing he said: "It is no more unreasonable for the union to request that management include a union-security clause in the contract so that all employees who receive the direct and primary benefits of the contract will, within 30 days, become legal members of the union than it is for management to demand that all persons who wish to receive the direct and primary profit-income of the firm must join the stockholders organization. Such contracts, he said, are the very essence of liberty and freedom. They provide absolute freedom of choice. True to our national free enterprise heritage they provide a realistic opportunity for an individual to think for himself and to exercise his ability and responsibility to choose between alternatives of a wage or a profit income. No one, he said, is compelled or forced to become either an employee or a stockholder, but if anyone chooses to receive an income from wages or profits, or both, that person must also bind himself by all the legal terms offered by the collective-bargaining of the stockholders contract."

"Democracy," he said, "be it political or industrial is government under God, of, for, and by the people and not government by an irresponsible minority of nonunion, nonstockholding, or nonvoting citizens or people."

A Message to Congress From the Grassroots

EXTENSION OF REMARKS

HON, WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. WIDNALL. Mr. Speaker, the American Press, an independent magazine for hometown newspapers, has recently conducted an exhaustive survey on current legislative problems. One thousand and fifty editors, 12 percent of all the country and suburban newspaper editors of the Nation, have answered the questions, answers which should prove of great interest to the Members of Congress.

This magazine should be commended in seeking to correlate the views of grassroots editors and in performing a service of inestimable value toward the cause of responsible government.

The survey is included under leave to extend my remarks:

A Message to Congress From the Grassboots

"Don't cut taxes yet. Reduce expenditures for foreign aid. Keep the flexible farm program. Don't start new social projects."

This advice, Mr. Congressman, comes from the country editors of the Nation. They have advice to give on a lot of other subjects, too, which the American Press has summarized in this special issue.

To help clarify grassroots opinion, the American Press has just completed the most thorough survey ever made of the attitude of these influential editors on subjects which face Congress.

A total of 1,050 newspaper editors—12 percent of all of the country and suburban newspaper editors of the Nation—have given time and thought to answering 18 questions asked of them by the American Press. All of their replies have been tabulated and typical comments, showing the reasoning behind their thinking, are presented here.

This survey was made to help make the voice of rural America more articulate in Washington. The American Press made this survey, not just to give the editors an opportunity to have their say, but also to help Congress, in dealing with the many debatable issues ahead, to be given this checkup on the pulse of the people.

It is our opinion—and an opinion shared by many Congressmen—that a closer relationship between these editors and the Members of Congress—can be of real value to the country.

Below we give our questions and a summary of the answers:

1. Corporation taxes: Present law calls for reduction of corporation taxes from 52 percent to 47 percent on April 1. The President has asked that this reduction be postponed for another year. Do you think this reduction should be postponed?

Answers: Yes, 70.4 percent; no, 24.9 percent; undecided, 1.4 percent; no answer, 3.3

2. Tax on dividends: Taxes on dividends have been called "double taxation" because corporations pay 52 percent taxes on profits, and then stockholders pay additional taxes on remaining profits distributed as dividends. Do you think taxes on dividends should be reduced, eliminated or left as is?

Answers: Reduced, 24.1 percent; eliminated, 28.9 percent; left as is, 41.2 percent; increased, 0.2 percent; undecided, 1.8 percent; no answer, 3.8 percent.

3. Excise taxes: The President has asked that excise taxes on liquor, tobacco, gasoline, and automobiles should be continued for another year. Please give below what action you think should be taken on each of these taxes.

Answers:

Liquor: continue, 86.8 percent; discontinue, 3.5 percent; lower, 3.8 percent; increase, 4.2 percent; no answer, 1.7 percent.

Tobacco: continue, 87.9 percent; discontinue, 3.5 percent; lower, 2.5 percent; increase, 3.9 percent; no answer, 1.7 percent.

Gasoline: continue, 66.3 percent; discontinue, 20.6 percent; lower, 10.5 percent; increase, 0.6 percent. (A few of those who thought a tax should continue specified that the money be used for roads only; a few others recommended that the States, rather than the Federal Government get the tax money.)

Automobiles: continued, 60 percent; discontinued, 24.5 percent; lower, 13.5 percent; increase, 0.3 percent; no answer, 1.7 percent.

4. Trade agreements: The President has proposed a 3-year extension of the Reciprocal Trade Agreements Act, with additional authority to the President to lower tariffs 5 percent each year. Do you favor this proposal?

Answers: Yes, 74.7 percent; no, 16.8 percent; continue without lowering, 2.3 percent; undecided, 3.9 percent; no answer, 2.3 percent.

5. Foreign investments: To encourage foreign investments, the President has proposed that corporation income from foreign investments be taxed at a 38-percent rate instead of the 52-percent tax charged on income of domestic corporations. Do you approve this idea?

Answers: Yes, 38.6 percent; no, 53 percent; undecided, 6.4 percent; no answer, 2 percent.

6. Foreign aid: Current law provides for the end of economic aid and of Foreign Operations Administration on June 30. The Administration has asked for their continuation and expansion. How would you vote?

Answers: Continue, 42.2 percent; discontinue, 38.1 percent; limit or reduce, 11 percent; shift to Asia, 0.5 percent; continue without expansion, 3.1 percent; undecided, 3.5 percent; no answer, 1.6 percent.

7. Congressmen's salaries: The President has requested that pay of Congressmen be

increased from \$12,500 to \$22,500. Do you

approve this increase?

Answers: Yes, 46.2 percent; no, 32.4 percent; compromise, 18.9 percent; more than \$25,000, 0.1 percent; less than \$12,500, 0.1 percent; undecided, 1.3 percent; no answer, 1 percent.

8. Federal employees' pay: The President has requested that Federal employees have their pay increased by an average of 5 percent-a total increase estimated at \$30 mil-

lion. Do you favor this increase?

Answers: Yes, 43 percent; no, 44.7 percent; selective raise, 5.5 percent; reduce staff to get funds, 1.6 percent; partial increase, 0.7 percent; undecided, 2.9 percent; no answer,

1.6 percent.

9. Farm program: The administration's price-support program went into effect at the first of the year. It calls for supports from 82.5 percent to 90 percent of parity for wheat, cotton, corn, rice, and peanuts. islation will be introduced at this session to return to rigid support of 90 percent of parity. Do you favor the new flexible support or return to the 90 percent program?

Answers: Flexible, 67.7 percent; 90-percent support, 18.4 percent; no support, 7.8 percent; lower than 82.5 percent, 0.4 percent; undecided, 3 percent; no answer, 2.7 percent.

10. Health reinsurance: The President has requested legislation for health reinsurance in order to encourage private insurance companies to write broader policies. Under the plan the Government would insure the private companies against heavy losses if they would write health insurance policies they now consider too risky. Do you favor such a program?

Answers: Yes, 39.9 percent; no, 51.1 percent; in limited form, 0.4 percent; undecided,

5.9 percent; no answer, 2.7 percent. 11. Public housing: Public housing authorization expires June 30. The President has asked that Congress authorize 35,000 more public housing units in each of the next 2 fiscal years. Do you favor this program?

Answers: Yes, 54.6 percent; no, 39.1 percent; undecided, 2.8 percent; no answer, 3.5

percent.

12. Taft-Hartley: Seventeen States now have laws forbidding compulsory union membership even in union shops, thus permitting employers to hire nonunion men to fill vacancies. The unions are seeking a revision of the Taft-Hartley law to take away from the States the power to pass such laws. Do Taft-Hartley law should be you think the amended in this manner?

Answers: Yes, 10.6 percent; no. 86.1 percent; undecided, 1.4 percent; no answer, 1.9

percent.

13. Guaranteed wage: Labor leaders are planning, during 1955, to push the guaranteed wage idea whereby workers would be paid during layoffs as well as when they are working. Do you approve of the guar-anteed wage idea?

Answers: Yes, 12.7 percent: no. 80.5 percent; with reservations, 1 percent; undecided, 4.7 percent; no answer, 1.1 percent.

14. Minimum wage: The hourly wage minimum is now 75 cents per hour. President Eisenhower has proposed that it be increased to 90 cents. Labor union leaders say it should be \$1.25. Which would you vote for?

Answers: Keep at 75 cents, 37.9 percent; 90 cents, 53.5 percent; \$1.25, 4.1 percent; no minimum, 3.0 percent; compromise, 0.6 per-

cent; no answer, 0.9 percent.

15. Bricker amendment: The Bricker proposal to limit the treaty powers of the President, which lost out last year by one vote, is expected to be introduced again. How would you vote on it?

Answers: For, 47.0 percent; against, 44.8 percent; undecided, 4.5 percent; no answer,

3.7 percent.

16. 18-year-old vote: The President has again asked that the voting age be lowered to 18. Do you favor this?

Answers: Yes, 42.8 percent; no, 53.2 percent; for Armed Forces only, 0.9 percent; undecided, 2.4 percent; no answer, 0.7 percent.

17. Stock market: The Senate Banking Committee is making plans to investigate the stock market to try to find out why stock prices advanced so rapidly during 1954. Do you think such an investigation is needed?

Answers: Yes, 39.2 percent; no, 50.0 percent; undecided, 7.7 percent; no answer,

3.1 percent.

18. Fair trade: Do you favor State laws which make it possible for manufacturers to set the price at which his product is sold at retail?

Answers: Yes, 17.3 percent; No. 76.8 percent; with limitations, 0.3 percent; undecided, 3.9 percent; no answer, 1.7 percent.

United States Air Force Academy

EXTENSION OF REMARKS OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. CHENOWETH. Mr. Speaker, a great national institution, authorized in 1954, is now in its formative stage, under the overall direction of its first superintendent, Lt. Gen. Hubert R. Harmon, United States Air Force. Located at Colorado Springs, in my district in Colorado, it is destined to great fame as the center of education in the training of future Air Force leaders. I refer to the United States Air Force Academy. On the evening of March 14, 1955,

I had the pleasure of hearing its first dean of faculty, Brig. Gen. Don Z. Zimmerman, United States Air Force, give a most instructive presentation on the new academy before a distinguished gathering at the Cosmos Club of Washington. I am sure his address will be of great interest to every Member of the House.

The Cosmos Club is an association of men who are distinguished in science. literature or the fine arts; in a learned profession or public service. It is nonpolitical in character and takes no position with respect to the subjects presented in its lecture series. Its sole purpose is the advancement of knowledge.

I would like to include the opening remarks of Capt. Miles P. DuVal, United States Navy, retired, who introduced General Zimmerman as follows:

Fellow members of the Cosmos Club ladies. and gentlemen, much United States history traces back to the leaders trained at our great service Academies. West Point was founded in 1802; the Naval Academy in 1845. The third school-the Air Force Academywas established in 1954.

Though the stories of the first two have been recorded in histories of those institutions, we do not have comprehensive statements by their founders made during the periods of creation. Tonight we are greatly privileged to have as our speaker one of the founders of the youngest service Academyits first dean of faculty.

A graduate of the University of Oregon, where he was a member of the ROTC, he was offered a commission in the Regular Army. He did the unusual. He did not accept, was appointed a second lieutenant in the Reserve, and sought and obtained an appointment as a cadet at West Pointprocedure that lost him 4 years seniority.

Graduating from the Military Academy in 1929, he was commissioned a second lieutenant in the Corps of Engineers, started flight training on the Pacific coast, and qualified for the degree of master of arts at the University of Oregon, all in the same year.

Rated pilot in 1930, he transferred to the Air Corps, and early became interested in the fields of operational planning and meteorology. In the latter, he took postgraduate training at the California Institute of Technology, where in 1936 he was awarded the degree of master of science, and was designated as an instructor at the Air Corps Primary Flying School. Among his contributions there were the introduction of the study of air-mass analysis in the Army and the preparation of the first Weather Manual for Pilots. He later served as an instructor in mathematics at West Point.

During World War II, as the first Director of Weather of the Army Air Forces, he supervised the establishment of a worldwide weather service, served on the planning staff of amphibious forces of the Pacific and in the Operations Division of the General Staff in Washington. Between war assignments he attended the Command and General Staff School at Leavenworth, the Army and Navy Staff College, and the Naval War College.

After hostilities he became assistant air attaché in London, during which period he attended the Imperial Defense When the Korean war started he was sent to Tokyo as director of operational planning for the Far East Air Forces, and made frequent visits to the battlefront.

Thus, in our speaker there are combined the qualities of the soldier and aviator, the student and educator, and the engineer and

administrator.

May I present the dean of faculty of the United States Air Force Academy, Brig. Gen. Don Z. Zimmerman.

ADDRESS OF BRIG. GEN. DON Z. ZIMMERMAN BEFORE THE COSMOS CLUB, WASHINGTON, D. C., MARCH 14, 1955

Members of the Cosmos Club and guests, ever since April 1, 1954, when President Eisenhower signed the bill authorizing the establishment of a United States Air Force Academy, there has been considerable interest throughout the Nation in the activities connected with that project. We participants are finding it a stimulating experience to help establish a school in which our country is showing such keen national interest. To me, personally, it is equally stimulating to be invited to talk to you on my favorite subject-the United States Air Force Academy.

The Headquarters, United States Air Force Academy, are now located temporarily at Lowry Air Force Base in Denver, Colo., where we are getting ready to receive our first class of 300 cadets next July. We plan to remain at our Denver site until the summer of 1957, at which time we are scheduled to move to our permanent location near Colorado Springs.

During the time allocated to me here. I want to give you a few highlights on your Air Force Academy. I propose to organize my presentation in this way. First, I will give you some idea of the course of study which we are planning; since this particular subject is both complex and important, I will spend most of my time on it. Secondly, I will talk briefly about the faculty we have selected. And lastly I will say a few words about our procedures for choosing the cadets who will come to the Academy.

Let us begin with an examination of the course of study which we have planned for

our cadets.

The Air Force Academy is indebted to a number of leading civilian educators, together with the staff and faculty of both West Point and Annapolis, for their generous assistance in the development of our

program of instruction. Approximately 60 distinguished civilian educators have acted as consultants since the beginning of the development of plans for the Academy in 1948.

In developing our program, a great deal of consideration was given to the diversified attributes required of an Air Force officer today. Most of these attributes are readily discernible. You are aware that unimpeachable character, an unflagging sense of duty, and devotion to the best interests of our country are absolute requisites of all officers in any of the services. You are equally aware that warfare may be either on a global scale or geographically restricted, that both its technical and nontechnical aspects have become more complex, and that Air Force operations call for a high degree of skill, knowledge, and judgment. These operations are dictated by military policy and objectives which are based on national policy and objectives. Knowledge of our country and its relations and interactions with foreign countries is essential to effective military action. For these reasons, we cannot afford to produce men with a good grasp of strategy and tactics but with no clear concept of the political, social, and economic factors which underlie the great problems of our time. We must produce men trained for the conduct of war in the broadest sense because today there is not a facet of governmental structure or economic and social organization which remains untouched in war.

For these reasons, the program which we will offer is unique to the Air Force Academy. No civilian institution offers such a program, and although our program is similar to that of the other two Service Academies, it differs considerably in its emphasis on professional air requirements, as contrasted with land and sea requirements, and in its greater emphasis on the humanities and social sciences. The course of academic study is almost equally balanced between the natural and physical sciences on one hand and the humanities and social sciences on the other.

Our entire program is divided into two major phases; the airmanship program which comes under the direction of the Commandant of Cadets, and the academic program which falls under my supervision as Dean of Faculty. I should like first to describe the airmanship program, which may be summed up as that part of the curriculum dealing directly with military training. Our catalogue defines the airmanship program in this way: "The purpose of the airmanship program is to train and condition the cadet for his destined role of leadership in the field of aviation. Toward this end he will be trained to full qualification as a rated aerial navigator; he will be given indoctrination training in piloting aircraft; he will be instructed in the composition, administraton, and control of military forces; he will be given thorough training in the art of leadership; and he will be developed physically to such condition as will permit him most successfully to employ the skills he Let me now take up each of these acquires." phases in turn.

The navigation training program will continue throughout the cadet's 4 years at the Academy and will include navigation instruction both on the ground and in the air. Ground instruction is comprised of such subjects as physiological training, equipment orientation, weather, instruments, celestial and polar navigation, and radar. Actual flights will make it possible to supplement the ground instruction with practical navigation problems in the air.

Navigation training will also be integrated with academic courses which are closely associated with navigation. For example, map reading will be taught in graphics; the geography course will give additional instruction in the use of maps; and the mathematics course will deal with the application of mathematics to navigation.

All cadets will be given pilot indoctrination in light aircraft. Those who qualify for further instruction as pilots will enter the Air Training Command pilot training program following their graduation from the Academy

The military training phase of the airmanship program starts immediately upon the cadet's arrival at the Academy. objective is the development of character and leadership, as well as the provision of a broad military education. Part of this program is in effect 24 hours a day as a product of the rigimen of cadet life. Other parts are specifically scheduled courses of instruction. These latter include basic military training, weapons and equipment familiarization, basic infantry drill and tactics, military organization, duties and responsibilities of officers and noncommissioned officers, and practical exercises in leadership. Military training will continue throughout the summer training period, and in the summer months will include appropriate participation in activities at selected Air Force, Army, and Navy installations.

The problem of developing leadership is not one which can be delegated solely to the airmanship program. It is a process which much go on 24 hours a day, 7 days a week, in class and out. Our academic instructors, whether they be teaching physics, English, or economics, will always bear responsibility for aiding in the development of leadership and the nurturing of a high sense of duty. For this reason, all of our instructors in both the airmanship and academic programs must be officers who, in addition to meeting a high standard of qualification in their subjects, have demonstrated marked qualities of leadership. I want to say more about our faculty in a few moments.

Physical training is a medium for much more than muscular development and conditioning. It must also serve as a device for developing leadership, teamwork, good sportsmanship, and competitive spirit. A full program of intramural and varsity athletics will be scheduled, with the upper classmen acting as coaches and instructors in the intramural phase as part of their practical work in leadership and instructor training.

You are doubtless all wondering what part intercollegiate athletics will play at the Academy. We expect to field winning teams in all major sports. It would be difficult to conceive of an effective officer or an effective military force as not being deeply imbued with the desire to win. That spirit is tra-All of you who have seen the cadets and midshipmen play football have likely been impressed by their will to win and at the same time by their sportsmanlike conduct on the No potential all-American will be turned away from our door, provided he has the intellectual and moral qualities required of a future Air Force leader and can meet our requirements the same as other cadets.

Now I would like to turn to a consideration of our academic program.

We believe, and I think most of you will agree, that it is not very profitable to teach a large number of courses, each insulated from the others and each constituting an end in itself. One of the knottiest problems facing all educational institutions is that of integrating course materials in such a manner as to impress upon the student that he is studying a generous slice of the total experience of mankind, and that human experience is indeed a totality rather than a group of unrelated experiences. We are neither so vain nor so foolish as to believe that we can succeed completely in integrating courses; however, throughout the early planning phase and in the present phase of course preparation, constant attention has been given to both vertical and horizontal integration and to relating course material

to the cadet's past experience and future activities. I shall try to point out some of the areas of integration as I describe the courses which make up our academic curriculum. Obviously, this is not the time and place to discuss these courses in detail. By and large, they are similar to standard college courses, except that all of our courses will be oriented toward Air Force application. Where one of our courses differs materially from its civilian college counterpart, I shall point out the areas of difference. For those of you who would like to examine course content in greater detail, a supply of catalogs will be available this spring.

I shall start with the scientific aspect of our academic program, since the applica-tion of scientific courses to military use is perhaps more obvious-at any rate more traditional. Our scientific courses are designed to provide the future Air Force officer with a fundamental knowledge of the aeronautical sciences. All courses will be functional in nature—that is, related to aircraft equipment and aviation problems rather than to purely theoretical situations. The majority of these courses will be offered 3 periods a week, each period 11/4 hours long. In some courses-mathematics, for instance-one-third of each period will be devoted to supervised study; in other courses. a portion of each academic week will be spent in the laboratory. Integration of courses within this area presents no serious problems, for they are all closely related.

The School of Basic Sciences includes mathematics, chemistry, and physics. A 2-year foundation in mathematics is, of course, basic to all of our science work. Here cadets will be given a broad but thorough knowledge of fundamental mathematical principles, a working knowledge of mathematical processes and their practical application, and an ability to apply mathematical concepts in aerial warfare.

Our work in chemistry is very similar to any college level basic chemistry course. Since chemistry is the first of the science courses to be taught, emphasis will be placed on scientific methodology. The course will have particular application to problems related to rockets, fuels, gas turbines, turbojet engines, and atomic and thermonuclear weapons. In the latter phase of the course, introductory instruction will be given in the physiological problems of high speed and high altitude flight.

Physics, which will be presented in the sophomore year, will cover principles of mechanics, hydrodynamics, heat and basic thermodynamics, kinetic theory, electricity and magnetism, sound, light and optics, atomic and nuclear physics, meteorology and climatology. This subject is basic to all the scientific courses which will follow in the junior and senior years.

The School of Engineering Sciences includes electrical engineering, mechanics, and thermodynamics. The last named course will have particular reference to gas turbines and rocket motors.

The School of Aeronautical Sciences includes the study of aerographics, aerodynamics, and aircraft design. Aerographics, to be given in the freshman year, is divided into two parts: (1) maps and charts, and (2) engineering drawing. The portion devoted to maps and charts is designed to train the cadet to read and understand the wealth of information available on aerial photographs, topographic maps and aeronautical charts. Cadets will also be given instruction in plotting and computing problems in aerial navi-gation. The engineering drawing portion of the course is designed to provide the cadet with the ability to read and understand engineering drawings with facility. Particular emphasis will be placed upon aircraft drawings, including Air Force specifications and nomenclature.

Aerodynamics, presented in the senior year, is designed to give the cadet a knowledge of

the behavior of forces that act on the component parts of an aircraft and how these forces affect aircraft design. Closely related is the course in aircraft design, also to be given to some of the cadets in the senior year. Those cadets who have not demonstrated a marked aptitude for foreign languages, or who have done outstanding work in their scientific courses, will be given this aircraft design course in lieu of a foreign language. In this course, the class will be divided into teams, each of which will be required to design an aircraft. Each member of the team will act as a specialist in one particular area of the total problem.

Although our curriculum embodies a lesser emphasis on scientific and engineering subjects than does the curriculum of the Military Academy, we have been assured that a graduate of the Air Force Academy can earn a degree in aeronautical engineering at one of the best civilian institutions in one summer and one academic year. The scientific program also provides sufficient background for graduate study in scientific fields other

than aeronautical engineering.

So much for the block of scientific subjects. Let us move on now to the other major block of subjects in our academic program—the social studies and humanities, business management and administration. This field of studies is designed to give to the cadet a knowledge of the world about him, an understanding of the people in that world, and skill in dealing with those people. The courses in this area have been coordinated to present related courses and continuous learning rather than separate and unrelated segments of knowledge.

The School of Languages includes English and foreign languages. A great deal of emphasis will be placed on English, especially in the first 3 years. It is essential to his future career that each cadet learn to speak and write effectively. It is equally essential that he learn to appreciate his heritage through a knowledge of great literature. The freshman English course deals largely with the fundamental communication skills, while the sophomore and junior courses are more concerned with American and World Literature. However, the threads of literature study and the communication skills of reading, writing, speaking, and listening run throughout each of the 3 years of English. Of course cadets will be judged on their ability to express themselves orally and in writing throughout all of their 4 years at the Academy.

Foreign languages will be taught in the senior year. In this way when the cadet graduates, his knowledge of a foreign language will be fresh and his interest keen. Language instruction will not be given to every cadet. Only those cadets who have done well in the language aptitude test and in the social-humanities area will study languages. As I pointed out earlier, those cadets who lack language aptitude or who have done outstanding work in scientific studies will take Aircraft Design rather than a foreign language. Language courses will be presented in highly concentrated form with emphasis on conversational use and reading comprchension. Such language facility will be developed by intensive practice in approximately 7 hours of classroom work each week. The courses will be similar to those developed in the Air Force Language School at Syracuse University. languages offered will depend upon the needs of the Air Force at any given time.
Our courses in the School of Human Rela-

Our courses in the School of Human Relations include philosophy, psychology and law. The philosophy course, which will be presented in the freshman year, is a one semester course designed to develop effective thinking. It is, in fact, a course in logic, and will teach the cadet to express himself clearly, to distinguish valid reasoning, and to apply the tests of logic to any situation.

Psychology, which will be presented in the sophomore year, includes a study of the principles of human behavior and their application to problems of leadership and command within the Air Force. Personnel management will be a feature of the course.

The course in law, which is also a part of the sophomore curriculum, deals with military, civil, and international law in their application to the Air Force and its person-

The School of History includes the usual history courses, as well as a course in military history. History will be offered during the freshman, sophomore and junior years. These courses will be closely integrated with the cadet's study of literature. Insofar as possible, history and English scheduling will be coordinated in such a way that the cadet is studying the literature of a period concurrently with its history. The history courses will place major emphasis on an understanding of the evolution of ideas and institutions rather than on a mere accumulation of historical facts. In all courses, supplementary readings will be used in conjunction with a text.

The freshman history course deals with world civilization, the sophomore course with American history, and the junior course with 20th century world history. We hope to devote the second semester of the course in 20th century world history to a study of some of the great issues of our day.

The course in military history, which will be presented in the senior year, is still under study and will continue in a stage of development for several years to come. As I now envisage the course, it will include a study of unified action in Army, Navy and Air Force campaigns which illustrate the principles of employing the three services in preparing for war, fighting a war, and making postwar adjustments. A careful analysis will be made of military mistakes in history. The course will be closely related to both history and international relations.

The School of Social Sciences includes courses in geography, comparative government, economics, and international relations. The geography course is to be presented in the freshman year and will be closely coordinated with the freshman history course and with navigation training. Physical, economic and demographic factors will be studied in their relationship to military—and particularly to Air Force—operations.

During their junior year, the cadets will study comparative governments and economics. The first semester of the government course will be devoted to a study of our own Government, while the second semester will deal with the governments of the major powers. This course is closely related to the economics course. The first semester of economics will include principles of business administration and management, while the second semester will involve a study of the major economic systems existing in the world today.

International relations, to be presented the senior year, will synthesize the knowledge which the cadet has gathered from his other courses in both scientific and nonscientific fields. All phases of international relations will be considered. The latter part of the course will be devoted to the study of the national security of the United States.

Throughout the courses in the humanities and social sciences, instruction and practice will be given in research methods and the preparation of reports and studies.

We believe that the curriculum which I have described is both sound and practical. However, I wish to emphasize that our curriculum is still in the exploratory stage and that it will remain under constant review. None of us can say with conviction that our present program meets perfectly the ideal requirements of an Air Force officer's education, and surely none may believe that these requirements will remain static. For

the next few years, of course, change will come quite readily, but with the passage of time, departmental interests tend to become sacred, and change becomes a matter of moving mountains. We are resolved to guard against this tendency; we are determined to maintain an inquiring and openminded attitude.

An essential part of the Air Force Academy will be its library. It will contain over 200,-000 volumes selected to support our training program and will be used as an integral part of our academic program. At least initially, the beginnings of our museum and art collection will be connected with the library.

I have told you, then, what we are going to teach. Now I want to say a few words about how we propose to teach our subjects.

We realize, as all of you do, that no matter how well a subject is taught, much of it will be lost to the student unless it is put to immediate and sustained used. This is particularly true of factual information. We will, therefore, handle detailed facts only to the extent necessary to provide the cadet with a frame of reference. Our primary concern is to provide him with an understanding of principles, endow him with the ability to apply these principles to real life situations, and encourage him to think for himself.

These objectives cannot be reached through reliance on a rote system of learning. Thus we wish to teach by discussion, demonstration, and student performance—supplemented, of course, with occasional lectures. Our academic sections will be small—about 12 cadets to a section—which allows for free interchange of ideas and a great deal of individual attention on the part of the instructor to the learning problems of each cadet.

We propose to arrange our cadets in sections according to their academic standing in each subject. This will give our instructors an opportunity to set a pace consistent with the abilities of each group. The more advanced students will thus be given additional work, while those who have made less rapid progress will receive concentrated instruction in course fundamentals.

So much for our course of study. Now let me tell you about our faculty, the people who will actually teach this course of study.

We are not now in a position to consider civilian educators in other than an advisory capacity or to recall Reserve officers to active duty to instruct at the Academy. Our present faculty has come from Air Force officers now on active duty. For them, we established as prerequisites for instructional duty at the Air Force Academy high teaching qualifications and a superior or outstanding record as an officer in the United States Air We also believe that since all of our graduates will wear wings as navigators, a high proportion of academic instructors should also wear wings. The Air Force has today a considerable resource of officers who meet these requirements. Some received their graduate training under Air Force auspices; many are former civilian college instructors who were recalled to duty during the Korean engagement; and many more have earned advanced degrees in their offduty hours. We are also fortunate in having a pool of officers who have instructed at either West Point or Annapolis, who are familiar with Service Academy methods, and who will be available to us for several years to come.

Let me take, as an example of how our faculty is shaping up, our department of history. Of the 3 instructors who will teach the freshman course in world civilization, 4 hold doctors' degrees, and 4 hold masters' degrees. All of the M. A.'s have completed at least a year's work toward their doctorates. Five of these instructors are pilots, all with combat experience. All have served at least 1 tour in an overseas theater, and all have at least 3 years' college teaching experience.

While none of these men approaches the academic distinction of being a national figure in the field of history, I believe each one is equipped to do a very creditable job. Moreover, I believe that the department of history is typical of our several departments.

We have seen something of our course of study and our faculty. Now let us examine briefly the most important thing in any educational institution—our students. Let's see how our cadets are appointed, where they come from, and how the best qualified are selected from the mass of applicants.

Any unmarried male citizen, between the ages of 17 and 22, who is of good character and who meets the prescribed standards of height and weight, is eligible to compete for an appointment to the Academy. In order to secure proper geographic representation, specific numbers of vacancies have been allocated to each State. For example, out of our first class of 300 cadets, the State of Oregon has been allocated 3 vacancies; this number was determined by Oregon's proportional representation in Congress. Each Senator and each Representative is authorized to nominate 10 candidates to compete statewide for the vacancies allocated to his State. About 85 percent of all vacancies will be filled by these congressional nominees. The remaining 15 percent will be filled by nominations from such authorities as the President. Vice President, Alaska, Hawaii, Puerto Rico, District of Columbia, and Canal Zone, as well as by selection from Regular and Reserve members of the United States Air Force and Army, and sons of deceased veterans, Presidential nominations are reserved for sons of members of the United States Army, Navy, Air Force, Marine Corps, and Coast Guard. Qualified sons of Medal of Honor winners are admitted without limit.1

After the prospective candidates receive their nominations from the sources just described, they will compete with each other throughout a comprehensive battery of examinations. Competition will be based on the Air Force medical examination for flying training, the Air Force pilot aptitude and officer quality test, and the college entrance examination board tests. These college board tests will include verbal and mathematical scholastic aptitude tests, together with achievement tests in intermediate mathematics, English composition, and social studies. Forty Air Force Academy examining centers have been established throughout the world to administer these

As I mentioned earlier, on July 11 we will open our doors to the first class of 300 cadets who have survived the rigid competition, which I have just described. Until the permanent installation is completed at Colorado Springs, it will be necessary to limit the size of our classes. In order to provide a gradual build-up in cadet strength, the Secretary of the Air Force is authorized to limit the size of the first four classes. The second class will be 400 strong with the third and fourth classes entering at 624 each. After that, we shall grow to our statutory limit of 2,496 cadets, plus foreign students and sons of Medal of Honor winners. Of course, as we increase the size and number of our classes, a corresponding increase will be made in the cadetships allocated to each source for cadets.

Public reception of the Air Force Academy has been wonderful from the beginning. It was good of you to come here today, and although my presentation has been rather long, I expect it leaves you with a great many unanswered questions. We would be delighted to answer your questions by hav-

¹This system of nomination and selection applies to the first four classes to enter the Air Force Academy. After that, barring changes in the law, the system will revert to that used for the other two service academies.

ing you visit us in Denver, either now during our preparatory phase, perhaps better from your point of view, after we open our doors in July.

I want now to leave you with this final thought about the Air Force Academy. In its location and facilities, in its course of study, in its faculty, and in its students—in all of these things, we believe that we are building an institution destined to play a distinguished role in the history of our country. You may be assured that those of us who have been honored with appointment to help create this institution are doing everything we possibly can to prove ourselves worthy of our affiliation with your United States Air Force Academy.

Investigation of Monopolistic Mergers in the Textile Industry

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following material I have received from Mr. Solomon Barkin, director of research, Textile Workers Union of America, in support of the resolution I have filed to authorize the Committee on the Judiciary to investigate and study monopolistic mergers in the textile industry. There is a listing of such mergers and I am confident a study of the same by the Members of Congress is a necessary step to provide understanding of the extent of the merger movement and need of thorough examination of such mergers and consolidations in the textile industry during the last 2 years. The material follows:

STATEMENT OF TEXTILE WORKERS UNION OF AMERICA, RESEARCH DEPARTMENT, NEW YORK, N. Y.

TEXTILE MERGERS

The current merger movement represents the second wave of counsolidations in the textile industry. The first—the major one—occurred during the period from 1944 through 1948. It converted an industry of individual small units into one of giant corporations. During this period most current big textile organizations were created. We have since witnessed further consolidation of these organizations which have acquired competitive mills and have become more significant as other mills have been eliminated through liquidations—approximately 700 individual plants employing close to 200,000 persons since the end of the war.

The first movement of consolidations was induced by several factors. Corporations enjoyed large profits and employed them for extending control. The excess-profits tax law encouraged sales of mills by older owners or estates which wanted to leave the business. The low capitalization of the mills made them targets for high tax levies. Through sales, the owners could convert their profits into capital gains which were taxed at lower rates. The buyers acquired a favorable high tax base for their new properties and were able to pay off the former owners from the surpluses accumulated in the acquired companies. Others bought mills to acquire fabric sources at a time when textile materials were scarce. Selling agents and houses bought mills to assure supplies. Mills bought selling houses to

guide their own sales. The huge profits during the war and immediate postwar periods favored these mergers.

The new wave beginning in 1953 has already gained tremendous sweep. In 1953, 35 companies were bought, involving 70 plants with some 24,000 workers. In 1954, 46 companies involving some 136 plants and employing 42,000 workers were bought up or consolidated. Already in 1955 we have records of 18 companies with 27 mills employing 9,000 persons which have been consolidated and the trade press daily carries stories of additional impending mergers.

The current mergers are being encouraged by our tax laws. Mills which have incurred losses have been bought by profitable corporations in order to use these losses to offset their own profits and therefore escape substantial Federal taxes. Already several companies boast of substantial tax savings through such acquisitions. Other companies have been acquired because of the desire to diversify operations. More and more mill organizations have undertaken to produce fabrics of diverse fibers. The shaky financial position of many woolen and worsted organizations made them attractive targets for such mergers. Other companies have undertaken to diversify their operations by acquiring factoring organizations so that their integration extends from the manufacture of yarn to weaving cloth, to finishing, to converting, to selling and financing of their sales. In some instances the companies actually produce and sell finished consumer articles. The diversification has extended beyond the acquisition of woolen plants as companies have purchased finishing operations or competitive units. Several mills with selling houses have bought organizations to broaden the range of goods sold by their selling houses. Other mills have been purchased to acquire the prestige of one or another label.

The influence of the giant corporations has also been extended as many of them are now selling not only for their own mills but also for independent manufacturing organizations. These giant organizations now dominate very large segments of the textile industry. Many cover the broadest range of goods, produce fabrics of many different fibers and perform all the services from yarn manufacture through product selling and financing of customers.

These large corporations are beginning to consolidate their controls. They are setting up their own internal organizations and systems. Their preoccupation with the financial aspects of their organizations has absorbed their leadership. One consequence of these consolidations has been the liquidation of many newly acquired plants in their determination to integrate their operations. Similarly their power to coerce and resist union organization has been heightened. They present a more formidable tower of strength with which to combat unionism. Individual textile workers, brought up to know their employers on a face-to-face basis, are now widely separated from the site of the corporation's economic and policy controls. Production schedules and price levels are centrally determined.

The textile industry is now dominated in the basic spinning and weaving and finishing industries by a group of 43 interests who provide employment to approximately 350,000 workers out of the 685,000 workers in the basic textile industry (spinning, weaving, and finishing). It can no longer be presented as an illustration of the traditional competitive industry. Despite its multiplicity of products and special markets, it is now pervaded by giant corporations and taking on the characteristics of other oligopolist industries.

The process of industrial contraction and merger has resulted in the liquidation of mills, the displacement of some 200,000 workers, and the stranding of many impor-

tant communities dependent upon the tex-tile industry. The needs of the people and the communities have seldom been consid-ered in these financial adventures. The tax

gains secured from the Federal Treasury have been pocketed by the financial engineers of these moves. The United States Treasury, the community, and the workers have lost,

Textile.
Acquisition in progress.
Plant sold to Sunbury Textiles.
Form of new organization undetermined.
Facilities leased.

Facilities leased.
 Working control purchased from Bankers Security Corp.
 Purchased from Burlington Mills Corp. through Windrim Corp.
 Plant operations will be reduced in scope.
 Merged into Chester Tricot Mills.
 Fieldcrest Mills, Inc., has 9 mills (producing cotton and wool textiles and hosiery) which employ a total of 3,740 employees.

Purchased from J. P. Stevens & Co., Inc

All yarn dyeing unit employing 15.

Purchased from Ziskind estate.

To form Berkshire Hathaway, Inc. Merger virtually completed.

Purchase virtually consummated.

Purchase through Johnstom Mills Co.

New merged company to be called L-O-F Glass Fibers Corp.; will be result of merger of Glass Fibers, Inc., and 2 fiberglas divisions of L-O-F. L-O-F to own 53 percent of the stock.

Name changed to Bonview Mills, Inc. Purchase from J & J Spinning Mill.

Aid-for-Asia Program Now Up for Decision-Big Question Is How Much Money Congress Will Allot Critical

> EXTENSION OF REMARKS OF

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, we have heard many conflicting statements on the question of how. and to what extent, we should continue our aid to underdeveloped countries of There have been many pronouncements, but I believe we are entitled to know a good many more basic facts about our aid program, about its financial and organizations requirements. I would like to draw the attention of the Congress to the article by Mr. Dana Adams Schmidt in the New York Times of March 6, which presents some of the information necessary to our study of this grave problem.

AID-FOR-ASIA PROGRAM NOW UP FOR DECISION-BIG QUESTION IS HOW MUCH MONEY CON-GRESS WILL ALLOT CRITICAL AREA

(By Dana Adams Schmidt)

WASHINGTON, March 5 .- The United States is moving into a period of intense economic competition with the Soviet Union and Communist China. And the most crucial com-petition is now developing in the area of free Asia stretching from Afghanistan and Pakistan to Korea and Japan. On this much, almost everyone is agreed, certainly in the administration, and probably in Congress.

But a pall of frustrating obscurity hangs over the future of United States foreign aid, for two reasons:

1. There is some doubt whether Congress

is in a mood to appropriate the money needed.

2. There is a great deal of doubt whether the administration will call for and Congress provide an organization adequate to the task, for the existing Foreign Operations Administration goes out of existence June 30, as directed by Congress.

This obscurity is particularly frustrating at this time because the Bangkok conference last week and the Afro-Asian meeting at Bandung, Indonesia, scheduled for April, are focusing the attention of the critical area on what the United States, the free world, and democracy are doing and intend to do for Asia.

The center of gravity of United States aid has shifted heavily from Europe to the Far East. Thus in fiscal 1952 Europe got 75 percent of all aid funds, military and economic. This fiscal year Europe's share was down to 25 percent and the Far East was assigned 55 percent. And now, in fiscal 1956, it is expertly estimated that some 75 percent of all aid funds (and about 60 percent of the nonmilitary funds) will go to the countries of Asia that lie in an enormous arc around Communist China from the Himalayas to the China Sea.

FIGURES TO COME

What this may mean in absolute figures for each of the countries involved will not be made public until the administration presents figures to Congress in April.

In the meantime, some authoritative estimates have become available of the programs for the fiscal year ending June 30. modifications dictated innumerable by changing needs, the program estimates look

Indochina	\$100,000,000
South Korea	280, 000, 000
Formosa	100, 000, 000
Japan	
Philippines	20,000,000
Thailand	36, 000, 000
Indonesia	7, 000, 000
India	85, 000, 000
Pakistan	70, 000, 000
Afghanistan	1, 600, 000

Total

799, 600, 000

Next year's programs or obligational authority requested from Congress will total about \$1 billion, as might be guessed from Secretary of the Treasur George M. Humphrey's statement in Chicago a week ago. He said actual expenditures in fiscal 1956 were budgeted at \$585 million. The meaningful figure in foreign-aid programs is the one for obligational authority.

Most of the quantitative difference between this year's and next year's programs will be accounted for by creation of a special fund, probably \$200 million, to be used for regional purposes in the arc of Asia in question. The fund would thus be outside of the individual-country programs, for projects transcending national borders.

Except in Japan, whose prosperity depends on that of all free Asia, the response of Asian countries to the whole idea of a special Asian-aid program has hitherto been slow, suspicious and altogether disappointing.

Existence of the fund, the FOA planners hope, may induce the Asians to take the initiative in forming some kind of regional organization.

HOPE FOR COOPERATION

The FOA has no illusions about conjuring up an Asian equivalent of the Organization for European Economic Cooperation. But it modestly ventures that the Colombo plan group, which includes nearly all the Asian countries concerned in the Asian-aid scheme, might see fit to establish a secretariat general of the Colombo plan.

The Colombo plan group was founded in 1950 for purposes of mutual aid. It now includes all the arc of Asia countries-Afghanistan, Formosa, and South Korea-as well as Britain, Australia, New Zealand, and Canada. It is an economic grouping, not to be confused with the Colombo powers Pakistan, India, Burma, Ceylon, and Indonesia-now organizing the Afro-Asian conference in Indonesia.

Some of Washington's best economists think a billion-dollar United States aid program could be adequate in fiscal 1956-if it is supplemented by more private capital, if some additional funds are obtained from Europe, if the share allocated to Korea and Formosa is not thrown out of all proportion by the burden on civilian economies of overlarge military establishments.

Congressional hearings indicate that many Members want to blast FOA to pieces, redistributing technical aid to the State Department, economic aid to Commerce, defense support and military equipment to the Pentagon, and distribution of surplus goods to the Department of Agriculture.

POLITICS AND STASSEN

These Members of Congress appear motivated by their dislike of "giveaway" programs and, sometimes, politically by dislike of the smooth-spoken FOA Director, Harold Stassen.

The astonishing fact is that no voice of any prominence has come to defend the integrity of the present FOA organization, which was formed after much study by the President's Reorganization Order No. 7 in August 1953.

Mr. Stassen, for fear that he will appear to be trying to keep himself in a job, has not yet pointed out in this context that unification of aid activities under one roof saved money and personnel; that, by again scattering this work around Washington, Congress may defeat its own ends; that administration of the program may be delayed 6 months by the proposed reorganization; that this may prevent the United States from repelling the Communist economic challenge.

The President must make up his mind about the aid program by the end of this month or early April at the latest. Then Congress will decide.

In the meantime, the American public has heard very little about the issues involved. The foreign-aid debate has gone on in private, mainly between Mr. Stassen and Mr. Humphrey. From these two men the public is entitled very soon to hear a great deal more about the financial and organizational requirements of foreign aid.

Citizen and Nation Need Security

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid article, Citizen and Nation Need Security, written by John Harris, and appearing in the Boston Sunday Globe of March 13, 1955:

CITIZEN AND NATION NEED SECURITY—NEW LOYALTY REGULATIONS GIVE ONLY LITTLE MORE ASSURANCE THAN THE OLD RULES—NEITHER WILL INTRADEPARTMENTAL CONFUSION BE PREVENTED

(By John Harris)

Washington, March 12.—Two psychiatrists recently told a group of fellow experts gathered in Chicago a tale as shocking as any that ever emerged from that city.

They spoke of intensified anxiety, panic, paranoid trends and incipient mental collapse among 30 of their patients in the Washington area who had come in contact with the Government's security program.

This could create an impression as exaggerated as it is distressful. Or it might be considered as just one of the hazards of government employment in an age made jittery by the very atomic weapons devised to protect its security.

However, we look upon it, and its import cannot be casually dismissed. It emphasizes aspects of our loyalty-security system—unspecified charges, faceless accusers—that are not of concern alone to our Federal workers. They are of undeniable importance to all who inherited a birthright of libertles with the declaration of this Nation's independence from alien tyranny. Who, if his loyalty and character were placed in doubt, would want to find himself stripped of any of his rights of self-defense?

DEFENSE OR DESTRUCTION

The chief dangers demanding thorough examination can be expressed most briefly in two questions:

The right to confront and cross-examine an accused is inalienable it is a natural, human right brutally suppressed by totalitarian powers. It has been vigorously upheld by President Eisenhower on his speech at Abilene. Is this right to become a casualty of the cold war?

Denouncing men on loosely drawn charges, dismissal without hearings or judgments by loyalty boards which themselves may not notice the identity of the accuser—must such star chamber proceedings return in the 20th century in the guise of a lifeguard of the Republic?

Fortunately, direct answers to these vital questions are now being sought in the Congress and before the Supreme Court.

An interested onlooker has to be certain just where to direct his attention. As so often in Washington, there is a bewildering number of related activities going on at the same time. The whirling dervish act of turnabout witnesses, indictment of recanters, disclosure that a Treasury security officer was himself a security risk. One committee is about ready to track down who promoted Peress, another committee is exploring the numbers game in which the administration has been charged with lumping together all sorts of security risks to obtain a bigger figure of dismissals than was reached under the old Truman loyalty program.

BASIC SHORTCOMINGS

The really basic shortcomings of the security system are currently under examination in the Peters case before the Supreme Court to which Attorney General Brownell has just addressed a 120-page brief, and at hearings which opened this past week before the Senate subcommittee headed by Senator Hubbert H. Humphrey, of Minnesota. Humphrey is seeking creation of a bipartisan blue-ribbon commission to review our Federal loyalty-security programs.

These, most rapidly since the time of the Hiss case, have developed helter-skelter while the major parties buslly produced a welter of confusion with their rival claims to be chief exposer of subversives.

The Attorney General has promulgated a new set of rules to meet some of the criticism directed at the security setup.

He has sought commendably to make its operation uniform among the various departments and equally fair and impartial to all Federal employees. The timing of this endeavor does seem to be a direct response to last December's embarrassing interdepartmental tragic comedy that saw Wolf Ladejinsky cleared by the State Department, rejected by the Agriculture Department, and hired by the Foreign Operations Administration.

CONFUSION AMONG DEPARTMENTS

Brownell's answer was a rule that Government agencies act "to avoid conflicting evaluations," a stricture which must be viewed in the light of executive orders that department heads clear their speeches to avoid confusion—and yet over the years these spokesmen have on occasion talked as though they represented different governments.

The new rules of the Attorney General, in general, have been criticized as little more than a rewording of protective rights pre-

sumably in existence since the start of the

loyalty-security program.

There is, indeed, little more assurance under the new rule that charges will be any more specifically delineated than under the old rule.

There is still to be no central, supervising, coordinating, ultimate appeal agency such as seems to be an objective of the Humphrey inquiry.

Critics stress that the Attorney General, in drafting these rules, did not touch upon the fundamental issue of an accused man's right to face his accuser and challenge his veracity.

HELP OR HAMPER FBI?

This criticism ignores the fact that Brownell expressed himself explicitly on that identical point in the brief he submitted in the Peters case almost immediately before making public his new rules. In this brief, the Attorney General contended, as have his predecessors, that it would endanger national security to disclose the identity of confidential informants.

Three years ago, in the Bailey case, the Supreme Court split 4 to 4 on this issue of accusers being required under due process to face the accused. The Peters case is an effort to resolve this question.

On the opening day of his public hearings, HUMPHREY declared he did not want to see the FBI hampered in its work through the public identification of "informants placed within the Communist Party by the FBI." Our national security must at all times be paramount.

The difficulty still confronting the Justice Department, which organized our security system, is to find a procedure that protects both the Nation and the full rights of individuals. The disgraceful performances of face-about witnesses underscores the necessity, as a minimum essential, that a genuine test of veracity be established in any absence of cross examination. There is urgency.

Our Republic's dedication to the rights of free men, the very keystone of our liberties, is our proudest stand before the admiring world.

The Economic Report

EXTENSION OF REMARKS

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, it is a surprising and rather wonderful thing when a congressional committee composed of both New Dealers and Old Dealers—liberals, conservatives, and ultra-conservatives—can get together unanimously on a report on the status of our economy and on the President's economic proposals.

Yet that is what happened this week when the Joint Committee on the Economic Report, composed of 7 Senators and 7 Representatives—with 4 Democrats and 3 Republicans in each group—made its annual report to Congress as required under the Employment Act of 1946, the Full Employment Act.

But before the editorialists begin to write rapturous pieces about the new atmosphere of economic unity on Capitol Hill, it might be useful to see just how we 14 committee members of such diverse personal views really managed to get together on a unanimous report on so explosive and controversial an area of national debate as economic policy.

We could agree, of course, on a wide number of fundamentals, such as allout defense against Communist expansion, maintenance of a strong free-enterprise system, the fact that we had a recession last year but want to have prosperity from now on, and so on. As a matter of fact, there are broad areas of agreement among Democrats and Republicans on a great number of things, including virtually all basic American principles, and I think we sometimes tend to underestimate this unity on the really big things while we pay much more attention to the political fights over details.

Nevertheless, in order to achieve the goal of a unanimous report, the joint committee had to narrow down quite a bit the scope of the report, and then start refining the language. Thus, alstart refining the language. though the Democrats were inclined to say things were not nearly good enough, the Republicans wanted to point out, instead, how much better they are than they were a year ago.

The result was compromise on both sides with such language as this:

Employment and production have gained about one-half of the ground lost, and unemployment has receded about onethird. Most indices in recent weeks have been up.

While this sort of compromise gave some substance to the idea that there is broad general agreement on many aspects of the economy, it was not satisfying to either group on the committee. So the result was that after our unanimous committee report, we then added a bunch of supplementary reports in which Democrats took a critical look at the present economy and of the President's economic proposals, while the Republicans took the opposite view-that things were pretty fine. And, of course, that was to be expected. For these divergent views are not just politics-they represent basic and fundamental differences of approach of the two political parties.

CAUTION

Throughout the report there is evidence that a good part of the present steam behind the economy comes from unusually high-volume, bunched-up automobile production. The question is asked: What happens if auto production begins to slacken later in the year, as it apparently will have to? What happens to steel, glass, rubber, and other related industries, and how do we take up the slack? In this connection, the approach taken by my public-works bill received broad support among members of the Joint Economic Committee, particularly on the Democratic side. But even the Republican members saw a need for more public-works activity, particularly in the distressed areas.

CONTRAST

While both Democrats and Republicans on the Joint Economic Committee of the Congress were agreeing in principle that the Government must be prepared to take a strong hand in meeting any basic economic dislocation before it causes deep distress to the whole country, the reactivated Hoover Commission, heavily loaded with ultraconservatives. came out with a report urging elimination of many of the Government's best weapons in the economic arsenal against depression. It wants to get Government out of business so much and so badly that, if we were to follow the Hoover approach, I am afraid we would end up all over again, as we did once before under his direction, having no business

Tariffs and Textiles

EXTENSION OF REMARKS OF

HON. HENDERSON L. LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including a letter published in the Christian Science Monitor for March 15, by Ernest H. Gaunt, of Orlando, Fla., entitled "Tariffs and Textiles "

This letter very lucidly and forcefully sets forth the true facts with reference to what has happened in our so-called reciprocal trade agreements program.

It is truly a most telling argument in favor of the position friends of the American textile industry took on the floor of the House recently when H. R. 1 was being considered.

Our position has been grossly misconstrued and exaggerated. We insisted first of all that if we were to have reciprocal trade agreements they really be "two-way streets" with the tariff barriers of other countries lowered in exchange for the lowering of our own tariff rates. As Mr. Gaunt forcefully points out, this has not been true of such reciprocal trade agreements in the past.

In the next place, the friends of the textile and other industries threatened with extinction or severe crippling by the further lowering of our tariffs indicated should have more adequate protection against competition from the importation of products made by low paid wage earners in other countries. other words, we were trying not to block the passage of H. R. 1, or to oppose the principle of expanded foreign trade. We were trying simply to strengthen and make really effective the escape clause and peril point provisions now in the act but really almost wholly ineffective.

The letter follows:

TARIFFS AND TEXTILES

To the Christian Science Monitor:

One should not lightly undertake to cross pens with George Ericson. However, it appears to me that in his column of January 29 there are flaws in his definitions and assumptions, important enough to negate his reasoning on behalf of still lower tariffs than we now have.

Free competitive enterprise in American tradition and practice means antimonopoly and fair competition. Unless that American concept is effectively introduced into world trade and sincerely accepted, there cannot be free and fair competitive enterprise in imports and exports.

The United States is the only great manufacturing country that has laws against monopoly, cartels, and unfair competition. All others either permit or encourage domestic and exporting cartels; and many subsidize exports with State funds, guaranteeing a profit to their manufacturers. This is neither free nor fair international compe-

Tariffs are not the only barriers to international trade, but quotas and currency restrictions may limit it more than our tariffs. Our import barriers are as nothing compared with the barriers to trade employed by Britain; and compared with the import barriers of all the countries that have currency and exchange control. American tariffs average about 5 percent of the value of all our imports; and on the same basis British tariffs average more than 25 percent.

Foreign inconvertible currencies are implements of world trade manipulation; and in most countries outside of North America, exchange rates are not related to economic value or actual purchasing power, but instead they bob up and down unpredictably according to the whims of their respective governments. And our tariffs are based on these often rigged foreign values, not on American values as they should be.

Outside of North America at the end of 1953, there appeared to be no country whose tariffs or trade restrictions against American goods generally were not more severe than years earlier. American cotton goods today are virtually excluded from the domesmarkets of the foreign textile manufacturing countries.

"Gradual" reductions of the tariff beyond the major reductions of the 1930's and 1940's are not logical when the present level of tariffs is already permitting a heavy and ungradual inflow of goods from low-wage, subsidized exporting countries.

India's average hourly wage of its 700,000 cotton and jute workers is 91/2 cents; Japan's 131/2; American southern cotton-rayon mills \$1.30; New England cotton mills \$1.41. Worsted mill average hourly wages in New England, New Jersey, and Pennsylvania are about \$1.50.

"Benefits the consumer" is the classic argument made for years by free-trade and low-tariff proponents. But this contention completely overlooks the long-range damages to consumers when a foreign monopoly of our market is obtained—as happened in world wars in silk and rubber.

Thoughtful American consumers can understand that if the vital textile industry, normally employing so many thousands at good wages, is sacrificed now when there is no fighting war, there would not, in time of great wars, be anywhere near enough producing capacity to give our fighting men or our civilian consumers the necessary continuity of supply, or fair prices, or sufficient volume.

Textile manufacturing requires highly skilled labor, a higher proportion of total cost of finished unit than automobiles, and cannot be used in a moving belt technique.

Prudent consumers with a long-range in-terest do not want foreign "bargains" based on foreign low wages and unfair competitive actions, Nor will our American consumers, if they are given a chance to know the facts. want American jobs exported to foreign countries-the foreign factories running full or overtime, at a profit, while our same lines of manufacturing are gradually destroyed. This has happened in 1953 and 1954.

As to helping Japan or other unfortunate or backward countries to keep out of the Communist orbit-there are better ways to strengthen them than by seriously weakening our home industries.

ERNEST H. GAUNT.

ORLANDO, FLA.

Congressional Salary Increases

EXTENSION OF REMARKS

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. MATTHEWS. Mr. Speaker, one of my constituents, Dr. Ernest R. Bartley, associate professor of political science, University of Florida, Gainesville, is at the present time on leave from his duties at the University of Florida and is doing some research here in the Nation's Capital. I have read two of Dr. Bartley's textbooks on American National Government, and I consider him an eminent authority in that field. I have been closely associated with Dr. Bartley during the past several weeks, as his research takes him into the everyday work of a Congressman, and I believe he already has a knowledge of the problems of Congressmen that is second to no man in the country.

I was particularly grateful to receive an unsolicited letter from Dr. Bartley concerning the matter of the pay raises for members of the Federal judiciary and of the Congress of the United States. I have asked Dr. Bartley for permission to include this good letter in the Congressional Record, and he has granted me that permission. I take great pleasure in presenting this very thought-provoking letter of Dr. Bartley:

ROCKVILLE, MD., March 9, 1955. Hon. D. R. Matthews,

House Office Building,

support of this measure.

Washington, D. C.

DEAR BILLY: Necessary upward revisions of the pay scales for members of the Federal judiclary and of the Congress of the United States have now been made. I should like to take this opportunity of stating how much I admired your courageous stand in

As you know, my profession is that of college teacher of political science, with particular reference to American National Government and American constitutional and administrative law. I am coauthor of 2 college-level textbooks in American National Government, both of which have received fairly wide acceptance by my professional colleagues. I am the author, too, of books, monographs, and articles in the field of public law. While I speak only for myself, and certainly not for the institution from which I am presently on leave, it has long been my opinion as a student of American Government that one measure necessary to the maintenance of a high order of judicial and congressional operations was the adoption of a pay scale somewhate commensurate with the important obligations assumed by the members of these two branches.

There should be little quarrel with the pay raise for Federal judges, for the National Government was in the ridiculous position of paying to its judges lesser salaries than those received by the State court judges of a number of States. Some Federal district court judges had resigned in recent years because they were no longer able to meet their personal needs from their salaries. And it should be remembered that Federal judges cannot engage in lucrative outside activities.

There has always been an understandable reluctance on the part of Congress toward raising its own salaries. For that reason congressional compensation has never, at

any period of our national history, correctly reflected the responsibility imposed on the Members of the United States Senate and House of Representatives. Congress has been reluctant to vote to its Members even the necessary amounts to run their offices effectively, with the net result that individual Members have had to secure from other sources, in many cases, the wherewithal to operate.

Some Members engaged in outside business activities, activities which interfered on more than one occasion with their congressional duties. They retained law practices, farms, or businesses, and actively participated in the management and functions of those enterprises. Some of the more adept speakers made the rounds of the lecture circuits. supplementing their income from this source. Some fortunate Members were and are independently wealthy, their congressional compensation amounting almost to peanuts. Some Members made up annual deficits from savings, borrowed money, or placed relatives on the office payrolls. And some, a very few to the great credit of Congress, made up their losses in salary from sources which, if not strictly illegal, hardly could be considered moral,

The reluctance to raise salary arose from the understandable desire of most Members to be reelected. History shows that the numbers of Members failing of reelection after each pay raise has been somewhat higher than the normal attrition rate. While it would be difficult to say categorically that the pay raise issue alone contributed to the defeat of any given Member, there can be no doubt that the question was a contributing factor in many instances. This has been particularly true where the defeated solon represented a primarily rural district. Even the great Henry Clay was reelected by the narrowest margin of his long career following a congressional pay raise. So great were the repercussions following the congressional pay raise in 1873 from \$5,000 to \$7,500, that in 1874 the act was repealed and the salary went back to \$5,000.

It may be of interest to note, however, that the electorate has not differentiated, in deciding the issue at the polls, between those who favored and those who voted against such an increase. Any Member of Congress who has voted against a pay raise has found that his acceptance of the increase has been sufficient to place him among the group for whom some voters at least have asked political retribution.

The duties of a Member of Congress in this complex age are far more exacting and timeconsuming than they were in less hurried days years ago. Members of the present Conwho have served for long periods of time have spoken on many occasions of the greatly increased periods of residence necessary in Washington nowadays as compared with much lesser periods even as little as 25 years ago. Being a Congressman today is a full-time job. Where congressional sessions in the very early days of the Republic lasted but 2 or 3 months, sessions now drag, in most instances, from January into August. And the period after August till the first of the year must be spent with the Member's constituents. No longer is much time available for handling outside businesses unless that time is taken (one might say stolen) from congressional responsibilities. The cold, hard fact of the matter was that, prior to the 1955 pay-raise action, the people were paying parttime salaries and expecting Congressmen to discharge full-time responsibilities.

The \$15,000-a-year compensation (\$12,500 plus a \$2,500 taxable expense account) in effect on January 1, 1955, could not begin to meet even the personal needs of most Members of Congress. The maintenance of two homes was necessary in most cases. Congressmen with children were faced with the necessity of bringing those children with

them and enrolling them in school in September, or else not having their families with them in Washington. Necessary trips back to one's district became a financial drain, especially for those Members representing areas geographically distant from Washington. Most voters did not and do not understand that a Congressman is reimbursed for but one round trip to his home State during each session, regular and special, of the Congress.

Contrary to popular belief, the average Member of Congress is not engaged in riotous and profligate living. Rents are high in the District of Columbia and surrounding area. A \$250 per month furnished apartment is not, as some might think, a lavish establishment. Further, there are many expenses of a social nature which are not incurred by persons in the ordinary course of living. I have observed, for example, the spectacle of persons visiting Washington practically demanding that their Congressman take them to lunch or dinner-and that he pick up the check. (Many of the persons are frequently more wealthy than the Congressman.) A number of Members of Congress have told me that they average \$10-15 per week buying lunches for other persons. The instance is small but illustrative of the special type of financial demands made on our Members of Congress.

Office expense, too, is a drain in many cases. Some of the independently wealthy Members have set up extra offices and hired personnel out of their own pockets. The purpose of "the additional help is not altogether, as cynics might allege, to insure the reelection of the Member involved. Rather, so I have observed, the out-of-pocket expenditures have resulted in better service to the constituents concerned. Not so fortunate are the Member of Congress and his constituents where that Member is not independently wealthy. There is little excuse for inadequate compensation where the essential work of Congress is concerned. Such niggardliness is nothing but the falsest sort of

The fact of the matter is, of course, that the pay raise voted at this session of Congress still does no more than bring the present Member up to slightly less than the buying power of compensation that existed in 1939 when the salary was but \$10,000 a year. Such a statement may sound unbelievable, yet with the decline in purchasing power of the dollar and the increase in Federal income taxation, such is the case. It may well be argued that the 1955 judicial congressional pay raise legislation still does not provide anywhere near adequate compensation.

It is a fact, also, that persons of comparable ability and in positions of trust in private industry with no greater responsibility (or less responsibility) receive far greater compensation than even that set in the present act. The majority of Members of Congress could earn far greater sums in private undertakings than they ever will as Members of Congress.

It is no argument to say that Members of the present Congress were elected knowing what the compensation was and that therefore they had a sort of unwritten "contract" not to change the rate. Such an argument applied down through the years would mean that present Congressmen would be receiving but the \$6 per day of the Members of the First Congress. Nor is it any argument to say that persons entering political life must expect low or inadequate compensation. Such an argument dooms the Nation to government by those persons of wealth who can afford to enter Government service; such an argument is antithetical to all the basic principles of American democracy which we have so long loved and cherished.

Some opposition to the congressional pay raise has been voiced on the ground that the percentage involved, 50 percent, is too great. These arguments are advanced even in the face of the fact that the level is still but a 1939 level in buying power. The theory is that the congressional raise in salaries will set off a chain reaction which will result in exorbitant demands by civilian Government employees and members of the military for salary increases. Some persons even argue that the congressional hike will result in demand for raises in private industry.

Sober reflection forces a number of conclusions on this argument. In the first place, salaries of Federal employees have been hiked on five different occasions since 1945. 1945 the pay increase was an average 15.9 percent; in 1946 it was 14.2 percent; in 1948, 11 percent; in 1949, 4.1 percent; and in 1951, roughly 10 percent. These increases total roughly 51 or 52 percent. Further, a pay hike for Government employees will undoubtedly pass at this session of Congress-and would have passed even without the congressional pay raise. A pay hike for the military, too, will undoubtedly come out of the present

There is another, and in many ways more serious, aspect to this argument against the congressional pay raise. So long as the salaries of the Congress remained at the \$15,000 level, there was a reluctance to effect the necessary salary increase in the higher ranks of the executive branch of the Government. Serious losses of high caliber men have been occurring with frightening regularity in the past few years. Private industry has been hiring upper bracket Government employees at salaries far in excess of those paid by Government. And if the congressional pay raise means that an increase for the higher echelons of the executive branch can be obtained. then the congressional hike will have saved many valuable men to the Federal service-

at a total negligible cost.

I recognize that money alone is not sufficient inducement to cause a high class individual to enter Government service, either as an elective or executive official, or to influence him to remain there. Government salaries in the higher brackets can never be great enough to compete with private industry on a pure money basis. For Government employees and Congressmen there must be, and is in the majority of cases as I can testify from personal observation, a genuine desire to serve ones fellow man. This sense of dedication is not altogether unlike that felt by educators, clerics, doctors, and others. Cynics may sneer but such is the case. there is no reason why salaries in the upper echelons of Government service and Members of Congress cannot reflect something of the responsibility involved.

The cost of the congressional pay hike itself is very negligible indeed. In your district, Billy, the cost to the voters of your increase in salary is approximately 1% cents per capita. Further, the overall cost of the judicial-congressional pay raise bill is only approximately \$4,500,000 per year—about one one-hundreth of 1 percent of the total

Federal budget.

I am one of those political conservatives who is very much in favor of balancing the Pederal budget. Deficit financing has always been anathema to me. I opposed the taxreduction bill passed over President Truman's veto by the 80th Congress. I opposed the tax reduction voted by the 83d Congress, and I oppose tax reduction in any form by the 84th Congress until such time as the budget is in balance. I do not believe, however, that the fact that the budget is in a state of imbalance argues against the judicial-congressional pay raise legislation. If the Federal budget is carefully examined, an action which the majority of the electorate fail to take, it will be found that salaries, contrary to popular belief, do not constitute

the majority of expenditures by Government. Real cuts in the Federal budget can be effected only by slashing programs-national defense, dams and river development, veterans aid, highway programs, welfare, It is poor economy in this day of specialization to economize on salaries; good men in all three branches of the Government save the costs of their increased salaries in increased efficiency of operation. The argument holds true as much for Congress as it does for the other two branches. It is high time that the Members of Congress understand somewhat the value of their own services; and it may be hoped that the electorate will also grow more willing, in time, to understand the value of an independent and highminded Congressman representing them in the District of Columbia.

Congress did not enter lightly upon the course it has just taken. In the 83d Congress, the President's Commission on Judicial and Congressional Salaries was established by Public Law 220. Composed of 18 voting members (6 designated by the President, 6 by the Chief Justice, and 3 each by the President of the Senate and the Speaker of the House of Representatives) the Commission represented the best available thought and reputation of business, agriculture, labor, and the professions. The Commission was an able, intelligent, diligent, and conscientious group; it held public hearings, took testimony, did extensive research, and generally exhausted every angle in order to assure that final recommendations were based on the soundest possible factual infor-mation. Interestingly enough, in no case does the judicial-congressional pay raise legislation just passed carry out the exact recommendation for salary increase made by this nonpartisan Commission. For example, the Commission recommended that Congressmen be paid \$27,500; the present legislation is \$5,000 short of this recommendation. Somewhat similar differences can be noted in all the other positions affected by the legislation.

I am certain that each Member of Congress searched his soul carefully before casting his vote on the issue. There were a few, a very few, who may have voted from the standpoint of immediate personal advantage. The majority, I am certain, voted as they did because of a firm belief that their vote was in the best interests of the Nation. member of your district, as your personal friend, I admire your forthrightness on the issue and the stand that you took. You could not, it seems to me, have voted in good conscience against the pay raise and then have taken advantage of the increased amount. But of more importance is the fact that you had the courage to recognize that the low level of congressional salaries constituted a substantial barrier to efficient and ethical congressional activity.

With best personal regards, I am Yours sincerely, ERNEST R. BARTLEY.

Big Fuss Over Small Business

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article by Drew Pearson which appeared in his column, Washington Merry-Go-Round in the Washington Post and Times Herald of March 16. 1955:

THE WASHINGTON MERRY-GO-ROUND-BIG FUSS OVER SMALL BUSINESS

(By Drew Pearson)

Democrats took a long step toward throw-ing away two of their chief campaign issues-giveaways, and helping small busiwhen a top Democrat, Congressman CARL VINSON, of Georgia, bucked and bristled over giving a hearing to the Small Business Committee regarding the sale of 11 Government-owned synthetic rubber factories.

VINSON was all set to join with the Republicans in handing the synthetic-rubber factories over to the big tire and oil companies when his fellow Democrat, WRIGHT PATMAN, of Texas, blew the whistle.

PATMAN, as chairman of the House Small Business Committee, had prepared a resolution with his colleague, SID YATES, of Illinois, pointing to the unfairness of the syntheticrubber giveaway. But Chairman Vinson of the Armed Services Committee didn't want to listen. He even challenged PATMAN's veracity, which to a Texan of integrity is tantamount to high treason.

"Mr. PATMAN, we are delighted to have you here this morning," the Georgian gushed

as the hearings opened.

"Thank you, Mr. Chairman," replied PAT-MAN, "I shall make—
"Wait a minute," cut in Vinson, "Before

you start, for the record, I want to find outare you speaking in behalf of the Small Business Committee, and by direction of that committee, or are you speaking in your individual capacity as a Member of Congress?"

"My committee has had no time to call a meeting," replied PATMAN. "But I was assured by a majority of members of my committee that I could speak for them. addition, I conferred with the ranking Republican member of my committee.'

INSULTING A TEXAN

"I suggest that the names of the members who have authorized Mr. Parman to speak for them be inserted in the record," broke in Republican Congressman Bates of Massachusetts.

"Don't you think that is going very far,

Mr. Chairman?" inquired Parman, angrily.
The meeting almost blew up at this point as several members, including Democrats Paul Kilday and Mel Price of Illinois, tried to be recognized by the chair.

"We will get along very well if everybody will be quiet," thundered Vinson.

"Do I understand that you are going to question the right of Mr. PATMAN to appear before this committee?" demanded KILDAY.

"No, sir," sputtered VINSON. "Not at all. That wasn't even intimated by any question of mine"

"I am not too sure that it wasn't," re-joined Kilday of Texas. "What was the purpose of your question about his appearing for a majority of the Small Business Committee"?

"I just wanted the record to show that he is not appearing by direction of the committee, but rather in behalf of a majority of the committee," explained Vinson.

"Are you going to require him to corroborate himself by placing in the record the names of Small Business Committee members he is speaking for?" insisted Kilday.
"No," back-tracked Vinson.

GAS STATION MONOPOLIES

PATMAN then explained how his resolution, prepared by the Small Business Committee, would stop the sale of the rubber factories on March 26 as now scheduled by President Eisenhower. Supporting him, Congressman YATES presented a masterful report which impressed even hostile committee members.

YATES showed that under the Eisenhower rubber sale 87½ percent of all rubber production would be in the hands of the big

four tire companies, who worked together to control the sale of tires.

Shell Oll, for instance, which takes over the Government rubber factory in Los Angeles, has a contract with Goodyear and Firestone to sell them rubber; then Goodyear and Firestone turn around and sell Shell tires. These tires are distributed to the public through Shell gasoline stations.

And Congressman YATES showed how any Shell dealer who tries to stock any other tire competing with Goodyear or Firestone

loses his Shell franchise.

The Standard Oil companies also have a deal with United States Rubber to make Atlas tires, sold exclusively through Standard Oil filling stations. No other tire can be sold by Standard Oil stations except Atlas.

Thus, the Eisenhower rubber sale plan, Congressman Yates said, would tighten this monopoly by putting all the Government rubber factories in the hands of Shell, Goodyear, United States Rubber, Goodrich, Firestone, Phillips Petroleum, Texas Oil, Sears Roebuck, Anaconda Copper, Endicott Johnson, and Dunlop Tires, of England.

CREDIT FOR ARGENTINA

PATMAN suggested that the House Armed Services Committee and the Senate Banking Committee get together and negotiate for the disposal of the synthetic plants—"so the little fellow won't be crowded out."

"It takes a pretty good-sized corporation to run one of these plants," interjected VINSON. "As I visualize it, it is not in the sphere of small business. This is big business."

When Parman explained that small business had no way of getting bank credit to buy the synthetic plants, without some help from the Government, Vinson yawned: "Oh, well."

"We find an agency of this Government (Export-Import Bank) with \$1 billion of capital stock, provided by the taxpayers," continued PATMAN, "that is making a loan for a steel mill in Argentina of \$60 million, plus other advances for equipment that will bring the taxpayers' outlay up to close to \$100 million for that 1 plant in Argentina.

"If we are able to spend so much money to help other countries like Argentina build a steel mill, why shouldn't we be able to help our own small business to buy some of these synthetic-rubber plants in order to have a competitive rubber market in the United States?"

Georgia's Vinson came back with the stock query: "Why, then, shouldn't we do that in

every other enterprise?"

"The difference is," replied Patman, "that in this case you are delivering lock, stock, and barrel to the rubber industry, facilities that will be used against the taxpayers as a monopoly."

Marguerite Kozen, Julius Chajes— Goodwill Ambassadors

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. DIGGS. Mr. Speaker, the 13th Congressional District of Michigan is proud of the singular achievements made by so many of its citizens. Mr. and Mrs. Julius Chajes, of 610 Blaine Street, Detroit, Mich., are two such persons who have added particular luster to the district through their accomplishments. Through the use of their talents, the

Chajes have performed an outstanding service of goodwill for their adopted country, the United States of America—Mrs. Chajes, as an established operatic soprano, who sings under the name of Marguerite Kozen; Mr, Chajes, as a composer and concert planist.

Our Nation is justly proud of such of its citizenry who, without the honor of presidential appointment, voluntarily serve as ambassadors of goodwill, establishing and solidifying vital friendships with neighbor countries. In appreciation of these services, I ask the permission of Congress to spread upon the Record a résumé of the accomplishments of the Chajes that it may serve to inspire all Americans to use the talents they have in goodwill service to our country.

Each year, Mr. and Mrs. Chajes, who were born in Europe but came to America to flee nazism, make regular trips through Central Europe and Israel for personal appearances and radio broadcasts. It is my understanding that on such trips, they also make contributions to printed publications as a means of expressing their support of our Government's efforts to convey information and to express its goodwill to those areas which, for political reasons, have been blocked off from our part of the world.

Mrs. Chajes made her American debut as soloist with the New York Philharmonic in Carnegie Hall. She has sung leading roles with opera companies in the United States and abroad. During the past 7 years, she has been on 8 consecutive concert tours in London, Paris, Lausanne, Vienna, Salzburg, Rome, and Jerusalem. With her husband, she has been presented in more than 300 concerts in the United States, coast to coast, and Canada.

Julius Chajes, while best known to the world as a composer and concert pianist, is known also in the city of Detroit as a conductor and teacher. Hailed as a "wonder child," he made his debut at the age of 9 in a piano concert in Lemberg, Poland. His first string quartet was played in Vienna, when, as a 12-year-old, he appeared as composer and pianist. A student under several famous teachers, including Moritz Rosenthal, once a pupil of Liszt, Mr. Chajes also studied conducting and composition in Austria.

From 1934 to 1936, Chajes headed the piano department of the Music College of Tel Aviv, Palestine. In this country, he became a teacher of composition at the New York College of Music. In 1937, he played the premier of his second piano concerto first with the Vienna Symphony, and the following season, as soloist with the Detroit Symphony Orchestra.

On a recent trip to New York, Mr. Chajes learned that his 142d Psalm has gone into its sixth printing—said to be an almost unprecedented achievement in choral work. The setting of the psalm has been recommended by David Williams, noted organist and choral director, to a conference of 300 Protestant choir directors as one of the most significant contributions of modern times to liturgical music.

The Robert Shaw Chorale and Fred Waring singers have made extensive use of Chajes choral works in concert and on television.

In Detroit, Mr. Chajes has been director of music at the Jewish Community Center since 1940. He was cofounder and artistic director of the Detroit Friends of Opera, Inc. He is also music cochairman of the Detroit Round Table of Catholics, Protestants, and Jews.

We salute in gratitude Mr. and Mrs. Chajes and the many other American citizens who are using their talents to perform a vital service for their fellowmen as well as to give pleasure to them.

True Economy?

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. DORN of South Carolina. Mr. Speaker, an editorial in this week's edition of the Army-Navy-Air Force Register illustrates the frustration which the editor of that publication has had in attempting to learn from the Secretary of Defense the relative cost and capability of land-based and carrier-based aircraft in the performance of strategic bombing missions.

What every unbiased person wants to know, what every citizen has a right to know is, "Have the Joint Chiefs of Staff or the Weapons Systems Evaluation Group made a comparative or relative evaluation of the apparent capability of land-based aircraft and carrier task forces to carry out strategic bombing missions? If either can carry out such missions, why do we need both? And is it economical to have both, rather than the one system that can carry out the mision most effectively?" To date Secretary Wilson has ignored these and similar questions.

I worked long and hard for the Unification Act which passed this Congress in 1947. My only purpose in working for the passage of that bill was in the interest of the security of the United States at the least possible cost to the already overburdened taxpayer. Those of us on the Expenditures Committee at that time listened for days and weeks to the testimony of the best military minds in the world including General Eisenhower who testified for the bill.

We were striving to eliminate duplication, waste, and extravagance by bringing our services closer together. I think Congress today should determine whether or not the Unification Act is functioning as it should. We should find out if there is any duplication of strategic bombing assignments within the Defense Department. It was my understanding that the first supercarrier was for testing and evaluation purposes. Before we embark on an expanded carrier program I think we should have the

results of this experiment in the first

Mr. Speaker, I ask unanimous consent of my colleagues to extend my remarks and insert the editorial called "True Economy?" from the Army-Navy-Air Force Register in today's issue of the Congressional Record. I would point out to my colleagues and emphasize to the printer that the title includes a question mark. Are we getting economy, as a result of unification, or are we building up three services, with no consideration at all for duplication, overlapping, and waste? The editorial, with questions as yet unanswered, follows:

TRUE ECONOMY?

Elsewhere in this issue, the Register prints two letters—one addressed to Secretary of Defense Charles E. Wilson by the editor of the Register on November 30, 1954; the other, a reply, dated February 9, 1955, and signed by D. Walter Swan, Deputy Assistant Secretary of Defense for Public Information.

It is, perhaps, significant that an inquiry concerning matters of basic policy and true economy in the military establishment was referred to a public relations assistant to answer—perhaps not. It might be significant, also, that the somewhat lengthy reply signed by Mr. Swan discusses at length what he assumed, erroneously, to be the premise of our letter, and then proceeds to a pep talk about defense programs which carefully avoids answering the questions asked. (At his news conference this week, Secretary Wilson, asked about Joint Chiefs' approval of the supercarrier, also used this technique of answering a question which had not been asked.)

On the score of Mr. Swan's apparent assumption concerning our premise, let it be said merely that responsible public officials can be "forced" to adopt a program by other means than arbitrary flat—they not only can be, they usually are.

All of the factors cited by Mr. Swan as bearing on the maintenance of a military establishment of any given type and size are so obvious that they can be assumed to be factors considered by the responsible officials—as they were, in fact, assumed by us to be. But this by no means answers our question as to whether or not "consideration has been given to any factors other than the application of monetary limitations, to the present structure and assigned missions of the forces."

Nor does the balance of Mr. Swan's letter answer the more specific questions any more satisfactorily. Since he failed to answer them, we will: In every case in which we asked specifically whether the Weapons Systems Evaluation Group has made a comparative or relative evaluation, the answer is a flat, "No."

WSEG has not examined weapons systems, existing or planned in the separate services, in which there is apparent overlap of function or of capability. WSEG has not made a comparative analysis of the cost or effectiveness of Army as against Air Force control of Army-type aviation. WSEG has not done an evaluation of land-based as against carrier-based long-range strategic bombardment systems. WSEG has not conducted any study to determine whether, in the light of current and expected aircraft developments, the old separation of Strategic and Tactical missions within the Air Force still makes sense. And so forth, and so forth.

The Register does not pretend to know the answers to these questions. It does assert, with complete confidence, that the answers are equally unknown to Secretary Wilson, his Deputy Secretary, and all his Assistant Secretaries. We concur heartly with Mr. Swan when he congratulates the country on

having both strategic air forces and carrier task forces. But we didn't ask Mr. Wilson about "carrier task forces"—we asked him specifically about the relative cost and capability of land-based and carrier-based aircraft in the performance of those air missions which, in military parlance, are termed "strategic"; and we asked him, specifically, whether WSEG or any other Defense Department (not Navy or Air Force) agency had tried to find out whether, as regards the carrier task force, "the addition to it of strategic bombardment capabilities increases its size and cost beyond those which would be required for naval forces not concerned with strategic bombardment."

The answer, of course, is "No"—neither WSEG nor any other group has made such an evaluation above the single-service level.

In our issue of February 5, we printed an account of significant changes now in process to give the Weapons Systems Evaluation Group the scope that the late Secretary of Defense James Forrestal intended it to have when he set it up 6 years ago. That account contained many of the answers which did not get into the letter signed by Mr. Swan.

With the House Armed Services Committee endorsing the Navy's request for a fifth Forrestal-class carrier, and other Members of the House questioning its wisdom, it might be wise for Mr. Swan and his superiors in the Pentagon to take another look at our letter of last November and realize that what we raised in that letter was no mere problem in public relations. We asked serious questions about matters of grave public policy, and they are not answered by a polite brush-off from a Deputy Assistant Secretary of Defense.

Secretary of Defense.

Mr. Swan says that "missions and requirements stem from national policy decisions and broad basic guidelines for planning."

Precisely. Our point is that, so far, these "broad basic guidelines" seem to be laid more up from the services to the Defense Department, than down from the Secretary of Defense on the basis of the independent evaluation, for him, of service projects and programs.

There may be no duplication, therefore, no waste, therefore no opportunity for true economy on the apparent overlap of Strategic Air Command and the employment intended for the supercarriers of the Forrestal class. There may be no duplication or overlap in the missiles systems being developed and even standardized by the three services, and so no opportunity for true economy

Our point is not that we don't know the answers but that the Secretary of Defense and the Joint Chiefs of Staff don't know the answers, because no qualified agency has yet conducted a scientific and objective evaluation of these and other equally important "weapons systems."

Until the Secretary knows the answers, he cannot be certain that his is a program of true economy.

Scholars Fear United States Will Return Nazi Archives Before Full Study

EXTENSION OF REMARKS

HON, ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following news story by the Washington correspondent of the New York Times which

appeared in that newspaper on March 7. I am, frankly, very much concerned with the subject with which that story deals. It seems to me that, if what it reports is accurate, it will mean that the United States will give up an invaluable resource in our knowledge of totalitarian conquest. If so, our present efforts to combat another version of totalitarianism, that of international communism, will be seriously handicapped and our intentions thwarted.

March 16

The German archives contain, no doubt, material that can shed a powerful light on the goals, methods, and processes of the Nazi conquest of one country. Germany: material about the unutterable plans for the destruction of what they called inferior people, first in their own land and then in neighboring countries. It, no doubt, sheds light on their Machiavellian propaganda techniques, including those by which they contemplated the division of our own country and the weakening of our material and moral strength to resist totalitarianism. Such material is of incalculable historical importance. It must not be jeopardized or lost to us by its casual return to a country where its nationalist forces may be disposed to destroy the full record or to conceal it forever from the scrutiny of the civilized world.

This record must be kept and, in due course, be made available to American scholarship as the all-important source material by which we can learn from the dread recent past and be strengthened by that knowledge to deal with problems that we may well have to meet in the imminent or far future.

Mr. Speaker, I believe this subject is one that ought to be of great concern to all of us. I for one mean to explore it fully so that no step will be taken that will prevent American scholars and historians, the American universities, and the American people as a whole from having access to data that is so important for our understanding of recent world events, and so essential for our own strength in any trials that may lie ahead.

The article follows:

SCHOLARS FEAR UNITED STATES WILL RETURN NAZI ARCHIVES BEFORE FULL STUDY

(By Anthony Leviero)

WASHINGTON, March 6.—The return of a rich store of captured German archives will soon become the subject of negotiation with West Germany.

Talks with Britain about the return of documents are fairly well advanced. Only casual preliminary talks have been held with German representatives.

The State Department is inclined to be liberal in returning to Bonn the documents of many departments of the Weimar Republic and the Hitler regime. Scholars and some officials are concerned, however, that they may be handed back before they have been fully exploited for intelligence purposes.

The archives are neatly stored in a former naval torpedo factory near here. On the steel cabinets, rising almost ceiling high, are labels that bracket the rise and fall of the Nazi empire: "Haushofer Collection—H. C. 945 through H. C. 955."

Karl Haushofer was a German geopolitician whose theories set Hitler's brain afrewith a dream of Lebensraum and world conquest. Many acts of Nazi policy, including the attack on the Soviet Union, have been

traced to Haushofer's concept that Germany, occupying the central position of the European-Asian "world island," was destined for expansion.

Haushofer committed suicide March 13, 1946. A great stack of material from his library is on file.

Near by is the label: "Hitler's Minutes— Mussolini File—Fragments 1 through 53."

From another section of the Hitler minutes a German-speaking United States Army sergeant picks at random some charred shorthand notes salvaged from the ruins of Hitler's bunker. After the war the Army had searched out the shorthand secretaries. From their transcriptions the sergeant read: "Conference of Hitler with General-oberst Zeitzler 29 December 1943."

On this occasion the topic was "capabilities of German railroads in case of retreat, especially of the Eastern Front." The Russians had begun their counter-offenses and the Germans were beginning to yield.

Later Gen. Kurt Zeitzler was to fall from his high position as Chief of the Army General Staff. He was imprisoned as chief organizer of the unsuccessful plot to kill Hitler.

Documents in the captured records section of the Government's departmental records branch in the old torpedo factory fill file cabinets that have a total length of 26,000 feet. The concrete structure is closely guarded.

The Government has files totaling 7,000 feet filled with captured Japanese documents, but by some quirk of administration they are under the National Archives rather than the Army.

Of the vast mine of material here, 22,500 feet of files are German, under the categories of "Military and Occupation," "Ministries," "Economic" and "Nazi Party." Part of this German hoard will be at stake in the peace settlements.

There are 500 feet of Italian records, about 2,000 feet of Soviet, and 1,000 of Korean. One of the most vital segments of these German records are the 2,000 feet of files under the heading "Russian" and subdivided as "Communist Party, economics, reparations." This is material about the Soviet Army captured or prepared by German eastern front units that fought the Russians.

This body of material at the time it was obtained gave the United States vastly more information about the Soviet Army than it was able to get as the temporary ally of the Soviet in World War II. In the "diaries" of the German units—equivalent of the United States Army's "after-action reports"—are data on order of battle, weapons, tactics, techniques of the Soviet Army, as well as information on the Communist Party, economic data and the reparations policies of the Russians.

Under a wartime sharing agreement, the documentary spoils of war were divided as follows:

The United States retained the great bulk of material on the German ground forces, including the archives of the German High Command and the Hitler papers.

The British retained the largest part of the records of the Luftwaffe, the German Foreign Office and the German Navy.

BIX VOLUMES PUBLISHED

The German Foreign Office archives have been receiving particular attention. The United States, France, and Britain have joined in publishing six volumes of the papers of the period from 1937 to the outbreak of World War II.

In exploiting the Foreign Office papers the archivists have been working backward to cover the World War era first. It is estimated that they will require 2 or 3 years before completing work on the Weimar Republic period, 1919-33.

Hence it may be a long time before West Germany persuades Britain and the United States to return some of the papers.

It is a question whether this country will ever hand back the files of the German Nationalist Socialist (Nazi) Party.

The United States has already returned some material deemed to be almost exclusively cultural or historical. But this country will not easily part with the German records of the Soviet Army.

In considering its ultimate, disposition, intelligence officials are not overlooking the value of the material, nor how difficult it was to come by much of it. Just before and in the early stages of World War II the United States had a small intelligence organization and relied on Britain for about 95 percent of its material until United States combat forces began smashing the enemy.

Security considerations make it difficult to determine whether the Government has allotted sufficient funds and personnel to make a maximum exploitation of the material before it is returned. Some scholars say that much of what they regard as a great intelligence treasure remains unevaluated. They fear it will slip out of this country's hands before the best use is made of it.

In all the years the material has been in this country's possession only 5,000 or 6,000 feet of it has been removed from the confidential category. And only about 300 or 400 translations of the German documents are available here.

Logistics: The Answer to Successful Warfare

EXTENSION OF REMARKS

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 10, 1955

Mr. COUDERT. Mr. Speaker, at the request of friends and constituents, it is a pleasure to insert an address by a distinguished naval officer, Adm. Oscar Charles Badger, United States Navy, retired:

LOGISTICS: THE ANSWER TO SUCCESSFUL WARPARE

(Address by Adm. Oscar Charles Badger, U. S. Navy, retired, Congressional Medal of Honor, before the Naval Order of the United States 64th annual dinner at the New York Yacht Club, New York City, December 9, 1954)

Commander Hann and fellow members of the Naval Order of the United States, as we gather together on occasions such as this. we may recall with satisfaction our participation in World War II. We recollect that as we entered that war on two fronts against such major powers as Germany and Japan, that we were dangerously short of manpower and material. We remember that the Axis Powers had already extended their miltary control to vast areas of land and sea, and that our allies had already suffered major defeat, and, in fact, military occupation. These circumstances, of course, emphasized, and multiplied, the demand for our military forces and our material support. But, in spite of these factors, we can now recall with satisfaction, our decisive victory over our enemies of that day.

The cold war came shortly after, at a time when we were at the height of our power, and when we were held in the highest regard by

the world for our overall capabilities. The Soviet Union quickly demonstrated, by action and attitude, its ambitions toward subjection of the world under Communist control. In quick response, the national policy of the United States was rapidly brought to express a definite determination to prevent, by all possible means, short of war, the spread of communism. Again, we were engaged in a world war, this time primarily economic and political, by nature, instead of military.

Eight years have passed and yet our position in wide parts of the world is still unfavorable. In important areas we and our allies have been driven back to a critical extent, sufficient to justify the statement that the cold war has gone against us.

It is my opinion that an important difference in the manner of our conduct of World War II and in the manner of conduct of the cold war, has been sufficient to bring about the difference between success and failure. Let me attempt to outline this difference and, at the same time, justify my reasons for optimism regarding the future outlook of today.

At the beginning of World War II, the Joint Chiefs of Staff were in existence and were charged with much the same responsibilities as they are at present. But at that time their staff consisted primarily of strategic planners, whereas the logistics elements were secondary and elementary in recognition and effectiveness. Therefore decisions in those early days were based on strategic studies and considerations, whereas logistics, or support of the operations, was often a matter of opinion or of hopeful estimation.

Confronted as we were with a major war on both fronts, our known shortages were frightening when it came to the prospect of engaging, simultaneously, enemies of the strength and potentialities of Germany and Japan in combination. This knowledge of our weakness with respect to military forces, equipment, and supporting facilities, occasioned a general tendency among our responsible officials to concentrate such strength as we had against Germany with a minimum of defensive effort against Japan. We became definitely oriented toward Europe.

We of the Navy have every reason to hold in the highest respect and appreciation the skill, fortitude, judgment, and offensive spirit of our war-time leader, Adm. E. J. King. One of his greatest contributions to our wartime success resulted from his determination to establish and maintain the offensive in all theaters, including the Pacific. Although he recognized the validity of a plan which brought about the defeat of Germany in the first instance and later, the final conquest of Japan, he believed that we could, and should, conduct ourselves so as to keep the Japanese constantly off balance, unable to consolidate themselves securely within the wide areas of their early conquests and to drive them back toward the homeland on every possible occasion.

Therefore, he initiated, and, I believe, was primarily responsible for, the system of high-level planning that reduced considerations of logistics to facts rather than opinions, to economies and efficient distributions instead of wastages and oversupply, to meticulous support of the needs of our military commanders instead of approximations, and to the approval of wide-spread operations with confidence rather than to restrictions in the direction of effort due to doubtful knowledge and fear of shortage.

Thus, we conducted the hot war through a system of planning, approvals, and control that assured superiority of support for each approved operation—strictly in accordance with the quantities, types, and timing requested in each plan of each area comman-

der. This resulted in placing the allies on the offensive in every theater of the war, and assured success in the execution and implementation of each approved plan.

Under this styem we achieved success.

When the cold war came into being, the motives and objectives became primarily economic and political in character but again our allies required a generous amount of material and technical aid to stage recovery from the war and to offer effective resistance to the Communist inroads. Again, it is my opinion that we became politically and otherwise oriented toward Europe, but this time there was no Joint Chiefs of Staff in control. and no Admiral King with his skill, judgment, and determination toward effective action in all theaters. There was no comparable logistics organization to work with the strategic groups. To this cause I lay our complete logistics failure in China and the Far East which permitted a Communist minority, enjoying better support, to overwhelm millions of our friends and former allies and to overrun and threaten a gigantic share of the earth's surface.

Had we not abandoned the basic organizations and principles so effectively employed during World War II, we would not have had divided action based on divided opinion among our controlling agencies as to whether the Chinese Communists were Red Communists or some sort of agrarian reformers. It made the difference between implementing the policy of preventing further spread of communism or doing it indifferently and

ineffectively.

We would not have granted loans of 2 or 3 hundred millions to the Chinese Government without some safeguard as to its accounting, some predetermined plan for its use, and some technical advice or control regarding its administration. Any logistics planner would have found it impossible to expect satisfactory results from a government without any national banking laws, any national system of taxation, any acceptable war plan, or any national organization for the obtaining, distributing, or accounting of essential supplies. The logistics planner would undoubtedly have insisted on some effective form of technical control and guidance of such a government.

We would not have expected any real results from the thousands of tons of nondescript and largely damaged, uninventoried, and unidentified material picked up from the Pacific islands and sold to the Chinese for \$300 million to \$400 million, which the cancellation of our then existing indebtedness to China involved. Any logistics planner would have maintained properly that this gear shipped haphazardly, many items unmarked and unidentified, much of it damaged or incomplete, all of it without any specific relationship to planned use or timing, could not have beneficial results in an area without trained repair, maintenance, storekeeping, and operational personnel or without repair and maintenance shops and facilities and in the face of existing or later embargoes on such essentials as spare parts, gasoline, and ammunition.

We would not have permitted, under the systems employed during World War II, the Berlin blockade to react to such a drastic degree in diverting the national interest and support from our vital commitments in the Far East. The introduction of similar diversionary pressures during World War II might have resulted in a reduction in the intensity of effort and some delays in other areas for logistics reasons, but not in loss of efficiency, control, or the abandonment of the controlling objectives.

And, finally, and possibly of greatest importance to our best efforts in the Far East, we would not have repeatedly failed to utilize, in timely and effective fashion, and by

such inefficiency, to waste the funds and authority granted by Congress and which were generally adequate for all essential purposes. Any strategic or logistics planner would have identified such action as surely leading to ultimate failure, as well as progressive loss of confidence and morale among the responsible operational Allied commands or agencies in the field.

Although, I might go on for hours bringing to your attention instances of failure due to abandonment, or even loyal support, of sound logistics principles, I think my point has been made. Our logistics effort in support of the Far East would have lost any war, hot or cold, by the manner in which it was conducted rather than by an unwillingness on the part of our Congress or our people to provide adequate funds and authority or effort.

I do not offer these statements as a basis for belief that our situation in the Far East must continue to deteriorate although we have failed for 7 years to resist the efforts of the Communists in accordance with our national policy "to resist by all means short of war the expansion of communism." On the contrary, I point to these defects in organization and in the principles of operation as easily identifiable, and, therefore, correctable by means already fully tested and proven effective.

For these reasons I am most optimistic regarding the future. I am hopeful and confident that we can, and will, reestablish proper organizations for the most effective and economical coordination between the strategists and logisticians of our own and allied nations in meeting the economic, social, and military demands of the cold war and for insuring the expansion and security of the free world. I will always believe that it was Admiral King who led the way under other and equally serious circumstances, and we could do no better now than to revive the organizations, the coordination and the procedures of implementation which he so effectively laid out for us and which, I believe to be essential to success in any world conflict—hot or cold.

Fair Play in Pacific Air Travel

EXTENSION OF REMARKS

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. SCHERER. Mr. Speaker, my attention has been called, on numerous occasions, to the controversy raging over the short airline route to the Orient by way of Seattle.

I believe that the Cincinnati Times-Star, in its editorial of February 28, most graphically illustrated the need to include Pan American World Airways on this route.

As you know, I have long indicated my belief that the success of this great country is based on free enterprise and competition. It seems contradictory to me that one air carrier should fly the shorter route that another surveyed while the surveyor must operate over a route infinitely longer and, ultimately, more expensive to the United States taxpayers.

I offer for the consideration of the Members of the House the Cincinnati Times-Star editorial of February 28, 1955:

FAIR PLAY IN PACIFIC AIR TRAVEL

Ability to go direct from one place to another is one of the great advantages of air transportation. As planes were developed to fly faster and farther, they have been routed on longer and more direct individual flights. The shorter flights have been assigned to smaller transports designed to provide the interim service.

Pan American World Airways pioneered the flying in the Pacific Ocean in the early days, using the Hawaiian Islands, Midway, and Wake as steppingstones. As the range of planes was extended, Pan American secured the services of Charles A. Lindbergh to survey the great circle route between the west coast and Tokyo. Finding it practical, Pan American then commenced an operation and actually flew some 25 trips, carrying cargo for United Nations Relief Association. It then applied for a certificate to route through flights direct from Seattle over the Aleutians.

The then President Truman, however, turned down Pan American and gave Northwest Airlines, a newcomer in the field of ocean flying, a temporary certificate on the direct route. The alleged purpose was to provide competition for Pan American.

Since the distance via Honolulu to Tokyo from the west coast is 6,970 miles and the distance by direct route is only 4,770 miles, this is unfair competition. It is as though one airline were given a route direct from New York to Seattle, and another was required to fly all the way down to Atlanta, then up to Seattle. If competition is the measuring stick, both lines should compete on the same route.

But this is not all. For Northwest carries only one-fourth of these through passengers. Three-fourths of them go on the longer Pan American trips, with resulting loss of time. Since both airlines operate on a subsidy basis, we taxpayers have to pay the additional cost to Pan American, resulting from flying 2,200 unnecessary miles.

Incidentally, the Hawaiian Islands would be adequately served if Pan American flights for Tokyo bypassed them. United, Northwest, and Pan American all operate heavy schedules to and from the mainland. And if there were any traffic originating in the islands for Tokyo, Pan American could readily operate an occasional schedule over the old island route.

The President has just renewed the Northwest certificate over the direct route. He has before him the renewed application of Pan American. It should be approved.

State of the Nations: Paper Tiger?

EXTENSION OF REMARKS

HON. HENDERSON L. LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. LANHAM. Mr. Speaker, with leave obtained to extend my own remarks in the Appendix of the Record, I am including an article by Joseph C. Harsch, special correspondent of the Christian Science Monitor, which said article appeared in the March 15 issue of that splendid newspaper. The title of the article is "State of the Nations" and the subtitle is "Paper Tiger."

My own comment is unnecessary since this article speaks most eloquently for itself:

STATE OF THE NATIONS: PAPER TIGER? (By Joseph C. Harsch)

Washington.-It becomes desirable, seems to me, to examine most carefully why Secretary of State John Foster Dulles feels that it may become necessary to prove to Communist China that the United States is 'prepared to stand firm and, if necessary, meet hostile force with the greater force that we possess."

According to Mr. Dulles the Chinese "are persistently trying to belittle our power and to throw doubt on our resolution." He says that Chinese Communist propaganda "portrays the United States as being merely a 'paper tiger'." This, he says, "suggests small peoples whom they threaten that the United States will always find reasons to fall back."

Mr. Dulles cites three events in recent history as being used by the Chinese propaganda to support their claim that the United States is a "paper tiger"—the retreat from the Yalu in 1950, nonparticipation in Indochina in 1954, and the evacuation of the Tachens in 1955.

The real question at issue is whether these three events actually make a reason why Communist China, or anyone else, could believe that the United States will always find a reason to "fall back"; whether they do add up to evidence of irresolution in Washington.

The answer is unavoidable, no matter how painful, that in each of these episodes in history there was evidence of irresolution, and even of vacillation, in Washington. each case there was a moment when Washington talked as though it would do more than it actually was prepared to do when the test came.

In 1950 Washington changed the definition of its purposes in midstream. The original statement of purpose at the time of the intervention in Korea was "to repel the aggression and punish the aggressor." When a chance seemed to present itself to "drive to the Yalu", the purpose was enlarged to encompass the reunification of Korea. This

larger purpose was not achieved.

In 1954 the act of nonintervention in Indochina was preceded by an assertion that Vietnam was of "paramount importance" to the security of southeast Asia. And Vietnam was likened to the cork in the neck of the bottle of the Malayan Peninsula. characterizations of the importance of Vietnam indicated an intentiton to intervene to save it from a Communist victory. The purpose implied in the characterization was not achieved.

In 1955 the withdrawal from the Tachens was accompanied and surrounded by words and interpretations which appeared to imply a forward movement, when actually they covered a regressive movement.

If we consider these three cases carefully we can, I submit, see why actions which need not have implied irresolution did come to seem irresolute. There would have been no irresolution in Korea had Washington and its allies adhered rigidly to their first definition of purpose in the Korean intervention. When the 38th parallel was crossed the aggression had been repelled, and in the process the aggressor had been severely punished. It was when the original purpose was expanded that an unachieved goal was

would have been no evidence of irresolution in Indochina had words been avoided which implied an intention to do something which subsequently was not done.

There would have been no evidence of irresolution in the Tachens withdrawal had it been labeled publicly precisely what it was, a military withdrawal.

In each case there was no need of causing an impression of irresolution. Had Wash ington estimated accurately what it would do and limited its declared or implied purposes to its actual intentions, there would have been no basis for a belief anywhere in the world that Washington was irresolute. The damage arose out of appearing to be ready to do more than was actually done.

In the same speech in which Mr. Dulles faces up to the dangers which arise out of the appearance of irresolution in Washington he presents a theory that if the Chinese Communists aggress on any one of their fronts they would be confronted "with tasks at the south, center, and north." at the south, center, and north." This is his theory of the "three-front war." It implies that a Chinese advance on any one front would automatically release war on all three fronts. He doesn't forecast it or say that it will necessarily happen. He does imply that it would happen.

But if the treaty commitments which cover these "three fronts" are examined, grave doubt emerges that they would or could be joined. To reopen the Korean front would require an act of the United Nations. To reopen the Formost front would require, according to Mr. Dulles' own previous assertions, the "constitutional process" in Washington. American intervention on the southern front, in the event of aggression, would also require the "constitutional process," As Mr. Dulles has pointed out himself, none of the United States commitments

NATO alliance. It would seem to me that Washington once more has laid itself open unnecessarily to an appearance of irresolution by using which sound stronger than they really are. The man who understates his intentions is never open to the charge of irresolution, is never mistaken for a "paper tiger."

in Asia involves the automatic feature of the

A Bill To Amend Title 28, United States Code

EXTENSION OF REMARKS OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. TUCK. Mr. Speaker, today I have introduced in the House of Representatives a bill to which I would like to call particular attention because of the economy involved as well as the important bearing it has upon the administration of justice in the courts of the land. My bill raises no complex questions and is short and simple and easy to understand. It reads as follows:

A bill to amend title 28, United States Code, to provide that the district courts shall have jurisdiction of certain civil actions only if the amount in controversy exceeds \$10,000, and to provide that their jurisdiction based on diversity of citizenship shall not extend to actions in which corporations are parties

Be it enacted, etc., That sections 1331 and 1332 of title 28, United States Code, are amended to read as follows:

"§ 1331. Federal question; amount in controversy

"The district courts shall have original jurisdiction of all civil actions wherein the matter in controversy exceeds the sum or value of \$10,000, exclusive of interest and costs, and arices under the Constitution, laws, or treaties of the United States.

"§ 1332. Diversity of citizenship; amount in

"(a) The district courts shall have original jurisdiction of all civil actions where the matter in controversy exceeds the sum or value of \$10,000, exclusive of interest and costs, and is between-

"(1) individuals who are citizens of different States;

"(2) individuals who are citizens of a State, and foreign states or citizens or subjects thereof;

'(3) individuals who are citizens of different States and in which foreign states or citizens or subjects thereof are additional parties.

'(b) The word 'States,' as used in this section, includes the Territories and the District of Columbia."

The effect of this proposal, if enacted into law, is to increase the original jurisdictional amount in United States district courts from \$3,000 to \$10,000, exclusive of interest and costs, in matters of controversy arising under the Constitution, laws and treaties of the United States, and in controversy between persons of diverse citizenship, and to confine jurisdiction in such cases to individuals who are citizens and to the exclusion of corporations except where Federal questions are raised

This measure is designed to relieve the Federal courts of litigation of a trifling or less substantial nature and to confer jurisdiction in such cases upon the State courts where it belongs. Under the Constitution of the United States the Congress has the power within certain limitations to fix and determine the jurisdiction of the United States courts. It is my information that the jurisdictional amount was fixed originally in 1780 at \$500. In 1801 it was reduced to \$400. then in 1802 it was again fixed at \$500. In 1887 the amount was increased to \$2,-000, and in 1911 it was increased to \$3,000.

Since 1911 when the jurisdictional amount in controversy was last increased the value of the dollar has steadily declined and litigation has considerably multiplied, particularly in the field of damage suits. Few such suits are now brought for as small an amount as \$3 .-000. Moreover, a greedy and Gargantuan Central Government in the last few years has usurped the powers of the States by expanding its activities into almost every phase of our existence and we can feel its tentacles in all walks of

This unwarranted invasion of the governmental functions and responsibilities of the States has been carried on under the guise of beneficence but if continued unchecked will finally leave the Government of the States and localities nothing more than the hollow shells of a lost liberty. Some of the States have succumbed to these spurious doctrines and have yielded to this usurpation of their powers either through a failure to understand the fundamental principles upon which our Government was established and is based, or have surrendered in the hope of receiving a liberal abundance and share of the governmental largess made available to them under many of these socialistic schemes.

My thoughts in respect to the increase in the jurisdictional amounts are not original with me for it is my understanding that a committee of judges comprising the senior United States circuit judges has recognized the desirability of making this change, and several bills have been introduced in the House of Representatives in recent years to this effect, and at least one bill has passed this body raising the jurisdictional amount from \$3,000 to \$7,500.

I want it distinctly understood now that I have unbounded confidence in the Federal judges presiding over the courts in which I have practiced. I am well acquainted with the United States district judges now in service in Virginia. I have the highest respect for all of them and they are, I believe, my warm personal friends. I have not discussed this subject with any of them. Hence, I have no authority and do not undertake to speak for them. Knowing them as I do, I believe that they would welcome the changes herein proposed in the interest of economy and in the administration of justice by relieving them from the burden of hearing and trying cases of a frivolous or less substantial nature, thus enabling them to devote more of their valuable time to cases of greater importance. I do know that they are all men of the highest qualifications, fitness, and character, and who would not under any conditions covet influence or power. It is my desire to enhance, if practicable, the usefulness and the already high standing of these honorable courts.

Under the diversity of citizenship clause of the Constitution, the courts have from time to time over a period of some 70 or 80 years construed the word "citizen" or "citizens," as used in article III of the Constitution, to embrace corporations also. Having enunciated this doctrine they have found and held that the persons composing the corporation are presumed to be citizens of the State where the corporation was chartered, and the courts have held that this presumption is irrebuttable. While there may be substantial basis for this theory and line of reasoning, I do think the time has come to curtail the jurisdiction of Federal courts based on the citizenship of corporations. This view, likewise, is not new or original with me for attempts have been made repeatedly for the last 75 years to negate these rulings by congressional action. The House of Representatives as far back as 1880 passed a bill, H. R. 4219, 46th Congress, one paragraph of which deprives Federal courts of jurisdiction based on diversity of citizenship in cases between a corporation and citizens of any State in which it does business other than patent and copyright cases. Other measures of a similar nature passed the House of Representatives from time to time thereafter but were lost in the Senate.

As late as 1932 President Hoover in a special message to Congress on strengthening the judiciary system of the country recommended that jurisdiction of Federal courts be modified by "providing that where a corporation, organized under the laws of one State, carries on business in another State, it shall be treated as a citizen of the State wherein it carries on business as respects suits

brought within that State between it and residents thereof and arising out of the business carried on in such State." The effect of the Supreme Court decisions hereinabove generally referred to construing the word citizen in article III, is to confer fictitious citizenship upon corporations. The bill which I have introduced will, if passed, nullify these decisions and limit the jurisdiction to individual citizens and exclude jurisdiction where the citizens are corporate or fictitious.

Mr. Speaker, I am a firm believer in the principles of States rights, and particularly where these principles apply to litigation. These matters in dispute can be settled more expeditiously and with a closer approach to public justice in the localities where the cause of action has arisen. Our State judges as a whole are learned men. They are fair, impartial, and highly fitted to wear the judicial robes. For the most part they rank in fitness and ability on a plane equally as high as our United States district judges. Under the aegis of such a judicial system and with expansion and improvement of communications such as automobiles, airplanes, the press-including radio and television-as well as our modern and improved educational programs, I cannot believe that the people of the respective States would be so provincial in this enlightened era that they would refuse a fair trial because one of the litigants was a citizen of another State. More often than not cases are moved from the State to the Federal courts for no purpose other than to delay the trial and administration of justice, and as we all know a delay in the trial of a case often thwarts public justice.

The Congress is called upon repeatedly to create additional Federal judgeships to relieve the present judges of the existing workload which in some Federal jurisdictions is unbearable. These additional courts are created and established at great expense to the already overburdened American taxpaver and the principal parties continue to be subjected to the harassment, the inconvenience, the delay, and the expense of having their cases heard and tried in some instances at least hundreds of miles away from the scene where the cause of action arose and where the litigants, attorneys, and witnesses reside.

Briefly, the above are a few, among many other good reasons, why the original jurisdictional amount in controversy should be changed so as to curtail the jurisdiction of the United States district courts, thus leaving important legal rights of our citizens to be determined in a forum where public justice will be promoted—not retarded or denied.

It is my fervent hope that the bill which I have introduced may have the active aid and support of the members of the Judiciary Committee not only, but of all those who are interested in economy at the Federal level where it is so sorely needed, and who are interested in the preservation of the rights of the citizens of our sovereign States as well as in the fair, impartial, and speedy administration of public justice.

The Poor Man's Tax Law

EXTENSION OF REMARKS

HON, EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. HIESTAND. Mr. Speaker, the big tax-revision bill of the 83d Congress, completely rewriting the tax code, which after a desperate fight became Public Law 591, is, in effect, a poor man's bill.

Those who would make political capital for purely political purposes by attacks upon this magnificent measure have called it a rich man's bill. The exact opposite is true. It's a poor man's relief law.

Now we have an abortive attempt to kill several of the most important parts of the 1954 tax legislation, all of which favored the lower income groups; but the attack on these favoring measures is being made by those who assert they are fighting the battle for the little man. Actually, they would hurt the little man, the average wage-earner, and the millions of people on small fixed incomes, small pensions, and especially the white collar workers.

Opponents of the administration would extend the excise tax law 2½ years instead of just 1; therefore, they would be guilty of taxing the little man, the poor man, the fixed income people, and the pensioners, an extra year and a half on such necessities as light bulbs, telephone calls, transportation, handbags, cosmetics, gasoline and many other everyday needs, of some of which we had hoped to unburden them at the end of the year. Does this proposed measure sound like relieving the little man?

They would again soak the little man. the poor man, and the pensioner by again double-taxing him on his meager dividend income. The vast majority of millions of stockholders are little people whose income is the result of hard work and lifetime savings, invested in a few shares of corporate stocks. To millions of these people, this is their only income. The law written last year gives 100 percent relief to those in the lowest income bracket, 67 percent in the next group, 521/2 percent in the next group, and tapers down to only 11 percent to the wealthy, who are relatively few in number. Why soak these millions of little people and claim you are soaking only the rich? Isn't that the height of de-ception? Does that sound like relieving the little man?

Now most of you are not kidded about this corporation tax measure. Only people pay taxes. Corporations, actually being groups of people, cannot exist unless they pass along taxes in the prices of their production. If they do not, they go broke and throw thousands of people out of work. So if you extend, as the opponents of the administration are now proposing, the 52 percent corporation earnings tax to $2\frac{1}{2}$ years instead of 1, you are again taxing millions and millions of the people that pay for the goods and services produced by the corpora-

tion. Does that sound like relieving the little man?

And then this politically inspired \$20 and \$10 tax cut amounts to 40 cents a week or 20 cents a week per individual. How much relief is that going to give the average individual? And yet it will cost your Treasury over a thousand million dollars, which added cost must be raised by deficit financing, which means bank borrowing, which is tantamount to the printing of that much new money, which in turn causes inflation and penalizes most deeply the people in the lower income bracket. The rich man can afford \$100 per year increased cost of living from inflation, but the little man-those on fixed incomes and pensions-would be cruelly hurt every time we allow inflation to creep in. Does this sound like relieving the little man?

It is hard to conceive this poorly disguised attempt at cheap politics which so obviously hurts the lower income people by repealing tax relief given them by last year's Congress. It was bad enough to call that great tax revision measure a rich man's bill, but to attempt to repeal some of the parts of it most important to poor people, seems the height of

hypocrisy.

March 15: Hungarian Freedom Day— Statement by Congressman John Lesinski

EXTENSION OF REMARKS

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. LESINSKI. Mr. Speaker, yesterday was the 107th anniversary of an event which brought joy and virtual independence to the people of Hungary. This was a very important event in Hungarian history, for on that day over a century ago the Hungarians regained some of the freedoms which were denied to them by their Hapsburg overlords. In the charter of freedom which the Hungarian House of Deputies approved on March 15, 1848, a number of reforms were introduced which were approved by the Austrian emperor. Among them freedom of the press was established, feudal servitude and heavy taxes on the peasantry were abolished, and the Hungarians were allowed to form their own national government. Louis Kossuth was made president. In short, by the Freedom Day Charter the Hungarians secured national autonomy, or for all practical purposes, independence.

The freedom gained in 1848 was soon lost, and it was not until the end of World War I that Hungary became a completely independent country. The Hungarians enjoyed the blessings of national independence for about two decades, but then came the dark years of World War II. Toward the end of the war Hungary was invaded by the Red army, and since then the Hungarians have been struggling, insofar as they are able, to free themselves

from the clutches of their Communist rulers. The fight they are waging against the ungodly Communists is an uphill fight, one in which many brave Hungarians have been placed under arrest and are serving prison terms in convict labor camps. Even the Roman Catholic primate of Hungary, Cardinal Mindszenty, the most outspoken foe of communism in Hungary, is not free.

This prelate of the church was arrested and imprisoned by the Communist government on some trumped-up charges and has been in prison since December of 1948. The whole free world, and specially our own country, sincerely hopes to have the cardinal released from prison, and we are doing everything practicable to support the Hungarians during these painful times. We are seeking to keep up the Hungarian spirit of independence by means of messages broadcast through the Voice of America. This is one of the ways that we hope will strengthen resistance to the Communist regime and thereby keep alive the Hungarians' faith in the cause of liberty.

In the celebration of this significant day, the Hungarian freedom day, all of us ardently hope that the rebirth of a new freedom for Hungary may not be too far off.

I intend to introduce shortly a concurrent resolution whereby Congress can focus the attention of the free world upon the violations of the Yalta Agreement committed by the Soviet Union. With the weight of Congress in back of such a resolution we can provide an effective way of puncturing the hypocrisy of Soviet propaganda.

Polish Exile To Make Movies for Freedom

EXTENSION OF REMARKS

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the Reconn, I include the following article that appeared in the Polish American Journal at Scranton, Pa., entitled "Polish Exile To Make Movies for Freedom":

POLISH EXILE TO MAKE MOVIES FOR FREEDOM

Los Angeles, Calif.—Fighting communism through appropriate moving pictures is the aim of John Muc, former counterintelligence officer in the Polish Army, who recently organized the American Motion Pictures for Freedom here and is now looking for funds to carry on his enterprise.

PRISONER OF REDS

Muc told the press here that he was captured when the Red army invaded Poland and sentenced to death, later commuted to 25 years of forced labor. He made the rounds of several labor camps and still bears on his wrist the scars of Russian shackles.

He endured a death march of hundreds of miles in the northernmost part of Russia, followed by torture and hunger. He says that for 2 years he never took off his clothes or washed.

After the signing of the Sikorski-Stalin pact, Muc was 1 of 300 survivors of the 7,000 Polish war prisoners employed in the mines at Novaya Zemlya Island, near the Arctic Ocean.

IN ANDERS' ARMY

Upon regaining freedom, Muc reached the Pollsh Embassy in Kuybishew where he was assigned the task of supervising the liberation of other Pollsh citizens from Soviet prisons and labor camps.

He left Russia with the Polish Army of

General Anders.

WORKS FOR THE UNITED STATES OF AMERICA

After leaving Russia, Muc worked with the American and British intelligence groups studying the methods of Communist propaganda.

For the past 3 years Muc worked for the United States Government. Although most of his work is classified top secret, Muc has been granted permission by the Government to prepare 26 documentary television scripts from its files. Work is soon to begin on the project, said Muc, with movie scripts to follow.

STALIN IS YOUR GOD

At present Muc is in the process of recruiting a score of Hollywood's best writers, actors, technical men, and directors to amalgamate their talents through his American Motion Pictures for Freedom organization.

Muc claims that his movement has already received support from highest Government officials, Senators, and Congressmen.

Among revealing and documentary stories from Government files to be scripted for filming by Muc's group are Stalin Is Your God, on atheism in Soviet schools; Friends or Foes, regarding lend-lease articles falsely labeled as products of the Russians at Archangel in 1942; exposé of the Russian espionage machine, etc.

The Muc's group has its headquarters at 1163 North Genesee Avenue, Hollywood.

A Wish for All American Children

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. ANFUSO. Mr. Speaker, the problem of juvenile delinquency has always been of great interest to me as a parent, as a former judge in the city of New York, and now as a legislator. I have given much thought to this problem and have introduced several measures in the 84th Congress to study the causes of juvenile delinquency and to seek effective means to curb this evil which is undermining the morals of our youth.

In the March issue of the magazine Ladies' Home Journal there is published a very interesting and thought provoking, yet succinct, summary of commonsense rules for all parents troubled about the future of their children. It is written by my good friend Judge George W. Smyth, of the children's court, of Westchester County, N. Y.

Mr. Speaker, I am happy to insert this brief article, entitled "Freedom Yet Discipline," in the RECORD in order to bring it to the attention of all my colleagues and to the Nation as a whole. It reads as follows:

FREEDOM YET DISCIPLINE

I would wish for a child from the moment of its birth:

 Regular hours of rest and sleep, plenty of fresh air and sunshine, good ventilation and wholesome food.

2. A mother with a good knowledge of sound habit training; one who is consistent in her handling of the child; who is loving yet firm; who will take the time to explain; who is willing and anxious to make the child her first and most important responsibility.

3. A home in which religion is the cornerstone, not merely lip service.

4. Parents who truly love each other and live together in mutual respect.

5. A father who feels his responsibility to participate in the training of the child—not just the one who supplies the cash, and leaves all the responsibility to the mother.

6. Parents who are themselves well disciplined. No greater mistake can be made than to try to discipline children in temper, yelling and screaming at them or pushing them around.

7. Parents who actually set the example through their own personal conduct of the standards they profess to want for their children—not parents who preach one thing and do another.

8. Parents who are interested in their children's activities; who try to find out what their natural interests and activities are; who try to help them to find opportunities for developing those aptitudes; who encourage the children to discuss their problem with them.

9. Parents who will encourage children to accept responsibility and allow them to share in family planning with the family group.

Schools of Blaj, Rumania

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert an address I delivered at a banquet in Cleveland on October 17, 1954, sponsored by the Association of Rumanian Catholics of America, on the occasion of the 200th anniversary commemoration of the inauguration of the schools of Blaj, Rumania:

It is with pleasure that I join in this commemoration of great import for the culture and spiritual life of Rumania. The deep appreciation I hold for my many Rumanian friends and acquaintances, as well as my long interest in the Rumanian cause, have brought closer to me many events of Rumanian history and various aspects of Rumanian national life.

I know well the illustrious place which Blaj holds in the history of Rumania. I was impressed especially by the fact that the spiritual rebirth that is indissolubly associated with the name of Blaj has been fundamentally an expression of Rumanian nationalism. The religious union with Rome came as a manifestation both of Catholic allegiance and of a strong national reaffirmation. For those pious and flery ancestors of yours, who forged the history of Blaj, Rome was the true symbol of Christianity, but at the same time it stood as the living reminder of the origins of their people, a people who could never renounce their national freedom and independence.

The great scholars and patriots of Blaj made their pilgrimage to Rome, both to the Vatican and to the Column of Emperor Trajan, the founder of Dacia Felix, their ancient land. The students sent from Blaj to acquire knowledge and wisdom at the "De Propaganda Fide," were driven also by that urge, which led Badea Cartan, to walk from his abode in Transylvania, with his desagl on his back to Rome, in order to give a fresh impetus to those national aspirations.

The consciousness of a heroic national past was strengthened and deepened by this contact with Rome. The Rumanian saga of eternal resistance against the barbaric invasions, their outstanding contribution in the fight to defend Christendom against the Ottoman penetration into the heart of Europe, were thus again brought to the fore in the minds of your fellow countrymen. The epic figures of Stephen the Great and Michael the Brave reminded them again of the days of national pride and independence. It was Michael the Brave, who coming to the "land beyond the forests," at Alba Julia, embodied for an historic moment the unity of all Rumanians.

The Catholic tie thus decisively helped the Rumanian cultural and national revival. This is only natural because Christianity stands for the freedom of all people. So Blaj, through its schools and religious institutions, through the spirit which gave them inspiration, became one of the most revered centers of your nation. The cultural climate of Blaj gave birth to the Latinist current which strongly nourished the national consciousness of your ancestors. In those periods of darkness, when Rumania was under a foreign rule, Blaj stood as a guiding light. It was therefore natural that the national revolutionary movement which swept over the whole of Europe in 1848, found a quick response in Blaj. This famous seat of Rumanian spiritual and intellectual life, which we are honoring today, on the 200th anniversary of the inauguration of its renowned schools, was the rallying point of the Transylvania patriots.

On the Biaj Field of Liberty, as it has been so aptly called, through the voice of Simeon Marnutiu and other patriotic leaders, the human, Christian and national aspirations of a people under foreign rule were forcefully and dramatically expressed. The great national poet, Andrei Muresanu, voiced the significance of this movement in what might be considered as the "Marseilleaise" of the Rumanian people, "Wake thou, Rumanian";

"Wake thou, Rumanian, from your sleep of death

In which you have been engulfed by barbaric tyrants."

More than a hundred years have elapsed since this call was heard for the national resurrection of an oppressed people. And now the valiant Rumanian people, who had at long last regained their freedom, are now crushed as never before by the most ruthless and Godless despotism ever known to mankind. Among the victims of Russian Communist aggression, Blaj, the stronghold of the Rumanian Uniate Church, so closely bound to Rome, of national culture and learning and of the consciousness of Rumania's Latin heritage, stands as a martyr of the Godless tyranny of communism.

The Russian invaders and their agents do everything, from intimidation to assassination, in order to eradicate all the pillars of Rumanian nationalism. Nevertheless, in spite of all their ruthless killings and inhumanities, the Russians have been unable to destroy in the heart of every Rumanian, those lasting forces which Blaj and its Field of Liberty symbolizes.

It is an incontrovertible historical fact that the most powerful and persistent driving force of the ages is that of national consclousness. This has been well demonstrated today by the resistance of the subjugated peoples against the new Red Russian colonialism. It is all the more evident that enlightened nationalism is one of the strongest barriers against communism and a necessary foundation for the establishment of a free and peaceful world. National freedom and independence expresses on the international plane what the dignity and liberty of the individual signifies in a free community. Independent and sovereign nations, however small, are thus the strongest assets for a free and democratic world. Conversely, it is well established that the sacrificing of national entities to autocratic empires constitutes the major cause of internal strife, international restlessness and, eventually, a major war.

If we look with confidence to the immense and invincible forces of the human soul, we who are enjoying freedom and its God-given benefits, we must squarely face up to our own responsibilities for the tragedy of the enslaved peoples. The errors on our part which have been and are being made, either through direct support of the Godless tyranny, or through our lack of support for the victims of that tyranny, throw a dubious light on our own future as a free nation. There is no doubt in my mind that if we persist in ignoring our moral duty toward the subjugated nations, the consequences of such a course will work against our own security and freedom. Those of us who have made a careful study of the problem are keenly conscious of the gravity of the present situation, the fruit of past errors. The hundreds of millions of human souls forced under the tyranny of the Red yoke, if completely abandoned by us, as the so-called policy of coexistence requires, would event-ually be reduced to the role of unwitting instruments in the advancement of the objectives of our enemies. Those objectives lead to world domination. On the other hand, we know these peoples are our true allies and that when we recognize and sunport their moral rights to national freedom and independence, we give fresh encourage-ment to their will to resist and strengthen their fortitude to struggle on until the day when the foreign occupier of Rumania and all the other non-Russian nations held captive within the Red colonial empire are once again free and independent.

Whether Reclamation?

EXTENSION OF REMARKS

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. DAWSON of Utah. Mr. Speaker, the House Interior and Insular Affairs Committee is now holding hearings on the authorization of the upper Colorado River storage project. This project was supported by President Eisenhower and has had the support of the Department of the Interior under both President Eisenhower and President Truman. However, it has been subjected to one of the most concentrated campaigns of opposition in the history of any reclamation project.

For the information of the Members, I am submitting a copy of an editorial from the Salt Lake Deseret News-Telegram of Saturday, March 12, 1955. The editorial follows:

WHETHER RECLAMATION?

Now we're getting down to basics regarding the upper Colorado River storage project.

In Sacramento, Northcut Ely, California's special antiproject lobbyist, is quoted by the Los Angeles Times as urging hundreds of thousands of Californians to write their friends and relatives to help save California's share of the Colorado River water.

And in Washington, California's Attorney General Pat Brown (who, by the way, wonders out loud whether Mr. Ely is worth the \$85,000 California is paying him) says unless California softens its opposition, there will be no more reclamation projects for that State either.

That about sums up the state of the oppo-

Note that Mr. Ely in his own State wasn't talking about the damage to Dinosaur National Monument or cost figures or any of the other arguments that have been used and misused in the debate before Congress. He was talking about the real reason for California's opposition—California wants the water. She wants more water than the 1922 compact entitles her to, and the only way to get it is to keep the upper basin States from using their own share. Congress could spare itself a lot of confusion in its hearings and debates by concentrating on this issue and forgetting all the diversionary attacks.

But there is another side to this coin, too. Further use of water in California or anywhere else in the West requires more reclamation projects. CLINTON ANDERSON, the former Secretary of Agriculture who is now chairman of the Senate Irrigation Subcommittee, made it clear this week that there will be no more projects for California as long as that State continues its present attitude toward the Colorado. So did California's own CLAIR ENGEL, chairman of the House Interior and Insular Affairs Committee, in expressing particular shame for the tactics his State is using.

All this doesn't represent a change of heart that ensures success of the project. The opposition remains deeply entrenched and powerful. Just this week the California Assembly ways and means committee voted an "extra" \$200.000 to continue and enlarge the fight. Still, it is encouraging that there are men fairminded enough and broad-visioned enough to speak up for what is right, even from the midst of the opposition camp. The statements of Mr. Brown and Congressman ENGLE have served well the public and national interest.

Appeal to Secretary Benson

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. CANNON. Mr. Speaker, on Tuesday, March 8, the House of Representatives of the Missouri General Assembly, in session at Jefferson City, Mo., passed by a unanimous vote a resolution requesting the Secretary of Agriculture, Hon. Ezra Taft Benson, to exercise the authority vested in him by statute to alleviate conditions in drouth areas in

Missouri, and elsewhere in the United States, by permitting farmers to harvest mixed wheat and other small grains for feed purposes, as follows:

House Resolution 71

Whereas Missouri farmers should be permitted to harvest unlimited acreage of mixed wheat and other small grain without penalty; and

Whereas a majority of Missouri counties have been officially recognized as drought disaster areas by the United States Department of Agriculture; and

Whereas, 3 years of drought has put many farmers in serious financial condition and restrictions on producing extra feed grain in the form of small grains mixed with wheat is placing restrictions on the farmer, so he cannot help himself; and

Whereas wheat has the highest feeding value of all small grains and makes excellent livestock feed in mixtures with other grains such as oats and rye; and

Whereas the past 3 years have disrupted many rotations, reduced the supply of feed grains and decreased the new and old acreage of grasses and legumes so important in land improvement and livestock production; and

Whereas there was a large acreage of wheat seeded in the fall of 1954 to help fill the need for pasture; and

Whereas if the Secretary of Agriculture will exercise his existing powers and permit drought area farmers to seed oats and grass mixtures in this large wheat acreage seeded for pasture and harvest the mixed grain for livestock feed, a substantial contribution will have been made in helping the farmer help himself in this period of economic stress. This additional mixed feed will be fed on the many Missouri farms suffering from a prolonged grain shortage and will not add in any way to the national supply of commercial wheat: Now therefore he it

wheat: Now, therefore, be it

Resolved, That the members of the House
of Representatives of the General Assembly
of the State of Missouri request the Secretary
of Agriculture to use the authority which
Congress has given him to alleviate conditions in drought areas by permitting farmers
to harvest mixed wheat and other small
grains for feed purposes only; and furthermore be it

Resolved, That a committee of not over 10 members of the house be appointed by the speaker of the house to call upon the Secretary of Agriculture and Members of Congress, asking that the Secretary of Agriculture use the authority granted him by Congress to alleviate this serious situation in the State of Missouri; and be it further

Resolved. That the travel and sustenance expense of the members of the committee be paid from the contingent fund of the house.

EARL A. BAER. RALPH WIGFIELD.

Mr. Speaker the resolution speaks for itself. Due to 3 years of unprecedented drouth the farmers are desperately in need of feed. The wheat to which the resolution refers was sown last fall before the announcement of their wheat quotas. Now that the quotas have been imposed they find themselves in a position where in order to comply with the program they must plow up a portion of the crop sown last fall. It involves loss of the seed and of the labor and investment expended in ordering the land and putting in the wheat and also the additional cost of plowing up the acreage in excess of their quota. The loss is particularly heavy at this time as they are faced in many instances with the alternative of sacrificing basic livestock if food can not be provided to carry it through.

If permitted to sow other small grains with the wheat thereby rendering it ineligible to commerce, and restricting it to use as stock feed by the farmer producing it, it cannot add to the national supply of commercial wheat and will in no wise interfere with the farm program as originally announced.

It is significant that this sensible and practical exemption is approved by the unanimous vote of the Missouri House of Representatives, of both parties and of both urban and rural representatives.

In response to the resolution, Speaker Hamlin appointed as members of the delegation to call on Secretary Benson, Representatives Earl A. Baer, Ralph Wigfield, I. Willis Henson, Luna E. Butler, John T. Campbell, Helen C. Hardy, Jennie Chinn, Charles J. Burns, James S. Lincoln, and George D. Young. The delegation will reach Washington by plane tonight and will be accompanied by Commissioner of Agriculture, Hon. L. C. Carpenter, and Hon. Arch V. McRoberts, an official of the House.

Arrangements have been made for them to call on Secretary Benson on Wednesday afternoon and it is to be hoped that agreements can be reached which will solve this difficult problem and meet the approval of Secretary Benson and the delegation and especially the farmers in the drouth areas and at the same time interfere in no way with the farm program so recently promulgated by the Department.

Mr. Humphrey's "Blooper"

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an editorial which appeared in the St. Louis Post-Dispatch, entitled "Mr. Humphrey's 'Blooper'.' together with a communication which I addressed to the editors of the St. Louis Post-Dispatch on this editorial pointing out that it was an extreme case of quoting a public official out of context.

MR. HUMPHREY'S "BLOOPER"

Secretary of the Treasury Humphrey, we regret to note, appears to have contracted a case of the affliction that has bothered some other officeholders before him. It is a pecular infirmity, for which the only known specific is a dose of realism mixed with humility.

Under the spell of this strange virus, the officeholder becomes obsessed with the idea that he cannot afford to admit having made a mistake.

Secretary Humphrey seemed to have been bitten by that bug when he testified before a House committee on what some Democrats have been unkind enough to call Humphrey's "billion-dollar blooper"." This is a freshly discovered loophole in the administration's 1954 tax law, under which corporations can reduce their tax liability

substantially by taking double deductions for certain business expenses.

The Secretary admits that the loophole exists, and he favors amendment of the law to remove it. But, like other officeholders before him, he is going through strange contortions in an effort to disclaim responsibility for the error.

ity for the error.

"You gentlemen passed the law, we didn't," Mr. Humphrey told the Congressmen. "If you made a mistake, I'm sorry."

That was a rather ungracious remark coming from a Cabinet member who has never been modest about hailing the administration's 1954 tax law as just about the greatest work of tax architecture in history. Mr. Humphrey's experts labored for months over that tax bill. They should have been aware of any billion-dollar "bloopers" that were in it.

The congressional committees have tax experts, too. These experts also should have detected the loophole which is now belatedly discovered. But their failure does not by any means excuse the Treasury's.

Mr. Humphrey would simplify everything if he would just frankly admit that his department can make mistakes and in this case did.

MARCH 15, 1955.

EDITORS, ST. LOUIS POST-DISPATCH,

St. Louis, Mo.

GENTLEMEN: Your editorial in Sunday, March 13, 1955, St. Louis Post-Dispatch, entitled "Mr. Humphrey's 'Blooper'," is an extreme case of quoting a public official out of context to make him appear to say the exact opposite of what he did say.

I was present and participated in the hearings of the Ways and Means Committee where Secretary Humphrey testified.

The full unrevised statement of the Secretary occurred in the following colloquy, page 18 of the unrevised transcript:

"Secretary HUMPHREY. Well, Mr. MILLS, I don't know what it is you are trying to drive at. You gentlemen passed the law. We did not.

"Mr. Mn.Ls. That is the point I am driving at, Mr Secretary.

"Secretary HUMPHREY. If you made a bad error, I am just sorry. For our participation in it, I am sorry. I regret that it happened, and I am trying to correct it as quickly as possible. And I am not trying to pin it on

"Mr. Mills. Mr. Secretary, my point is this, exactly the point you make. You attempt to lay the blame and the responsibility on this committee.

"Secretary HUMPHREY. No; I am not."

Prior to this point in the testimony, Secretary Humphrey had repeatedly stated that the Treasury Department had made a mistake and were partly responsible.

On page 11 of the uncorrected transcript, he stated:

"I think that it was a mistake. I think that it was a mistake that we made in the Treasury in the first instance in suggesting the matter. I think it was a mistake that you gentlemen and all of us participated in as we went along. It is one of those things that can happen, as I have said, when you are doing a job as big as this.

"We thought, and I am sure that you gentlemen thought, that all you were doing was a constructive job, as represented to us, to make the tax accounting and the business accounting coincide, which is a desirable thing if you just say it quickly."

On page 12, Secretary Humphrey further stated:

"So that is why I am here; because I think we made an error. I do not think we appreciated the results of what we said in the law. I don't think we appreciated the results of the advice that we gave you gentlemen. And I think that you gentlemen, on our advice and on your own hearings and on your own determinations, joined with us; and we just all made a mistake which ought to be corrected.

"Mr. Mn.Ls. The error, if is was made at all, was made in the acceptance of the proposition by the Treasury and the suggestion by the Treasury that this provision be included in H. R. 8300.

"Secretary Humphrey. We will take our full share of responsibility for it. I think we are all involved."

It was only after Mr. Mills of Arkansas kept trying to put the entire blame upon the Treasury Department that Mr. Humphrey made the remark you quoted out of context. The questioning and statement of Mr. Mills were so extreme, and I thought, in error, in trying to take all blame away from the Ways and Means Committee that I entered the colloquy, page 38, to make this statement:

"Mr. Curtis of Missouri. I mainly wanted to clear the record, because I want to disassociate myself from the views of Mr. Mills, in particular his defense of the committee. I personally am willing, as a member, to assume the responsibility, as a member of this committee, for what we did in H. R. 8300, and I would hate to see the time come when we did not, as a committee, assume responsibility for our actions.

"It is very good to inquire as to why we did certain things, to find out the course, to see where an error was made. But I, personally, think in order to assume any credit for what we did in H. R. 8300, we likewise must assume a responsibility for the harm that we have done. And I am not yet willing to say that this committee is a creature of either the executive department or political caucuses, even though there are members of the committee who seem willing not only to say it but by their actions make it a reality."

On page 92 of the transcript occurs this final colloquy, in point:

"Secretary HUMPHREY. I don't think that anybody had any idea; and I think if we had studied this provision for another year, we would still have put it in without knowing what has happened to date. It took actual application to find out.

"The CHAIRMAN (Hon. JERE COOPER, of Tennessee). I understand that. And I think you very appropriately stated here that the Treasury and you assume your part of the responsibility for the mistake that was made.

"Secretary HUMPHREY. That is right."

On Saturday, March 12, 1955, you have an editorial headed: "Now you see it, now you don't". You complain bitterly about a public relations firm quoting one of your editorials on the Dixon-Yates controversy out of context in relation to the other editorials you have printed on the subject. You conclude the editorial with the sentence, "Sweet are the uses of public relations."

Gentlemen, I think your complaint of being quoted out of context was justified. I suggest that you fight the cause of quoting out of context whenever and wherever it occurs. Also you might occasionally print the arguments on the other side of the Dixon-Yates controversy. This one-sided reporting your paper has indulged in on the Dixon-Yates and other public issues is just as reprehensible as quoting out of context and just as damaging to honest public discussion.

Yours truly,

THOMAS B. CURTIS.

Loyalty Program

EXTENSION OF REMARKS

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following letter from representatives of a great national organization that appeared in the New Times of March 14. It deals with our present loyalty program, reports on a survey conducted on that program, and indicates weaknesses in that program to which we ought to give our most earnest consideration if we are to sustain our standards of equity and justice.

The letter follows:

TO REVISE LOVALTY PROGRAM—RESULTS OF SURVEY PRESENTED AND RECOMMENDATIONS OFFERED

To the EDITOR OF THE NEW YORK TIMES:

Your March 7 editorial, Loyalty and Justice, makes a trenchant and significant contribution to the reexamination and reform of the Federal employee's security program.

On the basis of a survey recently concluded by the Antidefamation League of B'nai B'rith of the operation of the Federal employee security program in the Nation's Capital we heartily agree that further improvements in the program are indicated. We interviewed 8 Washington law arms which have handled a total of more than 450 security cases under the Truman and Elsenhower directives.

The most striking finding developed by the survey is that these lawyers won more than 90 percent of the cases. In other words, in 9 cases out of 10 the formal charges brought by the Government against an employee proved to be groundless.

UNNECESSARY DIFFICULTY

This arithmetic reveals some of the unnecessary hardship and heartache of the security program—because the present policy and practice are that the employee against whom charges are filed must first be suspended. In the overwhelming majority of cases, if past experience is a guide, he will ultimately be reinstated with back pay. But that will take an average of 6 months. Meanwhile, the employee will have been severed from his job. Demoralization will have set in. Reinstatement with back pay cannot completely undo the damage wrought.

It seems clear that security officers have failed to stop a thin or hollow case in its tracks, but have preferred to let the Issue go to a hearing board for determination. An indicated reform in the program would be to hold security officers responsible for sending along untenable charges that conscientious preliminary examination or a face-to-face meeting with the employee would have exploded.

All the lawyers consulted agreed on the need to revise the security program so that it will no longer be mandatory to suspend an employee against whom formal charges are filed, before final adjudication. Suspension before hearing may be reserved as a discretionary power in those cases where the employee holds an especially sensitive position and where the evidence against him is especially grave.

INSURING PAIRNESS

The lawyers all testified to the conscientious efforts on the part of present hearing board members to rule out prejudice and insure fair judgment. The few instances of malice or bigotry that cropped up were confined to informants, and the board members were alert to repudiate them when their motivation was revealed during the formal hearing. The extent to which other accusers may have been improperly motivated was, of course, impossible to determine while they remained anonymous.

In several cases superficially serious charges of pro-Communist activity were quickly evaporated when the accuser was cross-examined. Another reform they recommend would provide that an accused employee should have the right to confront his accusers, at least in those cases where the accuser is not an undercover FBI informant.

A third finding and recommendation relate to the need for stricter training and qualifications for security officials. Former Sentor Cain raised this point in his recent address when he called for security officials who understand both the Constitution and the history of the United States—especially, the lawyers would add, the history of the complex social forces of the Thirties and early Forties and the movements that mobilized and enlisted honest as well as disloyal dissent.

DIFFERENT MOTIVES

It appeared that employees who showed a special sensitivity to the dangers of nazism in the Thirties or to the need for achieving equal opportunity for America's minority groups have suffered disproportionately in the program. Security officials, whether because of timidity or lack of sophistication, have too frequently failed to distinguish between the employee who joined an organization because he hated Hitler and the employee who joined because he admired Stalin, between the employee who wanted civil rights as an end in itself and the employee who used it merely as a propaganda tactic for communist aims.

One of the virtues of these recommendations in our view is that they do not prejudice the legitimate vital interests of national security, while they strengthen traditional American guaranties of fair play. Indeed, we would argue that they would promote national security by strengthening morale and enhancing confidence in the fairness and humaneness of government.

We are glad to note that the administration has made some improvements which relate to some of the recommendations mentioned above, and that it will continue its review of the operation of the security pro-

DAVID A. Rose, Chairman, National Civil Rights Committee, Anti-Dejamation League of B'nai B'rith.

JACOB GRUMET, Associate Chairman. New York, March 10, 1955.

Rice Farming Has Golden Anniversary in Cross County

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF APKANSAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. GATHINGS. Mr. Speaker, as the Nation celebrates National Rice Week, it is interesting to note that Cross County, Ark., is celebrating the golden anniversary of rice farming in that county.

In the March 10 issue of the Wynne Progress, which has been one of the outstanding advocates of a better agricultural economy in Arkansas, there appears a fine article written by Mr. R. A. "Bob" Fisher, which tells the fascinating story of rice farming not only in Cross County but also in America.

Keeping in mind that rice is the biggest "money crop" in world agriculture, the Members should find this article most interesting:

This year, 1955, marks the golden anniversary of rice production in Cross County, although there is no documentary evidence of the fact. According to oldtimers in the county, rice production was first brought to this county by the Evans brothers, of Hickory Ridge, in 1905, but no written record of the first crop is available.

However, golden is a good descriptive word for rice in the country for it has increased in importance until it is now 1 of the 2 great crops in this area.

By 1910 rice farming had started its spread throughout the county. One of the first producers was the late Rush Wright, who planted his first crop in Poinsett County, near the Cross County line, in 1910. He got his seed from the Evans brothers. It was of the Honduras variety and produced very well. Other rice types of this period were the short-grain Pearl rice and Blue Rase.

After 1915 several long-grain varieties were introduced, including Nira, Bluebonnet, Rexark, Fortuna, and others. The most popular of today are Zenith medium grain, Bluebonnet, and Century Patna long grain, and Pearl varieties of short grain.

From the small beginning in 1905, Cross County rice production increased to a total of 63,795 reported acres in 1954, with a crop of more than 3,000,000 bushels of milling rice. The 1955 acreage allotment for the county is slightly above 36,000 acres.

In addition to the milling rice, Cross County produced several thousand bushels of top-quality seed rice. As a money crop, rice is now second only to cotton in the county.

There are now 5 large dryers and 1 rice mill in the county, and several growers have their own dryers. Due to curtailment of production by acreage controls the expansion of drying and milling facilities will probably be at a standstill until controls are lifted or acreage is greatly increased.

RICE IN THE NATION

The first successful introduction of rice culture into the United States was made in 1685. Legend has it that a brigantine sailing from the island of Madagascar suffered heavy damage in a south Atlantic storm and took refuge in the port of Charleston, S. C. While at the port making repairs, the captain of the ship gave a small quantity of rice to a Dr. Henry Woodward, who planted some of it and gave some to a few of his friends. From this seed came the Carolina gold rice which later became the standard of high-quality rice throughout the world.

After introduction of rice into the Carolina colonies production spread rapidly and in 1698 there were 60 tons of rough rice shipped to England from this area. In 1800 the total production in the United States amounted to 65 million pounds.

RICE WAS MONEY

The economic importance of rice in the early colonial period is indicated by the fact that it was once used as a medium of exchange. At one time rice bills were issued in North Carolina redeemable by a tax pay-

able in rice at the rate of 30 shillings (\$7.19) for each hundred pounds.

It was full legal tender, or as it was then called, a rated commodity, worth 1 pound, 5 shillings (\$5.97) per 100 pounds, cleaned and fit for transportation. It was receivable for all private debt and even for the payment of taxes.

RICE MOVES WEST

Rice was first introduced into Louisiana in 1718 by a group of Frenchmen led by Bienville. For about 50 years thereafter, however, it was not a major staple crop but was grown mostly in small plots as food for laborers and low-income farmers.

After the Civi War rice production increased rapidly in Louisiana and in 1864 total production was 1,600,000 pounds. Within 10 years after the end of the war production reach 22 million pounds and in the 3 years from 1874 to 1877 the figure was doubled.

This unusual increase was due to depressed prices of sugar and cotton following the war and the development of cheap methods of production in the flat lands near the river.

THE CIRCLE WIDENS

The major expansion of rice production in the southwestern area, however, came as the result of a discovery by a visiting Iowa farmer in 1884 that rice could be produced on the broad level prairie lands of southwestern Louisiana by mechanized methods then in use for production of wheat in the upper Mississippi Valley. A single wheat binder was brought in from the midwest to harvest rice mechanically in 1884. Five were used in 1885, 50 in 1886, 200 in 1887, 400 in 1888 and more than 1,000 in 1890.

Upland or nonirrigated rice was grown to a small extent in Texas as early as 1863. The crop did not become of commercial importance until after developments in mechanization in Louisiana. In 1889 there were 8,500 acres being grown on an experimental basis in the Beaumont area in Texas. The test was successful and rice production expanded throughout the east Texas prairie area.

INTO ARKANSAS

In 1902 rice was grown on a limited scale on the Grand Prairie of Arkansas near Lonoke under similar production methods to those in use in Louisiana and Texas. In 1904, there were 400 acres in the Lonoke district and by 1910 Arkansas had become the third most important rice State in the Union.

THE RICE AREAS

There are now three important rice producing sections in the United States. They are the Gulf Coast area of southwestern Louisiana and southeastern Texas. About 60 percent of the United States crop is produced in this region which extends along the Gulf of Mexico inland for 50 to 75 miles from a point near Lafayette in southwestern Louisiana westward to El Campo in southeastern Texas.

The remainder of the production is divided along the Grand Prairie section of eastern Arkansas and tablelands west of Crowley's Ridge from the Missouri to the Louisiana lines, and the Sacramento and San Joaquin Valley of California.

The original rice center, which was the Carolinas and Georgia, is no longer of any great importance in the rice trade.

Future expansion of the region of rice culture is likely to be limited. This is because of the rigid requirements of abundant water, level land, impervious subsoil, and relatively cheap agricultural land. Four Hundred and Thirty-fourth Anniversary of Magellan's Voyage to the Philippines

> EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. O'HARA of Illinois. Mr. Speaker, this is the 434th anniversary of a great historic event that I think it fitting should be noted in the Congress of the United States. At the suggestion of my good friend of many years, Dr. John Vdan, long a leader in the Philippine-American group, I am extending my remarks to include an article by Maximiano Marmito Villareal, a Philippine world traveler and author in Esperanto of The Philippine Flag Stands As a Monument in American Democracy.

The article follows:

THE PHILIPPINES FROM MAGELLAN TO MAGSAYSAY

March 16, 1955, is the 434th anniversary of the epic and most brilliant voyage ever attempted by man in the annals of history, which saw Ferdinand Magellan and his wooden Spanish fleet land in the Philippines trodden by a crew of brave Spanish and

Portuguese sailors.

This most important highlight and energetic contribution to world history epito-mizes the introduction of Christianity into and the immediate opening of that part of the world to western man. It also confirmed the fact touching on the shape of the globe. Christopher Columbus up to the time of his death believed that he had reached and found the border of the mainland of Asia. Magellan, by virtue of his round-the-world journey saw a part of the world which Columbus had missed, yet proved his outstanding theory of the roundness of the globe correct.

On Cebu Island Magellan baptized the native king and his subjects. Then he negotiated a treaty of alliance with the native king in behalf of the Kingdom of Spain which had sponsored this adventurous voyage. This signalized the first treaty ever made in that part of the world between the

Orient and the Occident.

Unfortunately Magellan himself was unable to return with his fleet when it made a return voyage back to Seville, Spain, in the capacity of captain general, because he was killed in a battle in Mactan Island where native defending forces gained the upper hand, led by Chief Lapulapu. The victorious side refused to return the corpse of Magellan despite offers of payment of a ransom made by the Spainards.

The courage and heroism of the invasionrepelling natives penetrated so deeply into the patriotic consciousness of the Philippine people that it strongly impressed generation after generation of worthy citizens, eventually steeling them to establish the

present Philippine Republic.

Since the visit of Magellan, the Philippines became the connecting, powerful link between all nations of the world in regards to crossing of the high seas for intercontinental promotions of shipping and com-This circumstance, considered in its relation to the promptings of able Philippine leaders, serves to aggrandize native approaches toward making contacts on a friendly basis of cooperation-hence the Philippines is virtually a brilliant star in the firmament of international good will,

shedding a beacon light in that region of the world for guiding the theoretical and literary navigators in the changing panorama of a progressive world. Such a spirit is ever effectual to diffuse a knowledge of science, invention, geography, history, politics, government, diplomacy, and economics, commerce and navigation.

Friendly cooperation between the Philippines and the United States which started flourishing immediately after the Battle of Manila Bay, alluding to events which transpired more than a half century ago, contributes notable chapters demonstrating the right road to take in solving complicated world problems and issues. The member-ship of both countries in the United Nations manifested the greatness of conjoint effort in shapingly influencing international attitudes

Today the lines of effectual confluent pacification are sharply drawn-conspicuously indicated. Absence of friendly intercourse between alert nations due to nonuse of an international auxiliary idiom whereby the rank and file of all peoples themselves can expressly make known honest, holy aspirations, is truly in our atomic age a barrier of acutely ubiquitous and formidable proportions.

The various peoples must sense the need for participating in the labor, in the fulfillment of undertakings to bring about lasting amicable relations between all nations. By press disclosures, conferences, travel, and through correspondence, publicity concerning the impressions of all peoples is stimulated inculcating assurances of the noble aims of the masses everywhere. Especially by aid of Esperanto, the epochal linguistic veteran of international communication, serving as a neutral, second, easy interlanguage, is this high ideal of interfraternization made possible. As a definite result of its usage people in all parts of continental regions react as though they are neighbors, next-door friends.

The Philippine Republic which is headed by President Ramon Magsaysay and Vice President Carlos P. Garcia, can help considerably by getting in back of UNESCO and its parent United Nations which recently in conference held at Montevideo, Uruguay, passed a resolution favoring Esperanto in token, and in commendation to encourage its role as a neutral auxiliary idiom, and so likewise should President Dwight Eisenhower and Vice President RICHARD NIXON of the United States display the same attitude which serves to instill in the hearts of the multitudes a desire to employ Esperanto as a fitting vehicle of intercontinental communication.

It would certainly be a high-minded accomplishment were the heads, also the elite of all nations engaged in a supreme effort aiming to implement the work of UNESCO by encouraging their several populations to join an enlightened movement for promotion of good will, friendship, and mutual understanding. This is bound to come about where there is an amicable, an earnest exchange of correspondence on the part of citizens of diverse nations who find themselves able to make use of an interlanguage as a neutral medium of intercommunication between language-divided nations.

This would assuredly be directly in line with the main purpose and objectives of the proponents and users of the international interlanguage Esperanto, which is put forward as being a second language for all peoples of the world to employ. The resultant gain in universal benevolence, sustained peace, incessant security, and unalloyed harmony in the international horizon will redound with augmented credit to the benefit and glory. noble traditions and gestures of all countries, thereby ameliorating at long last the chaotic political and economic conditions obtaining nowadays throughout the world,

thereby giving voice to still more powerfully, effectively, adequately sustained co-operation that have entered into the operation that have entered into the thoughts, into the hearts of the Philippine and American peoples.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

COVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which I shall be delivered at his residence, I at his office, and I at the Capitol.

Appendix

Natural Gas-What Has Happened

EXTENSION OF REMARKS

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. ROGERS of Texas. Mr. Speaker, what a whale of a difference a few decades make. Only 50 years ago the oil prospector who found some gas wells or—even worse—a gas field, manfully strove to keep from blubbering at his bad luck. For gas was not worth the match that turned it into a fiery monument to waste. Nobody wanted it. There was no way to haul it as you hauled the coal, oil, wood, that stoked the Nation's industrial fires and cooked its meals.

Nor is this all. If someone had then asked any of us to invest in gas, we would have ranked him with the slickers who were "selling" New York's Flatiron Building at bargain-basement prices to honest country folk visiting the metropolis. And that is where we would have made fools of ourselves.

The stone the builders rejected has become a chief cornerstone. Today natural gas is the Nation's sixth largest industry.

Today upward of \$12 billion is invested in the gas business. That is a lot of money even in a country where a quarter interest in a champion breed bull brings more than a king's ransom used to bring. And nearly every day someone in this dynamic industry is going to the public for more money to build more facilities to supply more gas to more people. How come? You may ask. What has swiftly transformed natural gas from a blooming nuisance itno a spectacular success?

The chief thing is this. If you produce something—in this case natural gas—that people universally like because it best serves their needs, price it right so that everybody can use it, service it in "the show's the thing" tradition of the trouper who goes onstage even if it kills him, then you are almost sure to become successful. Then you can nail down your success if you do not get too big for your britches and you remember that you are not God's gift to mankind but are just a businessman competing honorably with others who also have good products to sell.

In general, I believe the gas industry has had enough mother wit to abide by these principles. And whenever it forgets them it ought to be—and will be—soundly spanked. As for natural gas itself, evidently there is nothing wrong with it even if—as they are the first to admit with crimson brow—not all gas—

men wear fledgling wings. Now I do not like statistics any more than you do, but just as the doctor cannot examine your throat unless you say "ah" through a spoon, so the case cannot be made clear without using a few figures. Here they are:

Thirty-three million families cook with

Eighteen million families heat water with gas.

Four million families use gas refrigerators.

Fourteen million families heat their houses with gas.

It would seem, then, that, next to children, gas is the favorite household pet of them all, for nearly three-fourths of all American families depend upon it in their daily living.

The figures show this but they do not give us the why of it. Why did gas become a household favorite of the American woman who is wife, mother, cook, maid, companion to husband and children, and often helps support the family to boot? Because gas is clean; gas need not be stored as coal and oil are stored; gas contains no built-in waste; gas, if it could sing, could sing Ethel Merman's old favorite to its oil and coal competitors around the house, Anything You Can Do I Can Do Better; gas is priced right.

That last line, as it stands, is idiotic. It is like the advertising that reads: "Joe's pies are better." Better than what? Joe does not tell us. He tries to make us believe that his pies are better than the best pies available even if that is as far from the truth as a pig is from an understanding of Easter.

When I say that "gas is priced right," I mean that it is priced right in relation to its great competitors: coal and oil. Actually I believe that millions of American housewives, because of what one might call the housewifely qualities of natural gas, would willingly pay more for it than for competing fuels. But gas has made its way in the American home against the hard competition of oil and coal not only because of qualities that endear it to the housewife, but also because she could buy it nearly always for less, and certainly not more, than she would have to pay for coal or oil.

Yet—and this is as it should be—the very presence of coal and oil to which the housewife could turn if gasmen had been so stupid as to try to gouge her on prices helped keep the price of gas on the sunny side.

Those who produce gas are proud to have a secure place on the American hearth. It is cozy there and occasionally you can scent the homey aromas of cinnamon and apples coming from the kitchen. But no less proud to have an important place in the American factory. In fact, industry is the biggest customer.

Now, industry, as you know, buys what it needs to buy on one basis only: "Will

this article give us better service for a lower price than any competing article on the market?" And that works just fine. Because this basis has produced so much business that gas folks are nearly driven frantic to produce enough gas and build enough pipelines to deliver it to industrial customers whose appetite for gas seems to grow by what they feed upon.

But here again a salutary competition exists for those in the gas business, and if they should ever be foolish enough to forget it, they would deservedly lose their silly little heads. This competition lies in the fact that industry does not have to use natural gas. Gasmen have no monopoly. If, therefore, the gas industry should ever get "above its raisin'" it would price itself out of the market because industry and the housewife can always turn to coal and oil.

What has happened, then, is this: When gas producing was growing from a nuisance to the condition of spectacular success, gasmen sold their product at prices so competitive with other sources of fuel energy that gas won a secure place in American families and industrial life. During this period there was no regulation of gas producers—men who spend their lives hunting for gas—by the Government. But last year the Supreme Court, as you perhaps know, changed all that. It held that producers of natural gas were subject to regulation by the Federal Power Commission.

This is the law. It will remain the law unless Congress should step in and say plainly by statute that it is not in the public interest that producers of natural gas should be subject to Federal regulation and so return to the happy state of yesterday when gas met all comers in the field of competition and made its way to great estate in American life. I have the highest respect for the Supreme Court, but as its own record of reversals of opinions shows, it is not infallible and-praise the Lord-it does not think it is infallible. And fortunately for us free Americans, as a cat may look at a queen, so the humblest layman among us may question the wisdom of the highest legal authority among us. Hence the following observations that simply make sense:

First. Will the regulation of gas producers create greater and greater quantities of gas needed by Americans? I do not think so. Gas producing is risky. It is an enterprise that is neither all adventure nor all business but is always risky. If you hit it right, you may make a lot of money; that is, if you are permitted to bargain in your own way for the sale of your treasure trove. If you do not hit it, you will lose your shirt and there is no Marshall plan for shirtless gas producers. The chances are that you will not hit it, but that has never restrained Americans who have always

been willing to take high risks for the sake of high rewards. But just as there is a big difference between courage and foolhardiness, so there is a big difference between the man who will risk a lot for a hefty reward and the fellow who will risk a lot for a small reward or nothing. The latter does not last long and, while he does, his standing in the community is not enviable.

Second. Federal regulation of utilities has hitherto affected a relatively few firms—railroads, pipelines, and so forth. They are easy to regulate. They are not only few but are remarkably alike in structure and function. And—in return for regulation—the Government often grants them semimonopolistic status and clothes them with awesome rights such as the right of eminent domain—which means that they can confiscate your property, no matter how loud you howl, and pay you a fair price for it.

Yet, how are you going to apply these principles to gas producers? There are thousands of them. They are big, little, and runts. No two are identical. No two have an identical history. They are all bewilderingly different and each—to be fair—would have to be regulated, not on the basis of similarity, but upon the basis of dissimilarity. Yet, no regulatory body can regulate on the basis of dissimilarity for this would introduce into the regulations, not uniformity, but anarchy. But that is what the FPC faces if it is going to regulate fairly thousands of gas producers.

The gas industry is enormously complex, and Mr. Justice Douglas, dissenting from his brethren of the Court who held gas producers to be subject to regulation, said that it was perhaps too complex for the Court to understand upon its own. And it was just here that 50 years ago, Mr. Justice Holmes, one of the most brilliant minds that ever sat on the Supreme Court, said:

But legislatures and courts generally have recognized that the natural evolutions of a complex society are to be touched only with a very cautious hand.

Everybody agrees it is in the public interest that railroads, say, and some transportation gas and oil pipelines should be federally regulated to guard the public against possible abuse by them. These utilities are, with some exceptions, not producers. They sell a service: transportation. But it is recognized that while Government may regulate railroad rates, it may not regulate the prices of commodities hauled by railroads. Government may say that a railroad may not charge more than \$2 a ton to haul coal from Albany to Ashland. But it may not regulate the price of coal.

Some great companies of the gas industry produce gas themselves and transport it through their own pipelines. Sellers of both a commodity—gas—and a service—transportation—they constitute a separate category in the industry whose potential regulation must be considered in the light of their two-way function if great injury is not to result to all concerned.

This enormous distinction has always prevailed between the price of gas in the pipeline and the price of gas at the well-head—that is, before it has got into the

pipeline. At this point it is a commodity. Its price is one between seller, buyer, and the market. No one has ever believed that the price of such a commodity is any more subject to Federal regulation than other commodities are subject to it. Logically, if government is going to regulate the price of gas at the wellhead, it will eventually have to regulate the price of coal at the pithead and the price of oil in the well. This would mean Federal regulation of the great sources of fuel energy. And since America is what one might call combusion on wheels, the day would then be at hand when government, through control of our fuel energy sources, could control every business in this land from the greatest steel company to the smallest peanut roaster. I do not believe that is what Congress intended when it wrote the Natural Gas Act in 1938. I do not believe that that is what the overwhelming majority of the American people want either. And I do not think it is what you want. Hence, I think this is a matter of concern to all who want to go on in the future as a free-enterprise nation.

I hope, therefore, that Congress will declare that the regulation of natural-gas producers is not in the public interest. But pending its action, and regardless of what action it takes, I want to say this:

The gas people are loyal American citizens just as you are. They shall abide by the Supreme Court's decision so long as it is the law. They will do their best to find more gas to supply more people even if it must be done with one hand tied. They believe they can do an even greater job in the future than they have in the past if given the chance to do it. In the meanwhile, they are trying to tell people what is happening, serene in the belief that if they are right—and I profoundly believe they are—the people of this Nation will see to it that right prevails.

The New Concept of Education Embodied in the Land-Grant College Movement Not Limited to Two Colleges

EXTENSION OF REMARKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. SCHWENGEL. Mr. Speaker, I wish to insert into the Record my reply to a news release from Michigan State College concerning my statement to the press about the Michigan State College and Pennsylvania State University commemorative-stamp issue of February 12, 1955, a copy of which was filed in the CONGRESSIONAL RECORD, March 16, by Hon. Charles E. Potter, Senator from Michigan. My original statement appeared in the Record of March 15, 1955.

This commemorative stamp honoring the centennial of the founding of Michigan State College and Pennsylvania State University is referred to in the Michigan State College release as a stamp "to honor the founders of the new concept of higher education." The new concept of education in agriculture and mechanical arts in institutions of higher learning had been started in other colleges and universities throughout the Nation. It was a part of the productive growth of this country, and the tremendous westward expansion, and the need felt for practical education and wider educational advantages for more Americans. To single out only two State institutions to honor for this new concept of higher education is to deny the significant contemporary movements, in other States, to establish a broader base in higher education. Senator Justin Morrill, author of the Land-Grant College Act named for him, emphasized this in a speech before the Vermont Legislature at Montpelier in 1888, when he said:

The fundamental idea was to offer an opportunity in every State for a liberal and larger education to larger numbers, not merely to those destined to sedentary professions but to those much needing higher instruction for the world's business, for the industrial pursuits and professions of life.

In Iowa, for example, in 1848-

The legislature asked Congress to grant to the State the site and buildings of Fort Atkinson in Winneshiek County, with two sections of land, for an agriculture college. Nothing came of this movement, but on December 28, 1853, the State agriculture society was organized by people interested in agricultural education. * * Petitions for an agricultural college multiplied and finally on March 22, 1858, Governor Lowe approved a bill for a State agricultural college and farm.

This is only one example of the movement which was evolving in many States at that time. In fact, Iowa was also active during the consideration of the Morrill Act of 1859 which was vetoed by President Buchanan. Earle Ross in his History of Iowa State College points this out in the following description:

Iowa legislators authorized the establishment of an agricultural college with the definite expectation of Federal aid for their project, either through general grants to the States such as that proposed in the first Morrill bill then pending or by a special subsidy. * * *

On March 3, 1858, the legislature approved a memorial to Congress asking "a donation of 50,000 acres of land, to be taken from public lands in this State, for the purpose of establishing scientific agricultural schools." The memorial urged that "the farmers of the State of Iowa are exceedingly desirous to establish a scientific agricultural college and schools for the purpose of giving freely to all a profound knowledge of the great truths and fundamental principles of nature."

The Michigan State College release contains a quotation from Dr. Russell I. Thackery, president of the Association of Land-Grant Colleges and Universities. This, in my opinion, cannot be taken as a definitive answer to the question. I

¹True, Alfred Charles. A history of agricultural education in the United States. 1785-1925. Washington, U. S. Government Printing Office, 1929. P. 109.

² Ibid., p. 152.

⁹ Ross, Earle D. A history of Iowa State College. Ames, the Iowa State College Press, 1942. P. 35.

colleges which later were designated for the functions of the Morrill Act, but they

call to your attention that he is quoted as having said:

I think it is generally recognized that Michigan State is the first agricultural college of its type actually in operation deserves the distinction of being called the first landgrant institution.

You cannot build historical fact on what people think. Where does this place Pennsylvania State Agricultural College which, according to the stamp issue, is also celebrating its 100th anniversary and is designated by this as first of the land-grant colleges?

An additional error in fact, I would like to point out, occurs in the Michigan State College news release. They would have us believe that Dr. Adonijah Strong Welch was, and I quote:

A president imported directly from the East Lansing campus, according to Dr. Madison Kuhn, Michigan State College historian and author of the forthcoming book Michigan State—The First Hundred Years.

According to Earle D. Ross in his History of the Iowa State College of Agriculture and Mechanic Arts, Dr. Welch was head of Michigan State Normal College at Ypsilanti, Mich., in 1852 and "he served general education by the promotion to teachers' institutes and of a State teachers' association and aided technical training by service on the board of the agricultural college." He was not "imported directly from the East Lansing campus," as the Michigan State College press release says because, according to Earle Ross:

In 1865, failing health caused him to seek a milder climate, and he went to Florida, where he engaged in lumbering and fruit growing near Jacksonville. * * * His leadership in reconstruction politics had been felt among northern residents of Florida, and he was offered one of the senatorships of the restored State government. * * On June 17, 1868, he was chosen by the Florida Legislature for the short senatorial term ending March 3, 1869, took his seat on July 2, and served the remaining 25 days of the long session before assuming his academic duties in Iowa.*

In addition to this, I have also noted that in its centennial pamphlet, The First 100 Years of a New Educational Concept, Michigan State College states that it "and most of the the 53 land-grant colleges rank among the largest and best-known universities of the world." Their reputation is not disputable. Their contribution to American higher education deserves recognition, but there are not 53 land-grant institutions, there are 69.

There are two more points from my original statement I wish to reemphasize today. First, I salute those two great institutions—Michigan State College and Pennsylvania State University—on the occasion of their centennial celebrations and hope that their next hundred years will be as successfull and as resourceful as the first hundred.

Secondly, there was no such thing as a land-grant college under the Morrill Act in 1855 since the national legislation creating them was not enacted until 1862. Granted there were agricultural were not land-grant colleges until the several State legislatures accepted the terms of the Morrill Act and officially specified which State educational institution was to be the agricultural and mechanical arts college.

I call upon the presidents of these two

I call upon the presidents of these two fine institutions to review the documented facts as outlined here, as well as others which further study will reveal, in order that the reputations for truth and honesty which they have earned through their outstanding records will not be questioned in a situation like this where they seem to be taking advantage of others who should at least share in the honors.

The Post Office Department should be absolved of blame because it was led to believe that the picture as presented by these institutions represented the whole truth when it seems evident that this is not the case.

The Need for Improvement in the Social-Security System

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill to amend the Social Security Act in order to provide for greater economic security for our senior citizens over the age of 60 when they reach the evening of their life.

Because of the increasing number of older people in our population, there is a growing interest in the economic and social problems which have arisen as a result of this change in the makeup of this country's population. I believe we should give more serious thought to these problems so that we can deal more adequately with the growing number of elderly people and afford them the opportunity to spend their declining years in greater comfort and fewer economic worries.

In the last few years there have been some changes in the structure of our social-security system, which has been expanded to include greater numbers of our citizens, and the benefits have been somewhat liberalized. It is my conviction, however, that we have not gone far enough. There are still some serious deficiencies which should be corrected. In many instances the benefits are far from adequate and provide only a minor part of the needed security. In other instances the age limitation is too rigid, so that many people who are in dire need of this security cannot obtain it.

My bill aims to correct some of these deficiencies by improving and increasing the social-security benefits and by decreasing the age limit so that more people would be entitled to these benefits at a

time when they are most urgently in need of this assistance.

The bill which I am introducing seeks to amend title II of the Social Security Act in four major respects, namely, to increase the minimum benefits, to increase the amount of outside earnings, to reduce the retirement age at which such benefits become payable, and to extend coverage to include self-employed professionals. Let us examine these four amendments more closely.

First. Increase in minimum benefits: The minimum monthly benefits payable under the social-security system at the present is \$30. This is a most inadequate sum for an elderly person to be able to subsist on for an entire month at the current cost of living rate, especially where these people are no longer physically able to earn the limited outside income permissible under the law. Talk to any of our older citizens receiving this minimum and you will find that they are quite bitter and resentful over it. They feel that they are the forgotten people.

Consequently, I am proposing to raise the minimum monthly payments to \$40, which averages at about \$1.30 per day over the month—not a very large sum to cover even the most elementary needs. Nevertheless, I am certain that this small increase will be greatly appreciated by many elderly people throughout the country.

Second. Increase in the amount of outside earnings: Under our present law, those entitled to receive social-security payments are allowed to earn up to \$100 per month without deduction or loss of such benefits. There are still many among our older citizens who are able to work and they desire to do so in order to maintain a greater degree of economic independence and to keep themselves productively occupied. They can still render good services for their community and for the country as a whole, and we need not deprive them of this opportunity prematurely.

Therefore, I urge that the so-called work clause in the Social Security Act be amended to allow these people to supplement their income through part-time work whereby they can earn up to \$125 per month or a total of \$1,500 per year, instead of \$1,200 per year as at present.

Third. Lowering of retirement age: I consider this as the most important amendment proposed in my bill. A lowering in the eligibility age for entitlement to retirement benefits under social security is long overdue. Somehow, in the changes and improvements made in the law in recent years, this badly needed change was overlooked. Today, the age limit for eligibility to social-security benefits still remains at 65, and this age has become a yardstick of retirement. This causes a great hardship on many persons between the ages of 60 and 65 who are suffering from ill health and are no longer able to work and earn a livelihood.

It is particularly causing a great hardship for widows in this age group, who must wait until they reach the age of 65 before they can qualify for survivor's insurance. At the age of 60 or more women have almost no chances of ob-

^{*} Ibid., p. 60.

^{*} Loc. cit.

taining any kind of employment. In most instances they have no income on which they could fall back, and unless they have children to aid them they must turn to public relief in order to maintain themselves. I believe they should be taken off the relief rolls and provided for in a dignified manner the same as other elderly people.

It is estimated that there are some 6 million people, men and women, between the ages of 60 and 65. Fortunately, the overwhelming majority of these people still work and prefer to continue to work. But the few hundred thousand among them who have become ill and disabled cannot receive any benefits until they reach 65 and they face the alternatives of either becoming public charges or starving. Surely, this is no way to treat our senior citizens who have a right to expect at least a minimum of economic security from their country at a time when they can no longer be productive.

I am suggesting in my bill to lower the retirement age for entitlement to socialsecurity benefits from 65 to 60 years. I am familiar with the argument that this will cost us a large sum of money, but at this time I do not wish to go into a full discussion on this point. Suffice it to say, that the same arguments were made when social security was first enacted and they are being made each time an amendment liberalizing the system comes before the Congress. Yet. our social-security fund is growing from year to year. If it is a question of a choice between saving a few hundred million dollars annually or providing economic security to people between 60 and 65 who are dependent on such aid for their daily sustenance, I shall gladly choose the latter. Furthermore, this money will be used by the beneficiaries for food, clothing, rent, and other necessities of life and it will thus go right back into our economy.

Fourth. Extension of coverage: The fourth and last amendment of my bill calls for the extension of coverage to certain professional groups which are not now included in our social-security system. I refer specifically to self-employed lawyers, doctors, dentists, osteopaths, veterinarians, and optometrists. They should be afforded proper coverage under the law the same as other self-employed persons. There is no reason why these people should be discriminated against in enjoying the same degree of economic security as other American citizens.

Mr. Speaker, we must begin to look upon the problem of our aging population in a more realistic and more humane way. To ignore this problem as if it did not exist means that we are committing a grave injustice to millions of our elderly citizens, who deserve better treatment. By enacting the changes proposed in my bill, we shall take a decided step forward toward providing greater economic security for the American people. The provisions suggested in this bill will help to remove some of the more glaring deficiencies of the social-security system.

These amendments are neither unreasonable nor impracticable. It is a sincere effort to improve our social-security system in such a way that existing discriminations are eliminated and the greatest number of our people would be able to look forward in their old age to receiving adequate economic protection. They have earned this protection and they deserve to receive it when they most need it.

Republicans and Democrats Beware

EXTENSION OF REMARKS

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1955

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fairmont Daily Sentinel of March 1, 1955, entitled "Republicans and Democrats Beware":

The more than \$3 billion thrown out the window in foreign aid by one man alone—Harold E. Stassen, repudiated Minnesota politician—about equals the deficit the American taxpayers must make up in our national budget. It has bought us no good will, no loyalty, accomplished nothing toward promoting the security of our Nation. The FOA, which Stassen heads, was supposed to have been liquidated in June 1955, but already Minnesota's "wonder boy" has his target set for saving Asia through continuous giveaways through the Foreign Operations Administration.

The FOA is only one of the countless agencies set up under the New and Fair Deal administrations and perpetuated under the Eisenhower administration. The agencies are neither Republican nor Democrat in concept; rather, they are an entirely new breed of political hybrid spawned within the ranks of both parties. They have taken over and, through propaganda agencies supported by money exacted from American taxpayers, have formulated and sold the world on a new concept of Americanism that has left us largely without friends, even among those who naturally should be our allies.

The \$3 billion spent by Stassen in the FOA, the \$112 billion dug up by American taxpayers since 1940, would have built a lot of schools, hospitals and roads in the United States. (He is asking more than \$5 billion for 1955.)

We couldn't afford the \$3 billion plan which, in 7 years, would have reclaimed enough land to have provided more than 20,000 farms from wastelands in the United States. But, under the guidance, the propaganda and efforts of the do-gooders and one-worlders, the American taxpayers dug up five times that amount, in the same period for the ECA and MSA, to be spent in foreign lands.

We stage drives to raise a pitifully few dollars for our own homes for crippled and underprivileged children, but the American taxpayer is stripped—without so much as "by your leave"—of almost \$100 million for the United Nations Children's Fund for child health overseas.

The American taxpayer, under programs devised by the political hybrids of both major parties during the past 14 years, have played nursemaid to 40-odd nations who have stripped them to the extent of more than \$112 billion; yet, we have made no new friends. We have lost many of the old ones. We are viewed with suspicion by those who should be our allies.

It is high time that Republicans and Democrats alike take an inventory. Even this rich nation, with only 7 percent of the world's population, cannot continue indefinitely, to be saddled with the burden of carrying 97 percent of the world's inhabitants. The American taxpayer is hardy, but not that hardy.

We have been on the programs long enough to know by now that "throwing" the money at them has won us no new friends, no new allies. In case of actual need, let them come and ask for it. They'd have a lot more respect for us if they did.

Regulation of the Water Levels of Lake Ontario

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include a press release issued yesterday by the International Joint Commission with respect to regulation of the water levels of Lake Ontario.

The Commission, following a meeting earlier this week in Montreal, arrived at the tentative conclusion that the water levels of the lake can be regulated in accordance with the interests of all the users of the lake. Under its proposals, the normal fluctuations of the lake, which have ranged through 6.6 feet, will be reduced by as much as 2.6 feet, while the outflow will be maintained at a level which will benefit lakeshore property owners as well as navigation and power interests.

In my judgment, Mr. Speaker, the Commission deserves warm commendation for this constructive proposal. With the seaway and power developments taking place on the St. Lawrence River, residents of the lakeshore have feared, and not without reason, that their properties could be flooded and destroyed, and that they would be without legal remedies. The proposals of the International Joint Commission should, if approved, go far to assure them, as well as the power and navigation interests, that the interests of all can be protected. This is indeed a welcome step on the part of the Commission.

The release follows:

International Joint Commission, United States and Canada, Washington, D. C., March 16, 1955.

Following is text of press release for simultaneous release in Montreal and Washington:

"At its meeting held in Montreal on March 14, 15, and 16, 1955, the International Joint Commission examined with its technical advisers the feasibility of reducing the wide fluctuations of levels (up to 6.6 feet) which have prevailed on Lake Ontario in the past. The Commission came to the tentative conclusion that, having due regard to all the interests concerned, both upstream and downstream from the International Rapids Section, it would be technically feasible to operate the St. Lawrence power project so

as to reduce the wide range of fluctuations of levels on Lake Ontario.

"In order to achieve this desirable result, the Commission's tentative view is that a new method of regulation for the waters used in the project must be substituted for the method of regulation No. 5 referred to in the Commission's order of approval of October 29, 1952. The new method of regulation would fulfill the basic requirements of that order and would comply with the detailed criteria attached hereto. These criteria are designed to result in benefit to all interested parties. They will afford protection for downstream interests and, in fact, would improve conditions on Lake St. Louis. The lakeshore property owners on Lake Ontario will find substantial relief from the high water levels which reached a recorded peak of 249.3 feet. The maximum level under historical supply conditions, would under the regulation proposed not exceed 248 feet. Navigation interests will gain the advantage of 1.3 feet in depth, which is important under low water conditions, by virtue of raising the extreme low Lake Ontario stage of record from 242.7 feet to to 244 feet. Water supply, sanitation, recreational, municipal, and other lakeshore interests will also benefit from this substantial improvement in low water conditions. Finally, the power interests will obtain, under the new method of regulation, a regulated flow of water which will represent an improvement over benefits which might have been calculated under the method contemplated in 1952.

"The International Joint Commission has scheduled public hearings to be held in Rochester, N. Y., on April 12 and in Toronto, Ontario, on April 14 to hear the views of all interested parties on these tentative conclusions."

INTERNATIONAL JOINT COMMISSION—PROPOSED
CRITERIA FOR A METHOD OF REGULATION OF
OUTFLOWS AND LEVELS OF LAKE ONTARIO
APPLICABLE TO THE WORKS IN THE INTERNATIONAL RAPIDS SECTION OF THE ST. LAWRENCE
PLYERS

(a) The regulated outflow from Lake Ontario from April 1 to December 15 shall be such as not to reduce the minimum level of Montreal Harbor below that which would have occurred in the past with the supplies to Lake Ontario since 1860 adjusted to a condition assuming a continuous diversion out of the Great Lakes Basin of 3,100 cubic feet per second at Chicago, and a continuous diversion into the Great Lakes Basin of 5,000 cubic feet per second from the Albany River Basin (hereinafter called the "supplies of the past as adjusted").

(b) The regulated winter outflows from Lake Ontario from December 15 to March 31 shall be as large as feasible and shall be maintained so that the difficulties of winter

power operation are minimized.

(c) The regulated outflow from Lake Ontario during the annual spring breakup in Montreal Harbor and in the river downstream shall not be greater than would have occurred assuming supplies of the past as adjusted.

(d) The regulated outflow from Lake Ontario during the annual flood discharge from the Ottawa River shall not be greater than would have occurred assuming supplies of the past as adjusted.

(e) Consistent with other requirements, the minimum regulated monthly outflow from Lake Ontario shall be such as to secure the maximum dependable flow for power.

(f) Consistent with other requirements, the maximum regulated outflow from Lake Ontario shall be maintained as low as possible to reduce channel excavations to a minimum.

(g) Consistent with other requirements, the levels of Lake Ontario shall be regulated

for the benefit of property owners on the shores of Lake Ontario in the United States and Canada so as to reduce the extremes of stage which have been experienced.

(h) The regulated monthly mean level of Lake Ontario shall not exceed elevation 248.0 with the supplies of the past as adjusted.

(i) Under regulation, the frequencies of occurrences of monthly mean elevations of approximately 247 and higher on Lake Ontario shall be less than would have occurred in the past with the supplies of the past as adjusted and with present channel conditions in the Galops Rapids section of the Saint Lawrence River.

(j) The regulated level of Lake Ontario on April 1 shall not be lower than elevation 244. The regulated monthly mean level of the lake from April 1 to November 30 shall be maintained at or above elevation 244.

(k) In the event of supplies in excess of the supplies of the past as adjusted, the works in the International Rapids section shall be operated to provide all possible relief to the riparian owners upstream and downstream. In the event of supplies less than the supplies of the past as adjusted, the works in the International Rapids section shall be operated to provide all possible relief to navigation and power interests.

Statement of Dean K. Webster, Jr., Before House Committee on Agriculture

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement of Dean K. Webster, Jr., president of the H. K. Webster Co., of Lawrence, Mass., before the House Committee on Agriculture on H. R. 694, H. R. 1831, H. R. 2007, and H. R. 2137:

My name is Dean K. Webster, Jr., and I am president of the H. K. Webster Co., a Massachusetts corporation engaged in livestock feed manufacturing, with principal offices at Lawrence, Mass., and a sizeable feedmanufacturing plant located at Richford, Vt. I also have the honor to occupy at the present time the office of chairman of the board of directors of the American Feed Manufacturers Association, headquarters Chicago, Ill., which is a national association of feed manufacturers with present membership of 317 active and 375 associate members. I am asked to represent this association whose members small and large account for the majority tonnage of the manufacture and distribution of some 35,000,000 tons of livestock feed annually within the United States. We do urge the enactment of legislation in principle as described in the above-named bills, to afford an effective means of protection of an innocent purchaser of Commodity Credit Corporation stocks of fungible goods from inequitable recovery suits by Commodity Credit, provided he as a defendant in such suit can prove his purchase made in good faith, for full value, and with-out knowledge of improper conversion of such goods by the storing warehousemen.

1. In order to make clear how our mem-

 In order to make clear how our members are very seriously affected in the matter under consideration, we would like to explain briefly the basis of manufacture of our products and the method by which we acquire the grains and byproduct materials used in our processing. Carloads of grains, such as corn, oats, barley, sorghums, are brought into our elevators, together with numerous byproduct materials, such as bran, middlings, gluten feed, distillers grains, soybean meal, linseed meal, hominy feed, etc., minerals, such as salt, phosphate, and calcium, and various vitamins and antibiotics materials, all of which are ground and blended together into finished poultry and live-stock feeds scientifically formulated according to the nutritional requirements of the several types of livestock. These finished feeds are packaged, properly labeled under State regulations and control, and reshipped by rall or by truck to the thousands of retail grain stores for distribution to the hundreds of thousands, yes millions, of actual feeders, poultrymen, dairymen, cattle and hog raisers, etc. in the various sections of the country.

2. Of the 35 million tons production of livestock feeds, the largest proportion of ingredients, perhaps half, consist of grains, corn, oats, barley, sorghums, and wheat, in about this order of importance, with corn by far the most important. This huge ton-nage of grains runs to many hundreds of millions of bushels, many hundreds of thousands of carloads. The great bulk of these grains are purchased on Federal grading standards, such as No. 2 yellow corn, 40-lb. No. 2 white oats, etc., with smaller proportions on lot samples, and direct from producing farms. The marketing of these grains from the producers in the grain surplus producing areas, through the country elevators, to the great terminal elevators in Chicago, Kansas City, Toledo, Buffalo, and many lesser centers, thence to the feed manufacturers, processors and others who finally receive them for consumption in manufacturing feed or other purposes, is a marvel of efficiency gained from many years experience, in which the so-called grain trade has achieved the highest degree of integrity and reliability. The typical feed manufacturer is purchasing almost daily a number of carloads of these grains. His buyer, for example, on the trading floor of the Boston Grain and Flour Exchange during trading hours receives through brokers quotations from many grain houses large and small in grain marketing centers, practically minute by minute, and on decision to purchase, an order is confirmed by word of mouth, by wire or telephone, and subsequently in writing. for a specific quantity of a specific grain. such as No. 2 yellow corn. The seller is bound by the trade rules to deliver the specific grade of grain in carload lots, with invoices and drafts accompanied by Federal inspection certificates and official weight certificates. In a given contract shipment, say from Chicago, no question of which elevator or which bin of a warehouse concerns the buyer, he de-pends wholly on the certificates of Federal inpection and weights. The grains are fung-ible goods, the unit is the carload and it is an impossibility to identify from what bins the individual car has been drawn-the individual car shipped carries its own new identity as determined by the Federal inspector who issues his official certificate. It would be an unnecessary burden upon the time of the committee to go into further detail as to the procedures of the regular channels of trade through which the typical feed manufacturer purchases his supplies of grains. The particular point here is that the feed manufacturer through long years of trading with well established reputable grain houses in the principal grain marketing centers, has been fully warranted in relying completely on the dependability and integrity of his shippers, supported by the usual Federal inspection and weight certificates furnished with each carload shipped. The idea that somewhere in the flow of grain from producing farms through the trade channels some illegally acquired grain would come to light among his purchases is entirely foreign to his experience.

3. Now comes into the picture a series of claims and suits by Commodity Credit Corporation against purchasers of grains alleged to have been illegally withdrawn from CCC warehouse stocks, many of which purchasers are feed manufacturers totally innocent of any complicity in the conversion of the grain and without any possible means of guarding themselves against involvement at time of The enormity of the problem facpurchase. ing the Commodity Credit Corporation in carrying out price-support programs involving adequate and proper storage for the tremendous volume of commodities which have come into its hands, we fully recognize, and it is probably inevitable that despite the most elaborate and painstaking procedures for supervision and policing of these huge stocks, some incidents of conversion losses would occur. It is entirely the duty of Commodity Credit Corporation to seek out these cases and recover so far as possible from guilty parties. Certainly in those cases in which a purchaser knowingly participated in any manner in the conversion, full recovery should be had through every legal resort, but we submit that in most of the cases now instituted by CCC the purchasers acted in complete good faith without knowledge or warning that the seller was passing on converted Commodityowned goods, and were, therefore, completely innocent of any complicity in such conver-sion. We believe that most of the original purchasers, and subsequent repurchasers from the original purchasers, were innocent buyers in good faith for full value. If Commodity should recover these losses from innocent purchasers in a substantial number of these suits, many innocent feed manufacturers and other purchasers will be seriously, even disastrously, injured, and the continuance of such actions in the future would undoubtedly have a most harmful and far-reaching impact on the free movement of fungible goods all the way from warehousemen to the ultimate consumer. The serious nature of the problem has been stated by officials of the Department of Agriculture who recognize that it is impossible for a purchaser to check the seller's title to fungibles at the moment of purchase. Purchase and sale of fungibles between country elevators, commission firms, terminal elevators, and feed manufacturers and other ultimate consumers are usually handled by telephone or wire, and are consummated almost instantaneously. highest degree of faith in such transactions is well known and is necessary for the facility of trading in the free and competitive movement of these grains to market.

4. It would seem to be of paramount interest not only to the purchasers of these fungible goods but to the original producers of the commodities and the public gener-ally, that this situation be clarified by legislation at the earliest possible moment prevent further more serious disruption of the free competitive markets which accomplish the move of these commodities, let alone the unfair direct losses to the innocent purchasers. The committee is aware that a bill, H. R. 6878, similar to the present bills under consideration was presented to the 83d Congress, was favorably reported out of the House Committee on Agriculture, but falled of adoption before adjournment. respectfully refer to the Report No. 2655 to the 83d Congress, 2d session, by Congressman HOPE, on that bill, H. R. 6878, as well as the hearings of the House Agriculture Committee of July 14, 1954, on this same bill. Several new bills now before this committee are designed for the same intent. We, representing the feed manufacturers of the United States, respectfully urge the most careful scrutiny and consideration of these bills by your committee and pray your favor-

able report on same to the Congress with such possible changes as deemed proper, not changing the intent. Without a proper correction of the existing situation, the proverbial sword of Damocles hangs over our head, and, indeed, the continuance of the efficient marketing of the grains and commodities developed through long years of experience is seriously threatened.

How Can America Sell Democracy Abroad?

EXTENSION OF REMARKS

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. HENDERSON. Mr. Speaker, very recently, Helen L. Calvert, a pupil at Valley Local High School in Buffalo, Guernsey County, Ohio, was selected by Our Times, a national senior high-school paper, as one of the top winners in a current affairs awards competition. She has received a modest scholarship award on the basis of her scholastic record, a 650-word essay dealing with current affairs and other criteria. She competed with hundreds of other top students from 39 States, Alaska, and Hawaii. It is significant that she was a winner, but it is more significant that her essay is a thoughtful, considered approach to a problem which confronts our Nation which may be food for thought for the Americans of today. I am pleased to present the prizewinning essay by Helen L. Calvert entitled "How Can America Sell Democracy Abroad?":

HOW CAN AMERICA SELL DEMOCRACY ABROAD?

Not long after the formation of the United States, our statesmen began striving to establish this country as a competent and independent nation in the eyes of the older and more powerful European countries. Since then we have developed our natural resources, industries, and our unique form of government, until we, ourselves became a world power. Americans, down through the years have transformed our beloved country from a vast wilderness to a modern, well-developed, and powerful United States that we know today, armed with abundant initiative, energy, and enterprise.

The democratic view holds that every citiben is a creator of values, and that each man may make his own decisions. Far from seeking to set up a single standard for what is right and good, democracy values and cherishes the differences among people.

We have been trying for years to sell democracy abroad. It hasn't always been referred to in exactly these terms, but still the goal was the same. Many different methods have been tested, then discarded, in a long struggle to initiate a democratic form of government into the so-called backward countries. These countries are somewhat wary of accepting us or our standards. Why is this?

In earlier American history, we find that our Nation was aloofly regarded by Latin-American countries as the great colossus of the north when we tried to protect them by playing the part of the big brother. The Latin Americans felt they were being looked down upon. Similarly, we find that many Europeans are injured by the Americans' unintentional air of superiority toward them.

A recent article, stated that visitors are frequently so confused by a maze of restriction as they enter our country that they return home to complain to their government or newspaper about American bureaucratic injustice and to say that we are shutting the United States behind a legal curtain.

This practice cannot aid us in our battle to win countries over to the democratic way of life. Nor do the Americans help who go to Europe and act as if they own the world—continually belittling others. Also working against us is the fact that counterfeiters have been using famous American trademarks to sell cheap substitutes. These counterfeiters, both Americans and foreigners, are at work on practically every continent, fraudulently claiming to represent reliable products ranging from Parker and Sheaffer pens to Auto-Lite parts and from Quaker Oats to Squibb's penicillin.

America's greatness and riches have been flaunted before the eyes of Europeans for so long that certain countries have made a practice of inventing imaginary "pains" or "trouble spots," then "borrowing" several billion dollars from Uncle Sam. As a result, we have come to be regarded as the rich uncle whom no one bothers to repay.

I cannot help but feel that by complying with the wishes of the spendthrifts and by unloading commodities on nations which are not ready for them, we are hindering rather than helping them. Louis Bromfield says that democracy is a luxury, compounded of many things. It must be earned by the people who enjoy it. It is the product of literacy, intelligence, and education; but it is also the product of prosperity and wellbeing. We have been fortunate in being still underpopulated and in possessing vast internal wealth in the form of natural resources. Countries lacking in these advantages must manufacture and trade in order to maintain good living standards. Where there is not enough, true democracy has small chance. A prosperous Russia, a prosperous China and Japan, a prosperous Europe are the best guarantors of peace.

We must show the world what we really are—not just as a Nation—but as individ-

How can we sell democracy? We can, first, acknowledge our faults, and strive to overcome them. We know we aren't perfect—so let's admit it. Then when it comes right down to foreign aid we can show others new methods, not in the manner of a patient teacher with a group of first graders, but as one neighbor to another. We can continue sponsoring student-exchange groups which acquaint foreign students with Americans and American methods. But at the same time we can back our American corporations which are engaged in private foreignaid programs that will create industries and higher standards of living all over the world. These programs help to give the people the will—and show them the means—by which they may help themselves. The ability and the incentive of a people to better themselves is a positive steppingstone to democ-

White House Guests

EXTENSION OF REMARKS

OF

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I

include the following editorial from the business initiative and that they will favor Jackson (Miss.) State-Times:

WHITE HOUSE GUESTS

Among the 525 men who have been guests at 38 White House stag dinners, there have been 294 businessmen, 81 administration officials, 51 publishers or editors, 23 Republican Party leaders, and lesser numbers in other categories. It would be unfair to Mr. Eisenhower and to his guests to draw any specific inferences from the size of the various groups, but we can't escape the conclusion that the character of the Eisenhower administration is largely reflected in his choice of dinner companions.

You Can't Fool All of the People

EXTENSION OF REMARKS

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. DEROUNIAN. Mr. Speaker, the following article by David Lawrence, which appeared in the New York Herald Tribune on March 16, 1955, outlines the reaction of our citizens to some of the policies of the Democrat Party:

DEMOCRATS' MONEY POLICY IS SEEN ALIENATING VOTERS

(By David Lawrence)

Washington, March 15 .- Maybe the Republican Party is as weak, on account of internal friction as Vice President Nixon says it is, but even so he may be proved wrong about the ability of the party to win in 1956 should President Eisenhower decide not to run.

For the truth is the Democrats are unwittingly engaged in building up such a nationwide fear of their party that almost any Republican nominee may be able to poll a victory next year.

The Democrats are giving about the worst possible example of public relations from their own viewpoint—how to allenate the very group of voters most needed by them to win a presidential election.

The so-called low-income groups have always, for the most part, been registered on the Democratic side. Elections are won in America today by mobilizing the maximum number of independent voters who are concerned with the conservation of their savings and their jobs.

While the demagogs on the radical Dem-ocratic side spend their time trying to undermine confidence in the stock market and crying out about the removal of double taxes on dividends, they overlook the vast number of voters who have invested their money and now see their savings hurt in value by the Democratic propaganda campaign.

THE DEMOCRATS' MISTAKE

Home owners and car owners of today are deeply interested in property rights. They have far more sense than the Democratic orators credit them with having. The idea that a \$20 tax cut, for example, would win all the low- and middle-income groups is fallacious, as there are other factors far more important to them at work. To assume that the large body of independent voters who swing the balance of power would be ensnared by any such obvious bait is to underestimate the intelligence of a large segment of voters.

The mistake which the Democrats are making is to give the impression that, if they get in power, they will destroy American tax legislation virtually sabotaging the American industrial structure.

The nature of the speeches of attack made in Congress by the Democrats is well understood by the independent voters, who know that the derisive talk about the favor to "dividend boys" happens to strike hard at many millions of men and women who have invested a small amount of savings in stocks and who depend on dividends, directly and indirectly.

The Democratic spokesmen have set out to discourage the creation of jobs-at least that's the impact their remarks make on businessmen. The Democrats are back to the "leaf raking" days of the 1930's, when they talked about the Government doles to "increase purchasing power." Fortunately, the American people today are more investmentminded than this and will not accept the idea that prosperity can be achieved by bigger and bigger deficits in the Treasury.

"SOUND MONEY" ISSUE

If the Democratic Party keeps on frightening the property owners of the country, it will be a long time before the Democrats will win another national election. Back in 1893, when the panic came, the voters made up their minds that the Democratic Party was unsound on money matters, and from 1896 to 1912 the Republicans won every presidential election on a platform of "sound money." The Democrats will have to meet such attacks again, because the purchasing power of the dollar diminished considerably when they were in office. Here is what Senator Byrd, conservative Democrat, says on this point:

"When public debt is not paid off in taxes, liquidation takes the form of disastrous infiation or national repudiation. Our form of government cannot survive either.

"The continuing toboggan of the purchasing power of our dollar which, through the year just ended, has dropped more than 25 percent since the end of World War II, demonstrates our progress along this primrose path * * * our taxes are burdensome, but we would merely increase the burden by borrowing money to reduce them."

The conservative Democrats unfortunately are few in number, as is shown by the latest vote in the Senate rejecting the \$20 tax cut. The radical leadership in both Houses on the Democratic side has accepted the same unsound doctrines which made the words "Democratic Party" a bogyman among voters for many generations of American history

Mr. Nixon needn't be so pessimistic. Just as Harry Truman helped elect the Republicans in 1952, so, according to present indi-cations, will the Democratic majority in Congress help the Republicans win in 1956. For when any political party generates fear and begins to tinker with the delicate mechanism of the dollar, it takes a risk of defeat at the

An Irish Blessing on St. Patrick's Day

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD. I include an article entitled "An Irish Blessing," which I received in the mail this St. Patrick's Day from the Honorable John J. Griffin, vice president of the United Bank and Trust Co., St. Louis, Mo.:

AN IRISH BLESSING

May the blessed light be on you, light without and light within. May the blessed sunlight shine on you and warm your heart until it glows like a great fire, so that the stranger may come and warm himself at it, and also a friend.

And may the light shine out of the two eyes of you like a candle set in two windows of a house, bidding the wanderer to come in from out of the storm.

And may the blessing of the rain be on you—the soft, sweet rain. May it fall upon your spirit so that all the little flowers may spring up, and shed their sweetness on the

And may the blessing of the great rains be on you; may they beat upon your spirit and wash it fair and clean, and leave there a shining pool where the blue of heaven shines reflected, and sometimes a star.

And may the blessing of the earth be on you-the great and round earth; and may you ever have a kindly greeting for them you pass as you're going along the roads. May the earth be soft under you when you lie upon it, tired at the end of the day. and may it rest easy over you, when, at the last, you lie under it; may it rest so lightly over you that your soul may be quickly through it, and up, and off, and on its way to God.

May God always bless you, love you, and keep you.

Communist Government Encourages Dope Evil

EXTENSION OF REMARKS

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. CHIPERFIELD. Mr. Speaker, for the first time in history the production and distribution of opium and all its murderous narcotic derivatives has become an organized government business in Communist China. Pressed by Moscow for foreign exchange funds, the Peiping Government has undertaken the systematic cultivation of opium as a principal source of revenue. This review of the growing dope traffic out of Red China is based on recent testimony before the House Appropriations Committee by Harry J. Anslinger, Commissioner of Narcotics, in the Treasury Department.

Opium is Peiping's newest secret weapon. Dope is being delivered systematically in the Pacific and Southeast area, with special emphasis on infiltrating the military camps of the Western Powers particularly in Japan. There is no more deadly way to undermine morale than to spread the dope traffic amongst youngsters in the military services. That is Peiping's program today.

China's systematic development of the narcotics traffic as a state-approved and state-supported business began in 1950 when Communist street girls were infiltrated as dope peddlers around the United States military bases in South Korea

Only trusted Communists handle the processing of the opium after it reaches the central harvesting stations in China. The Communist Peoples' Bank of China handles the illicit financing through special agents assigned to the tobacco monopoly. Incoming shipments of opium from the remote provinces are analyzed for grade and quality by the Shanghai Hygienic Department.

The growing narcotics trade serves Peiping two ways; first, it provides tremendous dollar and sterling exchange; second, it is a weapon of sabotage against the entire free world, for every narcotic addict impairs the productive power of the victim nation. In May 1953 British customs agents in Singapore seized a consignment of 3,000 pounds of raw opium, described as the biggest seizure ever made anywhere in the world. The shipment was being offered at \$90 per pound. Refined to heroin, it sells for about \$20 per gram or roughly \$9,000 a pound.

During the past 3 years Chinese farmers have been encouraged to expand their planting of opium poppies. The Communist Government participates in the lucrative business of imposing heavy taxes on the sale of poppies at the farm. Government loans are available to farmers who wish to expand poppy acreage.

One factory in western China is known to produce for export more than 300 pounds of heroin a day. Revenues obtained from narcotics sales abroad for the fiscal year 1953 reached approximately \$70 million, out of which \$30 million went back to the Communist Government of China, and the remaining \$40 million was spent in the victim countries for Communist Party activities, sabotage, espionage, and the purchase of military and industrial secrets.

Never before has there been found so dark a page in the record of Godless communism. Truly, communism is the evil wrecker of all humanity, of all gov-ernment, of all morality. Wherever we find it, communism is always the samethe frightful, demonic destroyer, the brigand, outlaw, and killer.

People of Illinois Entitled to Details of Manipulations by State Officials of Dunbar Contract for Handling and Distributing Surplus Foods to Schools and Institutions

> EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "Investigate." which appeared in the March 14, 1955, issue of the East St. Louis (Ill.) Journal:

INVESTIGATE

A full investigation of the Dunbar contract is imperative.

And, if last week's news dispatches from Washington are correct, the people of Illinois are going to get, at last, all the details of

the disputed contract for handling and dis- flicted with medical disasters, and others got tributing surplus foods to schools and institutions in Illinois.

Up to now, Vernon L. Nickell, State superintendent of public instruction and the man who awarded the contract, has been vague in answering questions raised by critics of

the arrangement. So has James W. Dunbar, clerk of the Sangamon County probate court and Nick-ell's good political and personal friend, with whom the superintendent of instruction negotiated the contract in 1952.

The United States Department of Agriculture believes that Dunbar & Co., the firm Dunbar formed to handle and distribute the surplus food, has made from \$800,000 to \$900,000 in excessive profits on the arrange-

The Department forced Nickell to cancel the contract. He has announced that he will find a successor through competitive bidding—a precaution he did not exercise when he awarded the contract to Dunbar in 1952.

Despite these charges and developments, Nickell insists that the contract is a good one and that the Department of Agriculture's figures are wrong. Dunbar has called his services the best in the United States.

Congressman Fountain, Democrat, North Carolina, chairman of the House Intergovernmental Relations Subcommittee, revealed the details of the Department of Agriculture's report on the Dunbar contract Fri-He promised "to go into the matter very thoroughly."

That is good. There are many questions which need answering—questions like these:
Why did Nickell fail to call for competitive

bids on the contract? Has Dunbar been "a heavy . . contributor" to Nickell's campaign, as Congressman FOUNTAIN alleges?

What qualifications did Dunbar have for undertaking the contract?

On what basis did Nickell award the contract to Dunbar?

Full disclosure of the operations of Dunbar & Co. cannot come too soon.

Best for Little Fellow

EXTENSION OF REMARKS OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, February 7, 1955

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, and in line with my remarks yesterday, March 16, 1955, to the effect that the great tax-revision bill of 1954 is, in effect, a poor man's bill—a bill favoring the small individual-may I add the following letter of my distinguished colleague, the Honorable CRAIG HOSMER, of California, to the Christian Science Monitor on the same subject:

BEST FOR LITTLE FELLOW

To the Christian Science Monitor: In your March 7 column a reader at-tempted to discredit what he called the seep-down-tax theory, which is more com-monly referred to as the trickle-down theory by demagoging politicians in attacking the Eisenhower tax-revision bill enacted last year to correct countless inequities in the old law and to remove discouragements to job-producing economic development.

In the process everybody got a 10-percent tax reduction and such "little fellows" as retired people, working mothers, those in-

special attention.

Some relief also went to business, and some people claim that was bad.

But let us take a look at what business is. Farmers are businessmen, so are small proprietors. In fact, business in the broad sense is the organized economic life of the people. It is the direct provider of all income, public and private, large and small. Aside from the small output of amateurs, everything that is consumed by anyone must first be produced by business.

The mainspring that energizes this mechanism is the incenive of profit. In the drive for profit, business creates jobs, absorbs savings, pays wages, interest, and taxes to support the Government.

When the opportunity for profit is restricted by inequitable taxation, this mechanism slows down, all forms of income tend to shrink, and jobs are lost.

It is inaccurate and misleading to call this basic principle a trickle-down theory.

In the first place, it is not a theory but a constantly demonstrated fact. It is, in short, the free-enterprise American economic system which has given Americans the highest standard of living of any people in the history of the world.

In the second place, the flow of incomes originated in and radiating from business is, when conditions are right, not a trickle

or a seep but a torrent.

In the third place, the flow is no more down than it is up. It is best described as an emanation or spontaneous distribution of the goods and services produced by the people for their own use, under the spur of profit and subject to the regulatory action of price and competition.

America's economic system has proved itself the best ever devised by the mind of man to take care of the "little fellow."

That is why I feel impelled to answer another reader's attack on it.

State Marine Schools

EXTENSION OF REMARKS

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the Congressional Record, I include an editorial which appeared in the Knickerbocker News, of Albany, dated February 26, 1955, which, to my mind, states a clear case for continued Federal aid to the State maritime schools.

I am sure every Member of Congress would find this article not only interesting but factually effective.

The editorial follows:

STATE MARINE SCHOOLS

Assurance from Washington that United States Senators Ives and LEHMAN, together with various Congressmen, including LEO W. O'BRIEN, will vigorously support an effort to include an appropriation of Federal funds in the budget for the support of the State merchant marine schools comes as welcome news to the many Albany and capital district friends of the New York State University Maritime College at Fort Schuyler—one of the schools involved.

President Eisenhower's recommendation in his recent budget message that no further Federal funds be given to these State schools seems to be false economy and predicated on an inconsistent premise. In the first place, service in the merchant marine means employment in private industry and not Government service in the sense required of graduates of Annapolis and the Military Academy. The President himself has declared that education of this sort is a State and local responsibility and yet would deny relatively small financial assistance to these State schools which, at very low cost, are providing trained leaders for this industry which is so important to our economy and, in time of war, to our national defense.

It must be remembered by a grateful Nation that these State schools have been training officers for our merchant marine and Naval Reserve for many years and in the case of the New York school for three-quarters of a century. From this fine old institution have come such men as Commodore Harry Manning, hero of many a rescue at sea and first skipper of the glant United States, as well as his successor Capt. John W. Anderson; Commodore John S. Baylis, of the Coast Guard; the widely known sallor-uthor, Felix Riesenberg, and many others who have risen high in the Navy, Coast Guard, and Merchant Marine.

The modest sum of \$660,000, of which \$204,300 would be New York State's share, seems little enough to ask when projected against the background of future necessity and the proven record of the past.

Water Development Projects in Western Colorado

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to place in the RECORD a statement of Mr. John B. Barnard, of Granby, Colo., This statement deals with the values to be obtained from water development projects in the high elevations of western Colorado.

These headwater development projects are a part of the overall Colorado River Storage and Development Act on which the Interior and Insular Affairs Committee is now holding hearings. I think it is worthwhile for this information to be brought to the general attention of the Congress, and I take this opportunity to do so.

I have previously made available testimony by Mr. Barnard on the general parts of this development and this statement sheds additional light on the actual measureable benefit of the component parts of the overall development.

The statement follows:

What I have to say relates primarily to the participating projects in Colorado. Without them the Colorado River storage project would, as we in Colorado view it, serve less than half of its ultimate purpose, insofar as the beneficial use of Colorado River water in our State is concerned. Construction and operation of the holdover storage reservoirs must be supplemented by construction and operation of headwater storage reservoirs and distribution facilities, participating projects, if the water is to be put to its fullest use.

In dealing with the subject of participating projects, I think it would be more helpful to you if I analyze the one with which I am

familiar. What I say concerning it can be applied, with variations indicated by geological, geographical, climatic, and other elements, to all of the units which go to make up the general class of participating projects in Colorado.

Generally, these participating projects consist of systems devised and planned to divert, impound, distribute, and use the water of the Colorado near the source of the main stream and its tributaries. Specifically, the one which I shall discuss is known as the Parshall unit, which is located on the Williams River in Grand County, Colo. This tributary enters the main stream at Parshall, Colo., hence the name Parshall unit.

The project includes, as its principal and essential unit, Ute Park Reservoir, to be constructed on the Williams River, 20 miles above its confluence with the Colorado, at an elevation of approximately 8,000 feet. Water stored in that reservoir, with very small evaporation loss at that high altitude is to be conveyed, by two principal canals, and distributed on both sides of the stream, providing water for approximately 24,000 acres of new land, and supplemental water for approximately 3,000 acres of land, presently but inadequately irrigated with a growing season of about 85 days.

These questions immediately arise: If there is enough water to fill these reservoirs and to perform these functions, why is it necessary to impound it? Why not apply it by direct-flow irrigation and avoid the cost of the construction of the reservoirs and distribution systems?

Ute Park Reservoir is located in the high country, where, in deep snow, nature stores water for springtime and early summer runoff.

Stream-flow records in Colorado show that 70 percent of the entire annual flow of these high streams is delivered in a period of from 6 to 10 weeks. On the Williams River, because of its elevation, this period, in my opinion, is not longer than 6 weeks. The high flow ends by June 25, sometimes earlier and sometimes, perhaps, a few days later. On the other hand, the irrigation season does not end until approximately August 1. The need for irrigation water during July is greater, per acre, than it is in the earlier part of the irrigating season. Because of various factors, such as an accumulation of snow in our ditches, we cannot, as a rule, start to irrigate until about May 15. during the first half of the irrigating season we have much more water than we can use, and, during the latter half, not nearly enough.

It is a discouraging thing to stand on the margin of the Williams River in June and see a tremendous flow of water passing by which we cannot then use, but later so desperately needed, and to contemplate the thousands of acres of fertile land which could be made productive, if the then existing surplus of water could be impounded for use when the stream again runs low. Here the ingenuity of man and the forward and progressive planning and thinking which have made America great, apply themselves to the problem; and the answer is the Ute Park Reservoir and the Parshall unit of the Cliffs-Divide project.

But this project will do vastly more than make productive a large area devoted primarily, productively, and profitably to the raising of hay, grain, and pasture for feeding cattle in winter. By that statement I mean this:

Because of the altitude, temperatures prevailing, geological and soil formations in the Williams River area, only about 20 percent of the water applied to the land is consumed by evaporation, transpiration, etc. Of the 68,700 acre-feet proposed to be impounded in Ute Park Reservoir and used for the irrigation of lands immediately adjacent to the stream, perhaps 80 percent, or 53,950 acre-

feet will return to the river within a very few miles below the point of original application of the water, at such a later time that reuse of it may be made downstream when water is badly needed.

Between the lowest point of return of water stored in Ute Park Reservoir and the area around Glenwood Springs, on the main Colorado River, additional use of the return flow can and will be made, with an estimated further dimunition, by consumptive use, of 7 percent, or 3,780 acre-feet, leaving, at Glenwood Springs, a net of return flow of Ute Park water of 40,180 acre-feet.

Between Glenwood Springs and the eastern Utah line lies a vast area of fertile land yet unproductive, or less productive than an adequate water supply would make it. Here is raised and can be raised a great variety of crops, such as fruits, including the justly famed Palisade peaches, vegetables, grain, hay-almost any crop which can be produced in a temperate climate with a growing season of 190 days. Here the 40,000 acre-feet of Ute Park Reservoir can again be used. Here it can be applied to and will adequately irrigate at least 10,000 acres of land. From that irrigation there will be a return flow to the Colorado River of approximately 60 percent, or 24,000 acre-feet. This amount, less evaporation and other transmission losses, and perhaps some slight dimunition resulting from further consumptive use, will find its way to Lake Meade, there again to be impounded and eventually to supply the thirsty acres of the Imperial Valley in California, at a time when the snow mantle, which will provide the next year's supply of water, has again cloaked the high country whence the Ute Park water originally came.

Thus the ingenuity of man has put to use and repeated reuse, with results beneficial to those who use it and to the Nation's economy, water which now, in the short space of 6 weeks, flows, unimpeded and with benefit to but few, to the sea. Neither my time here nor my information nor my ability permits an analysis and setting forth herein, in dollars and cents, the benefits to individuals and to the national welfare and Treasury which will follow the construction and operation of Ute Park Reservoir. Such a study should be made; and I only regret that I could not make it.

The American Dollar

EXTENSION OF REMARKS

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. McVEY. Mr. Speaker, one of the most disturbing elements in our domestic economy has been the course of the American dollar. The public has witnessed a decrease in the purchasing power of the dollar, amounting to almost one-half of it. There have been compensating factors to the workingman through increases in salary, but at the same time, life-insurance policies of long standing have been cut in half of their former value. Saving deposits, bonds, pensions, and social-security payments have been depleted to a similar extent.

The administration which is now in power promised, before the election in 1952, a sound dollar. Let us see whether this promise has been fulfilled. In order not to become involved too extensively in statistics, decreases in the value of

the dollar since 1939 are quoted for certain periods, rather than for month-bymonth, down to the present time. A résumé of this situation is as follows:

[1935-39 consumer prices=100]

 Date:
 Value of the dollar

 1939
 101.4

 1946
 75.0

 1950
 58.8

 1952
 52.7

 1953 (January)
 52.0

 1954 (January)
 52.0

 1955 (January)
 52.0

From the above table, it does seem that the promise of the administration with regard to a sound dollar has been kept. The period, beginning in January 1953, has been given because that marks the event when the Eisenhower administration took office, and there has been no downward drift of the dollar since that date. The figures quoted may be verified by the Library of Congress in Washington, D. C., the most impartial and authentic source of information to which we have access.

It is possible that the American people do not realize fully the meaning of this accomplishment because not everyone is aware of the fact that in France today, approximately 400 francs can be purchased for an American dollar, as contrasted to the time when only 5 francs were available for the same amount of money. The development in France has been duplicated in most of the countries in Europe. We have seen an inflationary spiral destroy the currency of those countries one after another. There was a time, after the severe inflation in Germany, when a billion marks could be purchased for \$1.50. notwithstanding the fact that at one time, only 4 of those marks represented the same value as the American dollar.

With the stabilization of the American dollar, there has been a stabilization of most of the elements in the American economy. There may be other accomplishments to which we may point with pride, but there is not one which means more to the great mass of the American people than the stability of the purchasing power of our currency.

Colorado River Storage Project

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. ASPINALL. Mr. Speaker, the House Committee on Interior and Insular Affairs is currently holding hearings on the proposed Colorado River Storage and Development Act. Extensive hearings were held on this subject last year, but additional testimony is being taken this year so that the information will be up to date and available to the Members this session.

Unfortunately, certain elements of opposition to this proposed development for a vast and rich area have burdened the record with commentary that has served more to confuse than enlighten. Fundamental points of opposition actually are few, but opponents of this program have branched into every conceivable tangent that appeared to discredit this sound and beneficial development.

Accordingly, I should like to include, as an extension of my remarks, testimony on this program given by Mr. John B. Barnard, of Granby, Colo. Barnard states his own qualifications in his testimony, but I should like to add the statement that he is recognized in Colorado as a true expert on water matters and water development. His testimony is concise, yet it covers the subject completely and answers well the major arguments which have been made against this development for the upper area of the Colorado River watershed embracing parts of Colorado, New Mexico, Utah, and Wyoming. I urge those who have an interest in obtaining a factual and solid accounting of the major reasons for this development to take the few minutes required to read through this testimony. We are prepared to rest our case on such unemotional and broad-gaged testimony.

The statement follows:

COLORADO RIVER STORAGE PROJECT

(Statement of John B. Barnard, of Granby, Colo., before the House Interior and Insular Affairs Committee, in hearing on H. R. 3383 and H. R. 3384, March 9, 1955, and succeeding days)

My name is John B. Barnard of Granby, Grand County, Colo. I have practiced law since 1920 to the present time, and in addition thereto have owned and operated an irrigated ranch in Grand County, since 1921. I am attorney for the Middle Park Water Conservancy District, comprising the area embraced within the geographical limits of Grand and Summit Counties, Colo., at the headwaters of the Colorado River and one of its principle tributaries, the Blue River.

As has been or will be explained by other witnesses, the holdover storage reservoirs, which form a part of the Colorado River Storage Project, will make available to the four Upper Basin States, a portion of the water of the river which is apportioned to these States by the 1922 compact, and divided among them by the 1948 compact, which could not, otherwise, be put to use by them. The headwater diversion, storage, and distribution systems, which are the participating projects, will enable these four States to put to use the Colorado River water which will be made available to them by the operation of the large reservoirs. Both the large dams and the smaller units are necessary if the end result is to be accomplished—the development of the immense area of the West which is the upper Colorado River Basin. Neither will be sufficient to that end without the other. Together they comprehend and represent a program of progress and development which has been the very essence of American history, from Colonial days to now. Ultimate defeat of the project would mark the end of that program, so far as the upper Colorado Basin is concerned.

Is there economic and historical justification for this project? First let us consider the economic phase, which inevitably prompts the question: What will be the cost to the United States—to the taxpayers who will foot the bill? I do not mean the total investment by the Government in the project; I mean the amount which we taxpayers will pay for it, which will not be repaid to the Treasury.

Detailed figures are not available to us at this time, relating to the storage project as comprehended in H. R. 3384 or any of the bills presently before the House or Senate; but we do have at hand the figures which are applicable to the bill inroduced in the House of Representatives of the 83d Congress, 2d session, which included four storage-project units and 16 participating projects. For the purposes of this discussion, which properly should be termed a consideration of policies and principles, those figures will suffice. Already they have been presented to and considered by you; and I wish merely to reanalyze and to reappraise them.

The total estimated cost of construction was \$1.518.096,000. Of this total, the sum of \$712,762,000 was allocated to power purposes, all reimbursable with interest, \$100,874,000 to municipal water purposes, all reimbursable with interest, \$691,245,600 to irrigation, all reimbursable without interest, and \$7,714,700 to flood control, recreational development, Forest Service resource development, etc., all nonreimbursable. From these figures emerges the conclusion that the actual cost to the taxpayers would be \$7,714,700 plus interest on the unpaid balance of the sum of \$691,245,600 allocated to irrigation, as that amount is expended and during the period of its repayment.

A moment ago I said that authorization this project will carry forward the historical program of progress and development which has become an accepted part of the policies and traditions which have made America great. Are there other similar programs, involving the expenditure of substantial amounts of the taxpayers' money, with which to make pertinent comparison? I refer specifically to the civil works activities of the United States Corps of Engineers. The progress of our Nation has always demanded and still demands that flood-control works be constructed, for the protection of human lives as well as property, and that commercial intercourse be facilitated, between and among States and with foreign nations, by dredging otherwise nonnavigable streams and by harbor improvements. Congress has long recognized the necessity for those works, has repeatedly authorized projects directed to that end, and has consistently appropriated taxpayers' money for their construction. But when we propose national progress by means of the storage, distribution, and beneficial use of water for irrigation and other purposes, we are met with the contention that the cost to the taxpayers is too great to be considered.

The justification for the expenditure of Federal funds in the planning and construction of civil works by the Army engineers is found in the fact that the cost of such works is beyond the ability of private capital to meet, plus the fact that the national economy requires that the projects be constructed. Without them the affected areas and communities find themselves unable to carry on their agricultural and industrial activatiles with efficiency. Quite possibly we can say that the underlying theory of these works is that what is good for the economy and way of life of the people of New Jersey, for example, is good for America. We simply ask that that same theory be applied to the project we here propose.

The Colorado River storage project will primarily benefit four States—Colorado, Wyoming, Utah, and New Mexico. To appraise and measure the economic justification for the expenditure of the amount of Federal funds required to produce that benefit, let us compare the cost thereof with the cost of civil works projects in four Eastern States, chosen at random—Pennsylvania, New Jersey, Maryland, and Massachusetts.

These are the figures showing the expenditure of Federal funds made in the construction of works involved in flood prevention and river and harbor improvement in those States, made available to us by the Corps of

Engineers, each amount representing the cost to the United States and not including contributions from local interests:

It will, of course, be noted that, in the case of Pennsylvania, expenditures for the years 1824 through 1947 were not supplied us and are omitted from the above tabulation. We are informed that no part of the total has been or will be repaid to the Federal Government.

The above total is, then, to be compared with the sum of \$7,714,000, that being the nonreimbursable investment of the United States in the 1954 version of the Colorado River storage project. I did not calculate the interest on the money allocated to irrigation, in the storage project, as the same is advanced, nor upon the expenditures made by the United States for the above civil works activities. The amounts are closely comparable, \$691,245,000 for irriga-tion and \$661,768,000 for civil works. The interest charge to be added to the latter would be far greater than that involved in the former, the obvious reason being that, upon the portion of the investment of Federal funds allocated to irrigation in connection with the storage project, interest charges would end with repayment, whereas computation of interest on civil works investment must be a continuing process for-

What, I ask you in all sincerity, is the fundamental distinction to be drawn between the construction of dams, levees, and other works to prevent water from spreading over land, thus rendering the affected lands unproductive, and building dams and canals to cause water to spread over lands, thus rendering them productive? Is there any reason why the one endeavor should be approached from the standpoint of an indulgent and generous father, and the other should be viewed through the cold, unsympathetic eyes of a moneylender?

There is opposition to this project. It was expected. We do not disregard it nor do we minimize it. We do not question, much less impugn, the integrity or sincerity of those whose views do not coincide with ours. We respect their opinions, even though we disagree with them. They and the whole people of the United States are entitled to know why we say, as we do with appropriate

emphasis, that they are wrong.

Withholding approval of the Colorado River storage project would be tantamount to characterizing the vast area of the West which it would serve as economically or otherwise unfit for agricultural or industrial development. That portion of our Nation would forever be inhabited by the fortunate few whose hardy pioneer ancestors foresaw the necessity for early appropriation of water for various human uses, and made such appropriations; by the little towns which serve that few; by tourists who want to take a fleeting look at the grandeurs of nature; by the people who gain a meager and precarious livelihood from catering to the unpredictable needs and demands of the tourists; and by coyotes and jackrabbits.

Many reasons are advanced for withholding such approval. Many more undoubtedly will be conceived and voiced. Time obviously will not permit us to answer them all. The fact that we do not attempt to do so is not to be taken as an admission that there are no adequate answers, merely that time will not permit us to voice them.

Among others it is the freely expressed opinion that America now produces a surplus of everything that will be produced in this area. This contention is based upon the premise that three-fourths of the world's population is forever doomed to semi or complete starvation, while the other one-fourth produces more than it needs. We cannot accept that premise as a postulate. We believe that our leaders, working as they are now laboring, with the leaders of other free nations, will, without recourse to armed conflict, and in the not too far distant future, rid the body of the world of the cancer of communistic dictatorship which places a higher value on sustenance for the dogs of war than food for human beings. We have such faith in our Nation's present and future leaders that we look forward to the day when Our food products will find their way to foreign markets now closed to them, with utmost confidence that that day will come.

On the same subject, it occurs to us that those who oppose the authorization of this project for the reason that we now have enough of everything anyway, subscribe to the proposition that America's production capacity should remain static while her population and consequent demands on that production are increasing by leaps and bounds. Should we follow the policy of restricting our production of foodstuffs, for example, to present demands, the time will inevitably come, and that soon, when the expanding demands of an increasing population will face America with the emergency problem of increasing that production. Our proposal is that production be permitted to keep pace with the demands made upon it. What is sufficient for our needs today may be only half enough 25 years from now. cannot close our eyes to the welfare of our children and our children's children, with safety to them or the future generations of our country.

Let us then reexamine our Nation's history and seek therein our answer to the question now before your committee and our Congress, and to the objections now made to this proposal of ours. History is written and learned in order that, in the future, we may avoid mistakes made in the past, however honest those mistakes were, and that we may follow through such plans, programs, and policies as have pointed to ultimate success, happiness, welfare. Neither the mistakes nor the successes which our history reveals to us can, with safety, be ignored.

Our Nation was young when President Thomas Jefferson proposed and insisted upon the Louisiana Purchase. This brought into early being America's program of progress and development. There was violent opposition to the Louisiana Purchase, voiced by sincere, well-meaning men of substance and stature. They said, as is now said, "we have no need for this area. We already produce more than our people can consume. Why add territory to that we already have, at the cost of overburdened taxpayers?"

So intense was the opposition that the Massachusetts Legislative Assembly, seeing its young people leaving the commonwealth to seek new horizons in the West, adopted a resolution denouncing the President's proposal, and proclaiming that, if Jefferson succeeded in his mad plan, Massachusetts would no longer be bound to adhere to the Union. Today, the people of Louisiana, Arkansas, Missouri, Kansas, Texas, Colorado live and prosper, and, if they have reason to think about it, bless the President who conceived and fought for, and the Congress which authorized the Louisiana Purchase.

After the Mexican conflict in 1848 came the Treaty of Guadalupe Hidalgo and the Mexican cession. With acquisition of the area encompassed within the boundaries of that cession, the problem of developing the water resources of the Colorado River became important. That development has progressed until today, by means of Lake Mead, the All-American Canal, and other works, the southern part of California is now putting to commendable and beneficial use

practically all of the water apportioned to that State by the 1922 compact. We want to develop the rest of it; and we confess to an utter inability to understand why California should now say that, although she has been the beneficiary of the expenditure of tremendous amounts of Federal funds in developing her economy by means of Colorado River water, we in the upper basin, which is a part of the same acquisition by the United States which brought California into the Union, should be forever barred from developing our country.

The acquisition and development of the territory included in the cession were opposed in the halls of Congress and elsewhere. The opposition found typical vocal expression in the words of a great American, which words I desire to quote as I found them in a work on America's possessions by Murat Halstead, published in 1899:

"I say, sir, that, according to conscientious conviction, we are now fixing on the Constitution of the United States and its frame of government a monstrosity, a disfigura-

tion, an enormity."

Again this same statesman said:

"On other occasions in debate here I have expressed my determination to vote for no acquisition or cession or annexation north or south, east or west. My opinion has been that we have territory enough, and that we should follow the spartan maxim, 'Improve, adorn what you have;' seek no further * * *. There may be in California, and no doubt there are, some tracts of valuable land, but it is not so in New Mexico * * *. There are some strips of tillable land on the borders of the rivers, but the rivers themselves dry up before midsummer is gone. All that the people can do in that region is to raise some little articles, some little wheat for their tortillas, and that by irrigation."

The great American who made those statements was Daniel Webster, than whom no more able, honest, and conscientious man ever served in the United States Senate.

Of this policy of Webster, the Honorable James R. Mann, later a Member of Congress from the State of Illinois, wrote:

'The Senator from Massachusetts has been reversed by history. He did not see aright the signs of the times as to expansion. If Daniel Webster were now alive, he would be the last man in the Republic to admit that this country could afford to lose a single foot of the territory embraced in the cession from Mexico in 1848. He would be quick to admit that the acquisition of that territory has done much to cement the Union into closer unity; has done much to knit more tightly the bonds which hold our country together; that the sunny land on the other side of the Rocky Mountains, which was so far away in 1848, and which, through the genius of our citizenship, has been brought into close and quick touch with the rest of the Union, has made our whole country feel that distance no longer separates the utmost parts from quick communication with the Central Government, which responds constantly to every feeling of danger or joy, of poverty or prosperity, in every part of our domain."

Webster, despite the honesty of his motives and the sincerity of his purpose, was proved wrong by history. Had he prevailed and accomplished the withholding of congressional approval from the acquisition of the Mexican cession, southern California, which now opposes the development of our portion of the territory included therein by the construction of this project, would no doubt have flourished; but it would have been under a different flag than ours, and at the cost of a government other than ours.

Southern California now objects to the Colorado River project, saying that its construction and operation would infringe upon her use of Colorado River water. At the time the Legislature of California approved the 1922 compact, the legislators knew, and the Representatives of southern California knew, that the apportionment to the upper basin

States of a theoretical one-half of the Colorado River water would inevitably be followed by the beneficial use of that water in those States. The time for southern California to have objected to any development except her own, as she does now, was when the compact was signed, and not now when we in the upper basin States are attempting to do exactly what southern California has already done, by exactly the same means and in exactly the same manner she accomplished hers. Southern California's position on this project is comparable to that of a senior appropriator on a stream who perfects his own rights, and then seeks to prevent another from making an appropriation from the same source, saying:

"I do not know how or when or in what manner you may do it, but some day you may infringe upon my rights. I may some day want to use the whole stream, and if I do, that should be my right and privilege. Your rights to use water which some day I may want to use myself, although I do not know when or why or by what means, and although the law which I helped frame specifically denies me that right, should be denied you forever."

Again, following the War Between the States, Secretary of State William H. Seward proposed to purchase Alaska Territory from Russia. This proposal was bitterly opposed. Men termed the plan "Seward's Folly." gressmen who considered the land barren and worthless argued that the cost of Alaska and its consequent development should not be imposed upon the already overburdened taxpayers. Today, when our lookouts scan the northern skies alert for air attack from over the top of the world, they and we realize the importance of Alaska to our very existence. They and we shudder when we contemplate our strategic position if Alaska were still in unfriendly hands. Are there those among us now who world term Alaska "Seward's Folly?"

Is there not a lesson to be learned from Alaska, when we know that within the boundaries of the upper Colorado River Basin lie one of the world's greatest known stores of uranium, and one of the world's largest deposits and reserves of oil, both vital to our defense and fully available only if the water of the Colorado River be developed?

Again I say, the lessons of history are not to be read and then ignored or disregarded. America's history is one of forward-looking progress. Such progress has been resisted; but those who advocated a policy of development of the resources of our great land have always prevailed. Because that has been true, we now may enjoy our way of life, and look forward to a fuller life for those who will follow us.

If the time shall ever come when new horlzons do not beckon us, when we see no need for further progress or development, when we, as we are, and not as we could be, consider ourselves entirely self-sufficient, then will America stagnate and wither and die as a great nation.

Ike's Economic Report Is a Tribute to the New Deal

EXTENSION OF REMARKS

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1955

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I herewith insert an article originally appearing in the Toledo Blade, entitled "Ike's Economic Report Is a Tribute to the New Deal," by columnist Thomas L. Stokes, which appeared in condensed form in the April 1955 issue of the Democratic Digest:

IKE'S ECONOMIC REPORT IS A TRIBUTE TO THE NEW DEAL

(By Thomas L. Stokes)

It often takes time, sometimes adversity, to put past events in just and proper perspective. Take, for example, that era of reform known as the Roosevelt New Deal back in the middle and early 1930's which has been slammed and pilloried, even down to the last congressional election campaign.

It is worthy of note that it now is paid high tribute at long last—and significantly by the first Republican administration since then. You will find this scattered throughout President Eisenhower's Economic Report to Congress. That gives repeated credit to antidepression measures put on the statute books by the Roosevelt New Deal in helping to keep the recession of last year from snow-balling into a real depression.

Naturally the Eisenhower report does not identify those as Roosevelt New Deal measures, which would be too much to ask of any political party, whether Republican or Democratic. It just tells how the administration utilized them, with effusive presse for that operation.

Nowhere in the comprehensive report of the President's Council of Economic Advisers submitted to Congress will you find the name of Franklin D. Roosevelt. Nor, for another, that of the late Senator Carter Glass, a Virginia Democrat, who put through the banking laws which gave the Federal Government more of a free hand to devise flexible policies to check downward swings in the economy. Nor the name of Marriner S. Eccles, Governor of the Federal Reserve System for many years, who directed recovery efforts possible through credit policies. Nor the late Senator Robert F. Wagner, New York Democrat, sponsor of unemployment insurance and old-age pension laws. Nor any other in the galaxy of New Deal reform figures.

Natural-Gas Issue Flares

EXTENSION OF REMARKS

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1955

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the Record the following editorial from the Evening Star of Saturday, March 5, 1955, entitled "Natural-Gas Issue Flares," which I think is one of the most fair and logical discussions of a highly controversial issue that I have seen. I want to commend the Evening Star of Washington, D. C., for its reasonable approach to this problem:

NATURAL-GAS ISSUE FLARES

A highly controversial recommendation was laid before President Elsenhower—and Indirectly before Congress—when the Advisory Committee on Energy Supplies and Resources Policy expressed its belief that "the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line."

It is an issue that has a long and complex politico-economic background. In 1938,

Congress passed the Natural Gas Act giving to the Federal Power Commission regulatory authority over transportation of natural gas in interstate commerce and over sales of gas in interstate commerce for resale. The jurisdictional section of the act specifies, however, that it does not apply "to the production or gathering of natural gas." The authority over interstate pipeline rates and sales has been exercised by the FPC in the intervening years and has not been questioned. In turn, rates to consumers have been regulated by local public utility bodies. But on the question of sales by independent producersthose not engaged in interstate transmission even though they are selling to interstate carriers-the commission has repeatedly ruled that it does not have regulatory jurisdiction, that such initial sales are a natural part of the exempted "production or gathering." Legislation to clarify and support this point of view was passed in 1950 but was vetoed by President Truman. In June 1954, the Supreme Court ruled in a 5-3 decision that the FPC does have jurisdiction over independent producers' sales to interstate carriers and the Power Commission has initiated action to regulate such prices. New legislation to exempt independent producers from Federal regulation already has been introduced.

Consumer interest groups have been the principal advocates of Federal regulation on grounds it would result in lower retail prices. But the producers argue that field prices represent only about 10 percent of the final retail price and that competition among an estimated 5,000 competitors in the industry will preclude unreasonably high prices. They argue, further, that Federal regulation would result in a relatively low and rigid price structure that would make it uneconomic for the industry to risk the costs of exploration and development needed to keep gas production rising in response to the tremendous demand. Consequently, they say, developed gas supplies actually would decrease and prices to consumers eventually would go up.

would go up.

There is involved a basic question of whether competitive private enterprise or a federally regulated economy is to prevail. Natural gas producers are competing not only with each other, but their product is competing with coal and oil. If Federal price fixing is to apply to one, it may be argued seriously that it should be applied to all. Congress is facing more than a narrow question of whether Federal regulation, admittedly difficult, should be attempted in a single industry. If it accepts the status quo it may mark the first step toward a much broader and potentially repressive control of other parts of the national economy.

John T. Jones

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. VAN ZANDT. Mr. Speaker— Leaves have their time to fall And flowers to wither At the north wind's breath; but all Thou hast all seasons for thine own O death.

The organized-labor movement suffered a great loss on March 3, 1955, in the death of Mr. John T. Jones, nationally known director of Labor's Nonpartisan League and the possessor of many fine qualities that endeared him to those who were privileged to number him among their friends and associates.

It was my good fortune to know John T. Jones and because of my knowledge of his many admirable traits of character and the cordial relations that existed between us his passing has been a source of deep sorrow to me.

CALIBAN IN THE COAL MINES (By Louis Untermeyer)

God, we don't like to complain, We know that the mine is no lark, But there's the pools from the rain, But there's the cold and the dark.

God, You don't know what it is You in Your well-lighted sky, Watch the meteors whiz, Warm with the sun always by.

God, if You had but the moon Stuck in Your cap for a lamp Even You'd tire of it, too, Down in the dark and the damp.

Nothing but blackness above And nothing that moves, but the cars, God, if You wish for our love Fling us a handful of stars.

John T. Jones had a mission to perform in life for those with whom he worked in his early years in the coal mines of the Nation. That he was successful in his efforts to improve their lot in life is attested to by the fact that he spent many years in active and successful pursuit of the objectives of the United Mine Workers of America.

Mr. Speaker, I should like at this point in my remarks to have inserted the following article from the March 15, 1955, issue of the United Mine Workers Journal titled "John T. Jones—'In Whom There Was No Guile'."

The article contains references to the beautiful eulogy delivered at the funeral services on March 5, 1955, by the Reverend Dr. Frederick Brown Harris, pastor of Foundry Methodist Church, Washington, D. C., and Chaplain of the United States Senate.

The article follows:

JOHN T. JONES-"IN WHOM THERE WAS NO

Probably no more fitting words may be found to honor the memory of John T. Jones, director of Labor's Nonpartisan League, close associate of President John L. Lewis of the UMWA, and a veteran of 53 years of toil in behalf of his fellow coal miners, than those of the Reverend Dr. Prederick Brown Harris. Dr. Harris, minister of Washington's Foundry Methodist Church and chaplain of the United States Senate, was a close personal friend of Mr. Jones whose untimely death on March 3 shocked and sorrowed all who knew him.

These are the words of Dr. Harris, spoken in final tribute to Mr. Jones at the funeral

service on March 5:
"The brief working day of a valiant servant of God and of humanity, on this mortal stage, is ended. His sun has gone down while it is yet day. Our eyes are staring, stunned, bewildered and strangely moved, at a vacant place against the sky of our choicest friendship, our church, and our Nation.

"By dint of his own energy and effort, John T. Jones, climbing from the penury and darkness of his childhood and youth, never forgot the pit from which he was digged. The ruling passion of his life became to light that darkness for others who bent their backs to its heavy tasks.

"His own spirit was as the candle of the Lord, not just to shine in places of plenty

and comfort—to which his indefatigable toil, his devotion and his ability lifted him—but to bring justice and safety and more abundant home life to those hardy servants of the public good, his brother miners, whose contribution to the gadgets and glitter of an industrial day sentenced them to arduous labors, with light of day denied.

"We are vividly conscious in this hour, now that his lips are silent, that with righteous indignation against selfish powers which sought to exploit those whom he always regarded as his comrades in toil he cried out again and again to exploiters in high places of privilege, 'Let my people go.'

"We remember today the wistful appreciation with which in memory he turned often to that long-suffering Christian mother, whose face and form were ever with him and who, amid conditions which might have stifled spiritual aspirations, lighted the candies of faith and reverence on the altar of his boyish heart, a flame that no winds of adversity could ever blow out.

"As we survey the record of this useful life, we are thankful, as was his own grateful heart, that when as a young man his face turned from across the sea to this land of hope and glory, our America, this 'blessed land of room enough' gave him his chance to unlock native talents for leadership and for wide service which struggled for expression in the heart of this Welsh lad whose life, until that emancipating day, had been so cabined and confined. In these latter years, as with disciplined powers he moved on levels of great influence, all his days were as a paean of devotion to the great Repubwhich had become so truly his as it molded his life to ampler patterns of service to man and his Maker.

"We think of the great causes which claimed his loyalty and the full measure of his devotion. We bear witness to his love for the church of the living God and his belief in her mission. John T. Jones was not just a hearer, but a doer of the word. The message of the church and the kingdom to him was literally expressed in the program as announced by the great head of the church: 'I am come to preach the gospel to the poor, to heal the broken hearted, to preach deliverance to the captives and to set at liberty them that are bruised.' In this triumphal hour we testify that here was a Christian indeed, in whom there was no guile. In a time of sophisticated artificiality he loved and clung to the genuine and true. He hated sham and cant, and knew both when his honest eyes looked upon them with scorn, in high places and low.

"We rejoice in the heritage of the moving words he recently wrote, blazing with holy wrath against the sophistries of those who, in the titanic global struggle now raging, blaspheme and deny the paramount dignity of the individual and the rights of the common man.

"Our hearts are warmed as we remember his genius for friendship and how his life was bound as with bands of steel to the very souls of those he loved and trusted. As we think of his devotion to the Master of all good workmen, it will be to us evermore who ministered to him in holy things a blessed memory that on his last earthly Sabbath, listening, by his own earnest request, to the ancient words of contrition and consecration, his hands, so still now, reached out reverently for the bread and the wine in remembrance of the Lord and Master who was the strength of his life.

"Ringing in our ears will ever be his clear witness, just before the human skill of surgeons did their best; his confident words will light us to the end of our own way as we count the rosary of his assurance: 'I am not afraid, if this is the end of this life for me, for I know that the next room is a place of beauty and brightness beyond compare.' Inspired by his undimmed trust as he walked through the valley of the shadow and feared

no evil, now that he has gone into the bliss of that larger room our hearts cry out:

'Servant of God, well done!
Thy glorious warfare past;
The battle's fought, the crown is won
And thou art crowned at last.'

"And so we give thanks that there was a man sent from God whose name was John. And we give him back, with clean hands and pure heart, knowing where we shall find him again and in what company we shall see him when the long night is past and the eternal morning breaks.

"'A friend has passed across the bay.
So wide and vast, and put away
The mortal form that held his breath;
But through the storm that men call death.
Erect and straight, unstained by years,
At heaven's gate a man appears!"

Caribbean Coalition

EXTENSION OF REMARKS

HON. JOSEPH F. HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1955

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to the following editorial from the New York Herald Tribune. Vice President Nixon's tour of Central America and the Caribbean islands is an example of the best way to personally promote mutual respect and understanding in the countries of the world:

[From the New York Herald Tribune of March 6, 1955]

CARIBBEAN COALITION

Vice President Nixon's tour of Central America and the Caribbean islands has paid rich dividends in general good will. It also has been specifically valuable in lessening tensions between Costa Rica and Nicaragua. The most lasting and beneficial results of the journey, however, would spring from a new orientation of policy by all the states of the Caribbean basin along the lines which the Vice President has suggested—a strong regional coalition to insure political stability and economic prosperity.

Britain has already embarked on a program looking to the federation of its Caribbean territories. The independent states of the area are in equal need of closer ties. Many of them have specialized in single crops, such as sugar, coffee, or bananas, which is likely to create acute economic strains. Capital and cooperation for a more diversified economic base would aid them all. Politically, the rivalry of the different Caribbean countries has produced tensions that hamper the improvement of living standards of the people and foster the kind of unrest by which communism profits.

by which communism profits.

From its beginnings as a Republic, the United States has had the closest ties with Central America and the islands. The building of the Panama Canal intensified a strategic interest of long standing; trade and travel have made many links between the Caribbean and the Nation to the north. At various times the United States has policed parts of the region under a concept of stewardship that is now outmoded, although the sense of responsibility and common interest that inspired it remains. To promote a Caribbean coalition of the kind which Mr. Nixon advocates, and which could find its nucleus in the new Organization of Central American States, should be a major goal of American policy.

The task will not be easy. Animosities among the potential members of the coalition are keen; differences in social and political structure are great. Economic reforms will require the kind of vigor which Puerto Rico is applying to its problems, extended to the whole region. Nevertheless, the advantages of unity, in terms of prosperity, stability, and protection against the Red threat, would be incalculable. This is a challenge to the statesmanship of the Americas, one in which the hemisphere can find a common goal and a common gain. The Vice President is to be congratulated on his initiative.

Postmaster General Speeds Clean-Up-the-Mails Campaign

EXTENSION OF REMARKS

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. CEDERBERG. Mr. Speaker, I am sure decent citizens of our country will applaud the efforts of the Post Office Department, under Postmaster General Arthur E. Summerfield, to eliminate the obscene and indecent trash that has been finding its way into postal channels in increasing amounts recently. As the result of this drive the money-hungry purveyors of pornographic publications are going to have greater difficulty getting their lewd materials into the hands of their customers.

While the Post Office Department is without authority to prosecute the mailers of this material, it does have authority to refuse to carry it through the mail. That it is doing as rapidly as the source of the material is learned.

Postmaster General Summerfield recently made a very fine statement on this clean-up-the-mails drive, pointing out it does not involve an abridgement of freedom of speech or press nor sets up a censorship of works of art. This is a sincere effort to keep this unwanted pornographic material from being offered through the mail for delivery into American homes.

The statement of Postmaster General Summerfield follows:

CLEAN-UP-THE-MAILS CAMPAIGN

A growing volume of unwanted lewd and obscene matter is being sent through the mails into American homes, and the Post Office Department is intensifying its clean-up-the-mails efforts to stop this offense against common decency.

Risque snapshots, pornographic magazines and books, and lascivious slides, party films, and records are being widely offered for sale as shown by a 73-percent increase in the last 6 months in cases dealing with indecent materials sent through the mails.

This is a serious and nationwide problem of public morality which affects all our citizens. In our common interest this misuse and prostitution of the mails should be stopped by a sensible preventative program of the Post Office Department, acting for the people as directed by the law enacted by Congress.

We know from experience that any enlightened effort of this kind—no matter how intelligently administered—is occasionally open to attack and ridicule which is frequently deliberately inspired by those who make money from the sale of lewd materials. Sometimes we are criticized because our purposes are not fully understood by the very people we are seeking to protect from pornographic material.

CENSORSHIP NOT INVOLVED

In other instances our efforts to keep the mails clean produce an almost inevitable cry of censorship by certain groups who confuse license with liberty. Their viewpoint, while sincere, seems to suggest an abysmal ignorance of the nature of the problem and the threat it imposes to the moral fiber of the Nation.

We are not concerned with bureaucratic snooping. No issues of abridgments of the freedom of speech or of the press are involved.

We are not arbitrary censors of literary efforts nor of works of art, either ancient or modern.

What we are vitally concerned about is the great mass of unwanted pornographic material being offered for delivery through the mails into the homes of American citizens.

MENACE TO MORAL OF YOUTH

We know the great majority of adult Americans want this obscene material—which they have not asked for—kept out of their homes and away from their children, whether it is generated at home or malled into this country from abroad. This vile stream of commercialized obscenity persists because there is money in it and we must be alert lest the greed of the individuals and sham publishing concerns who sell it damage the moral standards of our young people.

Many criminal, educational, and religious authorities see a definite connection between this disgraceful upsurge in obscenity and the startling growth of juvenile delinquency in the Nation.

Other experts believe this increase in lewd and lascivious material is reflected in the sickening growth of criminal assaults on girls and women.

While the Post Office Department has no authority to prosecute mailers who offend against common decency, we are required, by law, to refuse to carry obscene material through the mails.

Fortunately the power to exclude pornographic material from the mails is a highly effective preventive measure in that it usually shuts down the most practical and economical distribution method available.

The criterion used in ruling on mailability is the ordinary standard of common decency of average representative citizens. Let me quote a recent ruling on obscene books which illustrates the reasoning used:

"The word 'obscene' is not uncommon and is used in English and American speech and writings as the symbol of indecent, smutty, lewd, or salacious reference to the parts of the human or animal body, or to their functions, or to the excrement therefrom.

"It is, of course, true that the ears of some may be so accustomed to words which are ordinarily regarded as obscene that they take no offense at them, but the law is not tempered to the hardened minority of society.

"The statue forbidding the importation of obscene books is not designed to fit the concept of morality throughout the world, nor for all time past and all the future, but it is designed to fit the normal American concept in the age in which we live.

"It is no legitimate argument that because there are social groups composed of moral delinquents in this or other countries that their language shall be received as legal tender along with the speech of the great masses who trade ideas and information in the honest money of decency."

OUR CITIZENS CAN HELP

Citizens who wish to help the Post Office Department in its clean-up-the-mails campaign can do so by delivering, to their local postmaster, any material received through the mails which they consider obscene. Postmasters throughout the country are being instructed to forward such material here to Washington to the Office of the Solicitor, the chief legal officer of the Post Office Department, for proper action.

Employment of Handicapped—An Essay by Miss Jane Wink, a Student at Governor Mifflin High School

EXTENSION OF REMARKS

HON, GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, one of the most important tasks before the Congress is to take adequate steps toward improving the opportunities of handicapped citizens. We should make it possible for them to more fully participate in the Nation's productive effort. To help our handicapped citizens toward the independence of self-support is to help them to share more fully in the bounties of our rich land and in all those things which make life worth-The rights, the dignity, and worth of the individual give strength to America as a nation.

Since I have been a Member of the Congress I have been keenly interested in having the Congress adopt a more realistic program for our 38 million handicapped citizens.

In the last Congress I, along with several of my colleagues, introduced a bill which calls for the establishment of a Federal agency for handicapped. This I feel was the most comprehensive approach to the handicapped program ever laid before the Congress. It provides for maximum extension of medical services, vocational guidance and counseling, education and training, and full employment opportunities to citizens handicapped by physical and mental disabilities.

It is my intention to introduce such legislation in this session of Congress as soon as I have completed study on my new proposal.

Mr. Speaker, I wish to include with my statement a prize-winning essay on the topic of A Decade of Progress in Employing the Handicapped, by Miss Nancy Jane Wink, a student at the Governor Mifflin Joint High School, in my congressional district. Miss Wink is the daughter of Mr. and Mrs. John R. Wink, 303 Wheatland Avenue, Shillington, Pa. Following herewith is the theme which won for Miss Wink first prize in the county contest and fifth prize in the statewide contest:

MIFFLIN HIGH GIRL WINS STATE, COUNTY HONORS WITH ESSAY ON EMPLOYMENT OF HANDICAPPED

(By Nancy Jane Wink, Governor Miffiin Joint High School)

This is your life, Philip Yerger, your new life. You were just like any other man, Philip Yerger, until 1944 when you were in an automobile accident. This is the genesis of your new life, a life into which you are afraid to go.

You are in the dark now, blind, never to see God's glorious sunsets, a drop of dew on a new leaf, the smiling faces of your two children and wife, or the clear, blue sky above the fields of corn.

As you lie in bed in the clean, neat hospital room, you ask yourself, "What next, Philip Yerger? What is left for me in life?" This question runs through your head; it keeps you awake at night. You will soon find the answer, Philip Yerger, very soon.

'I first met Phil after he had been in the hospital for 3 weeks. He was on the terrace brooding over his loss." Do you recall the voice of Fred Hensel? Do you remember that day on the terrace when he came up to you and spoke to you? He, too, was handicapped, for he had no arms or legs.

It is now you get your answer to your ques-Your life will be what you make it, Philip Yerger, and you are going to make it as normal and happy as possible. "I wept because I had no shoes, and then I met a man who had no feet." This old Arabic proverb will help you, Philip; it will give you the courage you will need.

As soon as you are discharged from the hospital, you start looking for a job. You need that courage now, because everywhere you go you get the same answer: "What do we want with a blind man? He will just be

You go to factories, department stores, and finally employment agencies. No one wants a blind man working for him. Before your accident you were a commercial artist. cannot do that now; you have no sight. Maybe they would let you answer the tele-phone or run the elevator. "Sorry, Phil, we can't use you," is the answer you get.

After weeks and months of nothing a friend suggests that you go to the rehabili-tation center of Larkin, Ohio. You did not even know Larkin had one. Now, Philip Yerger, things look better for you.

"Philip Yerger was an efficient and congenial worker. I am glad I was able to help him." Remember that voice, Philip Yerger? He is the man who gave you your It was not a very big or important job; but to you it was big; and it was important. This job which you would have for only a short time was weaving the seats for porch chairs out of reeds.

You were not satisfied with this though. You wanted to get ahead. You did not want to make your blindness a liability, an im-

pediment in your future.

In August of 1945 the 79th Congress declared that the first week in October will be set aside as National Employ the Physically Handicapped Week. The objectives of this plan are as follows:

1. More organization participation in year

round program.

- 2. Better understanding of the problem and the facts.
- 3. Increased employment of handicapped workers.
- 4. Improved methods of teaching handicapped workers.
- 5. Encouragement of retention and advancement of handicapped workers.
- 6. More comprehension by handicapped of services offered.
- 7. Expansion of facilities for increasing work capacity of qualified workers.
- 8. Greater use by the disabled of services offered.
- 9. More general employers' recognition of good business in hiring handicapped.

10. Effective publicity.

These were sent to all places of employment. As a result of this, Philip Yerger. many of your fellows were given jobs. Peo-ple who had never been accepted as equals in the field of labor were given the chance to develop skills and trades.

By 1948 a total of 53,131 disabled persons were employed in skilled and unskilled professional and semiprofessional, clerical, and agricultural jobs. This makes you feel good, Philip Yerger.

At last your associates are climbing the ladder of success to the top, not just hanging on to the first rung. Why, last year in the one month of October 28,000 individuals were placed in jobs, whereas in 1940 that was the total sum for the whole year.

You are the You, too, have a new job. head trainer for seeing-eye dogs at the rehabilitation center of Larkin. You and your assistant make sure the dogs are properly schooled, and each week you give every dog an examination.

By working so closely with the blind, Phillp Yerger, you are aware of the feeling the employer has for the afflicted person and that individual for his boss. You sense how willing businessmen are to employ these folks, not like when you first wanted a job.

Last week you and Henry Thomas, head of the rehabilitation center, went on a tour of the Larkin Bottling Works. How gratifying it was to see that 4 afflicted or crippled persons could get jobs out of every 10 positions open.

Everywhere are signs saying Employ the Handicapped. Every day thousands of pieces of mail pass from hand to hand and each one is stamped Hire the Handicapped: It Is Good Business

Yes, Philip Yerger, the Nation is awakening to reality. Life is becoming something real, not just a dream. You are offered a different and new job, your utopia. Philip Yerger, are put in charge of placing all the handicapped persons at the center into jobs most suited for them.

You can feel their emotions, their fears, and ambitions better any anyone else. You know the relief, the joy that floods over you when you hear the words "we would love to have you with us." Yes, this the job long awaited and hoped for. Now you can help your similarly afflicted associates find happiness and a feeling of belonging in the world.

As you sit at your desk, you come into contact with facts and figures that tell a story, a story of progress. For instance, Dr. Edward Conner of Meadville, Pa., a victim of multiple sclerosis, which attacks the nerves and nerve endings, he established a clinichis dream for years—to care for and instruct handicapped children.

In the year 1952, 64,000 persons in the United States were rehabilitated. That is greatly enlarged over the number when you.

Philip Yerger, first looked for a job.
Yes, Philip Yerger, this is your life. You signify the progress made by individuals over a period of years; the progress that fought its way through heartbreaks and disappointment, gains and losses, laughter and tears. Yours is a victory from which only you can get the fullest satisfaction.

"Nothing is too late till the tired heart shall cease to palpitate" was your motto.
You proved it to be true.
This is your life, Philip Yerger, and may

God bless you for it.

Ruby Red Grapefruit From the Lower Rio Grande Valley of Texas

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, February 25, 9155

Mrs. ROGERS of Massachusetts. Mr. Speaker, I would like to thank the Speaker and all of the Texas delegation and the citrus growers who gave us the most delicious ruby red grapefruit that were in the House dining room today. I enjoyed them very much. This is another reason for my liking Texas. The card that came with the grapefruit read:

RUBY RED GRAPEFRUIT

Tree-ripened ruby red grapefruit from the lower Rio Grande Valley of Texas, served to you today with the compliments of the Texas Citrus and Vegetable Growers and Shippers Association, of Harlingen, Tex., and the Texas delegation in the House of Representatives.

New Hoover Commission Favors Abolishing REA-"Operation Bankruptcy" for Great Program for Rural America Recommended

> EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. EVINS. Mr. Speaker, some years back when President Truman created the so-called Hoover Commission on Government Operations his action was commended by many because it was hoped that through its studies and recommendations the vast operation of the Federal Government might be simplified and sound economy and efficiency in Government promoted.

We know now, Mr. Speaker, that the sound principles of the Hoover Commission, as originally intended, have not been fulfilled and the new or second edition of the Hoover Commission has gone far afield in its policy recommendations. In fact, many report that the Hoover Commission, prejudiced and packed in its membership and judgments, is in a large measure attempting to take over the work and job of the Congress itself.

The new Hoover Commission task force on Federal power programs has recommended abolishing the rural electrification program-a great and worthwhile agency of our Government which has meant so much to the rural citizens of our Nation. This recommendation and proposal of the new Hoover Commission should be killed in its infancy.

In this connection, the Rural Electrification magazine, in its March 1955 issue, in an editorial has termed this proposal as "Operation Bankruptcy."

I ask unanimous consent that this editorial be reproduced with my remarks in the Appendix of the RECORD, together with a copy of a resolution adopted by the National Rural Electric Cooperative Association at its 13th annual meeting on February 17 last, in Atlantic City, N. J.

The editorial and resolution follow: [From Rural Electrification for March 1955]

OPERATION BANKRUPTCY For 2 years all of us have been concerned about the new Hoover Commission which was established to study, among other things, the Rural Electrification Administration and

the Federal power programs and make rec-This new ommendations to the Congress. Hoover Commission was authorized not only to study ways of making agencies more effi cient but to make recommendations for altering or abolishing Federal functions and to prepare bills to be introduced in Congress to carry out its recommendations.

The Hoover Commission then set up a separate task force to study each of the several divisions and functions of the United States Government. It set up a task force to study rural electrification and other Government lending agencies. It set up a task force on water and power to study, among other things, the Federal power program. Former President Herbert Hoover personally named the membes of the various task-force groups.

We have known from the beginning that the report of the task force on Federal lending agencies would be unfriendly to the Rural Electrification Administration because the members of the task force had obviously been selected for that purpose. Immediately after this lending task force was set up, we tried to get them to hold public hearings so that all of us, we in the national office and you in the field, could be heard in support of REA. The task force flatly refused to hold such hearings despite the fact that the task force on water and power had already agreed to hold public hearings. While still denying us the right to appear before them, the lending task force finally agreed to permit us to mail to them a written statement of our views, which we did. We had that statement printed and distributed to all of the rural-electric systems. It is entitled "Financing the Rural Electrification Program in the United States."

Now we find that our original fears are confirmed. The lending agencies task force has submitted a report to the Hoover Commission which was adopted by the Commis-

sion with only one change.

We have seen a copy of the part of this report which deals with REA. It bristies with unfair propaganda charges about the rural electrification program and recommends the abolition of REA.

The report charges that the rural electrification program is subsidized in four ways: (1) The 5-year deferment period on repayment of loans, (2) alleged Federal income-tax exemption, (3) the 2-percent interest rate, and (4) the administrative expenses of REA. After making these and other accusations, the report makes the following recommendations:

TASK FORCE RECOMMENDATIONS ON RURAL ELECTRIFICATION

1. The REA be abolished and that a new Pederal corporation be organized under the name "Rural Electrification Corporation."

2. That the rural electric systems be compelled to raise their rates high enough to provide funds for their own expansion.

3. That Congress provide no more loan or administrative funds for either electrifica-

tion or telephone purposes.

- 4. That the new corporation be compelled to raise new funds in the private money markets and pay whatever rate of interest necessary to get the needed funds.
- 5. That all new loans carry a sufficiently high rate of interest to cover the cost of borrowing money in the banker's market, plus enough to pay all administrative costs of the new corporation.
- 6. That the new corporation be prohibited from lending money to construct any telephone or electric facility which private utilities are willing to build.

There are more recommendations, but the foregoing are the ones of major importance. You can see by just looking over this list that what the Hoover Commission is asking the Congress to do is abolish the rural electrification program and force the sale of the rural electric systems to the private power

If REA is abolished and the new corporation set up, interest rates will no doubt be increased to at least 41/2 percent. Existing services would be slashed to the vanishing point. Promotion of the telephone program would be killed. And point No. 6 is obviously intended to utterly destroy the generation and transmission program which would automatically destroy our bargaining power with private power suppliers and result in increased wholesale power rates.

This report, put simply, should, as our Atlantic City annual meeting resolution says, be labeled "operation bankruptcy" for the whole rural-electrification program. Continuation of the rapidly growing rural-elec-trification program would simply not be possible in rural America-all of which is relatively thinly settled in comparison with the

-under such a program.

This report is one part of the emerging pattern here in Washington, a pattern of big-business socialism or corporate collectivism, or corporatism. Accelerated tax amortization, the administration's partnership program on resource development, this report on REA, and many, many other things all add up to one thing: A drive by the great corporations for complete domination of the American economy. They intend to encircle, swallow, or destroy every economic activity they do not presently own. And this is even more true of the big power companies and their allies than of any other group.

It is up to us and our allies to block them wherever possible, and we can if we will face up to what they are doing, tell our people about it, and insist that the Congress take

action when necessary.

The first and most important thing we must do is to get the Power Trust monopoly investigation underway again and root out the sources of the influences brought to bear on the Hoover Commission. Every member of a rural-electric system in the country should pick up his pencil and let his Congressman and his two Senators know how he feels about this matter. You can get copies of the Task Force Report on REA beginning Monday, March 14. Your Congressman should be able to get you a copy.

RESOLUTION ADOPTED BY THE 13TH ANNUAL MEETING OF MEMBERS OF THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION. ATLANTIC CITY, N. J., FEBRUARY 17, 1955

It has come to our attention that the task force on Federal lending agencies of the new Hoover Commission has prepared a report for the Commission, wherein this task force in reporting on REA recommends:

1. That the Rural Electrification Administration be abolished and a Federal corporation to be called the rural electrification corporation be established in its place, thereby separating the farmers' electric cooperative banker from the farmers and the Congress through the appointment of directors by the President of the United States,

2. That the new corporation be compelled to raise funds for the rural electrics from private money sources by floating debenture bonds at whatever rate of interest the private moneylenders demand.

3. That the new corporation be required to charge interest rates high enough to cover the much greater cost of private borrowing plus the cost of administration.

4. That the new corporation cannot lend money for any project which private industry is prepared to construct.

The results of these recommendations, if adopted by the full Commission and the Congress would be utterly disastrous to the rural electric systems.

(a) The corporate form of operation would rob the Congress and rural people of their control over the banker of the rural electric systems by placing an appointive board of directors between the people and the Congress. Our experience with such appointive groups has not been good in the face of the manner in which the Securities and change Commission and the Federal Power Commission have ceased to serve the people but serve, instead, the vested interests they were created to control in the public inter-We consider this recommendation on incorporation a part of a clear design to place REA funds and services under the control of the enemies of rural electrification.

(b) Forcing the new corporation into the arms of the bankers, investment houses and insurance companies plus the requirement that the interest rates charged the rural electric systems be high enough to cover all administrative costs would undoubtedly result in interest rates of 4.5 to 6 percent per annum, an intolerable burden on the rural systems and a burden designed to bankrupt said systems.

(c) The restriction against lending any project which private industry is willing to carry out is trick phrasing designed to destroy the generation and transmission phases of the program and thereby our bargaining power.

This task force report, prepared by the ower company accounting firm of Price, Waterhouse, the firm which audits the books of Purcell Smith's power trust lobby, was not prepared as a legitimate effort to improve Government lending functions but was deliberately prepared for the purpose of scuttling the rural electrification program and destroying competition in the electric This same task force refused to industry. This same task force refused to hold public hearings and NRECA was forced to submit a written statement regarding the Rural Electrification Administration, a statement which was utterly disregarded by the task force.

The report of the task force is full of misstatements and half truths. It is not a report in any true sense, but a propaganda document as vicious as we have ever examined: Now, therefore, be it

Resolved, That we urge the Congress to label the REA section of this task force report, unofficially, as "Operation Bankruptcy for Rural Electrification" and that the Congress not only reject this report in its entirety, but that it also conduct an investigation into the sources of the ideas in this report and expose the authors to the public eye for what they are, tools of the money lenders and the power monopoly; and be it further

Resolved, That copies of this resolution be ent to Members of the Congress and to President Eisenhower who appointed the Hoover Commission which, in turn, selected the task

Why Allow Gas Imports When We Are Flaring This Fuel in North Dakota?

EXTENSION OF REMARKS

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to submit a resolution of the North Dakota Legislature against the importation of natural gas when a surplus of this fuel exists in North Dakota. The countryside in our oilfields is lit at night by scores of flaring torches, natural gas that is burned because there is no available The resolution follows:

House Concurrent Resolution V-1

Concurrent resolution urging the Federal Power Commission to deny applications for the importation of foreign natural gas into the north central area while a surplus of gas exists in this area

Whereas applications are now pending before the Federal Power Commission for the importation of foreign natural gas into North Dakota and other States of the north central area of the United States; and

Whereas the importation of natural gas from foreign sources will retard and handicap the development of the natural resources of North Dakota and the north central area; and

Whereas it is in the interest of the prosperity and development of the State of North Dakota that the natural resources of this State be used in an efficient and useful manner without unfair competition from foreign

sources: Now, therefore, be it

Resolved by the House of Representatives
of the State of North Dakota (the Senate
concurring therein). That this legislative
assembly expresses its continuing concern
over the granting of any applications for
the importation into North Dakota of supplies of natural gas from foreign sources
until such time as existing supplies of such
products within the State of North Dakota
and the north central area of the United
States are being fully, safely, and adequately
utilized as determined by the North Dakota
Public Service Commission; and that this
legislative assembly hereby urges and requests the Federal Power Commission to
allow such importations only when the above

conditions are met; be it further Resolved. That copies of this resolution be forwarded by the chief clerk of the house of representatives to the Federal Power Commission, and to each Member of the North Dakota congressional delegation, and to the North Dakota Public Service Commission.

K. A. FITCH,

Speaker of the House.

KENNETH L. MORGAN,
Chief Clerk of the House.
C. P. Dahl.,
President of the Senate.

EDWARD LENO,
Secretary of the Senate.

St. Patrick's Day

EXTENSION OF REMARKS

HON, EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. BOLAND. Mr. Speaker, this morning's, March 17, issue of the Washington Post and Times Herald features an article on the character of St. Patrick. It was authored by the Reverend Dr. John Tracy Ellis, professor of church history at the Catholic University of America. In my opinion, it portrays an excellent analysis of the success that St. Patrick enjoyed in the conversion of pagan Ireland. The answer, of course, lies in the character of St. Patrick himself.

Mr. Speaker, I understand that my colleague from Pennsylvania [Mr. Flood] has secured unanimous consent to extend his remarks in the Record and to include Father Ellis' article. I congratulate the author on the article and commend the Washington Post on presenting it on today's St. Patrick's Day.

How To Get Along With Yourself

EXTENSION OF REMARKS

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks in the Record, I am inserting an article written by Dr. Abraham Shusterman, rabbi of the Har Sinai Congregation, of Baltimore, which appeared in the Baltimore Sunday American, Sunday, February 27, during the annual observance of Brotherhood Week.

I look forward to reading Rabbi Shusterman's column each Sunday and felt this particular article so inspiring I would like to bring it to the attention of my colleagues.

The article follows:

How To Get Along With Yourself

(By Rabbi Abraham Shusterman)

The recurrence of religious holidays awaken many wonderful memories. These are memories of shared experiences. It is true that my next-door neighbor, Vincent, and his family were Catholic, while

It is true that my next-door neighbor, Vincent, and his family were Catholic, while Charles and his family, who lived across the street, were Protestant. Their religious devotion was matched by our family's loyalty to the Jewish faith. Yuletide for them meant Channukahtime for us. Our mother was smart.

When the Channukah candles were kindled and blessed in our home, there were presents for the children in our family and for Vincent and Charles, as well. The parents of Vincent and Charles were equally universal in their outlook. We Jewish children received Christmas presents from them.

These memories are awakened by the beginning of Lent. We hadn't the slightest knowledge of the deeper meaning of the smudge on the foreheads of our Catholic neighbors on Ash Wednesday.

neighbors on Ash Wednesday.

It did not occur to us that the true significance of this sectarian rite was not too foreign to us as Jews. We had not been told that the ashes on their heads were signs of the shortness of human life, of man's accountability to God, and of the need for repentance.

If someone had told us the facts Ash Wednesday and Lent might remind us of our own month of Eliul which leads to the Hebrew New Year, the Day of Atonement and the penitential season. It would have been easier to understand fasting during Lent, if we had been able to compare it with our fasting on Yom Kippur.

Perhaps these are mature reflections. It may have been too much to expect it of children who are more concerned with happy experiences.

When our neighbors started Lent, with the dramatic use of ashes to symbolize mortality and the coming of judgment, we knew that Easter and Passover were not far away. Once again there was sharing in our little American neighborhood.

The families of other faiths seemed to love matzos and my mother took gifts of these unleavened cakes to their homes.

We always received from our neighbors little baskets of Easter eggs, both of the chocolate and hard-boiled varieties. Again, it must be confessed that the spiritual meaning of the holy season was not impressed upon our minds.

We were not given lectures in comparative religion and, if we Jewish boys and girls had been asked to interpret the spirit of Easter, few of us could have given a satisfactory answer.

But there is one thing that stands out in my memory. We were reverent. We sensed that there was something holy about ashes; something holy about our neighbors' disciplined life during the Lenten season.

We knew that the Easter baskets came at the end of a period of earnest prayer and self-scrutiny. From earliest childhood we respect it and our parents insisted that we regard it with reverence. It was as if our fathers and mothers had said to us, "This is not your holy season, but it is holy to Vincent and Charles. You must honor them for their devotion to their religion."

It seems to me that Vincent and Charles had the same attitude toward us.

They and their families accepted our gift of matzos; their acceptance of it had a special reverence about it, as if they felt that this unleavened bread was holy.

Yes, these are sweet memories of an unforgettable American childhood in which families differed in theological ideas but were united by mutual respect and affection.

Champions in Conservation

EXTENSION OF REMARKS

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. ABBITT. Mr. Speaker, I desire to call to the attention of the House the splendid work now being done by the American Forestry Association in cooperation with the various States in the promotion of the conservation of our forest resources.

For many years I have been interested in the conservation of our renewable resources. I believe that this is one of the most important problems facing our Nation today, that of conserving wherever possible the vast resources with which we have been entrusted.

Our country has been singularly blessed with an abundance of most of the raw materials and natural resources for the development of a modern productive society.

We should not, however, overlook the very distinct possibility that if we continue to use our resources at the present rate and do nothing to replenish them we shall soon begin to face the problem of supply.

For the last 6 years, I have had the privilege of serving on the awards committee of the American Forestry Association, which has the responsibility of selecting outstanding Americans who have contributed to the promotion of conservation.

Each year, this committee chooses five Americans in fields of public information, public service, business and industry, education, and general service, for recognition of their contribution to a sound program of conservation. A number of outstanding citizens have been so honored by the association.

Within a few months this committee will again be charged with the responsibility of making additional selections for these awards. In connection with this, I would like to call the attention of the House to an article written by Mr. James B. Craig, editor of the American Forests, the publication of the American Forestry

Association. This article, entitled "Champions in Conservation," has been written for the April issue of this magazine, and I believe it sets forth in a splendid manner the work of this organization.

The article follows:

CHAMPIONS IN CONSERVATION (By James B. Craig)

When the American Forestry Association adopted its first program for American forestry over a decade ago, there were many leaders in the whole field of renewable natural resources who made notable contributions to this effort. These men and women—they included scientists, public servants, educators, foresters, and journalists—were the pacesetters in this program of accomplishment. They were the people who moved out in front by virtue of that indescribable spirit-a form of selflessness in service-that stamps the leader in any form of endeavor.

That these champions of conservation should be recognized for their signal achievements was readily recognized by the American Forestry Association. Accordingly, 8 years ago, the association established own hall of fame for resources leaders in the form of its annual conservation awards program for distinguished service. These awards, AFA decided, should be presented annually to those individuals who have rendered outstanding service beyond the call of duty in conserving and managing our renewable resources of forests, soil, water, and wildlife. Five awards are made annually in five categories. These are: (1) Public information; (2) business and industry; (3) public servants; (4) education; (5) general service.

So successful were these initial efforts to acquaint the public with sterling contributions to sound resources development that the Sears, Roebuck Foundation joined the AFA in its program. Consequently, the project has continued to expand with every passing year. Today the awards have come to be regarded as an honor without parallel to those who work in conservation.

Last year the awards committee, headed by Chairman Robert N. Hoskins, screened 57 topflight nominations representing the widest bracket of resources activity in the history of the program. The nominations included those of foresters, city planners, business leaders, scientists, biologists, research specialists, writers, and people in many other lines. In some cases as many as 60 to 70 endorsing letters accompanied individual nominations. The five awards made at Portland, Oreg., last September 6, went to Frederick Paul Keen, Forest Service research specialist, of California; Dr. Olaus J. Murie, biologist, of Wyoming; Reuben Buck Robertson, paper-company board chairman, of North Carolina; Palmer Hoyt, newspaper publisher, of Colorado; and Dr. Samuel T. Dana, forester and educator, of Michigan.

This year's distinguished-service awards. for which nominations are now being received, will be made October 5 in connection with the all-South annual meeting of the American Forestry Association, October 3 to 6, at Jacksonville, Fla. With the Governors of many Southern States scheduled to attend, this promises to be one of the most significant resources meetings in the history of the South. President Eisenhower has been invited to address the conclave. Senator RICHARD B. RUSSELL, of Georgia, has been invited to make the keynote address on the conference theme, Southern Forestry; An Industrial Revolution With Roots. General chairman of the affair will be X. L. Pellicer, president, St. Augustine National Bank, of Florida. Recipients of the 1955 distinguished-service awards will be honored at the annual banquet of this annual meeting On October 5. The awards include a plaque

designating them as leaders in their particular fields and a life membership in the American Forestry Association.

Last month the American Forestry Association began accepting nominations for the 1955 awards. Because a nominations deadline of June 15 has been established, the awards committee is urging that AFA members and others nominate their candidates at the earliest possible date. Chairman Hoskins, industrial forester for the Seaboard Air Line Railroad, emphasized that eligibility for nominations is not limited to persons actually working in the field of renewable natural resources. He explained that the awards are intended to recognize and reward individuals whose contributions to conservation have been beyond the demands of their regular means of livelihood, adding that in previous years there has been some confusion as to who could be nominated and how awards winners were chosen.

Chairman Hoskins further explained that this year five winners will be selected from as many categories, and that for judging purposes nominations will be categorized on the basis of employment rather than on the phase of conservation in which they have been active. The categories are public servants, business and industry, education, public information, and a fifth grouping, which includes persons not definitely embraced by any of the other classifications. This means, Hoskins said, that even though a nomineea teacher, for instance-may have made an outstanding contribution in the field of public information, the awards committee would classify him in the "education" category, because that is his primary employment field. Likewise, he elaborated, an industrialist or a businessman could conceivably be nominated for activities in education, but for judging purposes both would be classified as "business and industry." Hoskins also stressed the importance of including all pertinent information on the nominations blank, and added that many nominations in recent years have been bolstered by accompanying letters of endorsement from as many as 70 different people.

Awards committee members who will work with Mr. Hoskins in screening this year's M. Abbitt, of Richmond, Va.; Bryce C. Browning, secretary-treasurer, Muskingum Watershed Conservancy District, New Philadelphia, Ohio; Dr. M. D. Mobley, executive secretary, American Vocational Association. Inc., Washington, D. C.; Arthur R. Spillers, Chief, Division of Cooperative Forest Management, United States Forest Service, Washington, D. C.; and Louis H. Wilson, director of information, American Plant Food Council, Washington, D. C.

Many fine leaders have been honored by the American Forestry Association for their achievements since the inauguration of AFA's first program for American forestry of a decade ago, Mr. Hoskins stressed. With a new program for forestry and related resources approved by the association only last year, many new leaders are appearing on today-people who are working to achieve the three big goals of this program which are: (1) To meet the essentials of forest protection; (2) to improve the national timber crop in volume and quality to a degree sufficient to wipe out all deficits and build up a reserve; (3) to obtain the maximum of economic and social services from our forests by realistic application of the principle of multiple use in their manage-

"The whole Nation is being invited and urged to take part in the activation of this program pointing toward resources abundance," Mr. Hoskins said. "As always, however, there are and will be the few who will stand out above all others for their unselfish dedication to a great cause. It is the membership in this choice group—the few who

contribute so much to so many-that AFA seeks to honor with its awards program for distinguished service."

Don't Seem To Be Getting Through

EXTENSION OF REMARKS OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. O'HARA of Minnesota Speaker, under leave to extend my remarks in the RECORD. I include the following editorial from the New Ulm Daily Journal, New Ulm, Minn., of March 4, 1955, entitled "Don't Seem To Be Getting Through":

In the past 14 years the United States has poured more than \$112 billion of the taxpayers' money into Europe and Asia in an effort to buy loyalty and support. But there

is something wrong somewhere.

Instead of winning goodwill and loyalty, we are viewed with distrust, suspicion, and hatred. In some instances with fear.

Perhaps it can be attributed to the meth-

ods we use. Whatever is wrong, the entire blame can-

not attach to the New and Fair Deals. Nor to the liberals and the conservatives in our Government. The blame does not attach solely to the Democrats as a party, nor to the Republicans as such. The blame must attach to the visionaries, the do-gooders and theorists that have taken over all parties in a grandiose move to have the world sleep in

Our capitalistic, altruistic plans to save the world have been attuned to the aristocracy of foreign lands, with little attention, if any, given to the bourgeoise, the proletariat, the hoi polloi.

The Communists, on the other hand, indulge in no such costly programs calculated to dazzle and impress the populace.

We spend millions on the Voice of America to indoctrinate our allies, as well as attempting to sell Russia and Communist satellite countries on our program. Imagine what we would do about such radio programs if Russia beamed them at us.

We build million-dollar office buildings in impoverished lands, staff them with wellpaid American help; we take over huge hotels, even palaces, staff them with men paid more per day than the natives earn in a month. Does that win friends and influence people?

We tell the world we can loose an atom bomb here that, within 30 minutes, will level Moscow. Does that create goodwill, especially among the common people whose goodwill we need?

We have moved in on countless foreign lands, set up offices in luxury and splendor. Our overseas staffs have their families, a society of their own. Whatever mingling they do with the natives, is with the upper crust, not with the common people whose goodwill we need.

We have given billions to restore industry in foreign lands and have won friendship of doubtful quality from the industrialists. But have we included a proviso that the industrialists, over a reasonable period of time, should see to it that these billions should eventually be added to the meager pay of their employees, so the common people may benefit? If we have, there is no public knowledge of it.

We have, at the cost of millions of dollars. set up an "information" service in Europe, staffed by more than 10,000 well-paid Americans, living in luxury. That is more employees than the combined majority of our great American newspapers have.

We have given fat assignments to repudiated politicians, turned over millions of dollars to them to dump on foreign lands (as witness Harold Stassen of the FOA), solely on their judgment. Has it brought us goodwill, loyalty or support? Or has it served to increase suspicion, distrust, and fear? Has Stassen ever condescended to speak to, or mingle with the common people? Or has he appeared at the cocktail parties, the swank social affairs of the upper crust?

Far better that we send a skeleton staff to foreign lands, let them live with and under the conditions of the common people; hire local people, pay them what we pay our own employees and let them do the job of selling.

We never know. At the moment, military strategists are considering turning over 20 bombers to each of our allies, each of them capable of dropping an atom bomb. A good idea—provided of course—we have irrevocable assurance they will remain allies. Which, of course, no one is able to give, even in the nation regarded today as our strongest most dependable ally.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

staffed by more than 10,000 well-paid Americans, living in luxury. That is more em-

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

(Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)
TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. Illustrations.—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the Record should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the Record and shall be linecuted only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections.—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

Analysis of the Post Office Department, January 1953 Through December 1954

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I take pleasure in inserting the following analysis of the Post Office Department, January 1953 through December 1954, which has been prepared by the citizens committee for the Hoover Report:

The original Hoover Commission's Report on the Post Office Department, submitted to the Congress on February 21, 1949, contained

two principal sections.

Under the heading "What Is Wrong With the Post Office?" the Commission listed eight major deficiencies. In a subsequent section, nine specific recommendations were made which were designed to correct those deficiencies. It is the purpose of this memorandum to show the extensive measures already taken to accomplish the objective of the Commission.

It is not possible to portray adequately the accomplishments of the Department solely by a numerical comparison with specific findings and recommendations. In every area definite progress is evident. In certain areas the Department has gone beyond the initial objectives indicated by the statements of the Commission. This is, in fact, illustrative of the determination of the present management to rehabilitate the postal service.

Prior to January 1953, several of the Commission's nine recommendations were acted

- A Deputy Postmaster General had been appointed as the operating head of the Department.
- An Advisory Board had been appointed to represent the different elements of the public in formulating postal policies and methods.
- 3. The 58 separate appropriations under which the Department operated had been consolidated into 6, and postal accounting responsibility had been returned by the General Accounting Office.

To those familiar with the Department, it was apparent, however, that the basic structure and tempo of the Postal Establishment had not been changed. The fundamental causes of its mounting deficits and deteriorating service had not been attacked. The question of "What Is Wrong With the Post Office?" posed by the Hoover Commission in 1949, was still being asked. The findings of the Commission in 1949 still applied as the new Postmaster General took office in January 1953.

- 1. The administrative structure was obsolete and overcentralized.
- 2. A maze of out-moded laws, regulations, and traditions stifled progress and proper administration

3. The Department lacked many of the essentials to good business operation.

 The postal rate structure had not kept pace with rising wages and other costs, and rate-making machinery was inadequate.

- The postal budget was used to hide subsidies wholly outside the Department's control or responsibility.
- 6. Political appointments and promotions produced inefficiency and militated against incentives to do a better lob.
- incentives to do a better job.
 7. Accounting methods were inadequate and did not produce timely control information useful to management.
- 8. The annual postal deficit had continued to increase each year, from \$263 million in 1947 to an estimated \$668 million for 1954.

The challenge had not been met. In 1953, however, it was met.

The Postmaster General became familiar with the report of the Hoover Commission and that of its post office task force, Robert Heller & Associates, and based his program on the letter and spirit of these reports. He also sought and found men in both private business and in Government qualified by experience to carry out this program.

As work progressed and the magnitude of the undertaking became more apparent, additional help was recruited. A nationally recognized firm of certified public accountants was retained to plan and assist in the modernization of the Department's financial and accounting policies and procedures. Other specialists were brought in to accelerate work on equipment development, records management, and job classification. Technicians were borrowed, without cost, from private industry to give temporary assistance in other specialized fields.

Rehabilitation of the postal establishment has gone forward, and can be best summarized in five broad areas: (1) Organization structure; (2) personnel relations; (3) finance and accounting; (4) operating regulations, practices, and equipment; (5) service to the public

The full record of accomplishment in each area is impressive and is made up of a large number of separate programs and projects. In certain instances the work is completed and the results are in. In others, work is still in progress and the long-range goals are not fully attained. In still others, the Department has developed and recommended programs of action and is seeking the required legislative support and approval.

The scope and degree of accomplishment are summarized as follows:

ORGANIZATION STRUCTURE

- 1. Reorganization of headquarters: (a) Duties and responsibilities of the several bureaus were regrouped to eliminate duplication, overlapping, unnecessary layers of supervision, and nonessential work.
- 2. Decentralization of management of postal operations:
- (a) A regional plan was developed to bring together and coordinate in the field the management functions already decentralized and those still carried on in Washington which could be better accomplished closer to the scene of action.
- (b) Ten of the fifteen regions projected are now in operation. The postal service will be fully regionalized by June 30, 1955.

(c) Plans have been developed to maintain, through the regional plan, management of the postal network in the event of a war emergency. This vital factor was not contemplated in the Hoover Commission recommendations of 1949.

PERSONNEL RELATIONS

1. Establishment of the new bureau of personnel: (a) This move, recommended by numerous commissions and committees over the years, was accomplished with congressional approval in 1953. This bureau has been the focal point for development of modern personnel policies and practices affecting over a half-million postal workers.

2. Development of an equitable system of employee compensation: (a) The Department has developed and recommended to the Congress a comprehensive plan for evaluating and classifying postal jobs as the basis for a modern and equitable schedule of salary ranges. It is anticipated that favorable action will be taken by the Congress

during its present session.

3. Inauguration of new and improved personnel practices: (a) Under the direction of the bureau of personnel, a number of improvements have been made. Competitive examinations have been introduced for postal workers seeking promotion to supervisory positions. Training programs have been developed to improve the productivity of postal workers. The Department's safety program has been expanded to reduce accidents and injuries and its suggestion system has been revitalized to encourage broader participation.

FINANCE AND ACCOUNTING

1. Establishment of the Postmaster General's reserve:

(a) A reserve account was established in 1953 to capture savings resulting from reorganization and improved procedures.

- (b) On June 30, 1954, this reserve showed a balance in excess of \$100 million representing funds appropriated but unspent. This amount was in addition to the voluntary reduction of \$74 million in appropriations made prior to the start of fiscal year 1954.
- Elimination of the burden of subsidies and free postal service:
- (a) Subsidies to the airlines, approximating \$80 million annually, were transferred in 1954 from the postal budget to that of the Civil Aeronautics Board.
- (b) Arrangements were made for reimbursing the Post Office Department for postal service performed for the Congress and for other departments of the Government, formerly provided without charge. Postal revenues were thus increased approximately \$35 million in fiscal year 1954.
- 3. Reorganization and modernization of budgeting and accounting:
- (a) The Department's budget was reorganized to conform with the organization structure as a means of clarifying management responsibility for expenditures.
- (b) The entire postal accounting system is being revised to provide for modern methods of recording transactions, timely and meaningful financial statements and control reports, availability of cost breakdowns, and adequate internal auditing procedures.
- 4. Development of a realistic schedule of postal rates and fees:

(a) Thorough and independent analysis of the causes of the postal deficit demon-strated the need and justification for additional revenues.

(b) Rates and fees under his jurisdiction were revised upward by the Postmaster Gen-This resulted in approximately \$23 eral. million of additional revenue in fiscal year

(c) A new schedule of rates for firstsecond-, and third-class mail, in line with past increases in postal wages and transportation costs, was proposed to the Congress, together with a plan for future rate revision by an independent commission. It is hoped that favorable action on these proposals will be taken during the present session.

5. Simplification of financial transactions: (a) Procedures relating to remitt_nce of cash receipts by postmasters, processing of money orders, and administration of postalsavings accounts have been revised to reduce costs and speed the accounting for funds.

OPERATING REGULATIONS, PRACTICES, AND EQUIPMENT

1 Elimination of unnecessary or obsolete procedures:

(a) Many traditional but unnecessarily burdensome regulations and practices have been modified or abolished. These include costly procedures in handling second-class metered mail, registered, insured, and c. o. d. mail, change-of-address notifications, and similar activities.

(b) Records retention policies were reviewed and revised with the result that 820 tons of records, receipts, and files have been destroyed or removed from Washington, thus freeing filing cabinets, manpower, and much valuable space formerly devoted to such files.

2. Revision and consolidation of postal manuals: (a) On December 1, 1954, a consolidated and revised manual of postal regulations was issued to employees and patrons. This was the first successful attempt in the Department's history to thus revise its regulations. It brought together in 1 manual of less than 300 pages the material formerly distributed throughout 4,000 pages of a number of publications.

3. Reorganization of the postal supply system: (a) Procedures and facilities used in procuring, storing, transporting, and controling post-office supplies, postage stamps, envelopes, and mail sacks have been examined and reorganized to reduce cost, minimize waste, and insure proper control of

4. Improvement in mail transportation: (a) Intensive research and experimentation in mail transportation has resulted in more economic use of rail transportation, extension of the use of short-haul trucks and buses, and transportation of regular firstclass mail by air on a trial basis.

5. Reorganization of real-estate manage-

- (a) Application of commercial and industrial real-estate practices has resulted in steadily decreasing the average cost of rented facilities and more efficient operation of Federal buildings managed by the Post Office Department.
- (b) New lease-purchase legislation will provide an opportunity to acquire improved postal facilities through a long-range program based on anticipated and planned
- 6. Development of work performance standards: (a) Standards of productivity 6. Development of applicable to mail sorting and handling operations have been installed in large post offices and terminals. Resulting comparative reports of efficiency have guided man-agement in the installation of training programs, methods studies, and other aids to supervision.
- 7. Development of new labor-saving equipment and methods: (a) Under the direction

of the new Industrial Engineering Department, an accelerated program of equipment development has made important advances. Bulk-mail handling and conveying equipment, stamp-vending machines, improved lighting, and similar innovations have been made in many locations. Especially designed light-weight vehicles are being tested on all types of city delivery routes. The first electronically controlled facing and canceling machine is undergoing service tests in the Washington post office. Voluntary separation of local and out-of-town mail by patrons has been successfully promoted in many large cities and has produced substantial

SERVICE TO THE PUBLIC

1. Elimination of outmoded fourth-class offices: (a) In rural areas of the country over 1,800 fourth-class offices have been replaced by extending rural delivery routes. who used to walk or drive several miles to a fourth-class office are now receiving mail service at their doors.

2. Establishment of Delayed Mail Unit; (a) Through the medium of 5,000 test mailins a week at large post offices handling 60 percent of the country's mail, the causes for delayed mail have been determined and steps taken to eliminate them. Delays thus recorded have been reduced so far by 36 percent.

3. Extension of carrier routes in growing communities: (a) Expanding suburban communities are receiving prompt consideration to assure adequate extensions of city delivery routes where warranted. Approximately \$11 million a year is now being spent for

this purpose.

4. Later window hours and mail collections: (a) Successful tests in several large cities showed the feasibility of extending post-office window hours and mail collections, usually with little or no additional expense. This program has been adopted in over 300 large cities and has resulted in earlier delivery of a substantial volume

5. Effect on service of other operational improvements: (a) Each change in operating policy has been considered as to its effect on both cost and service. Thus improve-ments in transportation methods, facilities, equipment, and procedures have all contributed to improved service.

It should be apparent that many important and lasting improvements in the organization and operation of the Post Office Department have been made in the past 2 years. The task has been great, however, and the tob is far from completed.

Some important projects will require many more months to complete. In such examples as regionalization, improved personnel practices, expansion of facilities, and development of new and modern equipment, the full result in terms of cost reduction may not be known for several years.

No matter how successful they may ultimately prove to be, these measures alone cannot hope to wipe out the postal deficit.

In fiscal year 1954 voluntary reductions in the bulget, transfer of subsidies, additional revenues from actions taken by the Postmaster General, and substantial additional havings succeeded in reducing the deficit from an anticipated \$668 million to an actual \$399 million. Unfortunately increases transportation rates recently granted by the Interstate Commerce Commission and proposed increases in rates of pay now before the Congress will almost offset these gains.

The understanding and support of postal employees, the Congress, and the public have contributed much to the success of the rehabilitation of the Department thus far. Their continuing support is vital to the completion of the job.

Yalta: Was It Worth It?

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Yalta: Was It Worth It?" published in the Washington Post of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

YALTA: WAS IT WORTH IT?

Publication of the Yalta papers reopens old wounds and opens a lot of new ones. The papers show no secret engagements whatsoever. Alger Hiss is revealed not as a "principal architect" of anything, but as a technician working among other techni-cians by the side of the American member of the Big Three. The main addition to what has long been known is a series of verbal indiscretions by the Yalta principals. The curious thing is that the historians who previously examined the papers showed more awareness of the national interest than did the Department of State

Have the disclosures eliminated the aura of treason which the "feudin' and the fightin'" in the party game has left hanging over the February 1945 parley in the Crimea? Not at all. The "I told you so" comments of sundry Republican figures with a vested interest in the "plot" at Yalta testify to no slate cleaning. That was inevitable. The commentators were precisely the same politicos who continued to yell in the hustings for the Wedemeyer Report on China long after that report had been published. It is doubtful whether they have even read the mountainous memoranda about Yalta for the publication of which they have been yammering.

Secretary Dulles on his departure for Canada acknowledged there would be no domestic healing as a result of the Yalta publication. He, of course, knew that before he decided upon the release. It is not in the nature of the political animal to swallow words and charges which have already yielded dividends in votes and which still could be made serviceable in "tickling the ears of the groundlings." Why, then, did he release this 500,000-word dossier to world attention at this critical moment?

The answer seems to be clear. He was acquitting himself of a GOP obligation incurred in the heat of the 1952 electioneering to pry open the State Department files so that the Yalta transaction could be bared to the public gaze. That is not all. Secretary Dulles did the job in his own peculiar way so as to fulfill the pledge and at the same time to appear not to injure our diplomatic standing with the world. Having run off heaven knows how many copies for the confidential information of all persons in any authority, he let nature take its course, and that course was bound to lead to a newspaper office. Secretary Dulles is not so naive as to have failed to envisage this eventuality.

Here, however is an instance of where the cake could not be had and eaten at the same time. Our diplomacy in the world has suffered a damaging blow. That is the prime mischief of the disclosures. It is a common courtesy that when parties engage in a negotiation, the consent of the parties concerned must be obtained prior to any publicity. Sir

Winston Churchill is reported as having withheld his consent-until it was virtually forced from him at the 11th hour. London is today rumbling with perturbation and even anger. It would be silly to expect that we shall be forgiven on the ground that publication was unavoidable because of a leak. What must we now face? The diplomacy of Britain-and, indeed, of other countries will now tend to keep its fingers crossed and a bridle on its tongue when it enters into conversation with ours. In other words, it will be inhibited in future relations with America. The loss to the confidence that should subsist between allies could be incal-

This does not mean that diplomatic undertakings of the momentous character of the Yalta Conference should be kept in darkness. Far from it. Wherever engagements are entered into, even if they are executive in nature and do not involve the treatymaking power, they should be made public. Furthermore, our Government should not bind itself beforehand to secret commitments. Covenants in our kind of world should be open; but we have now had enough experience since President Wilson's day to realize the disastrous consequences of arriving at those covenants openly, let alone of publishing all the memoranda of conversations without the common consent.

In respect of Yalta, it now turns out that the public had been acquainted with all the agreements which the Big Three made long before the half-million-word deluge broke over the world's head. In short, the publication itself—insofar as it was supposed to reveal a conspiracy—has proved a dud; but the effects of publication are proving explosive the world over. We may reflect today on what the ablest diplomat of the last generation, Jules Cambon, said on this general subject: "The day secrecy is abolished, negotiation of any kind will become impossible."

Slovak Independence Day

EXTENSION OF REMARKS

HON, PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1955

Mr. PHILBIN. Mr. Speaker, on this day, I am anxious to extend my congratulations to the Slovak people upon the birthday of their free nation and also to compliment them for the heroic battle they are waging against ruthless communism.

The oppression of Slovakia follows more or less the same outlines which characterize the various oppressions against other free peoples perpetrated by the Soviet and its puppets. Every form of tyranny and brutality is practiced by the Reds to break down the resistance and insure the complete submission of the native populations. Persecution of organized religion is a cardinal point and unceasing activity of the Soviet campaign.

Although the Slovak people are in virtual slavery, their brutal masters have not been able to break their spirit or destroy their will to be free. These people are God-fearing and liberty-loving and they will never bow to the tyrants even though the yoke of subjugation is fastened tightly about their necks. They prefer torture and death to slavery.

I think it is appropriate for Members of Congress and leaders of American opinion to send them messages of encouragement on this day, which marks their national independence, and I am proud to salute this brave people and to assure them that our great American nation extends them sympathy, encouragement and sincere hopes for their early liberation.

In some way our kind words will be communicated to them and will break through the shadows of despair and grief to bring fresh inspiration and fresh resolve to continue the fight. With courage and tenacity, in time, they will be free.

The knowledge of our interest and willingness to help in every way we can will inestimably strengthen these unfortunate oppressed peoples to endure their sorry plight until deliverance is at hand. To all the Slovak people I humbly tender my most earnest hopes and prayers that they will persist in their unflinching devotion to democracy and self-determination and find early release from the shackles that bind them and be restored soon once again to the free way of life which they have so nobly chosen for their own.

Republican Politicians in Illinois Made \$163,000 Profit Off Surplus Food for School Lunches

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith a news story on profits made off surplus food for school lunches in Illinois, which appeared in this morning's Washington Post and Times Herald:

PROFITS ON SCHOOL LUNCHES CITED

Dunbar & Co. made a 13-percent profit on hauling surplus food for school lunches and institutions in Illinois, Vernon L. Nickell, State superintendent of public instruction, told congressional investigators, yesterday.

Testifying before a House Government Operations Subcommittee checking into reports of excessive charges by Dunbar, Nickell said:

of excessive charges by Dunbar, Nickell said:
"Just before leaving Springfield I called
the auditors working on Dunbar & Co. books.
They gave me the following information:

"Total revenue received by Dunbar * * * amounted to \$1,288,000 over a period of 27 months.

"The net profit from this operation during the 27 months, after payment of Federal income taxes, amounted to approximately \$168,000, or 13 percent of income."

Nickell apparently was referring to independent auditors who have been studying Dunbar's records. James W. Dunbar, head of the concern, had refused to permit Government auditors to examine his books.

Chairman L. H. FOUNTAIN, Democrat, of North Carolina, of the subcommittee has said an Agricultural Department survey indicated Dunbar & Co. made a 310-percent profit under a contract awarded by Nickell in 1952.

Dunbar, clerk of the Sangmon (III.) circuit court, is a reputed contributor to Nickell's political campaigns, Fountain said.

Secretary Benson Urged To Move Surplus Cotton Into Export Channels

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. SMITH of Mississippi. Mr. Speaker, cotton farmers of the country facing a severe hardship of limited production are concerned about the lack of a concerted program to reduce the present cotton surplus.

At a time like this emergency action is needed in the overall interest of our economy.

As an expression of the views of many members of the House of Representatives from throughout the United States, a letter requesting early action has been submitted to Secretary of Agriculture Benson, signed by 129 Members of the House of Representatives. A similar letter was signed by 54 Senators.

Under unanimous consent, I include a copy of the letter:

House of Representatives, U.S., Committee on Agriculture, Washington, D.C., March 17, 1955.

Hon. EZRA TAPT BENSON,
Secretary, Department of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: We urge that you use existing authority under the Commodity Credit Corporation charter and other legislation to move accumulated stocks of cotton primarily into export channels.

This cotton could be sold with a minimum of disruption here at home and in world markets if a judicious job of merchandising is conducted.

As you know, other authorizations provide opportunities to barter such excess stock for supplemental reserves of strategic materials. We need these materials more than we need the cotton.

There is a need also for us to regain our fair share of the world market.

We share your concern for the fact that present cotton-acreage levels are about to ruin the economies in many of the cotton States. As you know, the income on cotton farms is far below the farm income averages in many other areas. Relief is greatly needed from the standpoint of our entire economy.

We jointly ask your personal attention to the situation which is of such consequence in cotton growing and manufacturing States.

Sincerely,

HAROLD D. COOLEY, JOHN W. McCor-MACK, JOHN L. McMILLAN, THOMAS G. ABERNETHY, E. C. GATHINGS, PAUL JONES, JOHN BELL WILLIAMS, JAMIE L. WHITTEN, WILBUR D. MILLS, ALBERT RAINS, A. S. HERLONG, JR., CARL T. DUR-HAM, NOBLE J. GREGORY, CLIFFORD DAVIS, HENDERSON LANHAM, ROSS BASS, JOHN J. FLYNT, JR., CARL VINSON, PHIL M. LANDRUM, CARL ELLIOTT, HERBERT C. BONNER, J. Strike on the L. & N., N. C. & St. L., and the Clinchfield Railroads

EKTENSION OF REMARKS

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. PERKINS. Mr. Speaker, Mr. T. C. Carroll, president of the Brotherhood of Maintenance of Way Employees, who is, by the way, himself an L. & N. employee on leave and an outstanding leader of labor, has recently made a very informative and very incisive speech here in Washington wherein he summarizes the issues at stake in this most serious strike. Under leave to revise and extend my remarks, I desire to include the speech of Mr. Carroll given before a group of interested public officials here in Washington.

The speech follows:

REMARKS BY T. C. CARROLL, PRESIDENT, BROTHERHOOD OF MAINTENANCE OF WAY EMPLOYEES, AT WASHINGTON, D. C., MARCH 16, 1955, WITH RESPECT TO STRIKE ON THE L. & N., N. C. & St. L., AND THE CLINCHFIELD RALEOADS

Three railroads operating extensively in the Southeastern States are tied up by a strike of their nonoperating employees. This is apparently the most extensive strike of nonoperating employees that has occurred since the so-called shopmen's strike of 1922.

Naturally the people in the States affected are concerned about this interruption of transportation services in their communities.

Why has this happened? Why did not the procedures of the Railway Labor Act operate to bring about a settlement of the dispute before it eventuated in a strike? My experiences in this matter convince me that this far-reaching strike is a shocking reflection upon the way these railroads attempt to conduct their labor relations.

The nonoperating organizations on May 22, 1953, served notices, pursuant to section 6 of the Railway Labor Act, of proposed changes in agreements so as to provide a number of improvements in working conditions. We asked for better vacations, paid holidays, premium pay for work on Sundays, group life insurance, and hospital, surgical, and medical protection for the employees and their families to be paid for by the railroads and for liberalized pass privileges.

These requests were patiently progressed through all of the procedures of the Railway Labor Act, namely, conferences, mediation by the National Mediation Board, and finally, beginning in January of last year, extensive hearings before a Presidential Emergency Board appointed by President Eisenhower under section 10 of the Railway Labor Act.

The Board made its report and recommendations on May 15, 1954. What it recommended fell far short of what the organizations had requested and what they feit they were justly entitled to have. Thirty days after that Board made its recommendations the organizations were legally free to call a strike in support of their proposals on any of the railroads throughout the country on which the notices were served.

We did not do that. Instead, we sat down day after day through long and tedious negotiations to work out an agreement with conference committees representing the railroad companies and finally on August 21, 1954, an agreement was reached between the unions and committees of railroad managers putting into effect substantially what the President's Emergency Board had recommended.

However, the 3 railroads now involved in this strike, together with several other southeastern railroads, withdrew from the Southeastern Carriers' Conference Committee, about 10 days before the agreement was reached, any authority to make an agreement on their behalf with respect to a health and welfare plan.

What the Emergency Board had recommended with respect to health and welfare fell very far short of what the employees had requested. The employees had requested that the entire program—group life insur-ance and complete hospital, surgical and medical protection for employees and their families-be provided at the expense of the The Emergency Board recommended no group life insurance and no contribution by the carriers toward health and welfare protection for the families, but only that hospital, surgical and medical insurance be provided for the employees with half the cost being borne by the employees and the other half by the carriers. The unions agreed to such a plan only because the Board appointed by President Eisenhower had recommended that the dispute on that Issue be disposed of on that basis,

After the agreement of August 21, 1954, had been made with all the major railroads of the country settling the dispute not only with respect to health and welfare, but with respect to all the other items involved in the employees' proposals and with respect to rules changes that the carriers had demanded by way of counterproposals, the railroads now involved in the strike were offered the opportunity to settle on the same basis. Repeated efforts were made by the National Mediation Board and by the organizations to obtain a settlement on those terms.

Why is it that these railroads are unwilling to accept terms of settlement that are in effect on over 90 percent of the railroad mileage of this country. They make the pious pretense that they are unwilling to compel their employees to participate in a health and welfare plan, through a payroll.

deduction of \$3.40 per month without the individual authorization of each employee. This is a basic attack on collective bargaining as provided for by the Railway Labor Act It has been held numbers of times by the Supreme Court that the collective bargaining agent chosen by the majority of employees in a craft or class of employees has not only the exclusive authority but also the legal responsibility to represent everyone in the craft or class equally, fairly, and without discrimination. It has been held by the Supreme Court that under the Railway Labor Act only this collective bargaining representative has power to agree upon the rates of pay and the terms and conditions of employment. Individual agreements, even though expressly made between the individual and the carrier, are void. The act contemplates that all the conditions of employment will be fixed through collective bargaining agreements. It is through such agreements that rates of pay may be increased or decreased, that hours may be shortened or lengthened, that seniority rights are established and that any of the other many terms of the contract of employment are made. Yet these railroads are pretending that they need the individual consent of the employee in order to establish a health and welfare plan in which he participates.

The insurance plan that has been worked out on the other railroads pusuant to the August 21, 1954, agreement is based on 100 percent participation of all employees represented on all railroads to whom the agreement applies. The premium rates are predicated on that basis. If a minority were permitted to abstain from participation, their abstention would deny to the majority the opportunity to get the best plan for the least cost.

These are the reasons why the unions have insisted, so far as health and welfare is concerned, that there be 100 percent participation by the employees they represent. This does not mean, however, that they have insisted that the railroad companies make deductions from the wages of the employees. The original proposals of the unions sought payment of the entire cost by the railroads. They agreed on most of the railroads to a plan involving deductions from employee wages only because President Eisenhower's Board had recommended that Emergency they do this. They would still be very happy to have the companies pay the entire cost

So far as the railroads involved in the strike are concerned, it is clear under the Railway Labor Act that the unsettled dispute is that arising from the organizations' proposals of May 22, 1953, and the carrier counterproposals. With these railroads there has been no agreement upon any of the issues raised by the original proposals or the carrier counterproposals. The strike ballot was taken on these issues and the strike call makes it clear that those are the issues and that the strike has been called because the dispute over those issues in their entirety remains unsettled.

Nevertheless, these railroads involved in the strike have gone into the courts of Kentucky and Tennessee and have sought injunctions against a strike that the organizations have been legally free to call at any time since the elapse of 30 days after the report of the Emergency Board on May 15, 1954. The basis on which they have sought these injunctions is the false claim that the sole purpose of the strike is to coerce the carriers into making agreements providing for deductions from employees' wages for a health and welfare plan, and this, they say, violates the laws of the States. Obviously, even if this were the object of the strike, the strike would still be lawful. State law cannot deny to the representatives authorized by the Federal Railway Labor Act the authority to contract for such deductions. Under Federal law, which under our Constitution is the supreme law of the land, these organizations are the sole contracting agents for the employees and when they make a contract providing for those deduc-tions they have spoken for the employee and no State law can deny the validity of that agreement.

As a result of these injunction suits, the organizations now find themselves in the fantastic position of being accused of unlawfully seeking agreements to carrying out the recommendations of a Presidential Emergency Board.

But as I have said, the claim that the sole purpose of the strike is to compel participation of these carriers in a contributory health and welfare system is false. The strike involves all of the issues in the employees' original proposals and the carrier counterproposals. None of them have been settled. In the only courts that have granted the organizations a hearing on these injunction suits, these facts have been clearly established. In the Jefferson Circuit Court at Louisville, Ky., the L. & N. Railroad sought an injunction against the strike. The court refused to issue it without a hearing. suit was filed March 9 and the court set it down for hearing on March 10. It heard evidence in argument on March 10 and 11 and on March 11 rendered its opinion, fully discussing all the facts and the law, and denying the injunction. An appeal was immediately taken to the Court of Appeals of Kentucky, the highest court of the State, and the action of the circuit court was affirmed Saturday afternoon, March 12.

I regret to say that in Tennessee, however, both in Nashville and in Erwin, our courts issued restraining orders without hearing. These restraining orders did not define what was restrained. They are simple notations by the judge to issue the restraining order prayed for on the complaint of the railroad.

By this arbitrary process tremendous and irreparable harm might have been done to the railroad unions and the some twenty-four-thousand-odd employees whom they represent on the railroads involved in the strike.

Fortunately for the employees, however, the railroads were in a legal dilemma. In order to make even a plausible claim that there was anything unlawful about the strike, the railroads had to make the false claim that the threatened strike was for the purpose of coercing an agreement requiring de-duction from the pay of the employees. Since the claim of illegality is predicated on this false factual claim, it is only a strike for such a purpose that is restrained. Because the strike ballot and the strike call have made clear beyond doubt that the strike is for other purposes, the unions and the workers have processed with the strike notwithstanding the issuance of these restraining orders.

I am confident that if the courts of Tennesee had held hearings on the request for temporary restraining orders, even on short notice, as the Kentucky courts did, the restraining orders would not have been issued. What has happened here has illustrated again the vicious consequences of the use of injunctions to regulate labor relations.

I have said that this is the most extensive strike of nonoperating employees since the so-called shopmen's strike of more than 30 years ago. Many of you will recall that that strike was broken by the infamous Wilkerson injunction issued by a Federal judge at the request of the Attorney General. Although that injunction has been held up all through the years as the horrible example of what courts should not do, it operated to break the strike and initiated an era of company unionism and "yellow dog" contracts from which many crafts on many railroads did not recover until recent years. Because of this abuse of judicial power in the shopmen's strike and other

cases, Congress passed the Norris-LaGuardia Act depriving Federal courts of the power to issue injunctions in labor disputes except in very restricted circumstances involving clearly lawless strikes attended by violence which the police are unable to control and after showing that the employer has made every reasonable effort to dispose of the

dispute amicably.

A number of States passed similar laws with respect to their own courts but others did not The abuse of judicial power has continued in the courts in those States that do not restrict the power of their courts in injunctions in labor disputes. And under the impetus of the revived legalization of injunctions in labor disputes utilized in the Taft-Hartley Act, even the Federal courts and the courts in States having so-called little Norris-LaGuardia Acts have come more and more again to abuse their power and to throttle the legitimate exercise of

collective bargaining rights.

What has happened in Tennessee within the last few days is no isolated example of this abuse in the railroad industry. In 1951 Congress after thorough deliberation and after giving full consideration to issues of national policy, amended the Railway Labor Act to authorize union shop agreements. The same nonoperating organizations involved in the current strikes on the three railroads thereafter initiated a movement to secure union shop agreements. Their proposals in that respect too were progressed through all the procedures of the Railway Labor Act including recommendations of a Presidential Emergency Board. They made agreements with most railroads carrying out the recommendations of that Board. But suddenly, about 2 years ago, through obviously well organized, concerted, and well financed activities of interests hostile to organized labor in general and union shop agreements in particular, they were hit with a wave of injunction suits. Through temporary injunction and restraining orders the union shop movement was brought to a firm and abrupt standstill. Now, 2 years later, that litigation is still wending its weary way through the courts. Nothing short of a decision by the Supreme Court of the United States will again enable these railroad unions to resume pursuit of an objective that Congress expressly authorized them to pursue years ago-and no case has yet even reached the Supreme Court.

We have seen a repetition of this process with respect to the provisions for health and welfare contained in the agreement of August 21, 1954. Here again there is an apparently well organized, concerted, and well financed drive to stop the carrying out of the most comprehensive plan for hospital. surgical, and medical insurance that has ever been negotiated in this country. Although some 7 or 8 injunction suits have been filed. aside from the strike injunction suits I have already discussed, so far at least this drive has not succeeded in interfering with the operation of the plan. The courts have either refused to issue temporary restraining orders or temporary injunctions without notice, or where they have issued them, they have immediately vacated them after hear-

Nevertheless, what has happened and is happening in the railroad industry both with respect to the union shop and with respect the subject of health and welfare is a potent warning that we are witnessing a most dangerous revival of the abuse of judicial power in the handling of labor relations. The labor unions involved have shown great restraint in submitting to this abuse and have manifested a commendable respect for legal processes, even when abused. They cannot be expected to continue to do so indefinitely. We must take heed that if this abuse is not stopped the time is bound to come when respect for the processes of law

I mentioned that the courts of Tennessee have issued temporary restraining orders against the strike without giving our organizations an opportunity to be heard, but that because of the misrepresentations by the railroads involved these restraining orders prohibit the unions from striking to obtain agreements other than those they are seeking in their strike. Nevertheless, the courts that have issued these temporary restraining orders are still acting on the basis of the statements made by these railroads and have issued contempt citations against union officials for violating the restraining orders which prohibited them from engaging in conduct they have not engaged in.

This is the situation with which the railway labor organizations are now confronted on the three roads in question, the L. & N., the N. C. & St. L., and the Clinchfield Railroad. Developments in a strike are, of course, subject to change on a moment's notice, but the serious result of this flagrant disregard of due process by the L. & N. Railroad and its minions reemphasizes the need for serious reexamination of our processes with respect to labor disputes in the railroad industry.

Most Holy Trinity Church, Detroit

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. DIGGS. Mr. Speaker, yesterday's observance of St. Patrick's Day had an extra significance for Most Holy Trinity Church located at Sixth and Porter Streets in the 13th Congresional District of Detroit, for the 100th anniversary of its edifice was celebrated. Few parishes in the United States have such a long colorful history in the service of the community and God Almighty. Many priests and sisters formly connected with the parish returned for the anniversary. Descendants of those who built the church returned from all parts of Detroit. They were greeted by Mexicans. Maltese. Chinese, and other newcomers-today's parishioners of the mother church of Detroit's Irish.

When Bishop Frederic Rese arrived here in 1833 to direct the newly established Detroit diocese, he received a petition from Irish Catholics for a parish and priest of their own. They were then attending St. Anne's Church, where sermons in English were preached for them.

Granting the request of the Irish here. Bishop Rese bought from the First Protestant Society its church, then located on Woodward Avenue between Larned and Congress. He had the frame building moved to Cadillac Square where now stands the Barlum Tower.

Before the building could be remodeled for Catholic services, the dreaded Asiatic cholera broke out and took a heavy toll. There were no hospitals or pesthouses. Bishop Rese ordered the proposed Holy Trinity Church turned into a temporary hospital and put it in charge of Father Martin Kundig. It was the first hospital in this part of the country.

After the plague had abated, on Trinity Sunday in 1835, the first church for the Irish of Detroit was dedicated. In lowing article from the Washington Post 1849 it was moved to Sixth and Porter in Corktown, the area bounded east and west by Third and Eighth Streets, and south and north by the river and Vernor Highway. In 1855 the early church was razed to make room for the present structure.

The new church cost \$30,000, a great sum for those days. When it was built Detroit had fewer than 25,000 inhabitants, there was no streetcar line, gas lighting was unknown, the eastern boundary of the city was Dequindre Street and the western limits were at Trumbull Avenue

In the old brick building, thousands of Detroiters, now prominent in civic and religious life, received baptism. Before its main altar hundreds of couples spoke their matrimonial vows and later moved into other parishes. Thousands of Detroiters received their religious and secular education in Holy Trinity Parochial School.

First pastor of Holy Trinity Parish was Father Bernard O'Cavanagh. In a short time he was succeeded by Father Kundig, who had charge a few months. One of the pastors of Old Trinity was the first priest ordained for this diocese, Father Lawrence Kilroy. Msgr. James Savage, known as the dean, served the parish 50 years, 10 years as assistant and 40 years as pastor. He died in 1927.

Successive pastors down through the years, including the present spiritual leader, Father Clement Kern, have been dedicated men whose conception of their responsibility encompassed all facets of community life. Under this conception by its leaders, parish members of Most Holy Trinity Church throughout the years have been principal factors in the growth and changing tone not only of our city of Detroit but, in the far-reaching effect of progressive community interest sensitive to the needs of humanity, they have heavily contributed to national welfare. America's position of world leadership, land of freedom and opportunity and riches, has been the attainment of such rightful conceptions of life and conscientious labors in making them a reality as represented in the efforts of the people of Most Holy Trinity.

It is fitting, therefore, that we here in the Congress of the United States, who recognize and appreciate the major role played by our great churches in fostering these ideals, in establishing these ideals as a bulwark in the struggle against godless international communism, pause and pay special tribute to the people of Most Holy Trinity Church of Detroit.

New Tariff Issue Puts Ike on Spot

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the foland Times Herald of Wednesday, March 16, 1955:

> NEW TARIFF ISSUE PUTS IKE ON SPOT (By Edwin L. Dale, Jr.)

The Tariff Commission has sent to President Eisenhower a recommendation for higher tariffs, or possibly import quotas, on foreign bicycles, in the most explosive escapeclause case since the Swiss watch case last

The President must act on the recommendation, which is still not public, within 60 days of Monday, when the report of the Commission went to the White House.

Bicycles are a leading export of both England and Austria. Their volume is impor-tant, unlike many of the other escape-clause cases involving such items as briar pipes and clothespins.

Under the escape clause of the reciprocal trade agreements law, the Commission must recommend that a tariff lowered under the law be rated again if injury to domestic producers results. So far, out of more than 50 applications for relief, the Commission has found injury in only 15, and of those 15 Presidents Eisenhower and Truman rejected the recommendation in 10.

The present case takes on added importance because the President's decision may come just when the Senate is considering his reciprocal trade bill. Probably the major threat to the bill, which the President considers 1 of the 2 or 3 most important items in his program, is an amendment to remove most or all of his discretion in rejecting Tariff Commission recommendations.

Such an amendment, which raises a threat to all past tariff cuts negotiated in the 20 years of reciprocal trade, was rejected in the House by the narrow margin of 206-199. There is strong support for it in the Senate Finance Committee, which now has the bill before it.

If the President rejects the Commission recommendation, he will strengthen the hand of those in the Senate who want to remove his discretion. If he accepts it, then he will badly injure relations with both Britain and Austria and will raise the general question of which way American tariff pol-

icy is moving.
Should a tightening of the escape clause pass Congress, then the number of applications for relief can be expected to increase sharply. Recently the Commission has been approving a much greater portion of the applications, but President Eisenhower has rejected 8 of the 10 that have come before him.

Unemployment in West Virginia

EXTENSION OF REMARKS OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. STAGGERS. Mr. Speaker, I wish to call to the attention of the House the timely statement presented by the very able Governor of West Virginia. William C. Marland, March 16, before the Senate Subcommittee on Labor and Public Welfare, which is investigating the causes of unemployment at this

The Bureau of Labor Statistics reports that employment in West Virginia during the month of January 1955, marks the lowest level of employment reached in our State since January 1941. Governor Marland is to be complimented for recognizing this critical situation and presenting so ably the grave picture which faces West Virginia today.

The people are looking to the Congress for help in solving a problem that is beyond the limit of local resources. I invite your attention to Governor Marland's statement:

Mr. Chairman, I am William C. Marland, Governor of West Virginia. The barometer of prosperity is falling in West Virginia, and the ensuing storm of unemployment is posing a crisis surpassed only by the years of the past depression. Hardest hit have been the State's vast bituminous coalfields, but the devastation of unemployment has not stopped there. Already it has made many inroads into related industrial employment and has shaken the economic structure of our State.

Remedial measures are being taken by West Virginia. An industrial survey has been made to determine our future industrial potential. Efforts to attract more and diversified industry into the State have been intensified. Small new avenues of employment have been opened to relieve some of the growing pressure of unemployment. These measures largely pertain to the future prosperity of the State, however, and do not answer completely the present plight of West Virginia's unemployed,

During 8 of the 12 months of 1954, West Virginia had the highest ratio of insured unemployment to covered work force in the Na-The rate of insured unemployment reached a peak of 13 percent in May and averaged around 11 percent per month for 1954. At the end of May, 61,200 unemployed workers had applications on file with the State employment service offices, and averaged 52,500 applications on file per month for 1954. Estimated insured and noninsured unemployment rose to 70,000 at the peak in May and remained around 60,000 for the rest of the year. Unemployment turned up slightly in January this year, principally from seasonal factors, and is now estimated

The high level of unemployment resulting from the loss of employment opportunities in our State was augmented by the contraction of employment opportunities elsewhere. The number of workers who lost their jobs in other States and who filed claims for unemployment insurance in West Virginia more than doubled, increasing from 11,284 in 1953 to 25,921 in 1954. Migration has ceased to be a factor in alleviating our unemployment problem. Rather, the return of many of these former outmigrants has intensified our problem.

To further indicate the large amount of unemployment existing in West Virginia, 15 of the 16 labor market areas in the State are currently classified by the United States Bureau of Employment security as group IV since these areas either have substantial or very substantial unemployment. These labor market areas embrace 29 counties that have 75 percent of the population and 80 percent of the labor force of the State. The rate of unemployment is currently ranging from 6.7 percent of the labor force in the Wheeling-Steubenville metropolitan area to 22.3 percent in the Beckley labor market area. The median rate of unemployment for all of these areas is 13 percent.

The 26 counties, mostly rural, out of the 55 in the State which are not included in any labor market area, are also suffering because of inadequate employment opportunities. Farms in the State are, for the most part, too small to provide the farm family with satisfactory income. Many farm families, therefore, are necessarily dependent on some offfarm employment.

The trend of employment in West Virginia is not following that of the Nation. For example, when employment was rising 4.1 percent in 1952 and 2.8 percent in 1953 in the Nation, employment was declining 2.1 percent in 1952 and 2.6 percent in 1953 in our State. In 1954, employment was off 2.8 percent in the Nation, but employment in West Virginia was off a substantial 8.2 percent.

Nonfarm employment fell to 447,100 this January to the lowest January level since 1941. Employment this January was 93,400 or 17.3 percent below the January 1949 high of 540,500. Employment was off 33,600 or 7 percent from January a year ago. Over half (17,400) of the year's loss was in bituminous coal mining. West Virginia's manufacturing industries also suffered considerable work force retrenchment in 1954 with the decline amounting to 7,700 or 5.9 percent from January 1954 to January 1955. Cutbacks affected most major industry groups but were not severe in the durable goods groups of stone, clay, glass, and primary metals.

The 65,500 workers employed this January in the bituminous mining industry was only half the number employed in the industry in January 1948. Employment in coal was off 37,000 or 36 percent since January 1953 for an average monthly loss of 1,540 for this period of 24 months. In contrast to this steep rate of decline, the monthly loss was 458 for the period of 60 months from January 1948 to January 1953. In 1954, mining (traditionally the major industry of the State) for the first time fell below trade as the largest single nonfactory user of manpower.

The 25-percent drop in bituminous coal mining wages during the first 9 months of 1954 from the first 9 months of 1953 is most indicative of the distressed economic conditions in our coal-mining areas, mining payrolls were \$77 million less than the \$300 million payrolls for the first 9 months of 1953. Some of this lost purchasing power was sustained by unemployment compensation. During 1954, benefits paid to some 44,000 unemployed mineworkers amounted to \$17,894,487. This was 51.3 percent of all unemployment compensation benefit payments in 1954. However, 18,179 of the mineworkers or approximately 40 percent of those drawing benefits exhausted their benefits. A survey showed that 60 percent of those who exhausted their benefits had not been able to find work since drawing their last benefit check. The survey further showed that the majority of these workers who had exhausted their benefits had to depend on their relatives and surplus commodities for their subsistence.

In certain areas, the unemployment problem has been aggravated by the fact that glassware and pottery industries, which are concentrated in a relatively small number of citles, are suffering from the effects of foreign competition. Recently imports of glassware from Germany and Japan have increased in volume and threaten to cause further reductions in employment this year.

Average weekly hours in the pottery industry dropped from an already low of 34 hours in 1953 to 31.8 in 1954 for a loss of 2.2 hours. Average annual employment in the pottery industry was down from 6,800 in 1952 to 5,400 in 1954 for a loss of 1,400 or 20.4 percent. Since 1948, employment in pottery has declined 3,700 or 40.5 percent. Employment in glass products has likewise suffered, employment dropped from 15,300 in 1952 to 14,500 in 1954 for a 5.2 percent decline. Since 1948, employment in glass products has declined 3,200 or 18 percent. Wages paid in the pottery industry during the first 9 months of 1954 were 16.3 percent below the amount paid the first 9 months of 1953. Wages paid in the glass-products industry during the first 9 months of 1954 were 5.4 percent below the amount paid the first 9 months of 1955.

The seriousness of the unemployment problem in West Virginia can be illustrated by the fact that 107,568 individuals received one or more unemployment compensation payments during 1954. Benefits paid amounted to \$34,872,329 for 1,549,031 weeks of unemployment. This loss of manpower in unemployment is equivalent to 29,790 manyears. In addition to State unemployment compensation benefits, \$4,711,310 was paid to veterans under title IV of the VRA Act of 1952 to bring the total amount of benefits paid in 1954 to \$39,583,639.

To alleviate the unemployment problem in West Virginia, much can be done nationally. For example:

1. Encourage industry to locate in the State, particularly industry vital to the defense of the Nation since our geographic location is most favorable for such industries.

Open up Government plants which have been closed, such as the naval ordnance plant in South Charleston and rubber plant at Institute.

 Encourage expansion of those plants already in the State which are capable of producing defense materials by directing more governmental contracts into the State.

4. Make the operation of the Small Business Administration more flexible so that it can assist employers in obtaining contracts, and to make loans for expansion and working capital. The present system under which the Small Business Administration is operating is too limited to assist those employers who need assistance.

5. Eliminate those laws which permit residual oil to destroy the markets for coal and which permit the products of cheap foreign labor to undersell our products, such as glassware and pottery.

6. Further improvement of our natural resources, such as planned flood and watershed control.

These measures, if encouraged and initiated from a national level, will do much to calm the blowing storm of unemployment in West Virginia. Though not the complete answer to the unemployment problem, it will provide much of the needed time for projected State planning to become functional.

The General Accounting Office and the American Merchant Marine

EXTENSION OF REMARKS

HON, PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Record, I include therein an excellent speech by Mr. Ralph E. Casey, Associate General Counsel, General Accounting Office, at the national convention of the Propeller Club, 1954, on the subject of the General Accounting Office and the American Merchant Marine.

Mr. Casey's comments on the work of the General Accounting Office generally, and its connection with merchantmarine matters in particular, is most illuminating and informative as well as very ably presented. It is reassuring to all of us, I am sure, to realize that the important functions of the General Accounting Office of standing guard over the Public Treasury and checking the fiscal affairs of the Government are being so capably conducted. In addition, of course, it is a great source of pride for me to realize that my friend, Mr. Casey, whom I so greatly respect and admire, is making such a substantial and praiseworthy contribution

The speech follows:

THE GENERAL ACCOUNTING OFFICE AND THE AMERICAN MERCHANT MARINE

(Remarks of Raiph E. Casey, Associate General Counsel, General Accounting Office, at the national convention of the Propeller Club, 1954)

I suppose that to many of you associated with the American merchant marine the General Accounting Office is known only as a place to stay away from. In reading the printed record of the proceedings at your last convention. I note one of the speakers said that some parts of the Merchant Marine Act of 1936 should be clarified so that its objectives could not be frustrated and defeated by antagonistic agencies. It is not too difficult to guess the identity of at least one of the agencies to which he was referring. It is my fervent hope that I may be able to dispel some of the doubts and fears which you of the industry may have concerning the General Accounting Office by explaining some of the purposes and functions of our Office and its relationship to

the American merchant marine.

The General Accounting Office is an independent, nonpolitical agency in the legislative branch of the Government. It is headed by the Comptroller General of the United States who is appointed by the President with the advice and consent of the Senate for a term of 15 years. He is not eligible for reappointment and may not be removed from office except by the Congress

Under the Budget and Accounting Act of 1921, the Office is responsible for auditing all public accounts, settling all claims by and against the Government, and for prescribing accounting requirements. The Comptroller General is also authorized to render decisions upon the request of department heads or disbursing officers as to the legality of a proposed expenditure of public funds. Finally, the Office is directed by law to investigate all matters relating to the receipt, disbursement, and application of public funds and to report to the Congress and its committees on fiscal matters. In addition to the general authority and direction to perform these functions insofar as concerns departments and agencies in the executive branch of the Government, the Merchant Marine Act of 1936 specifically directs that all financial transactions of the Maritime Board and Maritime Administration shall be audited in the GAO and that any departures by the Board from the provisions of the act shall be reported to the Congress by the Comptroller General.

These powers are broad; and the responsibility placed upon those of us who are called upon to exercise them is great. Naturally we strive always to be right—but I think I am safe in saying that if we erras we do, of course—we tend to err on the side of the public treasury. This is not as one-sided as it may sound because our decisions can be reversed in the courts by private individuals whose rights are affected and by the Congress upon the petition of department heads whose operations may be affected.

The history of the relationship between the General Accounting Office and the former Maritime Commission was an extremely unhappy one. For one thing, there was an ever-continuing disagreement as to jurisdiction. Then there was almost a feeling of resentment every time they were told they could not do, under the law, what they wanted to do. This situation, I am pleased to say, has entirely changed.

The change began under Admiral Cochrane as chairman though it received a setback with the final subsidy determination for the American Export vessels Independence and Constitution. Even there, however, the case was one where the trouble had started under the old Commission and the problems facing the board were tough ones to solve. But, under the relationship between the two agencies as it exists today, there is not, in my judgment, even a remote possibility of a recurrence of the extremely unfortunate situation which developed by reason of the old Commission's action on the construction subsidies for the United States Lines and American Export.

I do not wish to leave the impression that there never again will be areas of disagreement between our agencies. While the provisions of the Merchant Marine Act of 1936 are, in my judgment, fundamentally sound, they are far from simple. There will always be problems arising under it and some of them involve situations which the Congress obviously never could have envisioned at the time of its enactment. The expenditure of millions of dollars may rest upon the construction of a single word or phrase. Every time the answer is "No," someone will be However, as former Comptroller General Lindsay Warren often said, "We in the General Accounting Office are in no popularity contest. Just be sure you have all the facts; do your best to decide the case the way Congress intended it to be decided; then let the chips fall where they may." wish to emphasize that so long as there continues to exist the present spirit of cooperation, the present respect for each other's views and responsibilities, and above all a proper regard for the fact that the Congress alone decides the extent of aid and support for the American merchant marine, the industry can expect and enjoy a sound administration of maritime laws and a willingness on the part of Congress to enact necessary legislation. As unfortunate as the past has been, let us hope it has taught lessons that will not soon be forgotten.

Let me relate a recent experience to show how GAO can help in the resolution of maritime problems. It seems that few people ever hear of these instances—and they happen almost daily—whereas the whole world seems to hear when we clamp down. The American President Lines expressed a desire sometime in 1953 to buy the steamships President Cleveland and President Wilson, two war-built vessels then under charter from the Government. After some negotiation with the staff of the Maritime Administration, a bill was drawn proposing to sell the vessels to the company for \$5,300,000 each. This bill was approved by the Maritime Administration and passed on to the Bureau of the Budget by the Secretary of Commerce.

As is customary with most bills, Budget requested the views of the Comptroller General before sending the proposal to Capitol Hill. I became convinced that the price fixed in the bill was too low and did not represent a fair return to the Government for the vessels. However, rather than return the bill to Budget, I made known my personal views informally to the American President Lines, to the staff of the Maritime Administration, and finally to the Administrator himself. I have a pretty good idea of what happened after my discussion with Mr. Rothschild.

At any rate, we sat down at a conference table, Maritime, GAO, and APL, and agreed upon a new price of \$6,500,000 for each vessel. Of course, it was not done quite as simply or as quickly as that, but the result was that the bill went through the congressional committees and became law without a whisper of opposition.

During the 83d Congress Public Law 574 was enacted authorizing a tanker trade-in and build program. It is my understanding

that the tanker industry has insisted that each transaction under this law be approved in advance by the Comptroller General, From our standpoint, that is not really necessary; but we are prepared to cooperate as the occasions arise. At the same time, we recognize that primary authority and responsibility for administering the maritime laws has been delegated by the Congress to the Federal Maritime Board and to the Maritime Administrator. We in the General Accounting Office have no thought or desire to usurp any part of that authority or share any part of that responsibility. We do have an obligation to the Congress (our boss, so to speak) to take action where administrative officials fail to administer the law properly. But in appraising the administration, it has always been our policy to resolve reasonable doubts in favor of the position taken by the agency itself.

Of course, experience has shown that the best way to work out these problems is to forget about jurisdiction and discuss the questions frankly and openly as they arise. For example, in connection with this tanker program, we have already had discussions as to the amount of the credit allowances for the old tankers, the treatment of speed as a national-defense feature, and many other facets. In the case of one company, we worked out an arrangement whereby two new tankers could be constructed now, with a third to be constructed later on, and yet permit the company to realize the advantages of a three-ship construction contract.

In conclusion, I believe that, though born of uncertainty and reared through turmoil, the existing relationship between the General Accounting Office and the Maritime Administration will help, rather than impede or restrain, the development of a strong privately owned American merchant marine. If there is any one thing that is more essential to the merchant marine today than anything else it is the creation in the public mind of a conviction that every financial transaction between the industry and the Federal Government is as clean as the driven That is the area where the GAO, as the agent of the Congress, stands to make its most valuable contribution.

Religion in American Life

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the Record a Lenten message from our good Chaplain, the Reverend Dr. Bernard Braskamp. Recently I had the pleasure of having Dr. Braskamp as my guest on a radio program broadcast in my district. Dr. Braskamp commented on the subject of religion in American life, a subject to which millions of Americans today are giving renewed thought and meditation. With a view to making his views available to a wider audience, I include them herewith:

RELIGION IN AMERICAN LIFE

(A statement by the Reverend Dr. Bernard Braskamp, Chaplain of the House of Representatives)

I believe that a resurgence of faith in God, reverence for God's moral order, and obedience to God's will would be the noblest victory in the annals of American history,

for our national greatness cannot survive if we allow it to become eclipsed by a decline in spiritual idealism.

Materialism, as a philosophy, has well nigh run its course, but as a habit and way of life it still seems to have a very strong hold on many. The dream of an economic Garden of Eden is a very old one and there are those who feel that all that mankind needs is an abundance of food and drink and clothing and then all will be well. To be sure these are among the necessities of life and everything should be done to improve mankind's temporal conditions.

Man, however, is too great to be content with these, for man cannot live by bread alone. What we need to do is to help America cultivate the religious sentiment with the lofty idealisms, for then only can our Nation make a distinct contribution to the wealth of human aspirations and achievements and fulfill its responsibility for the welfare and happiness of all mankind.

It seems to me that the logic of the American way of life and the religious spirit of our Republic find their noblest expression when as citizens we seek to blend a virile and wholesome type of materialism with a noble and lofty idealism.

Our national spirit, at its best, embraces this dual aspect and these two must always be kept in close and cordial agreement so that our materialism shall incarnate our idealism and the great spiritual realities and sentiments shall pervade and permeate our materialism.

I believe that one of the most encouraging and hopeful signs of our time is just this, that there is a new feeling of God-consciousness among our leaders in public life. I frequently talk with the men in Congress about the place of religion in our national life and I find them very responsive and ready to admit that our national problems cannot be solved on a purely economic basis and that God must be brought into the picture. We are beginning to see that the weakness of our plans and programs for a finer social order has been just this, that we are working on the stupid assumption that an abundance of material things for struggling humanity is the universal cureall.

The manmade economic order needs to be coordinated with the God-made moral and spiritual order; otherwise there will be chaos and confusion, damnation and doom. Let no one say that the principles of Christianity have falled. The truth of the matter is that neither as a nation or as individuals have we ever given them an honest-to-goodness trial.

The time has come to put first things first. This is what Jesus said, "Seek ye first the Kingdom of God and His righteousness and all these things shall be added unto you." Roger Babson said many years ago, "The solution of the labor problem is wholly a question of religion." A leading commercial journal has said, "Above all else this country needs a nationwide revival of old-fashioned prayer-meeting religion."

Delays in Reaching the Goals of Justice

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. O'HARA of Illinois. Mr. Speaker, from lawyers in Chicago I have been receiving enthusiastic comments on the address to the Chicago chapter of the able Bolitha J. Laws, chief judge of the United States district court for the District of Columbia.

The Chicago chapter of the Federal Bar Association prides itself on the quality of the speakers at its gatherings. It is interesting to recall in this connection that the first public address in Chicago of former President Harry Truman was made at an annual banquet of the Chicago chapter of the Federal Bar Association, my son and namesake at that time being the president of the chapter. and the present Associate Justice of the Supreme Court, the Honorable Thomas Clark, the national president of the Federal Bar Association.

Former President Truman was the Senator from the State of Missouri, the chairman of a committee that had aroused wide public interest. The Honorable Edward J. Kelly then was mayor of Chicago. The visit of Senator Truman to Chicago to make his first public address in that city as the guest speaker of the Chicago chapter of the Federal Bar Association brought Senator Truman and Mayor Kelly again into association. This circumstance may have been a contributing factor to historic events quickly to follow. In any event, Mayor Kelly not long afterward was a a vital factor in swinging the vice presidential nomination to Mr. Truman. That nomination eventually led to the Presidency and the brilliant era of Truman's administration of the high office of the Chief Executive. It was President Truman who placed Associate Justice Clark first in the office of the Attorney General of the United States and then on the Supreme Court.

The theme of Judge Laws' address was a trend which he thinks presents a serious threat not only to the cause of justice but to the very existence of the courts themselves. This is the trend to long-drawn-out trials both in courts of law and before administrative agencies and tribunals. He directed attention to

a few typical cases: First. Within the past 5 years a suit in the Boston United States court included 4,600 exhibits one of them containing over 1,000 pages. Objections were filed on 2,000 of the exhibits and the hearings then took months, lengthening the trial case to well over a year.

Second. The New York Medina case took more than 2 years and although Judge Laws forgot the number of exhibits he recalled \$1 million was spent to transcribe the records alone.

Third. In the District of Columbia a case required approximately 31/2 months to hear a motion to dismiss. There were 976 exhibits and 3 judges studied the motion for over a year. The Supreme Court reversed the decision.

Fourth. A case in the District of Columbia in which Judge Laws had a part contained thousands of exhibits in the preliminary stages. Judge Laws understands that the exhibits at the trial may reach between five and ten thousand and the lawyers estimate the actual trial will last from 10 months to a year.

Fifth. In the district court for the District of Columbia if all long cases now

Federal Bar Association of the Honor- on the calendar were tried promptly it would occupy no less than full time for four judges for a year.

Sixth. In studying the calendar in Chicago several months ago a judge told Judge Laws that there were approximately 85 lengthy trials scheduled most of which were antitrust. If all of these were tried it would take the time of 6 judges for 47 months to try them.

Some criminal trials cited:

First. The Bridges case took over 82 trial days and ultimately over 4 months. Second. Communist cases-Foster, et al.-took 35 trial days, over 2 months, and time used in selecting jury requiring 105 trial days-over 5 months.

Third. A sedition case in the District of Columbia took over 108 days for trial-61/2 months-and then the judge The prosecution case was not closed.

Fourth. The Judith Coplon case in the District of Columbia was estimated to take a week but took 48 days-21/2 months. The New York trial took 50 days for motions, 30 days for trial, a total of over 4 months.

It is a waste of time, expense, and effort. Judge Laws said-

Many times as I have gone through tedious trials I have thought of the words of the great Teacher: "Use not vain repetitions, as the heathen do; for they think they will be heard for their much speaking." I think of the Lord's Prayer, a petition of man to his Creator for guidance; a prayer of 66 words. I also think of our amazing Constitution, with its amendments. This instrument has withstood assaults of more than 160 years of crises, through war and peace, prosperity and This mighty document, simple, depression. concise, definite, with reading time of 18 brief minutes.

We of the law today must combine to find a way to the goal of justice that is shorter, less expensive, and simpler.

Juvenile Delinguency

EXTENSION OF REMARKS OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks, I include an article from this morning's Washington Post and Times Herald.

Juvenile delinquency has been described as a sort of bone that the reformers chew on when other issues grow stale. Nevertheless it has its serious aspects and can undoubtedly breed vice and crime in any community with certainty comparable only with death and taxes. It appears that the District of Columbia is no exception to the rule.

When many of us came to Washington we anticipated a sort of model city but our hopes may have been dashed before we even reached the Capitol Building by the absence of arterial highways, parking facilities, and of congested traffic conditions in general. Further observation convinced us that the responsibility for these conditions does not rest with the city fathers who number some of the most capable men in the country in their particular fields. They have done a remarkable job with the tools at hand, handicapped as they are by congressional and diplomatic immunity and a liberal sprinkling of codfish aristocracy, influential and otherwise. It is not likely that the Nation's Capital will soon be able to rid itself of these hazards to the path of progress.

There is no immunity however, from the neglect of Washington's youthful offenders nor from the circumstances that lead up to their classification as such in the first place. Our schools and our churches are undoubtedly doing the best they can under the circumstances and deserve much credit, but the fact remains that the foundation of good citizenship must be laid in the home. This is where the juvenile court and the social worker do their most effective work. They spend most of their time with preventative measures and punishment is incidental

I was astounded to learn that Washington's juvenile court is presided over by a single judge and the magnitude of her duties and the responsibilities of her office are difficult for a layman to comprehend. I commend the following article from this morning's local paper for the study and serious consideration of my colleagues who may be justly concerned over the problem of juvenile delinquency and its influence on the community's crime and immorality:

TWO MENTALLY ILL BOYS KEPT 3 MONTHS IN RECEIVING HOME FOR SAPEKEEPING

Two mentally ill 10-year-old boys have spent almost 3 months at the Receiving Home awaiting placement in another District institution which also lacks facilities to care for them.

One was found to be too emotionally and materially deprived to respond to out-patient mental health services offered to him prior to court commitment to the Welfare Department.

The other goes beserk, couldn't be restrained in school, once tried to attack a police officer with a paring knife.

Yet these boys are slated for placement at Junior Village, an institution for homeless, neglected children. When and if a bed becomes vacant at Junior Village they will go there simply because the District has not a single residential treatment center for them.

One of the boys has been held at the Receiving Home by the Welfare Department for 81 days. This will be the longest stay of any child in the institution after today, when a District court hearing is scheduled on the commitment of a feebleminded teen-age mother to the District Training School.

A bed finally became available for her at the school, so she will be able to vacate the bed she has slept in for 165 days at the Receiving Home.

The boy, who has been at the home for 81 days, was committed on a dependency complaint because his mother did not understand the degree of his disturbance and emotional limitations. Police found him riding streetcars late at night.

He received treatment at Freedmen's Hospital but the institution was unable to continue to help him. The Welfare Department placed him in the Merriweather Home for Children but they were unable to cope with

The Welfare Department asks: "What other institution does the District provide for this boy?"

I Speak for Democracy

EXTENSION OF REMARKS

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I wish to include the following speech given by Miss Beverly Kunkel, a senior at the Simon Kenton High School, Independence, Ky., which won first place in the I Speak for Democracy contest in Kenton County, Ky .:

I SPEAK FOR DEMOCRACY (By Beverly Kunkel)

"Democracy." What does that word mean to you and your friends? Yes; even to your foe and to me?

Democracy may be understood as an abstract concept, namely, power of the people. It immediately adverts to idealism in a broad sense and it signifies the what-is-itness of American freedom and pursuit of hanniness

American democracy affects the individual to accept or reject freedoms of religion,

thought, race, press, and felicity.
Since this kind of abstract conception influences the American way of living, we wholeheartedly enjoy its basic principles.

To me the greatest freedom in the world is the freedom to worship God; when, where, and in the manner I choose. Only through God can any man achieve what he really wants. If it had not been for their abiding faith in God, our ancestors could never have withstood the trials and perils of the wilderness; therefore, you and I would not be living in this democracy of modern conveniences today.

If the framers of our Constitution could visit us today, they might wonder how the Constitution had survived at all. They could hardly have foreseen that their weak, little Nation of 4 million people on about a mil-lion square miles of territory would become one of the world's greatest powers. Nor could they have guessed how the commerce, industry, and science which they had en-couraged would change the Nation's ways of living and thinking. Nor how the change would necessitate innumerable laws of as-sistance and regulations to keep our complex civilization balanced and healthy even in ordinary times.

Our Constitution had drawn the States together into a Nation and at the same time preserved and extended the spirit of de-

mocracy through the years.

I think our forefathers would find civil liberties better observed today. They would find that the United States for all its upheavals is still a Government of laws made by free people.

This would please our forefathers because they did their best to guard the Nation from

the tyranny of dictatorship.

To me it is a priceless privilege to be able to discuss with others, the problems, plans, and our already established great traditions which have laid the foundation for our democracy.

The right to learn facts is a basic right

in democracy.
In order to keep democracy alive it should live in the hearts of the 160 million free people in America.

As we realize our blessings under our Constitution, we will agree, I am sure, on these points-that is, beware of how you allow any man or group of men to lay their hands upon the great instrument-democracy. Do not let it be torn down-for if you do all the great advance in freedom which it represents will perish and we shall return to primitive forms of government which in ancient and in modern times as well have oscillated between anarchy and despotism, with at best, only brief intermissions of true and ordered liberty. In order to preserve our great democracy we must always exercise our freedom and duty to vote.

After observing the facts of almost two centuries one may therefore say of the American democracy that it has contracted public debt with moderation; paid it with unexampled promptness; acquired as good a public credit as the world has ever known; made private property secure; and shown no tendency to attach riches or to subsidize poverty, or in either direction to violate the fundamental principle of democracy—that all men are equal before the law.

We, the Americans of today, must never

forget that we are the inheritors and guardians of our democracy.

It is my humble prayer that I may, in my small way, help to keep America a great democracy.

A Tribute to the Late Senator Maybank

EXTENSION OF REMARKS OF

HON, JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. RILEY. Mr. Speaker, early on the morning of September 1, 1954, I turned on my radio to get the headline news which is given at that time. I was shocked and distressed to hear that my distinguished senior Senator and beloved friend, Burnet Maybank, had passed away during the night. I felt very deeply that my State and Nation had suffered one of its heaviest losses in years, in the passing of this very able and distinguished representative in the prime of his life. I felt very deeply, too, the great personal loss which had come to me.

While Senator Maybank had been active in the political life of my State and in the leadership of the Democratic Party in South Carolina, I did not know him intimately until I came to Congress during the dark days of World War II. Senator Maybank was even then a leader in the United States Senate, although he had been a Member of that great body less than a term at that time. He was most cooperative in assisting me with matters that came before me and most generous in the giving of his time and counsel in matters in which we were jointly interested. I learned to know him well, and he and I became fast friends working together on legislation affecting our State. We had many joint problems since I had the honor of serving on the Banking and Currency Committee in the House and later on the Appropriations Committee in the House, while Senator Maybank was chairman of the great Banking and Currency Committee in the Senate and served on the Appropriations Committee in the Senate. I can say, with all sincerity, that Senator Maybank gave, without reservation, of his great ability and unbounded energy in the service of

his State and Nation. I firmly believe that his life was shortened through his extremely conscientious efforts to cope with the many problems of his responsible position. Beyond a doubt, he was one of the ablest and most influential representatives from South Carolina to serve in the national Congress.

He had a rich background of culture, splendid educational advantages, rare ability, and a personality that won him friends, not only among his Democratic colleagues, but among those who served on the Republican side. He had the confidence of all of his associates.

He had the confidence and esteem of the people of South Carolina, for he had filled with distinction the many responsible assignments which the citizens of his home city of Charleston and his beloved State had given him. The affection, confidence, and esteem in which he was held is attested by the fact that he was never defeated for any office for which he offered, and by the fact that in his last race for reelection as United States Senator he was unopposed, a tribute accorded to no other candidate for the national Senate by the people of the Palmetto State.

He loved his family, and nothing gave him greater pleasure than to have his friends visit with him and his family. My deepest sympathy goes to these loved ones of his. They have suffered an irreparable loss, but they have the great heritage of a noble husband and father to comfort them in the passing of this true southern gentleman and outstanding statesman. Those of us who are left can but try to emulate the high ideals and principles which guided the life of Burnet Rhett Maybank.

Sale of Surplus Commodities for Foreign Currencies

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following letter from the Associated Students of the University of California at Los Angeles relative to the authorization of the sale of surplus commodities for foreign currencies. It is stimulating to find the young people of this country coming up with such ideas. I sincerely hope my colleagues will take the time to read this letter:

ASSOCIATED STUDENTS. UNIVERSITY OF CALIFORNIA AT LOS ANGELES, Los Angeles, Calif., March 7, 1955. The Honorable James Roosevelt, House of Representatives,

Washington, D. C. DEAR REPRESENTATIVE ROOSEVELT: Last fall the President authorized the sale of surplus commodities for foreign currencies. This program resulted in the accumulation of a large sum of money abroad that cannot be

utilized at the present time. I would like to

suggest a plan that was drawn up by a group of UCLA students to put those moneys to use; meanwhile, aiding the American world-

partnership idea.

The UCLA plan calls for the setting aside of a portion of these currencies to finance research groups and field teams of American and foreign college students to compile data in regard to:

1. Opportunities for private investment in

underdeveloped areas.

Extent of need for economic and sociological development necessary for a stable economy.

3. Ability of ERP recipients to contribute

to this program.

The students who discussed this plan feel that the assignment of the field teams would be to travel in underdeveloped areas investigating resources and methods of development, and to make recommendations for educational, health, and administrative improvements. The research units in the United States and the field teams in the foreign countries will work in close liaison with foreign universities and the United States technical-assistance organizations. These studies, evaluated, could be made available to Government agencies, educational institutions, and business organizations for implementation.

The student legislative council of UCLA would appreciate your evaluation of this plan and opinion as to whether it would be possible to secure funds to implement this program. Please inform us of the outcome of your judgment at your earliest convenience.

Sincerely yours,

GEOFFREY STORMSON, Research Group Chairman,

St. Patrick's Day

EXTENSION OF REMARKS

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. LESINSKI. Mr. Speaker—

We invoke holy Patrick, Ireland's chief apostle. Glorious is his wondrous name, a flame that

baptized heathen;

He warned against hard-hearted wizards. He thrust down the proud with the help of our Lord of fair Heaven.

He purified Ireland's meadow-lands, a mighty

We pray to Patrick chief apostle; his judgment hath delivered us in doom from the malevolence of dark devils.

God be with us, together with the prayer of Patrick, chief apostle.

So prayed Ninine, Irish poet of the eighth century or earlier, and so we pray There is a green-and-gold glory today. about the world today, the sunshine on the grass reminding us of the dearly loved flag of ancient Ireland—the golden harp on a green field. All the year round we love the Irish, but this is the day we stand up and tell them so. This is the day when Irish song and Irish poetry mingle with flights of impassioned prose by orators of every race, all over the world. Everyone who feels the springs of courage in him, or claims to have a sense of humor, feels that he has a bit of the Irish in his blood.

All our hearts re-echo today to the music of these lines of William Drennan:
When Eire first rose from the dark-swelling flood,

God blessed the green island, and saw it was good;

The emerald of Europe, it sparkled and shone.

In the ring of the world, the most precious

In the ring of the world, the most precious stone.

In her sun, in her soil, in her station thrice blest,

With her back towards Britain, her face to the west, Eire stands proudly insular, on her steep

shore,

And strikes her high harp 'mid the ocean's deep roar.

All over the length and breadth of America people are wearing green—a shamrock, a green necktie, green suits and dresses. I have little doubt that some, in their unrestrained enthusiasm, are leaping this minute into vats of green dye. More power to them. May they live into a green old age.

We of Polish ancestry, you know, have a special feeling of kinship with the Irish. Poland, like Ireland, has a tragic and glorious history of bravery, of war and betrayal, of glorious victories and devastating defeats. But they are alike most of all in the courage that holds on to national identity and patriotism, through years and centuries of foreign rule; and in the faith that no promise of reward or threat of punishment can shake. It is out of defeat that we, Polish and Irish and American, draw our most glorious memories. Warsaw in World War II, with its history of oppression and murder, climaxed by the betrayal of General Bor and his gallant band of partisans, is a name to go down in history with Drogheda, of Cromwell's invasion of Ireland, and with the Alamo. But this background of gallantry and stalwart faith has a sadness about it that is foreign to the enjoyment of this day. Let us think, rather, of the double symbolism of the color green-the color of Ireland and the color of hope. Ireland, under the patronage of St. Patrick, won through to its independent place in the family of nations, after centuries of suffering and hoping, and to the unhampered exercise of the Catholic religion. May the green of hope and of St. Patrick carry today to every Polish heart assurance that Poland, too, will attain freedom and independence.

Today, though, the first thought of every Pole, and of every American, goes out to Ireland, whose sons are brave, whose daughters beautiful. Our hearts dance to the lilt of Irish melody and verse, until we half feel our own fathers and mothers must have been Irish, and we can read, with a feeling almost of nostalgia, lines like these of Father Charles L. O'Donnell:

A ROAD OF IRELAND

From Killybegs to Ardara is seven Irish miles,
"Tis there the blackbirds whistle and the
mating cuckoos call,

Beyond the fields the green sea glints, above the heaven smiles

On all the white boreens that thread the glens of Donegal.

Along the roads what feet have passed, could they but tell the story,

Of ancient king and saint and bard, the roads have known them all;

Lough Dergh, Doon Well, Glen Columcille, the names are yet a glory,

Tis great ghosts in the gloaming remember Donegal,

The harbor ships of Killybegs glistened with Spanish sail

The days Spain ventured round the world and held the half in thrall,

And Ardara has writ her name in the proud books of the Gael,

Though sleep has fallen on them now in dreaming Donegal.

Well, time will have its fling with dust, it is the changeless law,

But this I like to think of whatever may befall:

When she came up from Killybegs and he from Ardara,

My father met my mother on the road, in Donegal.

Report on Russia

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. McDONOUGH. Mr. Speaker, the Right Reverend Monsignor William E. North, Ph. D., editor of the Los Angeles Tidings has reviewed the findings of Mr. Hearst, editor in chief of the Hearst publications, on his recent visit to Russia. Mr. Hearst's comprehensive observation of the Russian people, and especially the leaders of the Politboro, at a time when internal difficulties were at fever heat with the disposing of Malenkov and the seating of Bulganin as the head of the Soviet Union makes this review especially interesting.

I am including the following editorial by Father North as part of my remarks: REPORT ON RUSSIA

There will be some kind of prize, Pulitzer or otherwise, for the remarkable series of articles on Russia, written by the newly appointed editor in chief of the Hearst publications. To be in Russia not only at an acute stage in East-West relations but at a crucial time of internal upheaval is one of those fortuitous circumstances that happen rarely in the field of journalism.

That Mr. Hearst and his party made the most of their interviews and observations is evident from the conclusions in this scintillating and detailed reporting. Here is no hysteria, no cry of alarm with Russia imminently on rampage if we do not appease on all fronts. Here is sober, matter-of-fact appraisal of serious weaknesses that bluff and bravado could not conceal.

The conclusions parallel the findings of other serious students of the Russian scene and render untenable further timorous temporizing in the face of newer aggression and aggrandizement. The masters in the Kremlin may be cruel but they are cold, hard realists. They have lost none of the fervor for worldwide domination but they are free of the complexes that could only invite destruction in the hideous halo of hydrogen that rings them round.

Russia needs the peace for which we gird. We but need strength to keep the peace. Our policy of firmness, howsoever uncertain and sporadic, has given both Russia and China pause. Let but our resolution steel and there will be a turning of the tide. There is disaffection among the people so widespread and disagreement among the leaders so deep seated as to make conflict unthinkable. What communism needs more than ever now is a prolonged spell of hypocritical coexistence.

The one hope that remains for piecemeal nibbling at the perimeters lies in the falling out of friends on matters of policy. The only thing the Kremlin cannot brook is the unanimity of the free world. The hesitation of allies was its opportunity in Korea and their confusion its victory in Vietnam. Now Mr. Eden, Foreign Minister of a nation that holds Hong Kong, an island off the mainland of China, blandly demands the return of the offshore islands of Matsu and Quemoy to the Reds. This narrow and self-ish stand ill serves the hope that we had finally halted the enemy's march to power.

Religion in Russia is a topic given the full treatment in the current series. It comes as no surprise to read that religion is still rife in Holy Russia. Neither the sword nor the word has yet been able to root God from the hearts of men. Communism's is a longrange program of religious alienation. It is content to wait generations if necessary to "erase the infamy." Not persecution but propaganda will do the work. Persecution martyrs religion, propaganda atrophies it. These must be letups even in propaganda when weaknesses manifest themselves within and dangers loom from without. So there is presently a brave show of bourgeois re-spectability in the matter of religion which beguiles the unwary into thinking all is well.

Mr. Hearst's positive proposals for cabining the threat are less happy than his straight reporting. He calls for a board of experts frame a show-off program to sell way of life to the world-our hockey players can beat theirs, our ballerinas are nimble, our artists more creative, our industry more productive, our gadgets more widespread. The Voice of America has been spending millions doing this and we have won but envy and neutralism. The Russians have proved better propagandists finding falsity as easy to peddle as truth.

Our marshaled might is not without its impress on the realists in the Kremlin. From strength and resolve will come the high tide and the turn in the fortunes of freedom.

H. R. 3232

EXTENSION OF REMARKS

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a letter from Andrew E. Danish, president, Northeastern Poultry Producers Council.

> NORTHEASTERN POULTRY PRODUCERS COUNCIL, INC., Trenton, N. J., March 17, 1955.

Re H. R. 3232. Hon. James M. Quigley, House Office Building, Washington, D. C.

DEAR CONGRESSMAN QUIGLEY: We are very pleased to learn that you have introduced bill H. R. 3232 to the House of Representatives, to amend section 335 of the Agricultural Adjustment Act of 1938 so as to exempt poultrymen and others who grow wheat as feed on their own acres for their own livestock. We are notifying the poultrymen of the State of Pennsylvania and the Pennsylvania State Poultry Federation, who are members of this council, of your praiseworthy

The Northeastern Poultry Producers Counrepresents poultry producers from the 14 Northeastern States and we are very much in accord with the intent of your proposed legislation. We sincerely hope it will receive favorable consideration when it reaches the House floor. The approval of this legislation will materially aid the responsible poultry industry to continue its position to stand on its own feet and not ask for Government aid in the form of subsidiaries and other handouts.

If there is anything which we, as an organization of poultry producers can do to help you further this legislation, please do not resitate to let us know.

Our sincerest thanks, Congressman Quig-LEY, for your helpful support in attempting to solve this burdensome problem of the poultry industry. Sincerely yours,

ANDREW E. DANISH. President.

The Postal Field Service Compensation Act of 1955

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. REES of Kansas. Mr. Speaker, on Monday the House will consider, under suspension of the rules, the bill H. R. 4644, the Postal Field Service Compensation Act of 1955.

Because of the limited time, under such procedure, I am presenting here for the information of the Members a few facts concerning this legislation.

Our committee has worked diligently to develop legislation which would not only be fair and equitable to postal employees, but would also come reasonably within the bounds of the President's request for this legislation.

Our committee has recommended a good bill. I am sure the Members when in possession of all the facts will agree. The members of the committee are to be commended for the effort they have put forth and the results obtained. This extends not only to those who voted with the large majority of the committee, but also to those who have some slight reservations with respect to the ultimate product.

Basically, the bill provides a minimum of 6-percent salary increase, and, at the same time, will bring about a reclassification of postal employees' salaries through the establishment of a new salary plan for the postal field service.

Under the bill, 90 percent of the employees are covered by position specifically defined in the bill and are assigned to appropriate salary levels. Only 10 percent will be assigned by the Postmaster General, and these must be assigned in accordance with strict standards and subject to an appeal to the Civil Service Commission by the employee concerned.

Many Members have received letters expressing concern about certain provisions or lack of them in the bill as originally recommended by the Postmaster General, H. R. 2987. The committee, by its action, has eliminated virtually everyone of these objections. Even the views of the minority are only one-half of 1 percent apart on total amount of the increase. For the benefit of the Members there follows a discussion of the most frequently raised objections to the bill, coupled with corrective action taken by the committee. For the convenience of the Members, I have referred to appropriate section numbers in H. R. 4644.

1. THE POSTMASTER GENERAL HAS TOO MUCH AUTHORITY TO GRADE JOBS

While this was not entirely true, the committee recognized the concern of the employees and struck out references to Postmaster General and rephrased the language to make the provisions of the bill a matter of law rather than to be dependent on actions required of the Postmaster General.

The descriptions of duties, responsibilities, and relationships of 50 positions. covering more than 90 percent of the postal employees, and the establishment of salary levels, are made a matter of law by section 203 of the bill.

The detailed procedure for the establishment of salary levels for the remaining less than 10 percent are made a matter of law by section 201 of the bill.

Section 202 authorizes the employee to appeal to the Civil Service Commission any action taken by the Post Office Department in the assignment of a job to a key position or to a salary level. It also makes the decisions of the Civil Service Commission mandatory on the Postmaster General.

2. THE SALARY OF AN EMPLOYEE CAN BE REDUCED MERELY BY ASSIGNMENT TO LOWER DUTIES

The committee, in the language of section 204, allows the assignment of employees to other duties but provides (a) that the salary of no employee be reduced as a result of such action, and (b) that assignment of an employee to higher duties for more than 30 days in a calendar year shall be paid for at the higher rate of pay.

3. ALLOWS THE POSTMASTER GENERAL TO MAKE UNLIMITED APPOINTMENTS TO SUPERVISORY POSITIONS FROM OUTSIDE THE POSTAL FIELD

Section 501 limits this authority to appointment of persons who have been civilian employees in any branch of the Government and to positions in the regional and district offices and positions in the professional and scientific fields.

4. PERMITS THE APPOINTMENT OF AN UNLIMITED NUMBER OF SUBSTITUTES

The committee recognized that there was some desirability of eliminating the regular-substitute ratio in the interest of flexibility of administration. However, it also felt that the claims that no ratio would lead to abuses had merit. Section 606 (c) retains a ratio but

changes it from 6 regulars to 1 substitute to 5 to 1. This overcomes the objections of the employees. It also allows additional administrative flexibility.

5. THE PROPOSAL OF THE ADMINISTRATION WOULD ALLOW THE POST OFFICE DEPARTMENT TO DOWNGRADE ALL POSITIONS

Sections 201, 202, 203, 301, 302, 303, and 504 of H. R. 4644 establishes by law the grade and salary of over 90 percent of the positions and provides a mandatory procedure for establishing the salary level of all others.

6. PROVIDES GREATEST INCREASES FOR HIGHER PAID WORKERS

This statement would be true, if the principle of equal pay for substantially equal work and responsibility is to be ignored. The ranking of positions and salary levels as set forth in title II and III of the bill, H. R. 4644, recognizes this principle. There are some 1,100 employees in positions such as assistant postmasters, superintendents of mails, superintendent of transportation, and a few others who for some 10 years have been grossly underpaid. For instance, the Postmaster at New York is paid \$13 .-770 while the Assistant Postmaster is paid only \$8,470. This is a difference of \$5,300 between the postmaster and his first deputy. The provisions of H. R. 4644 will bring these salary rates into more reasonable alinement and will, for the first time, recognize the duties and responsibilities of the assistant postmaster.

The committee also recognized that the clerks and carriers in post offices in the first and second class have greater responsibilities than reflected in the salary level proposal by the administration. A new salary level 5—section 301—which provides higher salaries for these groups of employees was approved by the committee. The additional cost resulting from the insertion of this new level is estimated at over \$20 million.

7. THE PROPOSED EFFECTIVE DATES DELAY THE INCREASES FOR 6 MONTHS

Section 710 (c) of H. R. 4644 establishes the first pay period after date of enactment as the effective date of both the 6-percent minimum pay increase and that resulting from reclassification. The bill allows a maximum of 180 days in which to effect the assignment of all positions to salary levels. Once the assignment is made, the employee will receive a retroactive payment for the amount of his gross increase as of the first pay period after date of enactment of this bill.

Stability for the Pear-Canning Industry

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, since his retirement from Congress, my predecessor, the Honorable Jack Z. Anderson, has done a most effective job in organizing the California Canning Pear Association.

Thinking it might be of interest to his former colleagues, I am inserting herewith in the Record his annual report to that association:

STABILITY FOR THE PEAR-CANNING INDUSTRY
(By Jack Z. Anderson, president, California
Canning Pear Association)

The California Canning Pear Association looks back with no small degree of pride on 2 years of accomplishment and looks ahead to a period of economic security for its growers. Almost every producer of canning pears in California will recall with many mixed emotions the spring and summer of 1953, when our association was trying desperately to get off the ground. The fact that the organization efforts were successful and that we now have a going concern is due almost entirely to the faith and cooperation of our grower-members.

No association of any commodity group can be a success unless the producers themselves make it so. The California Canning Pear Association has had a higher degree of cooperation from its members than any other farm group I can think of. New, untried, and almost unknown, our association survived its trial by fire in 1953 (during the cannery strike) and emerged as a determined group of pear producers who had decided that in order to insure their future security they must hang together or hang separately.

If 1953 was a year of trial and error, certainly 1954 proved to be a year of real accomplishment. Many growers felt that they reviewed too low a price for their 1953 crop of canning pears (California canners processed 186,000 tons), but with the all-time record crop of 1954 (canners processed 269,000 tons) these same growers realized that without the assistance of the association they might have seen a repetition of the 1948-49 debacle. In those 2 years, when the pear growers were entirely unorganized, the average returns to producers were: 1948, \$120 per ton; 1949, \$31

per ton. And the amazing fact about those 2 years was that the canners processed almost the same amount of tonnage in both years.

It becomes increasingly more apparent that the members of the California Canning Pear Association are primarily interested in stability. Stabilization of the canning pear industry, not only in California but on the entire Pacific coast, has been our slogan since the original meeting of California pear growers in Sacramento in September 1952. Furthermore, it is well to remember that when we speak of stability we are not talking about stability just for the grower. To be sure, the grower is always entitled to his cost of production plus a reasonable profit, but the average intelligent grower knows that he must sell his fruit at a price that the canner can afford to pay and still place that canned product on the grocers' shelves at a price that will attract the average housewife.

The stabilizing effect of our efforts for the past 2 years has attracted many favorable comments from the trade. The brokers, wholesalers, retailers, and consumers now know that they can buy canned pears and canned pear products without having to fear the wild fluctuations in price that have been so evident heretofore. Furthermore, our association keeps in constant touch with all industry advertising and sales promotion programs and assists in every way that it can to encourage the increased consumption of our processed fruit.

It is well to remember that the annual per capita consumption of canned pears at present is approximately two-thirds of a 2½ can. If this can be increased to one full can per capita, our so-called surplus problems will have been solved and we might find it difficult to supply the demand. Moreover, even a partial return of the historic export outlets which we enjoyed before World War

II would place every pear producer on the Pacific coast in a most enviable position.

Complete cooperation from the Bartlett pear growers in the Northwest now seems assured. A Washington State Canning Pear Association was organized in that State last summer in time to bargain for the sale of its members' 1954 crop. A price was set at \$77.50 per ton, \$2.50 over the Sacramento River price, and this was paid by the canners for Washington and Hood River, Oreg., canning Bartletts. Representatives from California, Oregon, and Washington are meeting from time to time in an effort to work out the type of program that will best meet the needs of the canning pear producers in all three States. Considerable progress has already been made and the ultimate completion of this task now appears to be only a matter of time.

December 1954 marked the first month when grower-members could withdraw from our association under the terms of their membership agreement. It is indeed gratifying to note that there were only three bona fide withdrawals representing only a nominal amount of tonnage. Our drive for new members is progressing satisfactorily and we now represent almost 60 percent of the free tonnage of canning pears produced in our State. The board of directors of the California Canning Pear Association is grateful for the fine support and cooperation of its grower-members. As long as we maintain our equilibrium and continue to operate on the theory that it can be done we will be an effective organization dedicated to the economic security of the canning pear producers in California.

New Jersey's Modern Courts

EXTENSION OF REMARKS

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. HAND. Mr. Speaker, those of us in the legislative branch of the Government are sometimes inclined to overlook the coequal branch, the judiciary, in building the kind of society we hope for in America. The importance of a timely, effective, and just procedure in our courts cannot be exaggerated.

No man is laboring harder toward this end than the chief justice of the New Jersey Supreme Court, the Honorable Arthur T. Vanderbilt.

A very interesting article regarding his efforts in New Jersey appeared in a recent issue of Time magazine, which is herewith appended for the information of the House:

COURT SYSTEM REFORM A PRESSING PROBLEM

"Justice," said Daniel Webster, "is the great interest of man on earth." But the focus of interest shifts. In Webster's day it centered on the courts; trials were closely watched, judges were appraised, lawyers had their bands of knowing followers. The present interest in justice is spotty. It concentrates on the detection of criminals, on new statutes, and on the public-welfare services encompassed by the phrase "social justice." The courts are so neglected by the educators, the press, and the public that reporters covering a rare sensation, such as the Sheppard trial, find that they have to pause for parenthetical explanation of the simplest procedures and the oldest rules of evidence. But no government will ever be much better than its courts. No system of welfare services, no multiplication of statutes or policemen can ever substitute for the ancient function in which society reflects the cosmic order, however dimly, by the dispensation of

justice between man and man.

While the public's back has been turned, a handful of lawyers and laymen have been trying to improve the courts of the United States. A leader in this fight is Chief Justice Arthur T. Vanderbilt, of the New Jersey Supreme Court, a distinguished jurist and the head of a State court system that has risen from one of the Nation's worst to one of the best in 10 years. Judge Vanderbilt notes that although some jurisdictions have made great improvements in the last two decades, in others the judges are substandard, procedures are unnecessarily complex, and court administration is inefficient. In a brilliant series of lectures at the University of Virginia, to be published in book form later this year, Judge Vanderbilt says: "It is in the courts and not in the legislature that our citizens primarily feel the keen, cutting edge of the law. If they have respect for the work of the courts affects them, their respect for law will survive the shortcomings of every other branch of government; but if they lose their respect for the work of the courts, their respect for law and order will vanish with it, to the great detriment of society."

To achieve and maintain this respect, Vanderbilt urges action on three fronts:

- Improving the quality of judges.
 Simplifying court procedures.
- Simplifying court procedures.
 Cutting delay by better management.

THE MEN OF THE COURTS

The history of the English Constitution is largely one of struggle toward an independent, qualified judiciary (in the Magna Carta, King John covenanted that "we will appoint as justices * * * only such as know the law of the realm and mean to observe it well"). The men who shaped the Governments of the United States and its States were acutely conscious of the importance of a judiciary free to act without fear or favor toward the executive and legislative branches. In the postrevolutionary period nearly all judges—State as well as Federal—were named by appointment and got life tenure "during good behavior."

In the mid-19th century a change occurred

In the mid-19th century a change occurred that Vanderbilt ascribes to the Jacksonian revolution, with its premise that all men are not only created equal but remain equal throughout life. While Andrew Jackson, once a judge himself, conceded that judges needed special qualifications, his followers took a more liberal view: jurors, lawyers, and judges, all being men, all were considered equal. As a result of this thesis, the trial judge in Maryland and Indiana to this day must instruct the jurors in criminal cases that they are judges not only

of the facts but of the law. An outgrowth of the equalitarian theory was a quantum jump in the number of men considered qualified for the bench, and pressures built up to rotate judicial offices. The result: popular election of judges for short terms.

The full effect of the Jacksonian idea was

The full effect of the Jacksonian idea was felt in 1846, when New York State switched to an elective judiciary—and paved the way for the reign of Boss Tweed. Other States followed suit, and as Judge Vanderbilt says, the "judges campaigned for judicial office in the hustings with the other candidates of the political parties from sheriff to hog reeve." Today all the judges of 36 States are elected political officers.

A knowledge of politics is by no means a disqualification for the bench. Said Justice Henry T. Lummus, of the Masachusetts Supreme Court: "There is no certain harm in turning a politician into a judge. He may be or become a good judge. The curse of the elective system is the converse: that it turns almost every judge into a politician." The elected judge, if he wants to be

reelected, must make all the commitments of a politician.

Arthur Vanderbilt eloquently describes the qualities that judges should have: "Judges learned in the law, not merely the law in books, but, something far more difficult to acquire, the law as applied in action in the courtroom; judges deeply versed in the mysteries of human nature and adept in the discovery of the truth in the discordant testimony of fallible human beings; judges beholden to no man, independent and honest and-equally important-believed by all men to be independent and honest; judges, above all, fired with consuming zeal to mete out justice according to law to every man, woman, and child that may come before them, and to preserve individual freedom against any aggression of government; judges with the humility born of wisdom, patient and untiring in the search for truth, and keenly conscious of the evils arising in a workaday world from any unnecessary delay-judges with all these attributes are not easy to find, but which of these traits dare we eliminate if we are to hope to attain even-handed justice?"

Vanderbilt urges that formal standards be set up stating the necessary qualifications for judges and that candidates for judicial office be selected by bar and lay leaders, none of whom hold public office. A list of qualified men can be drawn up, and the executive or the legislature required to choose from that list. After being appointed, judges would run for election only against their records on the bench, i. e., no other candidates would appear on the ballots, which would be simply phrased: "Shall Judge Blank be retained in office?" This system has been recommended by the American Bar Association, but so far almost all the States have ignored it.

ENDING THE SPORTING THEORY

Vanderbilt is in complete agreement with the late John Wigmore, dean of the North-western University Law School, who criticized and denied what he called "the sporting theory of law." Scoffed Wigmore: "To require the disclosure to an adversary of the evidence that is to be produced would be repugnant to all sportsmanlike instincts. Rather permit you to preserve the secret of your tactics, to lock up your documents in the vault, to send your witness to board in some obscure village, and then, reserving your evidential resources until the final moment, to marshal them at the trial before your surprised and dismayed antagonist, and thus overwhelm him."

But surprise is only one ploy under the sporting theory. Another is to take advantage of technical rules of pleading, many of which grew out of historical situations that have no counterparts in modern life.

After a long and little-reported fight, great strides were made in improving procedures in the United States Federal courts. Judge Vanderbilt says that the 1938 Federal Rules of Civil Procedure are models of simplicity and flexibility. So far seven States have almost entirely adopted the Federal rules, while 12 have followed to a lesser extent.

Under the new Federal rules a trial becomes more an orderly search for truth, less a tournament of wits. Key to the new system is the pretrial setup, which permits the free use of depositions, interrogatories, inspections and examinations, all almed at finding the facts on which the litigants are agreed and at defining the areas of disagreement. At the pretrial conference both plaintiff and defendant state what they expect to prove in the trial, thus eliminating tricky surprise. The judge dictates a pretrial order that supersedes the original pleadings and defines the questions at issue between the parties. Says Vanderbilt: "No longer does the trial judge have to fumble through the pleadings at the trial to find out what the

case is all about. • • • He has before him in a pretrial-conference order a complete outline of the course that the trial will take; he is master of the situation from the outset to the conclusion of the trial."

As used in Judge Vanderbilt's New Jersey case, the pretrial conference has shortened trials by from a third to a half. Vanderbilt notes—and condemns—the tendency of judges in some jurisdictions to use the conference to force settlements, but he contends that even without such coercion 3 out of 4 cases are settled soon after the pretrial conferences. Reason: the conference gives each litigant knowledge of his own weakness and his adversary's strength.

Vanderbilt says that with the various pretrial procedures at a judge's disposal there is no reason why, having also heard the evidence and the arguments at the trial, he cannot make his decision at once in cases without a jury. Says Vanderbilt: "He will never know more about it than he does at that time. The moment for decision has arrived, before other cases intervene to dull and blur his grasp of the pending case."

Then Vanderbilt adds: "How often have

Then Vanderbilt adds: "How often have you and I known judges burdened with so many undecided matters that they were exhausting their intellectual effort in determining which case to dispose of first and devoting what little strength they had left to telling all and sundry how overworked they were?"

DELAYS THROUGH MISMANAGEMENT

"So far as I know," says Vanderbilt, "the courts are the only nationwide or statewide businesses that have ever attempted to function without any administrative machinery." The Federal judiciary was dependent on the chief litigant in its courts—the Justice Department—for the conduct of all its business affairs, from buying pencils to presenting the judicial budget to Congress, until a 1939 law improved efficiency in the Federal courts by setting up an administrative office.

Mismanagement, or rather nonmanagement, of the States' judicial systems is the main reason for delay in the courts. In Queens County, N. Y., for example, it now takes 49 months for a jury case to come to trial in the State courts. Justice so long delayed can mean justice denied, as litigants die and witnesses disappear.

One chance for administrative improvement lies in the assignment of judges. Explains Vanderbilt: "It is intolerably bad business administration to have some judges everworked while others sit by half idle * *. This means that someone must be given the power to assign the trial judges to those courts where they are most needed." The obvious person to be given this administrative power, says Vanderbilt, is the top judicial officer in each State (in most cases, the chief justice).

If the chief justice is to have administrative responsibility in addition to his judicial duties, he must have full-time professional help. Only 13 States (plus Puerto Rico and the District of Columbia) now have such offices of judicial administration. An example of their work is seen in the weekly summary of reports from every New Jersey judge, listing hours spent on the bench, cases and motions heard, and decisions reserved. These reports on individual performance are distributed to all judges. The effect on indolent judges when their laziness is thus exposed has, Arthur Vanderbilt says tersely, been "truly remarkable."

The fight for improved court systems is not one that can be—or should be—confined to the legal profession. Judge Vanderbilt candidly says that "where cures have occurred they have generally been effected under the impetus of a popular revolt of laymen against the quaint professional notion that the courts exist primarily for the benefit of judges and lawyers and only incidentally for

the benefit of the litigants and the State." Against the members of the bar and the bench who stand in the way of reform, Vanderbilt issues a scathing indictment: convinced that the criminals, the gangsters, the corrupt local officials, and communistic subversives who would undermine and overthrow our Government with bloodshed and terror such as we have seen abroad * * * are no more dangerous to the country at large than the judges [and lawyers], many of the amiable gentlemen, who oppose either openly or covertly every change in procedural law and administration that would serve to eliminate technicalities, surprise, and undue delay in the law simply because they would be called upon to learn new rules of procedure or new and more effective methods of work."

Shotgun Shell Prices

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. REUSS. Mr. Speaker, the Associated Press has circulated an article by Dion Henderson which reports that sportsmen throughout America are alarmed by the rise in shotgun shells.

This AP dispatch apeared in the Milwaukee Journal for Sunday, March 13, under the heading "Shell Prices Stir

National Furor."

Following publication of my letter to Federal Trade Commissioner Edward F. Howrey, asking for an immediate investigation into price-fixing and monopoly in the shotgun shell business, I have received many protests urging that this investigation take place.

Many Congressmen, whose districts have as avid sportsmen as the Fifth District of Wisconsin, will be interested in the nationwide indignation which these frequent price increases have elicited:

SHELL PRICES STIR NATIONAL FUROR-IN-CREASES ARE PUTTING THE COST OF TRAP-SHOOTING BEYOND REACH OF MANY ENTHU-SIASTS, IS COMPLAINT

(By Dion Henderson)

Are increases in the price of shotgun shells—hit by 15 separate boosts since 1946 putting the cost of America's grand old sport of wing shooting beyond the reach of many shotgun enthusiasts "Yes," say spokesmen for 9 of 11 major gun clubs around the country, queried in a random sampling by the Associated Press.

Their comment came as Representative Rauss, Democrat, of Wisconsin, said in Washington that Fair Trade Commission Chairman Edward F. Howrey had advised him FTC would undertake the investigation into the shell-pricing situation as requested by REUSS.

These were some of the comments from

important trap-and-skeet clubs.

W. R. Beamish, president of the Twin City-Hopkins Gun Club at Minneapolis said, "Shotgun-shell manufacturers are pricing both professional and amateur shooters out of the target sport. High prices have caused the number of shooters to dwindle to near nothing. Youngsters can't afford to use established facilities to learn intelligent use of firearms."

Beamish said that many members of his club had taken up reloading used shotgun hulls with newly marketed devices similar in use to those used by rifle hobbyists for years in hand loading.

PRICE IS TOO HIGH

At Seattle, custodian Al Bonner, of the Seattle Gun Club, said that some members there also have taken up reloading, but that the average shooter has quit club activity

because of the cost of shells.

A spokesman at Chicago's Lincoln Park Gun Club said many members were pretty sore at recent increases and favored the FTC inquiry. Club members who have taken up reloading there report savings of \$1 a box.

Stewart Nevius, president of the Aqua Sierra Sportman's Club in Los Angeles, which he described as the largest private trap-andskeet club in southern California with 200 members and 10 shooting layouts, declared, "They're just pricing shells right out of existence."

On the other hand, B. B. Lotspeich, director of the Miami Trap and Skeet Club, said "everything else has gone up" and he sees no reason why shell prices shouldn't go up too. "Miami club members," he added, "are finicky about shells and wouldn't use reloads.

Eugene McLain, general manager of Nevada's Las Vegas Gun Club, repeated the opinion that prices were driving many trapshooters out of the sport and "working hardship on smaller gun clubs all over the country." He suggested that manufacturers be allowed to cut some of the trimmings off shells-waterproofing, fancy boxes and such-to reduce costs.

HALF CAN'T SHOOT

Again in the Midwest, Norbert Nielson, financial secretary of the Maywood Sportsman's Club at Eimhurst, Ill., said some of the club's 300 active members are "doing a respectable job" of reloading, with a substantial saving.

Fifty percent of the trap and skeet fans of the Long Beach-Dominguez Gun Club in California are unable to shoot now "because they can't afford it," owner-manager William

Ruth said.

Another dissent to the majority opinions in the sample came from Edwin L. Cozier of Springfield, Ohio, secretary of the Southern Ohio Trapshooters League. Cozier said that the most recent increase-10 cents a boxwould mean only \$8 more a year for the trapshooter who fires 2,000 shells in that time, "He may not like it," Cozier said, "but I don't think that's going to stop him."

But Robert E. Clyne, owner of the Troy Gun Club at Troy, Ohio, said he favors the FTC study because shell prices are ridiculously high. He said he's rigging a machine at his commercially run club to reload shells.

Use of Draft To Force Compliance With Farm Programs Is Unethical, Un-American, and Probably Illegal

EXTENSION OF REMARKS

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. QUIGLEY. Mr. Speaker, recently the House of Representatives repealed the so-called tie-in provision of the 1953 agriculture law, under which farmers who failed to comply with crop controls were ineligible to participate in the ACP program.

This was a wise move, for the Congress obviously felt that programs having separate and distinct goals should not be tied together.

It has come to my attention, however, that local selective-service boards are being advised to base agricultural deferments on compliance with crop controls established by Secretary of Agriculture Ezra Taft Benson.

Memoranda have been circulated among local boards in Pennsylvania setting forth benchmarks for use in reducing farm deferments. I quote two of these benchmarks:

3. Attention should be centered on the kind of farm produce and whether or not the farm in question is adhering to acreage quota of crops demanded by the Department of Agriculture.

And then the following:

Credit should be given only for farm commodities marketed. Therefore, for example, if a farmer is feeding 100 percent of his field crops or other produce to his stock he should be given credit for the milk or stock sold and not for the crops fed to produce that milk or other livestock. Further, any percentage of crops fed should be deducted from the unit value of crops sold.

Mr. Speaker, we recognize selective service as a necessary evil at best: a burden we Americans must reluctantly assume because of the existing world tensions. No one in this body who supported the extension voted earlier this year did so, I am confident, with the intent that it should be used to help Secretary Benson enforce compliance with his crop-control program.

Mr. Speaker, under leave to revise and extend my remarks, I include a portion of a memorandum dated February 1, which has been forwarded to local boards

in Pennsylvania.

This purports to provide answers to frequently asked questions. I submit, Mr. Speaker, that it is a most flippant, a most sophomoric approach to an extremely serious problem. Seldom have I had the opportunity of reading anything more ridiculous than this memorandum.

The memorandum follows:

PENNSYLVANIA STATE HEADQUARTERS, SELECTIVE SERVICE SYSTEM, Harrisburg, Pa., February 1, 1955. MEMORANDUM TO ALL LOCAL BOARDS

Subject: Notes on agriculture

There follows a few answers to excuses given to the question, Can a registrant be replaced? If not, why?

Excuse. It would take years of training. Answer. He has been liable since he registered and the training should have been started some time ago.

Excuse. Registrant is not replaceable,

(Registrant is the son.) Answer. No son is replaceable. But he is still liable for service.

Excuse. Where can you get hired help to do what the owner will do?

Answer. Nowhere. But owner is keyman and he can train and supervise a replace-

Excuse. Not dependable.

Answer. A good many people are this way in other pursuits as well as agricultural. No excuse.

Excuse. Cannot pay off debt and wages at same time.

Answer. Neither can the businessman, but he is liable for service.

Excuse. Because it wasn't necessary.

Answer. Wrong. It is necessary. Excuse. Doing all right this way. Answer. So were we all until the lightning

struck.

Excuse. Who will work on farm from daylight to dark?

Answer. Better wages and living conditions would help to persuade someone to do this. Excuse. Because I own farm business and

Answer. So does the business and the professional man own his own business and

Federal Grants-in-Aid for Vocational Education

EXTENSION OF REMARKS OF

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. REUSS. Mr. Speaker, I have received an enlightening letter from Wisconsin's State director of vocational and adult education, Mr. C. L. Greiber, of Madison.

This letter explains very clearly how Federal grants-in-aid have benefited vocational education in Wisconsin, without disturbing the independent and autonomous character of the system.

Mr. Greiber is well qualified to discuss this problem, since he is presently president of the National Association of State Directors of Vocational Education:

THE STATE OF WISCONSIN, STATE BOARD OF VOCATIONAL AND ADULT EDUCATION Madison, Wis., March 4, 1955.

The Honorable H. S. REUSS, United States House of Representatives,

Washington, D. C. DEAR SIR: This is in answer to your recent request for information regarding the control which Federal Government agencies exercise over funds made available to States and localities through Federal grant-in-aid pro-

The State Board of Vocational and Adult Education in Wisconsin administers the Federal aids appropriated by the Congress for the further development of programs of vocational education and the Federal aids appropriated for the rehabilitation of the handicapped. My experiences with Federal agencies through which grant-in-aid programs are carried on is, therefore, limited to the United States Office of Education and the Office of Vocational Rehabilitation of the Department of Health, Education, and Wel-

Federal aids for the further development of vocational education were originally made available under the Smith-Hughes Act which was passed by the Congress in 1917. This initial act has been supplemented by other Federal aid acts authorizing additional grants in aid for vocational education. The most recent of these passed by the Congress was the George-Barden Act which authorized additional Federal aids for vocational education in 1946. During that year I was President of the American Vocational Association which is a national organization of persons working in and interested in vocational education.

Federal aids for vocational rehabilitation were originally granted in 1920. The original appropriations have been increased by subsequent acts, the most recent of which was passed by the Congress in 1954 upon the recommendation of President Eisenhower.

It is true that certain minimum conditions apply to the expenditure by the States and localities of the Federal aids which are made available for vocational education and reha-

bilitation of the handicapped. These mini-mum conditions or standards, however, are essential if the programs shall be productive of the good results which were intended by the Congress when the legislation was enacted into law.

The Federal aids granted to the States under the provisions of the Smith-Hughes and George-Barden laws for purposes of vocational education may be expended only under certain rules and policies which have been adopted by the United States Office of Education. However, in arriving at the determination of these rules and policies, the Office of Education has sought the advice and assistance of the States through advisory committees of administrators on the State and local level. Accordingly, the States have had a part in determining the basic standards which should apply to the expenditure of Federal grant-in-aid funds for vocational education. From time to time these policies are reviewed in order that they may be changed in accordance with changing conditions in the States.

During the present year I am president of the National Association of State Directors of Vocational Education. It is the plan of our association to review both the Federal acts appropriating funds for vocational education and the policies governing the use of the funds at our next meeting.

I am sure that the United States Office of Education will be pleased to review any recommendations we may make and if changes are advisable to more effectively utilize the funds in the States and localities, I am sure that the Federal agency will make policy changes.

The Federal policies for vocational rehabilitation have been determined by the United States Office of Vocational Rehabilitation in a similar manner. The State officials responsible for the administration and supervision of programs of vocational rehabilitation are consulted regularly regarding the effect which existing policies have upon the operation of the program in the States. The Office is most cooperative in adopting recommended changes in rules and policies made by these officials which will result in a more effective functioning of the program in the States.

On the basis of many years of personal experience in the administration of Federal grants for vocational education and vocational rehabilitation of the handicapped on the State level. I feel that the United States Office of Education and the United States Office of Vocational Rehabilitation do not exercise undue control or restraint in the use of Federal grants for vocational education and vocational rehabilitation of the handicapped. Policies which provide for minimum standards in the use of grant-inaid funds are necessary to safeguard the proper use of these appropriations in the manner which was intended by the Congress when the laws were enacted.

With best wishes, I am. Sincerely yours,

C. L. GREIBER, State Director, Vocational and Adult Education.

Red Drive Continues in Italy

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial: RED DRIVE CONTINUES IN ITALY

Rome reports that the recent ignominious reversals suffered by the Communists have not induced them to give up the battle. On the contrary their defeats have still further enraged them. Their antinational activity has been intensified and diversified, evidently in the hope that they will be able to find the weakest spot in order to strike the Nation with a fatal stab in the back. They do not overlook the slightest pretext to re-new their attacks. They exploit every opportunity, even when they are convinced they will not gain their objective.

A typical deplorable act of bravado was that in the University of Rome used as a sad reprisal against the movement to pillory the infamous tyrant D'Onofrio, officially accused of sadistic outrages against Italian soldiers taken prisoners in Russia during World War II. Gangsters and hooligans of the worst order were recruited from faraway towns and, armed with clubs and iron bars, were integrated with the Communist university cell to treacherously attack the students who were alined against the torturer of Italian prisoners in Russia.

The police promptly intervened and those

responsible for the attack were arrested and brought to justice. The Government is quite determined to act and this is a source of satisfaction.

SUPPORT OF ALL CITIZENS

Naturally, the action of the authorities and the determination of the Government and the ruling classes to check Italian bolshevism will not be successful and will not be able to win over the masses and public opinion if they are not strengthened by the conscientious and courageous support of all the citizens who love their country and are ready to fight for its rebirth and to preserve it free and independent.

The password from Moscow to all Communists is to "sabotage the UEO." Sabotage the Western Defense Pact by obstructionist tactics and insurrection. Above all, sabotage the conscience of the people through a vast movement of violent agitation and a capillary action based on pressure and threats.

In his rabble-rousing address at the Adriano Theater, Italy's Commie leader, Palmiro Togliatti, declared: "We shall go from door to door to induce every Italian to reject the military pacts."

The ludicrous battle, launched in the House, and in the Senate, was ignominously lost. The Paris accords have been ratified and Italy has definitely become a part of the Western Defense Organization. De-feated in Parliament, the Kremlin mercenaries now propose to continue their intimidating activities in the public squares, in the factories and in the homes. Squads, formed mostly by women, are making the rounds with petition lists gathering signa-tures and intimating that he who does not sign is lost because some day soon these lists might become honor rolls and those not present naturally will be blacklisted.

ISOLATE THE TRAITORS

All this is absolutely intolerable and we are sure the Government will take the necessary measures to combat it. Together with the steps already promulgated and those planned by the constituted authorities, all citizens must set the example by showing the door to those who are participating in this insidious attempt at incitement.

Communists and their accomplices must be isolated.

The moment has finally arrived when it becomes necessary to conquer the subjection complex inspired by the Kremlin fifth columnists. Their strength is represented by the fear instilled in others. By conquering this fear bolshevism, which is still a grave threat to the Nation, will be destroyed.

History has proven that when Communists are forced to fight in the open, without allies, they have always been put to flight. The stupid episode of violence in the D'Onofrio case has shown their confusion when they find themselves isolated. It is therefor up to the honest and partiotic Italians to definitely quarantine them and leave them alone to face their evil responsibility.

Hoover Commission Proposal Would Kill Rural Electrification Program

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial which appeared in the St. Louis Post-Dispatch on March 16, 1955. The editorial entitled "A Proposal To Kill REA" follows:

A PROPOSAL TO KILL REA

"That the Rural Electrification Administration be reorganized on a self-supporting basis and secure its financing from private sources."

This apparently innocent recommendation of the Hoover Commission is one-half deceptive propaganda. The other half is poison for the rural-electrification program which has brought the fruits of the industrial revolution to more than 3 million farm families in the last 20 years.

families in the last 20 years.

REA does not have to be reorganized in order to be self-supporting. It is already self-supporting. The loans it makes to cooperative electric distribution systems are being repaid with an exceedingly low rate of default which private banking might

If private sources had had the enterprise and the courage to finance rural electrification in America, and if private utility companies had had the courage, enterprise, and sense of service to carry out the program, REA would never have been required.

The effect of the Hoover Commission's recommendations could be to paralyze REA immediately and kill it off entirely within a few short years. One might think that since more than I million miles of transmission lines have been built through the REA program, the systems are going concerns, and more than 90 percent of the Nation's farms are now reached by electricity, the program is safe. This is far from true.

Public-power systems do not stand still in this expanding economy, any more than private businesses do. They must expand to meet the growing needs of their customers, and their customers' demands are doubling every 5 years.

Electricity has only begun to do a few of the many things it can do on the farm. As just one example, two-thirds of the farm homes in this country still lack inside bathrooms dependent on electric home pumping systems.

In order to grow with their customers' requirements, cooperatives and other public power systems must be able to borrow money. In lending the money, the Government makes a safe investment at the same time that it performs a service for the people which no other agency stood ready to perform. Cut off from credit, a growing public power system would suffer the same fate a private power company would suffer under the same circumstances. It would wither, and be forced to sell out on any terms it could get to someone with adequate credit.

Quite likely the Government should get out of some of its lending activities, perhaps including some of those the Hoover Commission mentions. This was clearly true with respect to the Reconstruction Finance Corporation, as we said at the time. But it is not true of REA.

There is, in fact, little evidence that the Hoover Commission made these recommendations with the welfare of rural electrification at heart. Former President Herbert Hoover, the chairman of the commission, is hostile to all public powers.

Another objective of the recommendations is to reduce the national debt, since the celling set on it by Congress has been a constant plague to the Eisenhower administration. The commission estimates that its overall recommendations, including REA, would reduce the national debt more than \$7 billion.

Insofar as REA is concerned, the money returned into the United States Treasury would not be savings or benefits, as the commission is fond of saying. It would be money taken out of productive work in the public's service.

Antarctica Is Strategically Important

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. TOLLEFSON. Mr. Speaker, an article by Walter Sullivan, appearing in the March 9 issue of the New York Times, points up the strategic importance of Antarctica. While other nations of the world are laying claims to portions of this vast continent, the United States, which has done more exploratory work than all the others put together, has failed to make any claim whatsoever. I believe that we are making a serious mistake not to do so. Our Nation ought to take action in the matter before it is too late.

The above-mentioned article follows:
(By Walter Sullivan)

Antarctica is literally at the end of the earth, but it cannot be ignored in looking to the future.

Methods of processing snow that have been developed since World War II enable wheeled planes to operate from atop an icecap. This has given new urgency to the problem of denying the Antarctic to a potential enemy.

The new snow compaction techniques mean that the ice sheet over the continent at the bottom of the world furnishes an airfield larger than Europe. The smooth snow surface is only rarely broken by mountains or crevasses. To a northern power seeking a foothold in the south, Antarctica has certain advantages. It is a continent virtually uninhabited and undefended.

Because landing places are far apart, the first force ashore would be difficult to displace. Modern icebreakers can reach the shore of Antarctica at a number of places, but it is more difficult to find any place to land. Almost the entire coastline consists of sheer ice cliffs. The U. S. S. Atka, which has arrived here after having circled half the continent, found only four accessible harbors along thousands of miles of coast.

A NONMILITARY MISSION

The voyage of the Atka was nonmilitary in in character. The ship sought to find suitable base sites for scientific observations in the International Geophysical Years 1957-58:

In this worldwide project nations will coordinate their measurements and observations of the physics of the earth.

Although the strategic importance of the Antarctic does not approach that of the Arctic, the South Polar regions command the waters linking the principal oceans of the world. Unless a ship passes through 1 of 2 vulnerable canals, at Panama or Suez, or unless it fights its way through Arctic ice it cannot go from the Pacific to the Atlantic, or from the Atlantic to the Indian Ocean without sailing through sub-Antarctic seas.

There were several battles for control of these waters in World War I. They were finally resolved in favor of the British at the battle of the Falkland Islands. In World War II the Germans sent the pocket battleships Graf Spee and Admiral Scheer to harass Allied shipping in southern waters.

German mystery ships, whose operations have only recently become fully known, used the Antarctic for sanctuary. Four such vessels operated in the sub-Antarctic. Kerguellen Island was used as a rendezvous, as a watering station, and as a "dressing room" where the ships could change their disguises.

One of these merchant raiders, the Komet, had a bow reenforced for ice work. She penetrated the Ross Sea north of Little America to latitude 71°36′ south, longitude 170°44′ west.

NORWEGIAN WHALERS SETZED

Another, the Pinguin, seized almost the entire Norwegian whaling fleet north of Queen Maud Land. Three factory ships and eleven whale catchers were sent back to Germany. The Pinguin is described by the Germans as their most successful raider in either world war. She sank more than 84,000 tons of Allied shipping and sent 52,000 tons back to Germany under prize crews, cargo, and all.

With the help of one of her prizes as a Trojan horse she laid mines in the harbor entrances of the Australian ports of Sydney, Melbourne, Adelaide, and Hobart. She sank what appears to have been the first United States ship to go down in the war, the City of Bayville. The latter struck one of her mines between Australia and Tasmania on November 9, 1940.

on November 9, 1940.

The raider Orion circled the Antarctic continent, preying on Allied shipping. A sister ship, the raider Kormoran, sank the Australian light cruiser Sydney.

The raiders resembled innocuous cargo ship but carried numerous hidden guns, four torpedo tubes and a seaplane concealed in one hold. Their masts and stocks were rigged like telescopes so they could be holsted to any deeired height. The ships were specially equipped to build "scenery" so they could assume the silhouette of various types. The Pinguin began her cruise with her lull emblazoned with the hammer and sickle. She masqueraded as the Soviet ship Pechora.

BRITISH WARTIME MOVE

In 1943 the British learned that an Argentine ship had been surveying harbors among the islands off Palmer Peninsula. A base there would give Argentina control of both sides of Drake Passage, linking the Atlantic and Pacific.

London feared that such bases might be made available to the Germans and hence, although Britain was hard pressed at home. Operation Tabarin was initiated. Two small naval forces were established ashore. One was at Deception Island, which had been scouted by the Argentines. The other was at Wiencke Island.

Since the war, with the realinement of great powers, the problems in the Antarctic are considerably altered. Britain, Argentina, and Chile are all established in the Palmer Peninsula area. Their claims of sovereignty there have introduced the element of national prestige. Yet these quarrels are over-

shadowed by the cold war.

The United States has good ground for claims in that sector and Washington is certainly aware of the importance of controlling the south side of Drake Passage. But presumably Washington feels that the war must come first; that peace and unity in the Western camp is the primary consideration. The Antarctic must be considered as a whole, the task being to deny its use to a potential enemy.

County of Los Angeles Board of Supervisors Resolution Against Upper Colorado River Basin Projects as Proposed in H. R. 270 and H. R. 412

EXTENSION OF REMARKS

OF

HON, CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do. I present to the attention of all the Members of this great legislative body the text of a letter to me dated March 16, 1955, of the action of the Board of Supervisors of the County of Los Angeles, wherein the great 23d District. which I represent, is located.

I also present the text of the resolution which is referred to in said letter.

The letter and resolution follow:

COUNTY OF LOS ANGELES, BOARD OF SUPERVISORS,

Los Angeles, Calif., March 16, 1955. Hon. CLYDE DOYLE,

Member, House of Representatives,

House Office Building, Washington, D. C.

DEAR CONGRESSMAN DOYLE: Enclosed is a certified copy of a resolution adopted by the Board of Supervisors of the County of Los Angeles on March 15, 1955, opposing the upper Colorado River Basin projects as proposed in S. 500 and H. R. 270, and the Fryingpan-Arkansas project as proposed in S. 300 and H. R. 412, now ending in Congress. Sincerely yours,

RAY E. LEE. Chief Clerk.

Resolution opposing upper Colorado River Basin projects as proposed in S. 500 and H. R. 270 and the Fryingpan-Arkansas project as proposed in S. 300 and H. R. 412, now pending in Congress

Whereas the county of Los Angeles in the State of California is vitally dependent on a water supply obtained from the Colorado

Whereas California's rightful share of Colorado River water is threatened by the upper Colorado River Basin projects as proposed in S. 500 and H. R. 270, and the Fryingpan-Arkansas project as proposed in S. 300 and H. R. 412, now pending in Congress; and

the aforementioned Whereas would inflict on all taxpayers of this county and the Nation an unjustifiable burden of

more than \$4 billion; and

Whereas these political pump-priming schemes, if authorized, would furnish water to grow more surplus crops already heavily subsidized by the taxpayers; and

Whereas it would cost American taxpayers \$5,000 an acre to susidize the proposed irri-

gation project for farms located in high altitiude country which has a short growing season: and

Whereas the Colorado River Board of California, official State agency charged with the responsibility of safeguarding California's existing contracts for Colorado River water, has gone on record strongly opposing these measures: Now, therefore, be it

Resolved. That the enactment of these bills is against the interest of the county of Los Angeles in particular and the State of Callfornia in general and should be opposed;

be it further

Resolved, That the county of Los Angeles respectfully requests the Representatives of State of California in the Congress of the United States to actively oppose the enactment of the above-mentioned bills, or any similar proposals, and that certified copies of this resolution be airmailed to our congressional representatives, and that copies be made available to press and radio news

The Natural Law-The Family: The Basis of All Good Government

EXTENSION OF REMARKS OF

HON, GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. McDONOUGH. Mr. Speaker, the basis of all good government for orderly society, for the greatest good for the greatest number springs from the family unit, which springs from the natural Any government that overlooks the family or subordinates it to the state-the state which depends upon its very existence because of the family unit, controverts the natural law and thereby becomes a dictatorship, an oligarchy, an oppressive government,

against the family and the natural law.

Communism in the Russian Soviet Union and Red China are classic examples of the type of government which denies the family unit and violates the natural law. In these governments the state is supreme and all family units are pawns of and are dominated by the supreme state.

The United States is the direct opposite, we recognize the family unit as the basis of and the reason for the existence of the state and we also recognize that the family unit permits the state to exist and can abolish it, if the state violates the natural law. Here the family unit is supreme, not the state.

The following statement by Dr. William V. Lawlor is a clear and easily understandable expression of the importance of the family unit and its place in and relation to Government. The United States Constitution recognizes the great power and value of the natural law and the family unit in this free and independent Nation:

There is no authority or agency operated by the State that does not spring from the basic unit of society—the family. no organization or agency or power within the State or beyond it that has any claim to validity unless it operates in conformity with that natural law that has dictated the very existence of the family.

Just as the parent has the right to delegate his authority to the various segments of society, so has he the right to withdraw When the parent sees the State or any of its segments violating that natural law, he has not only the right to windraw such authority, but he has a duty to withdraw it. * * * The preservation of the family. The preservation of the family, operating according to the moral code upon which it is founded, is the only fundamental excuse for the very existence of the State.

Robert Cutler, Presidential Assistant, Retires

EXTENSION OF REMARKS OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, March 14, 1955

Mr. WIGGLESWORTH. Mr. Speaker, Gen. Robert Cutler, special assistant to the President, is about to retire after 2 years of distinguished service to the Nation. Under leave to extend my remarks in the RECORD, I include in this connection the following article by Arthur Krock appearing in the New York Times of March 18, 1955, entitled "The NSC's Development Under Cutler."

THE NSC'S DEVELOPMENT UNDER CUTLER (By Arthur Krock)

Washington, March 17.-The impending departure from Government of Presidential Assistant Robert Cutler makes pertinent a review of the functions, activities, and growth of the National Security Council. In this high advisory group (the President alone makes the decisions) are ground out the policies which could mean the survival or death of the Republic. Cutler is responsible to the President for the processes lead-

ing to this policymaking.

Ferdinand Eberstadt, of New York City, under the direction of the late James Forrestal, conceived the NSC, and Congress wrote it in the Military Integration Act of 1947. The group is composed of six statutory members, including the Vice President; and Secretary Humphrey and Budget Director Hughes meet with them regularly.

The following comparative statistics of the Council's activities in the two administra-tions reveal how they have grown;

From the NSC's first assembling, September 26, 1947, to January 20, 1953, when President Eisenhower was inaugurated—128 meetings and 699 actions. From January 20, 1953, to the same date in 1955—104 meetings and 612 actions. On a 6-month com-parative compilation—8 meetings and 43 actions in the previous administration, and 26 and 134 respectively in this one. tions" means positive or negative disposal of topics on the agenda.)

THE PROCEDURE

The progress in the Government toward NSC action is as follows:

Meetings of the Planning Board in which deputies of the Council's members propose subjects for the NSC agenda and explain their reasons for the selections. These reasons are fully discussed at several meetings, after which Cutler chooses the issues to be presented for decision before the NSC. The Council staff (a small group of 38 persons, of whom 18 are secretaries) prepares a draft of the paper to go to the Council. This can be revised by the Board, and eventually is laid before Cutler for such revisions he may wish to make in the final draft.

Before Cutler approves a draft for the Council he insists that every word in it shall mean the same thing to everybody concerned. He also insists that demonstrative pronouns ("This means," etc.) shall have unmistakable ancestry. For the lack of such precautions Government documents often breed confusion.

This paper as approved is composed of a statement of the issue; the reasons why it calls for prompt Council action; a listing of the objectives; proposed courses of the action to be taken; a financial appendix estimating the costs of the action (a Cutler reform to determine "whether we are buying an elephant or a pony"); an appendix of the NSC staff studies on which the paper is based.

THE ADVANCE BRIEFING

On receipt of the paper several days before the NSC is to see it, Planning Board members brief their superiors so they will come to the Council meeting with their homework done. The President is a stickler for that. Cutier briefs him fully the day before each NSC meeting, but reading no more from the paper than he thinks essential. Council members say that in the art of saving the President's time while informing him fully Cutler is a master.

Occasionally differences arise in the Planning Board on the courses of action to recommend. In that event all points of view

are included in the paper.

After the Council has at length discussed the agenda—3 hours a week is the average—and the President makes the decision, it is Cutler's task to assure that the final paper reflects any changes the President may order—on his own or in acceptance of new points made in the discussion. Every Saturday morning Cutler lays this ultimate document before the President for approval. When the President approves, and only then, it becomes national security policy.

it becomes national security policy.

These labors have occupied Cutler 60 or 70 hours a week steadily since he joined the administration. That will not be as much news to certain of his fellow members in the Somerset Club, of Boston, as they are said to have found the increasing mention of his name in Washington dispatches. "I see," said one, according to the yarn, "that Bobby Cutler is becoming very prominent." "Only nationally," said the other Brahmin.

Article by Robert M. Stewart

EXTENSION OF REMARKS

HON, F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. HÉBERT. Mr. Speaker, when a

Mr. HEBERT. Mr. Speaker, when a newspaper editor, particularly the editor of a weekly newspaper, writes an article like this one by Robert Stewart of the West Bank Herald, of Algiers, La., and a Freedoms' Foundation award winner, there is nothing anybody can say about it except this: "Read it"—

(By Robert M. Stewart)

If we were non-Christians, if we did not have faith in God, and if we were certain that the promise of everlasting life was a myth fabricated to satisfy the insatiable hunger existing in the hearts of all people for something more than we have on this earth, I would still believe that the Sermon on the Mount is the greatest yardstick in human relations ever given to a troubled world.

Unfortunately many professed Christians do not put into practice the philosophy of Christ as expressed in the Sermon on the Mount. Many claim to be Christians, they attend church services and say they have faith in God. They make all kinds of gestures toward belief in Christianity but few put into everyday living—"to do justly, to love kindness, and to walk humbly with thy God."

Many of us knit our faith snugly and conveniently into our own little mean world of hypocrisy, greed, hate, and envy. The cruelties we inflict upon one another is an indictment against our professed Christian beliefs. Our lack of compassion for those in need of friendship, our consuming ambition at the cost of others, our envy toward the success and position of our fellowman is as anti-Christ as the tenets of Karl Marx. We go our merry way piously saying we are Christians while performing acts in our everyday life which Christ deplored, condemned, and despised. From children through adulthood we take our envy and frustrations out on others, and often, in so doing, break the heart of a friend or loved Sometimes we relish their discomfort and unhappiness. Many times we inhumanly add to it, enjoying the suffering and anguish of the unfortunates.

Of all the moral crimes of which man is guilty the worst, in our opinion, is that of malicious gossip and intentioned slander. Most of the trouble in the world and in past ages comes from the hypocritical mouthings of pious-frocked fabricators, tattlers, and traducers. Unsubstantiated charges uttered maliciously with the aim to injure the reputation of another, smear, defamation, and tarnishment of character is as vile a crime, in our opinion, as physical murder. The Sermon On the Mount teaches responsibility to ourselves and to others, besides inspiring us to greater heights of decency. How many of us honestly try to assume the responsibility as laid out by Jesus Christ? It is appalling how few.

Every man who has achieved high eminence has been confronted with the malevolence and venom which clearly define the sordid character of instinuators, liars, and hypocrites. Many of our patriots from Washington to Eisenhower have had to endure this lowest of human frailities. Campaigns have been knowingly entered into with a view toward destroying a man with lies. Gossipers and maligners tarnish and impair the characters of decent people. From backfence fabricators and praters to the highly organized destroyers of character this deceit and littleness exemplify the lack of Christian morals.

Most of the greatest and most successful people of our country knew reverses, failure, and poverty. Lincoin failed five times in business, Andrew Jackson and Thomas Jefferson died bankrupts. Yet their contribution to our country cannot be estimated in dollars and cents. It is often amazing to us to find ill will, out and out hatred, desire of evil to others, enmity of heart and an inclination to injure others displayed by people we previously had considered genteel and Christian.

All of us are talked about; many of our intentions are distorted, most of us have been the object of venomous gossip, yet most of us are guilty of the same charges against others. Many of us have heard the truth we've spoken, twisted by knaves to make a trap for fools.

All men who occupy controversial positions through which they deal with all types of people know what we mean. Perhaps that is why a recent quotation made by Secretary of the Interior Douglas McKay to his wife struck home. When Mrs. McKay complained of unjust and unfair criticism the Secretary of unjust and unfair criticism the Secretary to the development of unjust and unfair criticism the secretary to bed, she should just say her prayers, tell everybody to go to hell and then go to sleep."

Nuclear Parity and Diplomacy by Ultimatum—A Prospect of the Immediate Future

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. FEIGHAN. Mr. Speaker, yesterday the Ancient Order of Hibernians in Cleveland had a grand celebration of the feast of St. Patrick. The toastmaster of the 88th annual dinner was Robert Emmett Sweeney, a tireless worker for the cause of the Ancient Order, who has earned the gratitude of the people of Cleveland for his fine civic spirit.

The principal speaker was the Honorable Edward M. O'Connor, Government official who is well known to many Members of Congress. The title of his stir-ring address was "Nuclear Parity and Diplomacy by Ultimatum-A Prospect of the Immediate Future." The essence of I.fr. O'Connor's penetrating analysis of world tensions is that we may have no more than 5 years of free action left to turn back the tyranny of Russian imperial communism. The prospect of nuclear parity is a real one. The prospect of what the Russians will likely do when they gain nuclear parity is not a happy one. I commend the reading of this address to everyone who believes our way of life is worth fighting for.

NUCLEAR PARITY AND DIPLOMACY BY ULTI-MATUM—A PROSPECT OF THE IMMEDIATE FUTURE

March 17 of each year has been set aside in the United States to pay tribute to good St. Patrick, patron saint of Ireland and a great inspiration to all the Irish, near-Irish, and Irish by adoption throughout the world.

This great tradition was inaugurated shortly after the American patriots signed the Declaration of Independence and began their historic struggle for freedom. The Irish volunteers in the Revolutionary Army were both numerous and dedicated. Gen. George Washington first paid tribute to the spirit of St. Patrick in a March 17 order of the day to the troops. On still another March 17 St. Patrick was the password of the day.

Since then we have observed the feast day

Since then we have observed the feast day of St. Patrick without interruption, enjoying its great spiritual and patriotic inspiration.

We here in America and the hearty sons of St. Patrick in Ireland by no means enjoy a monopoly on the festivities occasioned by March 17. Every nation on earth which opened its doors to the Irish immigrant pays appropriate tribute to good St. Patrick on this, his day. It has been said that in some distant lands far removed from the routes ordinarily taken by man, it is sufficient to claim that once an Irishman passed that way and good cause is established to vigorously celebrate today.

But wherever these festivities are taking place and regardless of the differences in custom, this is a day dedicated to things of the spirit. It is a day when spirited men rededicate themselves to God and country. It is a day of thanksgiving for the many wonderful blessings bestowed upon us who today enjoy the fruits of personal liberty.

Personal or individual liberty forms the basis for all the freedoms aspired to by man CONGRESSIONAL RECORD — APPENDIX

since the beginning of time. Political liberty, economic liberty, religious liberty, in-tellectual liberty will fail to exist if we ever lose our personal liberty.

That is the fundamental lesson St. Patrick taught the Irish race. That is the fundamental belief the loyal sons and daughters of Ireland have taken to the four corners of the earth. They planted it deep in the most fertile soil of their adopted lands and fervently nurtured it. They have protected it against the many assaults of those who would degrade mankind including those who in our time argue that man is nothing more than animal, to be used as the state sees

It is quite natural, therefore, that we should associate St. Patrick with the cause of personal liberty and the basic freedoms which spring from that happy state of being. It helps us to understand why almost every struggle engaged in by man to throw off the chains of the despot has had the Irish somehow mixed up in it. This is especially true of movements for national independence and struggles against imperialism.

The Irish know well what the tyrannies of imperialism are, just as they know what life is like in an exploited colony. They also know what it is like to have one's nation

divided by unnatural barriers.

The experiences of history accompanied by great suffering and sacrifice have made the Irish implacable foes of imperialism or any other "ism" which preaches race superiority or otherwise advocates the right of one nation to exploit or submerge another.

It is for these same reasons that the Irish have always been stanch fighters for governments based upon moral laws and a social order built upon the recognition of the individual dignity possessed by each and every member of society. These are the fundamentals of the civilization of which we are a part. That is the legacy of St. Patrick.

Yet there is scarcely one of us gathered here this evening who would not agree that our civilization is under the most violent attack in all its glorious history. Not only are the cornerstones being put to the acid test but every grain of sand which comprises the mortar is subjected to severe stress and strain. Nothing that is an essential part of our way of life has been exempt from this warfare.

A new order seeks to take hold of and control even the smallest affairs of man in every hamlet and village of the world. That new order has declared that our way of life is reactionary, that we who believe are weak and timid and that life as we know it must be completely eliminated in order to make way for the new order.

The new order proclaims that all values are measured in material worth, that man is an accident upon this earth and therefore nothing more than one of many tools of production. That new order is militant, atheistic materialism, known more popularly as Russian imperial communism.

Contrary to popular belief, we have been under steady and increasing attack since 1918, the year the Bolsheviks took over the reins of terror in the Russian nation. One frequently hears reference made to the cold war, recalling that we are now in the 8th year of that engagement. The fact is that we as a nation did not awaken until 8 years ago to the fact that we had been the target for almost 30 years of an unorthodox type of warfare.

That unorthodox type of warfare is no less cruel, destructive, exacting, or corruptive the traditional forms of war most commonly known. In many respects, it is more cruel and exacting, in some respects less costly but more effective.

This type of warfare is new to us. The enemy is expert in this type of warfare, it is his creature and he has a vast, head start on us in both strategy and tactical weapons.

That the enemy is adept at his game of warfare is borne out by a long series of evil events which only recently have been clearly written into the official record. In setting the public record straight with respect to criminal conspiracy of communism a notable contribution was made by the House Select Committee on Communist Aggression during the 83d Congress.

That bipartisan committee sought out facts from the most expert witnesses available in the world-those who were themselves the victims of Communist tyranny, The reports of the committee, based upon testimony, documents, and other authoritative evidence taken by it, have filled a huge gap in our knowledge of the enemy. great city of Cleveland can take justifiable pride in knowing that its own son, the Honorable MICHAEL A. FEIGHAN, of the 20th District, was one of the distinguished and hard working members of that committee.

The record of Communist aggression stands as the most reliable index of the progress they have made toward accomplishing their goal of a new world order. It includes the following, among others, startling fact:

1. In the course of 37 years communism taken over and occupied no less than 25 nations, divided 4 others, and thrown an ominous curtain around 800 million people upon whom it wages a campaign of neverending terror.

2. Communism has accomplished the destruction of entire nations by mass deportations, systematically carried out in the course of 24 hours. There remains no doubt that the crime of genocide has been perpetrated against at least three nationsthe Crimean Tartars, the Chechin-Ingush, the Kalmyk Nations. These crimes involved more than 1 million people.

3. Manmade famines, carried out in basically agricultural nations at a time when the crops were normal or better, have been used by the Communists to break the national and patriotic spirit of the people. This type of grand crime against humanity caused the death of more than 5 million people in the Ukraine and in Turkestan in the course of 1 year.

4. Communism has brought about the massacre of thousands of people who resisted the tyranny of the new order or otherwise stood in its way. God alone knows the total number of mass graves of such victims hidden through the empire of communism. There is sufficient evidence on hand, however, to indicate that the murder of ten or twenty thousand people, followed by their burial in common mass graves, is an established part of Communist behavior. The Katyn Forest and Vynnytsia massacres are the most commonly known examples of this crime.

5. Communism has demonstrated an ability to use nonaggression pacts, treaties of mutual assistance, and all other solemn covenants to which it becomes a party as instruments to accomplish the goal of world domain. The only difference they see between the victim state and a state contracting by treaty with them is a matter of time. That is, the time when the Kremlin decides it is opportune to take over and occupy the contracting party.

6. The Communists have left no doubt of their intention to destroy civilization as we know it and to replace it with a universal superstate controlled by a small elite class. Immediately upon the takeover of a nation they set into motion a campaign of total terror calculated to utterly destroy all the institutions, customs, beliefs, culture, and aspirations of the people of the victim nation. Their methods may differ slightly in various parts of the world, but the final objectives always remain the same.

That is by no means the complete record. It is no more than a few selected items on which the recorded evidence is overwhelmingly conclusive.

All these things Lenin said must be done if communism was to triumph throughout the world. The evil legacy of Lenin has been diligently nurtured by his successors in the Kremlin.

Now, against that background I would like to review with you some of the issues which now confront our free society.

Let's take the prospect of peaceful coexistence between communism and the free world, an old-fashioned beartrap which the Kremlin recently revived from the archives of Lenin and is now enthusiastically promoting. Most of what now emanates from Moscow is dressed up in garments of sweetness and light. The new master—Krushchev—is described as just a boy from across the railroad tracks who, like Frank Merriwell, has made good and now wants to be accepted by polite society.

Tempting offers of trade, new markets, and lush profits accompany this latest siren song. The Kremlin is even trying to dignify its Iron Curtain by inviting carefully selected groups from the free world to take better-

conducted tours of its empire.

Since there has been no change in Communist doctrine and the objectives of Lenin remain as the guideposts of conduct, commonsense dictates that we ask what causes this sudden change in tactics on the part of the Kremlin. From reliable evidence at hand it appears the Communists need time to consolidate their slave empire, to stamp out all forms of resistance, to prepare a new civilization devoid of morality and responsive to the will of the dictator, and to gain nuclear parity with the free world.

The Russian bear has developed a wide assortment of camouflages but his strangling embrace has been the same for centuries.

Are we likely to plunge the world into to-tal war if we dare to take positive and overt action against the Communist conspiracy? This question has been magnified and put to the American people in a wide variety of ways. We have been advised by no less a personality than George Kennan, a Russian expert, and former diplomat, that our best interests would be served: "If we all sit quietly in our little boat and address ourselves to the process of navigation I doubt that it will tip over; but if we all leap up from our seats and go rushing around grabbing ourselves by the lapels and screaming 'Why don't you do something about it?' we will be on the surest way to making it capsize."

What Mr. Kennan falls to understand is that the little boat he speaks about is really not little at all because it holds a great civilization and before any captain of state concerns himself with navigation he makes sure the powerplant to propel the boat through stormy seas is in good working order. The obvious conclusion to be drawn from his advice is that we must follow a donothing policy and that by locking ourselves and our moral and political ideals in a vacuum the threat to our civilization will somehow subside.

This same type of expert is always ready with the gratuitous advice that these are days for calmness and unlimited patience and that anyone who suggests positive action is a dangerous firebrand or a hothead. this connection it is interesting to note that Khrushchev recently branded those who opposed his version of peaceful coexistence as hotheads. Here we have repeated, though in slightly different form, the theory that studious passivity is the formula for survival against the warfare communism has launched against us.

But here, again, the official record is clear that there will not be a hot war until the Russians are convinced they have a 50-50 chance of winning it. Make no mistake, however, once the Russians think they have an even chance of winning they will not hesitate to undertake a sneak, and possibly fatal, attack on the United States.

It has also been said that preventive war was the only alternative course of action to accepting the Russian trap of peaceful coexistence. This dangerous oversimplification has created false assumptions that the people of the United States would no longer stand up for what is right and that our philosophy was peace at any price.

This specious argument is calculated to break our national morale and weaken our

will to fight-when fight we must.

Then there are those who shamelessly state that the heroic ideals and dreams of wonderful accomplishments which brought us greatness among the powers of the earth are nothing more than American myths. They subtly tell us that in the America of our day there is no room for ideals or dreams—the substance that real men are made of.

These same spoiled children, products of a hothouse culture, tell us that we stand on the threshold of-a breathtaking new era if we will calmly adjust ourselves to the realities of life with communism. They boldly promise that somehow we will emerge from this tryst with evil as a new and better civil-lzation. There is a striking similarity between these politically immature observations and the theoretical writings of Lenin.

Recently Winston Churchill raised a question which the more timid of men have been avoiding for some long time. While we may sharply disagree with him on some matters we consider vital, we must admit there are times when he demonstrates a genius of leadership, such as that expressed in his stirring speech at Fulton, Mo., in 1946.

You will recall that he gave us the phrase "Iron Curtain" in that address, which shocked some people, but which since has been recognized as an accurate description of what the Communists have done to a

large segment of mankind.

During the course of a parliamentary challenge a few days ago on nuclear weapons and their possible use, he stated that the free world still had a decisive superiority over the Russians in types, destructive power, and ability to deliver. It was his opinion that this favorable balance was all that prevented the Russians from assaulting last ramparts of our civilization. estimated we might be able to keep this superiority for a period of 3 to 5 years, possibly less. Then we would likely enter a new era of nuclear parity in which the Russians would launch an allout campaign of diplomacy by ultimatum. By this brilliant analysis he sought to awaken us-to give us vigor and determination to make the best possible use of the few years of free action we may have left.

Some observers in looking foward to the so-called era of nuclear parity suggest the hope that both sides—the Communist and the free—will be frightened into an era of peace by fear of the terrible destructive power of these new weapons. There is little prospect of realizing this hope because it neglects to take into account that in the era of nuclear parity it is quite possible for the one who strikes first to so impair and demoralize his victim as to make retaliation of little or no consequence. There is nothing in the record of communism to indicate the Kremlin has any respect for human life or fear of destroying an entire civilization.

or fear of destroying an entire civilization. Lenin once said, "Three-quarters of mankind must die if necessary to ensure the other quarter for communism." Any school-boy can understand the meaning of that order given by Lenin to those who were to follow him. The inheritors of his legacy have never deviated from the basic doctrines. It would be sheer stupidity for us to believe they would hesitate to use any means to attain their goal of a new world order.

The basic issue confronting all Americans today is how shall we best use those 3

to 5 years, possibly less, which we still have before the Russians acquire nuclear parity? There are many suggestions and plans offered up on this question in addition to what is already being done by the Government, but I believe we must first accomplish these very elementary steps:

1. We must clearly identify the enemy,

 We must clearly identify the enemy, his objectives, tactics, and operating organs.
 Know thy enemy is a prime requisite for any successful defense. We must then unmask

the enemy.

2. We must recognize that communism is engaged in constant warfare against our civilization, leaving no course open to us but to destroy it or be destroyed by it. This is not our choice but a course forced upon us by the moral duties of our station.

- 3. We must have the courage to admit we as a Nation have been taken in by Communist tactics, that some of our most sophisticated citizenry have been its unwitting allies and that commonsense impels us to declare a public amnesty for those who knew no better or knowing have since learned what terrible fools they were. Such an amnesty would be aimed at eliminating attitudes which defend communism and causing all future public apologists for its cause to stand alone in their folly. It would not serve as an escape hatch for those who remain the hired hands of the conspiracy.
- 4. We must rededicate ourselves to the moral and political principles expressed in the American Declaration of Independence and establish beyond any doubt in the minds of all people on both sides of the Iron Curtain that these same principles, without exception or reservation, govern our intentions toward all the nations and people of the world. We must reject the reactionary theory which holds that there is no morality or legality in the conduct of relations between nations.
- 5. We must learn to take better advantage of the means of communicating our ideals and intentions to the people of the world. For some time we have been in agreement that truth is the most powerful weapon in the arsenal of democracy. While we possess this weapon and all the means of communicating it to every quarter of the globe, we have not brought ourselves around to fully using these assets. The enemy disadins the truth but he makes maximum use of all means of communication to spread fear, uncertainty, suspicion, and unrest. The Congress should create a joint committee on United States overseas information programs and thus take the lead in fully utilizing our most powerful weapon.

If we can accomplish these fundamental steps we will have cleared the decks of some ugly debris as well as some excess equipment that has never been tested under fire. We will then be in a position to launch a bipartisan political offensive against the criminal conspiracy of communism and on behalf of the nations and people now enslaved by it.

Such a program could not fail because it would appeal to the most powerful force God has put on this earth—man's right to and desire for personal liberty. Such a program is the only one which gives us reasonable hope of avoiding all-out war.

The few years of free action we still have left might well be regarded as a period of probation imposed upon us by God. It could well be that extra, second chance that he seems to have reserved for us in time of crisis. It may well be our last real chance to prevent the holocaust of nuclear warfare which could destroy civilization as we know it. If we fail to rise up with all our strength to meet this challenge we will have betrayed St. Patrick and all his beloved teachings.

Who among us would want to be guilty of such an unbelievable crime?

Congressional Pensions

EXTENSION OF REMARKS

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. HÉBERT. Mr. Speaker, I recently had occasion to make some critical remarks concerning a news story which appeared in the Washington Post and Times Herald under the credit line of the Associated Press.

Following my observation on the "coloring" of the piece I received a letter from Mr. W. J. Beale, Jr., chief of bureau of the Associated Press.

Obviously the Washington Post and Times Herald edited the original of the Associated Press story to its own convenience and, of course, wrote its own headline.

In order to be fair on the subject, I am enclosing the letter which Mr. Beale wrote me as well as the complete text of the story which the Washington Post and Times Herald did not print. They follow:

MARCH 8, 1955.

The Honorable F. Edward Hébert, House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN HÉBERT: I have noted your extension of remarks in yesterday's Congressional Record relating to Bill Abrogast's story about congressional pensions.

A full copy of that story is enclosed. I believe you will find it makes all the points you raised. The ninth paragraph is based on Public Law 303, 83d Congress, making \$12,555 the lowest salary for purposes of retirement pay.

With kindest regards, Sincerely yours.

W. L. BEALE, Jr., Chief of Bureau, the Associated Press.

CONGRESS PENSIONS (By William F. Arbogast)

Washington, March 3.—The \$7,500 annual pay raise Congress voted its Members this year adds \$5,625 a year to maximum congressional pension benefits.

The maximum payment goes only to those who complete 30 years or more of congressional service. To qualify for the new top pension of \$16,875 a year, a Member would have to serve 30 years under the new pay scale.

Pension payments to Congressmen are based on average annual salary during a Member's tenure in office, with a limit of 75 percent of full pay.

President Eisenhower signed into law yesterday a bill raising Congress Members' salaries from \$15,000 to \$22,500 a year as of March 1.

The top pension any Member could draw under the salary scale in effect when the present Congress convened was \$11,250.

Pension payments are at the rate of 21/2 percent of average pay multiplied by the number of years of service.

Contributions to the pension fund also will increase as a result of the pay raise, since Members pay 6 percent of their salary into the fund. Participation is voluntary.

Newer Members of Congress stand to benefit most from the pay raise, since their pension base, or salary average, will be computed at the new and larger figure. Older Mem-

bers, however, will receive substantial benefits, since their average salary will be boosted

for pension purposes.

The pension law disregards congressional salaries paid prior to 1946, when salary was boosted from \$10,000 to \$12,500 annually. Subsequently, Congress voted to include a former \$2,500 expense allowance as part of the pension base starting in 1953, in effect making the base pay \$15,000.

A Congressman who first came to Washington in 1946 will, if he remains in office 30 years, be eligible for a maximum pension payment of approximately \$15,000 annually when he retires, if there are no future pay raises. That is 75 percent of his average annual pay of approximately \$20,000 during his tenure.

Without the pay boost made effective this week, the same Member would have drawn a pension of approximately \$11,000 after 30

years.

Members retiring or defeated before they serve 30 years draw pensions based on their years in office, with a minimum of 6 years of service required.

No pensions are paid below the age of 60 and to receive the maximum benefit participants must wait until age 62.

The pension plan provides for the same survivorship benefits—for widows or other dependents—that have long been a part of the Federal Civil Service retirement system.

For purposes of determining the amount of pension of a retired or defeated Member, all service in the Federal Government, whether continuous or interrupted, is counted. A defeated Congressman may count as part of his service any time he was employed by a Government agency, either before or after coming to Congress. He also receives pension credit for military service up to 5 years, even though his military service was prior to his election to Congress.

Democratic Plea for \$20 Tax Cut Seen Helping Cause of GOP in 1956, Winning Many Small Investors

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD the following article by David Lawrence, which appeared in the Washington Star on March 16. It makes sense. When any political party attempts to make political capital for itself at the expense of the country's stability, it is certain to suffer at the polls. That political party which follows the course which best serves the interests of the country as a whole, putting country above any group and seeking special favor from none, is certain to win the support of the majority of the American people.

DEMOCRATIC PLEA FOR \$20 TAX CUT SEEN HELFING CAUSE OF GOP IN 1956, WINNING MANY SMALL INVESTORS

Maybe the Republican Party is as weak, on account of internal friction, as Vice President Nixon says it is, but even so he may be proved wrong about the ability of the party to win in 1956 should President Eisenhower decide not to run.

For the truth is the Democrats are unwittingly engaged in building up such a nationwide fear of their party that almost any Republican nominee may be able to poll a victory next year.

The Democrats are giving about the worst possible example of public relations from their own viewpoint—how to alienate the very group of voters most needed by them to

win a Presidential election.

The so-called low-income groups have always, for the most part, been registered on the Democratic side. Elections are won in America today by mobilizing the maximum number of independent voters who are concerned with the conservation of their savings and their jobs.

While the damagogs on the radical Democratic side spend their time trying to undermine confidence in the stock market and crying out about the removal of double taxes on dividends, they overlook the vast number of voters who have invested their money and now see their savings hurt in value by the Democratic propaganda campaign.

Homeowners and carowners of today are deeply interested in property rights. They have far more sense than the Democratic corators credit them with having. The idea that a \$20 tax cut, for example, would win all the low- and middle-income groups is failacious, as there are other factors far more important to them at work. To assume that the large body of independent voters who swing the balance of power would be ensnared by any such obvious bait is to underestimate the intelligence of a large segment of voters.

The mistake which the Democrats are making is to give the impression that, if they get in power, they will destroy American business initiative and that they will favor tax legislation virtually sabotaging the American industrial structure.

The nature of the speeches of attack made in Congress by the Democrats is well understood by the independent voters, who know that the derisive talk about the favors to "dividend boys" happens to strike hard at many millions of men and women who have invested a small amount of savings in stocks and who depende on dividends, directly and indirectly.

The Democratic spokesmen have set out to discourage the creation of jobs—at least that's the impact their remarks make on businessmen. The Democrats are back to the leaf-raking days of the 1930's, when they talked about the Government doles to increase purchasing power. Fortunately, the American people today are more investment-minded than this and will not accept the idea that prosperity can be achieved by bigger and bigger deficits in the Treasury.

If the Democratic Party keeps on frightening the property owners of the country, it will be a long time before the Democrats will win another natoinal election. Back in 1893, when the panic came, the voters made up their minds that the Democratic Party was unsound on money matters, and from 1896 to 1912 the Republicans won every presidential election on a platform of sound money. The Democrats will have to meet such attacks again, because the purchasing power of the dollar diminished considerably when they were in office. Here is what Senator Byra, conservative Democrat, says on this point:

"When public debt is not paid off in taxes, liquidation takes the form of disastrous inflation or national repudiation. Our form of Government cannot survive either.

"The continuing toboggan of the purchasing power of our dollar which, through the year just ended, has dropped more than 25 percent since the end of World War II, demonstrates our progress alnog this primrose path. * * * Our taxes are burdensome, but

we would merely increase the burden by borrowing money to reduce them."

The conservative Democrats unfortunately are few in number, as is shown by the latest vote in the Senate rejecting the \$20 tax cut, The radical leadership in both Houses on the Democratic side has accepted the same unsound doctrines which made the words Democratic Party a bogeyman among voters for many generations of American history.

Mr. Nixon needn't be so possimistic. Just as Harry Truman helped elect the Republicans in 1952, so, according to present indications, will the Democratic majority in Congress help the Republicans win in 1956. For when any political party generates fear and begins to tinker with the delicate mechanism of the dollar, it takes a risk of defeat at the polls.

Air National Guard

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. PELLY. Mr. Speaker, on Monday last, March 14, I called the attention of the distinguished Members of this House to H. R. 4890, a bill I had introduced to extend to members of the Air National Guard and their survivors certain benefits presently available to members of other Reserve components of the Armed Forces and their survivors. My remarks at that time explaining this legislation were more or less general in nature and were for the purpose of drawing the attention of my colleagues to the existing discrimination against a small group of Reserve fliers. Since the introduction of H. R. 4890, a surprising number of groups and individuals have expressed their interest in this bill and made inquiries which suggest the need for more specific and technical information. Therefore, Mr. Speaker, I have asked permission to further extend my remarks in order to include the following comparison which points out the obvious discrepancies in benefits now existent between the Air National Guard and the Air Force Reserve, bearing in mind that the Air National Guard units of our country are, for all practical purposes, an important part of the Air Force Reserve program.

Under existing law, members of the Air National Guard units are eligible for Veterans' Administration benefits only. To make the glaring inequities more apparent, let us take the hypothetical case of a member of the Air Force Reserve with the rank of colonel having accrued 30 years' service. If deceased during wartime, his widow would receive 40 percent of base pay or \$290.47 per month, and, in addition, 15 percent for each dependent up to 75 percent of base pay or \$544.64 per month. The widow of the same officer, mind you, if a member of an Air National Guard unit and deceased under identical conditions and while in performance of identical duties, would receive only \$87 per month with no dependents or \$121 per month with

one dependent plus \$29 for each additional minor dependent.

It seems only fair and right that since the Air National Guard and the Air Force Reserve are to all intents and purposes the same, that survivor benefits should be the same.

COMPARISON OF BENEFITS

AIR RESERVISTS ON ACTIVE DUTY

Under Federal Employees Compensation Act

Death benefits of basic salary to widow

until death or remarriage.

Widow with dependents, 40 percent plus 15 percent each dependent up to 75 percent of salary, dependents' allotment terminates at 18 years of age. Also for totally dependent parents, if only one, 25 percent; if both dependent, 20 percent each.

If disabled and subject has dependents receives up to 75 percent of base salary depending on degree of disability. determination is the sole prerogative of the Bureau of Employees Compensation.

AIR NATIONAL GUARD

Under Veterans Administration

If subject deceased during wartime, widow received flat \$87 per month if she has no children: \$121 per month with one child, plus \$29 each additional child. Dependent's allotment ceases at 18 years of age unless totally disabled or attending school, in which case allotment continues until 21 years of

If subject deceased during peacetime, widow receives \$69.60 per month; with one child, \$96.80 per month, plus \$23.20 each additional minor dependent. Dependency terminates same as war conditions.

If subject disabled, benefits depend on degree of disability not to exceed death

benefit.

All benefits to widow cease in case of remarriage or death.

House Resolution 151

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 7, 1955

Mr. DOYLE. Mr. Speaker, I thank you and all the Members of this great legislative body for approving and granting my request for unanimous consent to put in place the following in our daily CONGRESSIONAL RECORD.

Herewith is the text of Doyle House Resolution 151, which resolution was several days ago authorized by the House Rules Committee to come to the floor of the House, and I am informed that it

will shortly do so.

I insert the text and the following editorials about it for the information of all concerned as it appears to me, for the present, that these editorials are informative and also indicative. I trust the insertion of the resolution text, together with these editorials will prove helpful.

House Resolution 151

Resolved, That rule XI (25) (a) of the Rules of the House of Representatives is amended to read:

"25. (a) The Rules of the House are the rules of its committees so far as possible, except that a motion to recess from day to day is a motion of high privilege in committees.

Committees may adopt additional rules not inconsistent therewith."

SEC. 2. Rule XI (25) is further amended by adding at the end thereof:

"(h) Each committee may fix the number of its members to constitute a quorum for taking testimony and receiving evidence, which shall be not less than two.

"(i) The chairman at an investigative hearing shall announce in an opening statement the subject of the investigation.

"(j) A copy of the committee rules, if any, and paragraph 25 of rule XI of the House of Representatives shall be made available to the witness.

"(k) Witnesses may be accompanied by their own counsel for the purpose of advising them concerning their constitutional rights.

"(1) The chairman may punish breaches of order and decorum, and of professional ethics on the part of counsel, by censure and exclusion from the hearings; and the com-mittee may cite the offender to the House for contempt.
"(m) If the committee determines that

evidence or testimony at an investigative hearing may tend to defame, degrade, or incriminate any person, it shall-

"(1) receive such evidence or testimony in executive session:

"(2) afford such person an opportunity voluntarily to appear as a witness; and

"(3) receive and dispose of requests from such person to subpena additional witnesses. "(n) Except as provided in paragraph (m), the chairman shall receive and the commit-

tee shall dispose of requests to subpena additional witnesses.

"(o) No evidence or testimony taken in executive session may be released or used in public sessions without the consent of the committee.

"(p) In the discretion of the committee, witnesses may submit brief and pertinent sworn statements in writing for inclusion in the record. The committee is the sole judge of the pertinency of testimony and evidence adduced at its hearing.

"(q) Upon payment of the cost thereof, a witness may obtain a transcript copy of his testimony given at a public session or, if given at an executive session, when authorized by the committee."

[From the New York Times of March 9, 1955] A CODE FOR INVESTIGATIONS

The excesses of some notorious congressional investigating committees have for years made it incumbent on both Houses of Congress to adopt general rules of procedure that would curb the worst of the abuses.

Congress is, in the last analysis, responsible for the conduct of its Members; and there is no doubt at all that the conduct of some of them, acting in their official capacity as investigators-or, more accurately, as inquisitors—has decply reflected on the prestige and the dignity of the Congress and thereby done injury to our democretic institutions. This feeling took tan-gible form in a well-merited censure resolution against one Senator last fall. the problem of establishing in each House a clearly defined minimum standard for congressional investigations remained.

Individual committees of both House and Senate have at various times adopted admirable codes for themselves, but what has been needed is a general expression representing the collective thought of each. The House Rules Committee has at last taken definite action in this regard. The resolution by Representative DOYLE, Democrat, of California, which it approved without dissent yesterday, represents no more than the pre-dicted minimum; but if that minimum is adhered to some of the worst abuses that have tended to give congressional investigations a bad name may be eliminated. The reforms are generally intended to give com-

mittee witnesses a little more protection than they have sometimes had in the past. This is doing nothing more sensational than treating them in accordance with our constitutional tradition; but that, too, has not always been adhered to in the past.

Under the Doyle resolution each committee of the House would still have the right to draw up its own rules, but they would have to be not inconsistent with the guide set forth by the Rules Committee. Anyone familiar with congressional practice will realize at once that this code is not going to guarantee fairness to witnesses, because a committee chairman retains great power, and rules can always be ignored or broken. But what it can and probably will do will be to act as a valuable restraint on chairmen and their committees; it will make them think twice about abusing their powers; and it will stand as the conscience of the House, by which their conduct will be judged. This would be a useful innovation.

We hope the resolution is approved by the House and that one certainly no milder will also eventually be accepted by the Sen-

[From the Washington Post and Times Herald, of March 14, 1955]

AIMED AT INQUISITIONS

The House Rules Committee has made a good start toward curbing irresponsible investigating committees. The proposed code of fair procedure it has recommended to the House is by no means complete, and some of its provisions would be wide open to evasion. But at least it nails down a few simple rules that would be of value in keeping the more reckless investigators in line. Witnesses could stil be mistreated, but they would have better grounds for protest and the House itself would become responsible for enforcement of the rules of fair play.

The Rules Committee did not attempt to bring all House committees into conformity with a single set of regulations. Rather, it set up a few minimum requirements that all committees would have to incorporate in their own rules. Each committee would be free, for example, to fix the number of members required for taking testimony, except that this could not be fewer than two. Thus one-man hearings would be ended. The chairman would have to state the subject of the investigation and provide each witness with a copy of the rules. Witnesses could be accompanied by counsel, although the counsel would be limited to advising the witness as to his constitutional rights.

Several other devices would give at least qualified aid to witnesses under suspicion. Their testimony would be taken first in executive session; they could appear voluntarily as witnesses; they could ask the committee to summon witnesses in their behalf, although this would be solely within the discretion of the committee. Similarly witnesses could submit sworn statements for the record, but these would be included only at the discretion of the committee. No right of cross-examination would be granted; nor would the right of silence be recognized when the committee fished for information beyond the proper scope of its inquiry. dence taken behind closed doors would not be released or used in public sessions without the consent of the committee, but nothing is said about leaks.

With all its shortcomings, the proposed code is a valuable contribution to the cause of responsible investigation. We hope the House will adopt it, with improvements on the floor if possible, and that this example will stimulate the Senate into action in the same cause. No rules can change a witch hunter or a smear artist into a scrupulous factfinder, but rules help to make investi-gators more conscious of the public demand for fair play. Careful selection of investigating chairman, along with stiff rules at both ends of the Capitol, could help bring the disgrace of congressional inquisitions to a timely end.

[From the Washington Sunday Star of March 13, 1955]

BETTER BREAK FOR WITNESSES

The House Rules Committee has done a constructive day's work in reporting out the resolution submitted by Representative Doyle, Democrat, of California.

This resolution proposes a variety of safe-guards for the benefit of witnesses appearing before congressional committees. No set rules or regulations will prevent all abuse of witnesses, for this is a matter which is governed in considerable degree by the attitudes, the taste for fair or unfair play, of individual Congressmen. But Mr. DOYLE's proposals, if adopted, should curb the worst abuses, especially the one-man inquisitions of recent memory. It is to be hoped that the House will enact the proposals now before it, and that the Senate will take comparable action.

Mr. Speaker, the three foregoing editorials, which I have herein identified are but a few of a goodly number which have appeared in various places in the Nation, I am informed, in support of the objectives of House Resolution 151. I recite this information as it further indicates public interest in, and approval of same.

I desire to also state that the final text thereof is not the "brain child" of only myself. For, some of the distinguished members of this great legislative body who also worked strenuously and consistently with me to conclude a text which it was believed would be sound, reasonable and constructive, and yet not unnecessarily elaborate, or which would in any way interfere with the jurisdiction of each investigative committee, on its own behalf to write its own rules of procedure, were Messrs. Walter of Pennsylvania, WILLIS of Louisiana, DAWSON of Illinois, and FORRESTER of Georgia. Also, we had the great benefit of counsel with, and material aid, by our distinguished Parliamentarian, Mr. Deschler. As to the final drafting thereof, we were greatly assisted by Mr. Charles J. Zenn, of the House Judiciary Committee.

I think it should be emphasized that a careful reading of the text of the above resolution will make it clear that it only applies to an investigative hearing. In the resolution see section 2, rule 11, subdivision (h), (i), and (m). Also please note, as provided in section 25, as follows: "Committees may adopt additional rules not inconsistent therewith."

On behalf of myself and colleagues herein named. I desire to herein express appreciation to all the members of the House Rules Committee for their most courteous and full consideration of the subject matter of my resolution and of the other similar resolutions which were considered by said committee. I consider my attendance upon the Rules Committee when they were considering the several resolutions dealing with code of procedures and ethics for investigative committees as one of the most pleasant experiences and sources of information which I have experienced during these more than 8 years I have already been a member of this great legislative body.

Federal Inspection Urgently Needed in United States Poultry Industry

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial which appeared in the March 16, 1955, issue of the Belleville (III-) News-Democrat, which points to the need for thorough inspection of poultry before it reaches the dinner table.

I have called attention to the deplorable and shocking conditions in a segment of the poultry industry by reading published sworn affidavits by poultry workers into the Record. I have introduced a resolution calling for a full-scale congressional investigation.

The editorial "Sick Chicken for Dinner," which follows, supports my resolution. I earnestly appeal to my colleagues for their support and call upon the Rules Committee to approve the investigation so that proper legislation may result to correct the conditions so serious to the consumer.

The editorial from the News-Democrat follows:

SICK CHICKEN FOR DINNER

Pure food for American consumers is a legitimate concern of Government, and the measures it takes to make sure that certain foods are fit for human consumption are well founded. A serious fault of the present program, however, is that it does not reach far enough.

Notable lapses of jurisdiction occur in the butchering industry. Consumers are able to buy with confidence of quality in grade those carcasses of beef, pork, mutton, and other meats and meat products which bear the United States inspector's seal. The inspection begins when the animals are delivered to the stockyards and continue throughout the packing process until the final stage has been completed.

Yet even though poultry is a major food today there is no inspection at all in the poultry-packing business. It is urgently needed. So say the Amalgamated Meat Cutters and Butcher Workmen of North America, A. F. of L., in their new booklet, Congress Should Probe Sick and Diseased Poultry. The butchers union has intimate knowledge of prevailing conditions since 30,000 members are employed in the poultry industry.

Sanitary conditions in some poultry processing plants are absolutely abominable, and the volume of inferior, diseased, filthy, rotten, adulterated poultry unfit for human consumption that gets to market is appaling.

The poultry workers themselves have published sworn affidavits describing conditions in some of these uninspected plants. These affidavits assert that large quantities of poultry in advanced stages of disease and in the most revolting condition are slaughtered and processed—even birds which are already decomposing are packed and shipped out to unsuspecting consumers.

Officials of the United States Public Health Service have stated that "anyone who has observed poultry plant operations from a public health point of view does not have to be convinced of the need for poultry inspection programs." The March issue of Consumer Reports declares that it is well established by health authorities that certain poultry diseases are transmissible to man. * * * Among these are psitticosis (parrot fever), which has been traced to turkeys, and a virus infection known as Newcastle disease. In addition there are a large number of disease-causing organisms common to man and poultry; of these, the Salmonelia group of bacteria, which causes infections similar to paratyphoid or typhoid fever, are of the greatest concern to public health officers.

Every year thousands of cases of foodborne disease can be traced to poultry and

poultry dishes.

The situation stinks to high heaven. Obviously, something needs to be done about it, and quickly. Senator Paul H. Douglas, of Illinois, and Congressman Melvin Price, of our district, have introduced resolutions in the respective Chambers calling for a full-scale congressional investigation. Thorough airing of the poultry packing business would be wholesome in more ways than one.

Murphy General Hospital, Waltham, Mass.

EXTENSION OF REMARKS

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the Record, I include therein a resolution adopted by the House of Representatives of the State of New Hampshire:

STATE OF NEW HAMPSHIRE, RESOLUTIONS

Whereas the closing of the Murphy General Hospital in Waltham, Mass., is scheduled at the close of the current fiscal year and no new patients will be admitted whose treatment cannot be completed by April 30, 1955; and

Whereas this is the only general Army hospital in the New England area and is of semipermanent type construction as opposed to the frame structure of the hospitals at most Army installations; and

Whereas needed medical and surgical treatment is available for both reserve and active members of the Army, as well as the Air Force and Navy personnel, and, perhaps even more important, to the dependents of such members of the Armed Forces; and

Whereas the closing of this hospital will work an undue and severe hardship on many such members of the Armed Forces and their dependents from New Hampshire as well as other New England States; and

Whereas operation of this hospital with the possible addition of an organized program of medical research and training could prove most valuable to the armed services and would insure the continuance of these necessary facilities: Now, therefore, be it

Resolved, That the House of Representatives of the New Hampshire General Court request the members of the New Hampshire congressional delegation to study carefully all factors involved in the proposed closing of the Murphy General Hospital, with special attention to the effect of the addition of the aforementioned research and training program; and be it further

Resolved, That with due regard to ecomony and efficient operation, every reasonable effort be directed toward retaining the vital medical and surgical care now available; and be it further

Resolved, That a copy of these resolutions be forwarded to each Member of the New Hampshire congressional delegation.

CHARLES GRIFFIN, Speaker of the House of Representatives. RICHMOND H. SKINNER. Representative from Alton. ROBERT L. STARK.

Clerk of the House of Representatives.

The Future Direction of the Refugee Relief Program

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a transcript of a news analysis given over CBS radio on March 12, 1955, by the noted news commentator, Mr. Daniel Schorr.

Mr. Schorr's comments on the delays and confusion surrounding the administration of the Rufugee Relief Act deserve the attention of every American concerned with our overall immigration policies.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

We would like now to look at one item of news which is not in today's headlines. While Secretary of State Dulles traveled in Asia and wrestled with the terrifying problem of war or peace in the Far East, a number of minor problems accumulated on his desk. One of these, on which he will have to decide soon, is the future direction of the refugee relief program, so far something less than a brilliant success.

When President Eisenhower appealed to Congress, after the expiration of the Displaced Persons Act, to let him bring in some more refugees, in order to maintain our democratic posture in the world and to give hope of a haven to some of those we have tacitly encouraged to escape from behind the Iron Curtain, Congress responded hesitantly. It authorized a quota of 209,000 until the end of 1956, but laid down so many restrictions, such rigid categories, so much redtape, as to inhibit the program it enacted. And, symbolic of the prevailing mood, Congress directed that the program be administered by the Chief of the State Department Security and Consular Bureau, Scott McLeod. President Eisenhower is reported to have said that if he had to administer such an unworkable program, he would resign. And McLeod himself has said, as a rueful joke, that if he knew who was responsible for assigning the job to him, McLeod would have him assassinated.

The program got off to a halting start. It was difficult to get the necessary advance assurances of jobs and housing for each refugee. Those who escaped from behind the Iron Curtain without their possessions frequently could not furnish the required documents:

And worst of all were the requirements for security clearance which, by McLeod's reckoning, take 42 of the average 126 days needed to get a visa. Relatively few visas have so far been issued, and while the program is speeding up, it is doubtful, the way things are going, that all 209,000 can be issued by the deadline of December 31, 1956. Private refugee-ald agencies-mainly operated by religious organizations-whose cooperation is essential to the program, are dissatisfied, and some have threatened to withdraw their

In this situation, Secretary Dulles last January caled in a troubleshooter, former Immigration Commissioner Edward J. Corsi of New York, made him a personal assistant to the Secretary and also deputy administrator to Scott McLeod, a kind of confusing bureaucratic compromise of the sort common in Washington. Corsi soon concluded that if the program was to work, it would have to be deteched from the security and consular divisions of the State Department. Security officers are mainly concerned with avolding risks, not with opening our gates. In short, the issue was whether to keep out all foreigners, except the certified simon pure, or to get refugees in, except the really suspect.

Corsi has now summed up his recommendations in a memorandum to Dulles-a memorandum which, incidentally, went directly to Dulles' desk, with only an informational copy to McLeod.

But now Corsi himself has become a controversial figure—a controversy which, some suspect, has some connection with the ishe personifies. Representative Francis E. Walter, whose restrictive McCarran-Walter Immigration Act Corsi opposed, has accused him of serving in an organization, later listed as subversive, which Corsi has denied. And McLeod, whom Corsi, according to Representative EMANUEL CELLER, of New York, was supposed to be easing out of the refugee post, has asked the FBI for a full field check on Corsi before granting him security clearance for his post.

On January 16, the day he was sworn in, Corst told an interviewer, "I am very liberal and my record may be a little dangerous at times." He was speaking half-jokingly, but He was speaking half-jokingly, but he has since found out that this was no joke. There's a kind of irony in the fact that the man who believes security considerations play too much part in our refugee program is himself now the subject of a security investigation.

But, behind the controversy over Corsi, is the underlying issue of whether the refugee program will be controlled by those intent on bringing 209,000 refugees to our shores, or those more concerned with rigid security considerations. Yesterday, McLeod told a Senate subcommittee, speaking of State Department personnel, that he would not hesitate to hire a security risk if he was the only person available for a necessary job. He said, "Our policy is not to be so secure that we can't get the job done." Whether the same policy-not to be so secure that we don't get the job done-applied also to the refugee program remains to be seen. It may have to be decided by Secretary Dulles.

College and University Housing

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. SPARKMAN. Mr. President. a few days ago the 10th National Conference on Higher Education, a part of the National Education Association, adopted certain resolutions relating to title IV of the 1950 Housing Act, a title which provides assistance for college housing.

I may say, Mr. President, with some pride, that I was the author of that title of the Housing Act.

In the main, Mr. President, I agree with these resolutions. Particularly do I agree with the disapproval of the recommendation of the Commission on Organization of the Executive Branch of the Government that the college housing loan program be discontinued.

This program is self-liquidating and is serving a vital purpose in helping to provide needed housing for GI's and others who are attempting to obtain college training.

I ask unanimous consent, Mr. President, that the resolutions and other information supplied by the National Education Association be printed in the Appendix of the RECORD.

There being no objection, the resolution and memorandum were ordered to be printed in the RECORD, as follows:

CONFERENCE RESOLUTIONS ADOPTED BY 10TH NATIONAL CONFERENCE ON HIGHER EDUCA-TION, CHICAGO, ILL., MARCH 2, 1955

COLLEGE AND UNIVERSITY HOUSING

Whereas the present housing facilities on college and university campuses are entirely inadequate for present and anticipated enrollments despite the welcome assistance already given by the College Housing Program, title IV of the Housing Act of 1950 (Public Law 475, 81st Cong.); and

Whereas the regulations under which title IV of the Housing Act, 1950, now operates prevent the program from being fully prac-

tical for self-liquidating projects: Be it Resolved, That the 10th National Conference on Higher Education recommend a modification of the regulations governing the use of the funds by providing for the lowest interest rates consistent with the original act; reducing the reserve fund requirement to the lowest reasonable level; and by making available as soon as possible the full amount of the funds provided under the act; and

Whereas the 1953 amendment to title IV of the Housing Act of 1950 gives discretionary power to the Administrator of the Housing and Home Finance Agency to change the interest rate, thus introducing further elements of uncertainty for the colleges in the effective operation of the law: Be it

Resolved, That the 10th National Conference on Higher Education recommend that title IV of the Housing Act of 1950, as amended, be further amended to withdraw the discretionary power of the Administrator of the Housing and Home Finance Agency to change the interest rate.

COLLEGE AND UNIVERSITY FACILITIES FOR AUX-ILIARY SERVICES OTHER THAN HOUSING

Whereas the existing facilities for auxiliary services other than housing on college and university campuses fall far short of meeting the needs of present and anticipated enrollments; and

Whereas facilities for auxiliary enterprises of colleges and universities may be of a selfliquidating nature: Be it

Resolved, That the 10th National Conference on Higher Education urge amendment of title IV of the Housing Act, 1950, to include financing the construction and equipment of facilities for auxiliary services other than housing on college and university campuses.

HOOVER GROUP DISAGREES WITH EDUCATORS (Article carried in March 1 and 15, 1955, College and University Bulletin, vol. 7, Nos. 10 and 11, published by Association for Higher Education, National Education Association, 1201 16th Street NW., Washington, D. C.)

That the Federal college housing loans should be completely terminated was 1 of the 48 recommendations made in the report of the Commission on Organization of the Executive Branch of the Government, a 12member body headed by former President Hoover, prepared for Congress.

The report is the fourth in a series of 20 to be prepared for Congress by the Com-To date this report has brought the greatest difference in opinion from Commission members. As a matter of fact, 5 of the 12 members dissented from the majority report on certain recommendations.

The participants of the AHE's 10th national conference on higher education, however, held in Chicago recently, adopted resolutions in support of the college housing loan program urging: (1) That the full amount of the funds provided under title IV of the Housing Act of 1950 be made available as soon as possible at the lowest interest rates consistent with the original act; and (2) that the act be expanded to include college and university facilities for self-liquidating projects other than housing. (The complete texts of the resolutions will be carried in the April 1 issue of CUB.)

The Hoover report says some puzzling things about loans to colleges for housing. For example, on page 41, the Hoover Commission states that the interest rates are "only one-fourth percent higher than those of long-term Government bonds." Actually, the rates are substantially higher, following the 1953 amendment which gave discretionary power to raise rates to the Housing and Home Finance Administrator. In fact. a recommendation for the removal of this discretionary power is included in one of the conference resolutions.

Further, the Hoover Commission, in de-

veloping the conclusion that "this program is no longer necessary," states that on December 31, 1954, applications for only \$16.3 cember 31, 1904, applications for only \$10.0 million were pending; whereas inquiries by College and University Bulletin indicate that, at that time, applications for \$47.6 million were on file. More requests have been added in 1955.

Within the next few weeks, it may be expected that the President, after receiving comments from all interested parties, including college administrators, will decide whether or not he will ask the Congress to terminate the college housing loan program.

St. Patrick's Day Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS OF

HON, WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. KNOWLAND, Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by me last night at the Hotel Astor, New York, N. Y., before the Friendly Sons of St. Patrick.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

Mr. Chairman, your eminence, Mr. Mayor, distinguished guests, members and guests of the Friendly Sons:

We are here to pay our respects to St. Patrick. In his day, as every wearer of the green will recall and all others should be advised, he drove the snakes out of his beloved Ireland.

He used a stout stick for he understood that in dealing with snakes they would have been unimpressed by the use of either mere talk or discussion backed up with only a feather duster. Even a good stout shillelagh would not work if its value was neutralized by the lack of will to use it to meet the threat at hand.

Today the world faces the serpent of communism which has spread its venom on a worldwide scale.

The age in which St. Patrick lived was one in which ancient institutions were breaking down and confusion reigned in men's The Roman Empire was disintegrating and with it the political structure of the civilized world. Christian civilization in north Africa was wiped out by the vandals. Because of the withdrawal of Roman troops, Britain, which had under Roman protection reached a high degree of civilized life, was left unprotected to the inroads of such marauders as the pagan band which carried Patrick off. Fear and uncer-tainty were everywhere in that chaotic

Into his part of that world Patrick brought two great and related ideas-faith and free-

He was first and foremost an apostle of the Christian faith. There were apparently Christians in Ireland before him, but he made the country dominantly Christian, and so throughly that Ireland became for the next 700 years a center of learning and a center of missionary activity. From Ireland missionaries went to Scotland, to northern and central Europe. Ireland was a kind of headquarters of culture and re-

ligion for western Europe.

At the time, and quite logically so, Patrick was an apostle of freedom. He had been a captive. Now he endeavored to make people free.

The story of St. Patrick is of peculiar relevance today. Fear and uncertainty reign in various places. Moreover, there

is a great, powerful, and concerted attack on just the things for which St. Patrick

Communism, which is stalking over the world today, is the denial of religious faith and at the same time the denial of human freedom. Communism is godless. It is also a system of slavery based on contempt for, and oppression of, the common man.

But there is that which will defeat communism. It is just the twofold vital quality which St. Patrick wielded as his weapon-faith in God and faith in human free-These are indestructible and while we cling to them we are indestructible too. This is the lesson of St. Patrick.

At the time of Yalta, just 10 years ago, less than 200 million people were behind the Communist Iron Curtain. Today, over 800 million people are enslaved by the most godless tyranny the world has ever known.

Despite the fact that the Soviet Union has violated its treaties of friendship and nonaggression with Finland, Poland, Latvia, Lithuania, Estonia, Hungary, Rumania, Bulgaria, Czechoslovakia, and the Republic of China there are still some simple souls who believe that the way to deal with an international bully is by more appeasement.

At Munich the world should have learned that the road to appeasement is not the road to peace, it is surrender on the installment plan.

The Soviet Union has vetoed the admission of 17 nations into the United Nations, none of which have committed an act of aggression since the formation of that organization 10 years ago. Significantly Ireland, Portugal, and Spain were all "honored" by the Soviet veto. Ireland first applied for membership in 1946 and the Soviet Union has vetoed their application, three different times though more than two-thirds of the General Assembly has voted to approve the membership.

The Soviet Union is an admitted violator of the United Nations charter and the resolutions in support of the Republic of Korea, a victim of Communist aggression on June 25, 1950. Yet now the Soviet Union is supporting the admission of the aggressor, Communist China, into that organization.

Such action would violate the moral foundation upon which the United Nations is supposed to rest. It would be putting a premium on aggression. It would serve notice that the quickest way to membership is by shooting your way in. It would be a betrayal of the 140,000 American casualties including 35,000 of our dead.

The Chinese Communists, in violation of the armistice, admit they hold 15 American airmen; 11 of these have been sentenced to Communist prisons. There is strong reason to believe they hold several hundred other United States and United Nations military prisoners. prisoners. We know they hold over 30 American civilians who have been in jail for several years.

As long as one American in the armed services or in civilian life is unjustly held I shall not remain silent.

How can our associates even consider compromising principle and honor to that extent? What does the United Nations intend to do about it? What are the American people going to do about it?

Based alone on the Soviet Union's failure to support the United Nations action in Korea and to abide by its charter obligations the Soviet Union should have been expelled from membership.

Have we forgotten St. Paul's injunction in second Corinthians:

"Be ye not unequally yoked together with unbelievers: for what fellowship has righteousness with unrighteousness? And what communion has light with darkness?"

As for me, as long as I have a voice and vote in the Senate of the United States. I shall oppose the admission of Communist China.

We must always distinguish between the people of Russia and their Communist Kremlin masters. The Russian people were the first victims of the godless Marxian tyranny of Lenin and Stalin.

The struggle for power goes on in the Kremlin. The tactics may change with the faction temporarily in power. The long-term strategy for the destruction of human freedom continues throughout the world by Communist aggression from without or by subversion from within.

There will never be peace in our time in any real sense until the people of Russia and China have thrown out their Communist masters and established justice in their political system, freed their economy the dead hand of statism concentrated on armament production and, more important than all, reopened their churches so that the guidance of the Father of us all may replace the godless teachings of Marx, Lenin, and Stalin.

The crucifix is a more potent force than the clenched fist of Communism.

When the people of Russia and China gain their freedom from the tyranny which temporarily rules them we should make it known that our friendship and our assistance will be available for the establishment of peace with honor in a truly free world of freemen.

We seek not 1 foot of their territory nor control over a solitary one of their people.

We only want for them the cherished freedom to worship God according to the dictates of their conscience; to have in the hands of a truly free people the right of self-determination on who shall constitute their government and the right to change it by the decision of 200 million people rather than a cabal of less than a dozen power-mad men in the Kremlin who threaten the peace of the world; and to be able to enjoy the

fruits of their labor and a rising standard of living.

We should look upon the people within the Iron Curtain as our friends and allies. Indeed, should their totalitarian masters embark upon further aggression the temporarily enslaved people may turn out to be among our stoutest allies.

Such a policy does not contemplate aggression on the part of the free world. But it does require that we never by word or deed give our moral or legal blessing to the enslavement of the 800 million people behind the Communist Iron Curtain.

Such a policy does contemplate the application of moral, economic, and diplomatic sanctions against the international Communist conspiracy against the free way of life. Human freedom is a God-given right beyond the power of dictatorships to permanently destroy.

It is difficult for me to understand how the British Foreign Minister could urge the turning over of Quemoy and Matsu Islands to the Communists on the grounds they are close to the Communist mainland and be silent about Hong Kong which is closer and would be an even bigger feather in their

It may be clever, but it is not honorable to pay the ransom to the Communists with the other fellows assets. America should have no part of any such deal.

The United States and Ireland learned that people must be prepared to fight for freedom if they are to achieve it.

Another Patrick (Patrick Henry) March 23, 1775 (about 4 years after the friendly sons was organized), in the Virginia Legislature said:

'Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God: I know not what course others may take, but as for me, give me liberty or give me death."

In his day Lincoln understood that this Nation could not continue "half slave and half free." In the age of the airplane and the atomic and hydrogen weapons the world cannot long continue half slave and half

In 1865 at his second inaugural Lincoln expanded this doctrine when he said:

'Fellow citizens, we cannot escape history • • • we here have the power and bear the responsibility • • • in giving freedom to the slave we assure freedom to the free. We shall nobly save or we shall meanly lose this last best hope of earth."

This I believe: Under the divine guidance that made us and kept us a free Nation this generation of Americans will not sacrifice principle for expediency; nor cringe in the face of brutal naked aggression and we will not barter friends and allies in the Western Hemisphere, in Europe, Africa or Asia in a dishonorable appeasement at a far eastern Munich or a second Yalta.

Civilian Conservation Corps

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 2, 1955

Mr. PRICE. Mr. Speaker, under leave to revise and extend my remarks, I herewith include a letter I have received from the secretary of the Cahokia Nature League in East St. Louis, Ill. Mr. J. W. Galbreath points out the apprehensions of the Cahokia Nature League, which are shared by all citizens interested in the conservation of our national resources. with regard to the disposition of many of our renewable resources.

The contents of the following letter should be heeded by all Members of Congress, and it is my hope that Congress will recognize the importance of acting to preserve and beautify the millions of acres of land which constitute our national resources:

> THE CAHOKIA NATURE LEAGUE, East St. Louis, Ill.

Hon. Melvin Price, Congressman, Washington, D. C.

DEAR CONGRESSMAN PRICE: We wish to congratulate you on your recent stand on several bills pertaining to the conservation of our national resources.

We of the Cahokia Nature League are greatly perturbed concerning the disposition of many of our renewable resources; our water, our solls, our forests, and our wildlife. It seems that we have billions for defense from without but only pennies to save our beloved national parks and national forests and other renewable resources at home.

When nearly 48 million people visit these parks and forests every year, to seek mental relaxation, physical rest, and refreshment of the soul, we cannot afford to let them fall into a neglected state of repair and upkeep. Slum-like and unsanitary conditions do exist in some of our most frequented parks.

Why not revive the Civilian Conservation Corps instead of so much idle drilling and marking time in our Armed Forces. Let us plant some trees, dig some lakes, construct some rock dams for trout fishing, build some needed shelters, and lay out hiking trails, etc. There is no limit to the things that need to be done. This would not only save our national recreation areas but save a lot of young juvenile delinquents, idling their time away in all parts of our country. Why not give these young people a chance to do some conservative work, and obtain wholesome exercise in God's great outdoors; this will be the only time some of them will ever be permitted to visit our national parks and forests.

This is surely a cause above partisan politics, which will not only benefit present generations but generations yet unborn. have a rich American heritage, of which we should be justly proud. Let all of us fight and work to keep it thus, for our sake and the sake of posterity.

Respectfully yours,

J. W. GALBREATH, Secretary.

We Have a World Bank for Reconstruction and Development, Why Not a Home Bank?

EXTENSION OF REMARKS

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. SIEMINSKI. Mr. Speaker, since the war, the World Bank for Reconstruction and Development has moved on projects at a brisk and profitable clip.

Here at home, a hitch in a finance formula holds up profitable and modern living when it slows up prompt and rapid redevelopment of outworn sections of our towns.

The below listed editorial on Ike and Jersey City-March 15, 1955, issue of the Jersey Journal-shows that we do not move with quite the speed on local projects that the World Bank does on projects abroad.

The World Bank moves with an ease that suggests it is free of legislative straitjackets.

It is not too flattering for the Congress to be told that the World Bank has been able to cull unto itself more experts with more time to translate more projects abroad into workable laws than the Congress appears to have been able to do for the citizen and the community at home. Perhaps a home bank for reconstruction and development is in the offing.

"Ike and Jersey City" tells a story. It

follows:

THE AND JERSEY CITY

President Eisenhower's housing program had twin objectives:

He wanted to help cities rebuild their outworn sections. He wanted to help private business recapture those phases of public housing in which it can do a satisfactory

The program has not gone too well because the men who translated it into law

did a hurried job.

As a result Ike's administrators find it difficult to bring his program into reality; they are straitjacketed by legislative shortcomings. To break that straitjacket they

1. Find interpretations which will allow them to reach Ike's objectives without violating the law.

2. Find a test area in which they can develop sound amendments to the law.

By a quirk of circumstances, Jersey Cityone of the Democratic strongholds of the Nation-may be the very laboratory in which this Republican national program can be refined and made practicable.

Here's why:

1. Jersey City is one of the oldest cities in the country and, therefore, one of those most in need of rebuilding.

2. Few urban spots offer a better opportunity for redevelopment than the space behind Jersey City's city hall (the Gregory project). This area was the heart of old Jersey City. It has everything except modern multiple dwellings. Within easy access are churches, schools, shopping, entertainment, and rapid transit. Redevelopment can give new life to these facilities by bringing in people to use them.

3. Well aware of its needs, Jersey City was one of the first communities to get into the urban-redevelopment program. The Federal Government, after a survey, designated 2 redevelopment areas (Gregory and St. John's) and already has put about \$5 million into buying and clearing these sites. All is ready for a private developer and private financing to move in and make the envisioned apartments a reality.

It is with this last step that the hitch comes. The shortcomings in the formulas for financing are such that urban redevelop-

ment moves hesitantly.

Commissioner Donald Spence, representing Jersey City, and Washington officials, representing Housing Administrator Cole, have been working closely for months. Now they are preparing for what may be a key conference in Washington.

If their work is successful, then the President's program for urban redevelopment through the cooperation of public and private agencies, will be on its way in Jersey City.

If that comes to pass, then here will be an example to which the Federal Government can point as a real achievement.

For Jersey City, it would be wonderful to have at last in progress the first phase of rebuilding our town for modern living.

Statement in Support of H. R. 4903, Chapter 7, Department of Health, Education, and Welfare, Dealing With Additional Payments to School Districts

EXTENSION OF REMARKS

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. CRAMER. Mr. Speaker, I wish to take this opportunity to commend the Appropriations Committee for its action in including in the second supplemental appropriation bill, 1955, a provision for \$20 million as an additional amount for payments to school districts for carrying out the provisions of Public Law 874, and thus for the current year making available 100 percent of entitlements as the result of the suspension, pursuant to Public Law 732, of the 3-percent absorption feature of Public Law 874 as amended by Public Law 248, of the 83d Congress.

This is of tremendous importance to the First District of Florida, as it is to many other areas of the country where federally impacted areas exist, thereby placing a greater responsibility on the local school boards and taxpayers, to provide educational facilities. The existing appropriation of \$55 million for payment to school districts for the 1955 fiscal year resulted in the payment of only 65 percent of full entitlement to the school districts qualifying. The \$20 million additional appropriation provided in this bill will permit payment of 100 percent entitlement to the eligible school districts.

I received communications from the Honorable J. Crockett Farnell, superintendent of Hillsborough County public schools, which provide a concrete example of the tremendous importance of this supplemental apporpriation, in that it will mean approximately an additional \$35,000 to help bear a portion of the additional cost of educating approximately 2,000 federally connected pupils who must be absorbed by the educational system of that one county that has an average total daily attendance of some 50,000 pupils. Of the 2,000 federally connected pupils a sufficient number qualify for only a one-half pupil rating to reduce the number below 1,500, or below 3 percent of the total enrollment.

These figures will, it appears, clearly justify and substantiate the wisdom of the Congress in the last session eliminating the 3 percent absorption feature contained in Public Law 874, amended by Public Law 248, of the 83d Congress, said suspension for 1 fiscal year being contained in Public Law 732. Without this provision this county, which bears a tremendous burden of Federal impact, due to the existence of one of the largest Air Force bases in the country, MacDill Field, would be unable to qualify under the act and would thereby lose a hundred thousand dollars as an average per year as

a partial contribution toward the education of these 2,000 federally connected pupils. This contribution pays for only a portion of the educational costs and certainly this participation is justified on the facts involved, and I hope will demonstrate clearly the need for continuing the elimination of this 3-percent-absorption feature.

I am hoping that Congress will, in this session, recognize the tremendous importance of many areas of continued elimination of the 3-percent-absorption provision, and will enact legislation similar to H. R. 850 designed to accomplish this in subsequent fiscal years.

Speech by Hon. Leonard W. Hall, Chairman of the Republican National Committee

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Judge Leonard W. Hall, chairman of the Republican National Committee, at a dinner given in his honor by the Republican Finance Committee of Florida on March 17, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY LEONARD W. HALL, REPUBLICAN NATIONAL CHAIRMAN, AT A DINNER IN HIS HONOR, GIVEN BY THE REPUBLICAN FINANCE COMMITTEE OF FLORIDA AT THE BISCAYNE TERRACE HOTEL, MIAMI, MARCH 17, 1955

One of the political tragedles of our times has been the departure of many of the leaders of the Democratic Party from the party's fundamental Jeffersonian principles. Of course, I, as a Republican interested in getting votes for Republican candidates, probably shouldn't complain, because it has caused hundreds of thousands of fine Democrats to come over to the Republican Party, particularly in the last Presidential campaign. This broadening of our own ranks I welcome, of course.

But the transgressions of the ruling minds of the Democratic Party are more than a mere political matter. They affect the welfare of our country and threaten our basic American system. I do not have to tell this audience what has happened. In the last 20 years we have seen these Democratic leaders in many parts of our country taken over by leftwing advocates of the planned economy, the welfare state—or, to use the correct term and a term they assiduously avoid—socialism. It has been this undeniable trend at the top of the Democratic Party that caused the creation of the States' Right Party in the South. It has been this trend which, along with the great personal appeal of Dwight D. Eisenhower, enabled the Republicans to carry Texas, Oklahoma, Tennessee, Virginia, and Florida in the 1952 election. It has been this trend which caused the voters of South Carolina to take the unprecedented step of electing a writein candidate to the United States Senate in 1954. It has been this trend which enabled Texas and Florida to give us a Republican Congressman, each, in the same election. It is this trend, as much as any other single thing, which has hastened recognition of the need for a strong two-party system in the South.

The philosophy of this group can be described, using basic American terms, as anti-Jeffersonian. It is a philosophy that is the antithesis of Jeffersonian principles. Jefferson believed in decentralized Government and States' rights. Jefferson believed in checks and balances, not only in the three coequal branches of the Federal Government but between the Federal, State, and local governments. Jefferson believed in the fundamental rights of individuals. He was dedicated to individual liberty.

But the anti-Jeffersonians—and I mean the Adlai Stevensons, Walter Reuthers, Hubert Humphreys, Neubergers, Douglases, and all the other ADA apostles—scorn States' rights and advocate an all-powerful centralized Federal Government. They subscribe to more and more powers for the executive branch of our Federal Government. They advocate Government planning on a huge scale for our people.

I have been in Washington almost steadily for the last 17 years. I have watched the tremendous inroads made on our American system, and I have seen Dwight D. Elsenhower and the Republican Party in the last of those 2 years doing everything possible to rectify the damage done in the preceding years. You could not live in the middle of events as I did all those years without seeing the pattern which these disciples of left-wing ventures have set.

The pattern is simple. The Government taxes the citizens more and more, so that the Government, not the citizen, spends for him the money he earns. This is accompanied by heavy Government spending, deficit financing, and Government-planned inflation. Then, to prevent inflation from reaching runaway proportions, controls are placed over prices, wages, and materials. As these controls are installed they unjoint other segments of the free-enterprise economy so additional controls have to be invoked to adjust the damage done by the initial set of controls. Soon, not only the economy but the people as a whole are under the regimented hand of Government, and socialism is upon us.

In short, the whole transformation is accomplished basically by economic moves by Government, not political or social moves by Government.

Now let us examine for a moment the nature of the attack which has been made on the Eisenhower administration since it took office. Let us see who has been one of the leaders behind the attack. Let us see where it is taking him.

The attack has not been made on the political front, on the legislative front, or on the social-progress front—but on the economic front.

Nine days after President Elsenhower took office in January 1955, Senator Paul. Douglas, a one-time fund-raising chairman for the Socialist Party candidate for President, began predicting a recession in America.

From that time on, all through 1953, Doug-LAS went up and down the countryside predicting a recession. Finally, on December 23, 1953, the Senator from Illinois formally announced that the country was (and I quote) "in a real recession."

From then on his cry was, I quote, "My concern is that the current recession shall not become cumulative and develop into a depression."

Thus, through 1954—for 21 long months—Senator Douglas, Hubert Humphrey, Walter Reuther, and all the rest of these apostles of gloom and doom did their best to convince America that it was in a recession. The truth was that America was not in a recession and

as big as these voices of gloom and doom they could not scare the American people into one. Why? Because of the fundamental soundness of our economy under the administration of President Eisenhower

and the Republican Party.

It was pointed out repeatedly that these very gentlemen in the days of President Truman had witnessed unemployment of almost 5 million in February of 1950 without so much as mentioning the words "recession" or "depression." Why didn't they mention them? Because America was headed down the road of their choosing under Harry Truman, but it was not and is not headed down the road of their choosing under Dwight D. Eisenhower.

No: they could not talk America into a recession or depression, and with the arrival of election day and the attendant victories which they scored by the scare campaign which they ran, they ceased fire. Why? Because the facts were slowly catching up with them.

For example, Senator Douglas in the 21 months preceding the 1954 congressional elections filled nearly two-score pages of the CONGRESSIONAL RECORD with contentions that we were in a recession. On November 4 he was reelected to Congress. How many pages has he put in the CONGRESSIONAL RECORD since? I have had the Congressional Recone searched. The answer is: zero pages.

Now, it has only been a few weeks since one of the best answers to this recessiondepression talk was given here in Miami. By whom? By the American Federation of Labor at its executive council's meeting.

The AFL disclosed that wage increases during 1954 represented the greatest gain in real wages of any year since World War II, and they frankly added that these wage increases had been reached with fewer hours and less worktime lost through strikes than any year in that period.

Their report stated that these wage in-creases, and I quote, "were almost entirely over and beyond the amount needed to compensate for rises in the cost of living. other words, these were not cost-of-living wage increases that we had during the Truman inflationary period, but real wage in-

Do you wonder that the gloom-and-doom

boys finally had to sign off?

So what now? The attack has failed. The Eisenhower administration has stabilized our economy on a high, prosperous plateau, inflation has been stopped, our workers are now receiving real wage increases instead of cost-of-living increases, and the industrial and business world is most optimistic about the future, as indicated in every major business publication and our daily press

In the United States Senate we now have an investigation of the stock market. Nobody can quarrel with the right of the Congress to investigate such a vital instrument as the stock market. Whether this investigation is necessary or not I do not profess to know.

But if you will look at the membership of the committee, you will find one of the original instigators of the gloom-and-doom attack that started back in 1953. I refer to Senator Paul Douglas, of Illinois. You will also find that Senator Douglas' legislative assistant, Robert Ash Wallace, has been placed in charge of the investigation with the title of staff director.

Now, who was one of the first witnesses

called? One Prof. John Galbraith, of Har-

vard. Who is he?

Galbraith is an oldtime New Dealing, ADAtype of anti-Jeffersonian radical. He was credited with almost wrecking OPA during the war with his drastic ideas for controls. He was the father of the compulsory gradelabeling movement during those days. He flirted around with the customary pink fronts-not very many, 2 or 3. He wrote admiring statements about the Soviet system and the Communist leaders in Western Europe as late as 1949. His radical economic theories caused a well-known economist, Dr. David McCord Wright, to state at the 66th annual meeting of the American Economics Association in December 1953, and I quote. "albeit quite possibly unconsciously, I should judge Dr. Galbraith one of the most effective enemies of both capitalism and democracy."

That was the kind of "expert"-and I use the word advisedly-that was put on the witness stand.

What did he do? He filled the air with dire statements, spread gloom and doom by the yard, and generally pictured a terrible economic plight ahead. What happened?

The stock market immediately fell an average of 5 points. Now, I don't know whether Professor Galbraith caused this or not. Markets are sensitive things. They react to many factors. But the coincidence is certainly interesting.

I know this much: that the market has been uneasy, unstable, and on 1 or 2 days downright jittery since the professor took

the stand.

And I know this, as do millions of investors in this country: In the week ending last Saturday, stocks fell a reported total of \$7 billion. It was the biggest decline in 15

Now what does this drop mean? Who lost this \$7 billion? Just what do investments

mean to our American system?

First, let me say that the Eisenhower administration is dedicated to an ever-expanding economy. The President has stated this repeatedly and virtually every move of the Eisenhower administration and the Republican Party has been in this direction. Investing money in our great enterprise system promotes expansion, construction, invention, and, above all else, jobs.

Some people try to foster the idea that in America only a few people hold the stocks which represent investment and which are listed on the stock exchange. I read in the New York Times, Sunday, March 6, an estimate by one of its experts that there are 7.5 million separate owners of corporate stocks in the United States. I fell to wondering who these 7.5 million people could be, what income brackets they might be in. So I asked our research division to give me some figures and they handed me a study made by the Brookings Institution in 1952.

Here's what that study showed:

Nearly one-third-31.6 percent-of all the shareowners of this country are people with incomes of less than \$5,000 a year. Fortyfour and four-tenths percent of the share-owners are in the \$5,000 to \$10,000 income bracket. And only 24 percent have incomes exceeding \$10,000.

And let me tell you one other significant thing this study showed. A majority of the shareowners-50.6 percent-are women, I wonder if our left-wingers know that!

So I should say that when Secretary of the Treasury Humphrey the other day cautioned the investigators to go slow before they started undermining the confidence of the American people he was on sound ground. I call that speaking for the average American. Believe me, 7.5 million shareowners are a lot of people. I wonder if our leftwingers know that?

I say that the American public had better wake up to the real aims of these advocates of an all-powerful Federal Government, these admirers of socialism.

I think all of us can remember when Florida retired one of these gentlemen a few years back-one Claude Pepper.

I know this much. If these gentlemen of the left keep driving the Democrat Party farther and farther left, we, as Republi-cans, must make sure that we never close the door to thinking Democrats who want to

The American people are never join us. going to let this Nation go socialist if the facts are in front of them. Maybe they could be led into it by deceit, but never by truth. And it is our job to provide the American people with the truth. It is our job to see that the Republican Party enters candidates in every section of the country to give the voters a real opportunity to choose between these conflicting ideologies. In that we must not fail, either as Americans or Republi-

Now, I said earlier that I have been in Washington almost continuously for 17 years. Like you, during all those years I was disturbed by the trend of the New Deal-Fair Deal administrations toward the establishment of a socialist state. I am going to identify the things that bothered me.

The tremendous expansion of the Fed-

eral Government.

2. The corresponding colossal increases in expenditures and the ever-growing burden taxes, whereby the Government spending the individual's earnings for him.

3. The fetish for more and more Federal controls regulating the daily lives of all of

4. The encroachment of the Federal Government into areas properly belonging to the States and local governments under our sys-

5. The ceaseless warfare by the executive branch on first the judicial and then the legislative branch, with the idea of increasing the power of the executive branch, while destroying the faith of our people in the other two arms of our Government.

Now, what have the Eisenhower administration and the Republican Party done about these basic paths toward the socialist state? I am going to itemize them one by one:

1. The trend toward big government has been completely reversed, with entire bureaus abolished, 283,000 Federal employees eliminated from unnecessary positions and the process of reduction is still going on.

- 2. Government expenditures have drastically reduced each year and the Republican 83d Congress, in cooperation with the executive branch, cut appropriations (meaning future spending) by enormous sums, with the result that last year it was possible to give the American people the largest tax reduction in history-\$7,400,-000,000.
- 3. Despite cries of alarm from the New Deal-Fair Dealers, the President took off depressive economic controls-the OPA was abolished; price, rent and wage controls eliminated, etc-with the result that the awful spiral of inflation was halted and our economy has at last been stabilized on a highly prosperous plateau. To me, the most significant fact is that during the dangerous inflationary years our dollar dropped in purchusing power from 100 cents in 1939 to 52.2 cents at the end of 1952. The Eisenhower Administration in the 2 years that it has been in power has halted the drop at 52.0 cents, or a decline of only one-fifth of a cent in 2 years.
- 4. The President and the Republican Congress have reversed the invasion of State and local rights on countless fronts, notably, enactment of legislation returning the Tidelands to the States, development of a power policy called for the States and private industry to develop power, with the Federal Government entering into a partnership with the States only when the States and private industry are unable to act, and finally, the establishment of a commission to study which are the proper areas of government as between Federal, State, and local entities.
- 5. There has been a complete cessation of attacks by the executive branch on the judicial, and legislative branches, and in its place the President has encouraged, by pub-lic utterances and otherwise, the fact that the three branches of our Government are

coordinate coequal and all entitled to the respect of our citizens.

To me, the greatest single political event of the past 20 years has been this fundamental reversal of political trend in government and the credit for it must go to President Eisenhower and the Republican Party. It is overriding because it is so basic to our way of life. It is proof of what the President has said on so many occasions—that with respect to our Government and our physical possessions we must be conservative; in human relations and social matters, progressive.

The Real Alternative of Liberation in American Foreign Policy

EXTENSION OF REMARKS

HON, LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a very informative article by Dr. Lev E. Dobriansky, which appeared in the autumn 1954 number of the Ukrainian Quarterly. It deals with a subject of vital concern in our foreign policy and I commend it to the Members of the House who are interested:

THE REAL ALTERNATIVE OF LIBERATION IN AMERICAN FOREIGN POLICY

(By Dr. Lev E. Dobriansky)

One of the most serious misconceptions being harbored today is the false notion that the only alternative to peaceful co-existence is preventive war. Aside from the very valid consideration as to whether peaceful coexistence itself can insure peace-i. e., the prevention of a global conflict-it is evident to any careful and critical analyst that this misconception is a glaring product of the haphazard reasoning which accounts also for the pitiful lack of rational discrimination and distinction in regard to the many concepts employed in our characterization of foreign policy. The net result has been confusion, and the administration, in its indiscriminate use of the successive concepts of mass retaliation, peaceful coexistence, and now, in some quarters, competi-tive coexistence, has contributed in the greatest measure to this unfortunate beclouded condition. When one cuts sharply through these terminological innovations, the same essence of the containment policy. which ostensibly was repudiated in 1952, is found present.

In addition to preventive war, there is a real alternative to peaceful coexistence, or any other verbal brand of containment, and this is the policy of liberation. The spirit of this policy remains as one enunciated by both President Eisenhower and Secretary of State Dulles. "Our determination," declared the President, "must go beyond the negative concept of containment to the positive concept of expanding by peaceful means the areas of freedom. If this is not done, we will once again find ourselves at war. It must be done. It can be done." The Secretary once rightly observed: "But liberation from the yoke of Moscow will not occur for a very long time and courage in neighboring lands will not be sustained unless the United States makes it publicly known that it wants and expects liberation to occur." This spirit has not been present in the policy of the administration since April 1953, at

which time a real reversion to the old containment policy took place but with new verbal embroidery. Thus, in examining our current policy in the light of the liberation alternative, it is logically sound to refer to it as containment.

THE CONCRETE MEANING OF LIBERATION

It is perhaps somewhat of an understatement to say that despite the extensive controversy that transpired 2 years ago on the liberation theme much misunderstanding and confusion remains as to the nature of the liberation policy, even among those who profess it. If one carefully reflects on the logically determining aspects of this issue, he cannot but come to recognize the general supportable proposition that any political course on the part of our Government that is not a policy of liberation is essentially a policy of containment. In the complex of contemporary circumstances there is a discernible internal determinism which establishes the complete validity of this proposition and sets the groundwork for our free dynamic action that is something radically different from the drift of uncreative adaptation to altered conditions contrived by enemy initiative. Fundamental in this respect is the fact that the concept of liberation rests on the unqualified rejection of the expedient Soviet theory of coexistence which, significantly, has baited the frequent support of Kennanism and the many now who wishfully impute to its intermittent use the success of containment and transient diplo-

This sound rejection rests on three forms of evidence establishing the Russian Communist design for world conquest, namely, abundant theoretic expressions in Russian Communist works, an imposing record of imperialist conquest since 1920, and the vast operation of the world Communist conspiracy directed by Moscow. It is also associated with a vivid awareness that the dynamics of historical movement disallow permanent statical relations, and that for their control they require more than what may prove to be the illusory deterrent of supposedly ma-terial power. The containment position depends exclusively on this power deterrent and the naive hope of institutional atrophy within the Red Empire. However, since 1950 it has borne an accruing disutility that with the passage of time can only result in unprecedented losses, not to exclude national disaster itself.

It is patently erroneous and misleading to identify the concept of liberation with the prosaic and hollow verbalism that we earnestly hope the captive nations will one day become free. Wishful verbalism of this sort can be found in abundance in the varied output of those who knowingly or unknowingly espouse different shades of containment. Such verballsms become meaningless when sober consideration is given to the animus of liberation, which in essence is practical, positive, initiative-bearing, realistic, moral, and, above all, supremely deterrent against a third world war: in short, outstanding policy characteristics that are inevitably obscured by self-defeating avowals of containment, no matter how described. To repeat, any policy that is not essentially and functionally liberationist belongs by nature to the containment species and, consequently, will be found wanting in these preeminent qualities. A quick glance at the confusing and tortuous character of our current policy is sufficient to impress one with the truth of this observation.

The spirit of the liberation policy is thoroughly practical because it is unquestionably in our fundamental national interest to furnish concrete aid to the captive nations in the vast Russian Communist empire. Practicable aid extended to Polish, Lithuanian, Ukrainian, Slovak, Hungarian, and other national patriots is a strategically well-placed investment not only in the de-

sired restoration of their national independence and freedom but also—in fact more so—in the very preservation of our own Nation. The full import of this will be appreciated when we shall consider the ultimate variables in the calculus of world conquest below.

Moreover, the liberation animus is positive in that it is oriented toward the strengthening of the forces of freedom everywhere which necessarily entails the expansion of the areas of freedom rather than their mere, negative conservation at the critical cost of the enslaved nations now undergoing genocidal consolidation. In its scale of values freedom precedes peace, for carried to its logical extent, peace can even be bought for total bondage. Where the world remains half free and half slave, the scaled precedence of peace to freedom, as fostered by Communist slogans of peaceful coexistence, creates an illusion concocted to serve as the opiate of the still free nations. In the illusion of peace we have shamelessly acceded to the tyrannical expansion of the Russian Communist empire far beyond the wildest dreams of the past tsars of Muscovy. Many who have succumbed to this illusion overlook the elementary fact that war, essentially a conflict of relationships, commences in the souls of men only to culminate on the battlefields of the world. Our record so far in the contest for the souls of men everywhere points to this disastrous culmination. And the most glaring effect of the opiate of peace over freedom is the insidious sensation that short-run truces add up into a long-run peace.

These qualities in themselves certify to the striking initiative-bearing characteristic of the liberation policy. With the fixed objective of expanded freedom, the imaginative employment of numerous, diverse means and a deep certitude of spirit, we can keep the unalterably self-dedicated enemy on a continuous defensive which alone is capable of exhausting the sources of Moscow's imperialist rule. The policy is realistic in that it is founded on a plain recognition of the mortal enemy and, with principled determination and courage, is formulated accordingly. In its full realism, without being emotionally crusading or sentimental in character, liberation postulates a moral commitment toward the captive nations, and this essential morality of the liberation idea is a primary fact. is this fact that fundamentally distinguishes it from any form of containment policy which, by reasoned analysis, can only show for itself the tenuous basis of comparative technologic power. In the maze of his countless confused speculations and errors Mr. Kennan at least strikes upon this truth when, in behalf of containment, he admits that "I see the most serious fault of our past policy formulation to lie in something that I might call the legalistic-moralistic approach to international problems."

Logically and by written evidence, containment in whatever form is by nature amoral. It involves no moral commitment because it is not predicated, as Mr. Kennan and other containment theorists well confirm, on determining moral and political principles. Little wonder that the eminent Father Walsh of Georgetown University was quick to score the above and similar statements uttered by Kennan. For an American foreign policy formulated in divorce from the constant guidance of moral principles would enjoy no better rational criteria than those underlying the policy of the Soviet Union. Contrary to Kennan's further error, had our past policy formulation adhered closely to absolute moral and political criteria, the course of contemporary history since 1918, notably with the dissolution of the Russian Empire, in real possibilities would have been by far more favorable for us and the world. tunately, numerous current expressions of this moral commitment toward the captive

Footnotes at end of speech.

nations may be found in statements by President Eisenhower and Secretary of State Dulles, but these expressions will remain only verbalistic and hollow unless the commitment is functionalized by the only policy adaptable to it, namely the policy of liberation.

In the light of these outstanding qualities, how then can we define an American policy of liberation? Most succinctly, it is a policy girded to the concept of liberation which is a process of political warfare aimed at the defeat of the enemy and the independence of enslaved nations as a necessary and logical basis for European and Asiatic reconstruction along federative of free lines. Notwithstanding the misconception of many, liberation is not an end in itself, but a peaceable means to a double end, negative and positive in character. It engenders not only the fight against communism and its decisive defeat but also the positive fight for freedom and the independence of nations. It is the first vital link of a policy chain that makes for a rational, coherent and winning American foreign policy. As stated by the brilliant author of the most authoritative book on the subject, "Liberation, independence, federation: the three are links in the same policy chain." 4

THE LIBERATION CONCEPT IN OPERATIONAL STAGES

When thought through carefully and logically, liberation is an operational concept best fitted for the heavy requirements of the moment and of the desired future. In the present phase, that of the cold war, it provides the best possible insurance against the sudden outbreak of a hot war without appeasement, truce-like concessions and compromise of principle and national integrity. As an unfolding process of political warfare on the enemy's terrain, it affords us the only possible chance of curtailing the genocidal consolidation of the Russian Communist Empire which is the primary variable in the Communist calculus of world conquest. The containment policy in effect today allows the formation of this essential variable which is being executed behind lavish Communist professions of peaceful coexistence, wide Communist participation in international conferences, and timed contributions to an apparent lessening of world tensions. all calculated to generate the illusion of a prolonged peace in order to gain the neces-sary time for this consolidation.

To contend, as some superficially do, that liberation entails the risk of a hot war is obviously an argument oblivious to the constant presence of this risk. Liberation alone can lessen this risk, for an enemy confronted by an increasing insecurity within his own domain is surely less apt to embark upon world conquest than without this circumstance. To hope, as many in vain do, that, somehow, something might occur in the unaided slave world to precipitate an internal collapse, like the lost hope of a convulsion upon Stalin's death, is plainly indicative of an inadequate understanding of the highly technologized techniques of oppressive Communist rule. Pretty phrases of cultural erosion, territorial indigestion, and the like belong to diplomatic poetry, not to the field of real political action. To maintain, as several do in the very same breath, that the freedom of the enslaved nations cannot be attained without a hot war, arbitrarily rules out all hope founded on the liberating effects of a backed cacophony of unrest, dissension. and calculated opposition reaching into all vulnerable strata of the empire. These planned effects counter the absurd argument of aimless uprisings, and constitute a real possibility which for its very existence in the coming short-run can only be nurtured by liberation.

Footnotes at end of speech.

For the requirements of the ever-impending phase of a hot war it should be evident now that a policy of liberation places us in an infinitely more advantageous position than one of containment and its myopic wait-and-see attitude. Efficiently organized groups of national leadership, thriving in well-supported underground networks with roots deeply implanted in the respective populace, cannot be expected to materialize with a narrow policy of containment no matter how extensive our intelligence and espionage activity may be. We are dealing with enslaved national bodies that in their present grave state of systematic genocide require our complete national effort which, again, can only be expressed through a policy of liberation. Their hope, their courage, their will to exist and fight can only be sustained by our effective moral commitment to the goals of their freedom and independ-Thus in the final inexorable accountence. ing, to the degree that we fail in the concrete preparation and support of these truly natural allies, to that degree and more, in the event of a showdown, we shall be forced to underwrite the undoubtedly heavy losses of open combat in grossly disproportionate amounts of American lives and treasure. The great irony and paradox of our current containment policy reside in the inescapable fact that as we timidly attempt, on the insular bases of brute material power and passive institutional example, to stave off a global conflict marked by vast devastation, we are inadvertently, by the very nature of our present historical dilemma, contributing to this horrible outcome.

Let us honestly face the cruel fact that this is the tremendous responsibility of decision now weighing upon the shoulders of our policymakers whose anticipated pleadings of "we did our best in the cause of peace" could scarcely justify their failure to mold now the available alternative means to a swift, economical and certain victory in the case of a hot war. The simplistic notion that all that is required is the massive capacity to bomb out the enemy, is purely a product of vacuous thinking with a show of arrogance toward all the determining factors of geography, history, economics and sound psychological strategy. The detailed contents of these factors are certainly not the exclusive property of our policymakers to warrant the self-legitimating shroud of secret information upon which policy decisions are pre-sumably formed. In substantial degree they are accessible to anyone given to painstaking research and study, and in many instances are more easily acquired through unofficial channels. Those familiar with these factors inevitably encounter the consummate conclusion that our ineptitude in the strategic utilization of these factors for the current historic struggle might well seal our doom, The plain truth is that despite our past military successes, we can lose: and the ultimate phase of reconstruction, for which the universal principles of liberation prepare us best, may not be of our making.

THE DUAL NATURE OF THE ENEMY

Scholars are well aware of the many myths circulating in this country on the subjects of communism and the Soviet Union. Those who are unwilling or impatient to study the genesis of Russian communism, its genealogy and historical development to the present day, easily succumb to such myths as: (1) that Moscow-centered communism is not a Russian phenomenon and was initially imposed upon the Russian people; (2) that our enemy is merely ideologic communism, so to speak, born in a historical void; and (3) that any thought of dismembering the Soviet Union—the inner sphere of the Russian Communist Empire-would consolidate the Russian masses behind the Kremlin. To what extent these and similar myths are inspired by enemy agents and Russia "first" elements

in this country is always a fitting question. Nevertheless, they are media of disinformation blurring the necessary distinctions of thought and fact that must be observed in any realistic program of successful, political action.

From a historical-sociological viewpoint one of the most ridiculous notions entertained is that the Bolshevik Revolution represents an institutional hiatus in the history of ethnic Russia. Fortunately, competent scholar-ship refutes this politically inspired notion, and has increasingly shown the historic, autocratic Russian qualities of Muscovitic communism. As the learned Father Walsh points out, "Psychologically, the Russian peopleupon whom the revolution is based and without whose acquiescence it could not have been launched or so long sustained-have always revealed qualities of frustrated mysticism which inclines them to constant acceptance of contradictions and paradoxes." One of the most outstanding Russian authorities, Nicolas Berdyaev, stresses that 'However paradoxical it may sound, still Bolshevism is the third appearance of Russian autocratic imperialism; its first appearance being the Muscovite Czardom and its second the Petrine Empire." Sooner or later, thoughtful Americans, whose minds have not been completely infected by the hatched notions of puny Russia "first" advocates, will come to understand the full import of the warning given by this venerable Russian Christian scholar: "It is particularly important for western minds to understand the national roots of Russian communism and the fact that it was Russian history which determined its limits and shaped its character. A knowledge of Marxism will not help in this." *

Indeed, it is important for us to understand this in order to shape our policy accordingly. The enemy is dual in nature. In objective, experiential terms ideologic communism is bankrupt, but although, like the Muscovite and Petrine doctrines of the Third Rome and Pan-Slavism in the past, it serves the purpose of ideologic babbitry in the empire, it functions also as a conspiratorial weapon in the free world, attracting dupes, opportunitst, and traitors. The real substance of the enemy is totalitarian Russian imperialism driven, as one scholar puts it, by the historic Messianic obsession of "expansion, greatness of the state, ideas of grandeur, and Messianic ideas of world redemp-tion or world domination." This drive expressed itself at the very inception of Russian communism by the imperialist rape of independent Ukraine, White Ruthenia, Georgia, Poland, the Baltic countries, Hungary, and the other nations.

THE RUSSIAN CALCULUS OF WORLD CONQUEST

History has cast our role as the savior of nations, more so those genocided behind the Iron Curtain than those threatened in the free world. The plan for their necessary salvation can only commence with the policy of liberation. Except in hollow word, we are today acquiescing to Russian genocidal consolidation and in reality abandoning the captive nations. With millions of beaten robots at its disposal, Moscow will have achieved its psychological basis of reasonable expectation of success in its calculus of world conquest. Given the initial advantage of attack and a sabotaging world conspiratorial network, it does not even have to regard the second essential variable, a quantitative superiority in arms, as a necessary requisite for such expectation; although with concentrated specialization, it may easily attain it both absolutely and relatively as we are forced to dissipate our resources in side-The third basic variable, its fear of retaliation, will be inversely related to its estimated ability to create regionalized Pearl

Footnotes at end of speech.

Harbors. Allowing the first, and dangerously gambling through unprincipled containment on the second, we are contributing heavily to their lessened fear of the third variable

Time definitely favors Moscow, not the free world. Behind the Iron Curtain are formidable allies which in a sense are more important than France and England. They are, step-by-step, vanishing under the brutal Communist force and our nebulous foreign policy providing to them no hope of liberation. Are we prepared to sacrifice them by a compromised policy? In two World Wars England and France turned to us for their salvation. Whom can we turn to in the event of a third?

The Natural Gas Act

EXTENSION OF REMARKS

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following joint resolution from the Utah State Legislature concerning the Natural Gas Act:

Senate Joint Resolution 12

Joint resolution of the 31st Legislature of the State of Utah memorializing the Congress of the United States to enact legislation recognizing that the sale of natural gas by producers or gatherers in interstate commerce for resale are an integral part of the production and gathering of that resource and exempting such sales from any and all regulation by the Federal Government

Be it resolved by the Legislature of the tate of Utah (both houses concurring therein):

Whereas the Congress of the United States in 1938 passed the Natural Gas Act which gave the Federal Power Commission regulatory authority over the transportation and sale of natural gas in interstate commerce and provided that the provisions of this act shall not apply to the production and gathering of natural gas; and

Whereas the Federal Power Commission ruled on many occasions between 1938 and 1951 that it had no jurisdiction over sales of natural gas by producers and gatherers, and the United States Congress in 1950 again reiterated its intention that sales by producers or gatherers were exempt from Federal regulation under the Natural Gas Act; and

Whereas the Supreme Court of the United States in 1954 held that all sales of natural gas for resale in interstate commerce are subject to regulation by the Federal Power Commission under the Natural Gas Act whether made before, during, or after production and gathering, such decision re-versing a precedent of long standing; and

Whereas it is the consensus of opinion of the Legislature of the State of Utah that the resultant subjection of theretofore unregulated activities of producers and gatherers to Federal regulation is not in the best

interests of the people of the United States in that it will have a very detrimental effect on the future development and ultimate beneficial utilization of this very valuable natural resource, and will also result in an inevitable clash between the Federal regulating authorities and State regulation with respect to utilization of this resource, and will have the further effect of encouraging extension of crippling Federal controls to many other commodities in the American economy: Now, therefore, be it

Resolved, That we do petition and me-morialize the Congress of the United States to propose and enact an amendment to the Natural Gas Act of 1938 which will clearly and positively exempt from Federal regulation the activities of producers or gatherers of natural gas including sale by them of natural gas in interstate commerce for resale; be it further

Resolved, That copies of this resolution be transmitted forthwith to the President of the United States, United States Senate, House of Representatives, and each congressional delegate from the State of Utah.

National Park Policies Need Revision

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. TOLLEFSON. Mr. Speaker, peo-ple in the State of Washington believe that our national park policies ought to be revised to permit full development of facilities at Mount Rainier National Park in order that more people might enjoy the scenic wonders and winter sports potential in the area. A resolution adopted last month by the Pierce County Pomona Grange, No. 16, expresses the attitude of not only its own members but that of countless other citizens of our State as well. I insert it herewith in the Congressional Record: PIERCE COUNTY POMONA GRANGE, No. 16,

Puyallup, Wash., February 12, 1955. Hon. THOR C. TOLLEFSON,

House of Representatives,

Washington, D. C.

DEAR Sm: The following resolution was adopted at the last Pomona Grange, No. 16, held February 12, 1955, copies to be sent our legislators:

'Whereas Washington's No. 1 tourist attraction, Mount Rainier, is being denied its fullest development by the National Park Service; and

Whereas Mount Rainier National Park offers superior skiing terrain, picnic areas, and scenic grandeur; and

"Whereas the park area properly developed would be a wonderful drawing card for national and international meets: Therefore be it

"Resolved, Congress amend Park Service regulations to stimulate construction of privately operated park facilities, including an aerial tramway; and

"Resolved, That Pierce County Pomona Grange urge their Senators and Representatives to introduce and support legislation for the full development of the natural resourfes of Mount Rainier National Park.

We ask for your cooperation on the above resolution.

Thank you for your time and effort. Yours truly,

Mrs. LUCILLE A. OCKFEN. Secretary.

Valuable and Effective Work Performed by Mercy Flights, Inc.

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. NEUBERGER. Mr. President, an outstanding and courageous job has been done in Jackson County, Oreg., by Mercy Flights, Inc. This group provides an air ambulance for patients who cannot be treated otherwise, and for whom such emergency service is essential to life or health.

In recognition of the valuable and effective work performed by Mercy Flights, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Medford (Oreg.) Mail-Tribune of March 13, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MERCY FLIGHTS ANNOUNCES PLANS FOR PRICE. **OPERATION CHANGES**

Mercy Flights, Inc., Jackson County's nonprofit air ambulance organization, Saturday announced plans for administrative changes which will guarantee continuation of its service.

The group's air ambulances last week carried the 334th patient—an average of nearly 11/4 flights per week since service was started just over 5 years ago.

The nonprofit corporation has grown from nothing but an idea to a responsible organization with assets totaling several thousand dollars, including a metal hanger at the Medford airport, a twin-engine Cessna aircraft, a single-engine Stinson aircraft, both converted to ambulance planes by the use of stretchers and big loading doors, and considerable radio, first aid and other equipment.

To maintain its planes in top condition, and to plan for future purchase of replacement planes, the group's board of directors has found it necessary to increase its pre-paid subscription charge to \$4 per family per year. Subscription will be \$2 for indi-

The income from this higher fee will permit the corporation to set up a fund for the purchase of replacement planes, which will become necessary some time in the future, and will allow continuance of maintenance and operations at the present level.

The prepaid subscription plan "saved" Mercy Flights from going bankrupt when it was first instituted in 1951 about a year and a half after service was first started, and provided it with a regular and reliable source of income. Prior to that, the only income was from flight charges, which were irregular. And since Mercy Flights has never turned down a patient for inability to pay, the corporation once or twice was in debt with no prospects of getting out.

FOUR SERVICE CLASSES

Four classes of service are now offered: 1. For subscribers, emergency ambulance service, certified as necessary by a doctor, within a 400-mile radius (this includes Seattle and San Francisco), is free on both the planes.

- 2. For subscribers, nonemergency but necessary ambulance service is available at a rate of 25 cents per mile one-way in the Cessna and 171/2 cents in the Stinson.
- 3. For nonsubscribers living in Jackson County, the rate is 35 cents per mile in the Cessna and 25 cents in the Stinson.

4. For nonsubscribers living outside of Jackson County the rate is 50 cents for the Cessna; 35 cents for the Stinson.

Out-of-county flights are made only in medical emergencies, and only when other air transportation is unavailable. As a non-profit corporation, Mercy Flights does not compete with commercial operators. Its flights are limited strictly to ambulance operations.

PILOTS NET SMALL PAY

When the service began operations, the pilots were unpaid. Since the demand for the service has increased, however, and the calls for pilots are more and more frequent, they are paid at a rate of 3 cents per mile—which in most cases does not compensate them for the time.

All pilots are volunteers, and all observe strict flight safety_regulations. All are qualified and experienced in the type of flying done.

Other phases of the operation being changed includes the bonding of company officers who handle funds of the organization; the centralization of record-keeping, and setting up of a new accounting system. Officers believe these steps together with the increase in rates to provide needed income, will insure the stability and safety of the organization.

BILLINGS NOW UP

Billings going out this month will be for the increased amount which is still felt to be a small amount for the type of protection and service offered.

There are 12 directors who are responsible for the operation of the organization. They include George Milligan, who is also founder, chairman and chief pilot of Mercy Flights; Mrs. Jeanette Thatcher Marshall, secretary; Dr. L. Paul Walker, vice chairman, and Eric Allen, Jr., treasurer, and Dr. C. I. Drummond, Seth Bullis, Mrs. Stephen Nye, Frank Peri, Vern Smith, George Flanagan, Harold Frye, and Joseph Burns. Burns was recently elected to the board to succeed Dick Woods, who moved from Medford.

A chief pilot's committee, which assists in the formulation and enforcement of safety figing regulations, consists of Gene Kooser and John Childers, both Mercy Flights pilots. A technical advisory committee, responsible for plane maintenance, includes Milligan, Kooser, Childers, Allen, and Burns. The corporation's executive committee, which makes policy decisions between board meetings, consists of the four officers.

Our Present Currency

EXTENSION OF REMARKS

HON. STYLES ERIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an article entitled "Why Our Present Currency Is a Wicked Type of Money," written by Frederick G. Shull and published in the Commercial and Financial Chronicle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY OUR PRESENT CURRENCY IS A WICKED TYPE OF MONEY

EDITOR, COMMERCIAL AND FINANCIAL CHRON-ICLE:

Having devoted considerable time in recent years to a study of the subject, sound money—which quality of money has been denied our citizens ever since we were taken off the gold standard in 1933 and given the "printing press" substitute, with which we are still operating-the seeming lack of interest displayed by bankers and insurance executives toward a return to specie-backed currency has been rather distasteful, to say the least. It should be borne in mind that we started out with a specie-backed currency under Alexander Hamilton, in 1792; and, with minor exceptions, that quality of American dollar was maintained right down to 1933. But there has appeared a ray of sunshine stemming from a recent statement made by the president of a large insurance company, in which he correctly called our present money a wicked type of money. Following are the facts of that statement:

At a meeting in Washington on December 6 and 7, 1954, under the chairmanship of Senator Flanders, high officials of Treasury and Pederal Reserve, economists, bankers, and others were in attendance, among them Mr. Frazar B. Wilde, president of the Connecticut General Life Insurance Co., Hartford. Chairman Flanders raised the question as to whether the United States should return to gold convertibility—meaning, of course, to the gold standard. Comment by Mr. Wilde was not only forthright, it really hit the nail right on the head. Here are Mr. Wilde's own words:

"I may be biased because of the fect that my business sells money for future delivery, and to me it is a pretty wicked thing to consider the possibility that people will make present sacrifices for future protection, and then get dollars of much lower value." (Reference: U. S. Government Printing Office pamphlet No. 55314, p. 88, dated Dec. 6 and 7, 1954.)

Let's give some thought to Mr. Wilde's statement that his business sells money for future delivery. Is that type of business confined to Connecticut general? It is not; for every insurance company, regardless of type of insurance involved, sells money for future delivery. And is it confined to insurance business? No; it also applies with the same force to the entire banking business of this Nation; for every banker is selling money for future delivery. Let me enlarge upon that point.

When I deposit \$100 in a bank, I am paying that bank \$100 for, in effect, a guaranty by the bank to deliver \$100 to me at some future date. Am I entitled to receive back the same quality of money as I entrusted to that bank? There can be but one answer: Yes. I cannot, of course, hold the bank responsible for fluctuations in purchasing power of those dollars; but I am entitled to demand that since the dollars I deposited carried a value of \$35 a fine ounce of gold, the bank shall reimburse me with dollars of the same quality. And the same applies to insurance policies: When I pay an insurance premium with dollars carrying a value of one thirty-fifth of an ounce of gold per dollar, I am entitled to receive the benefits under that policy in dollars of the same quality. In other words, all I am saying is strictly in line with the forthright admission of Frazar B. Wilde-that "it is a pretty wicked thing to consider the possibility that people will make present sacrifices for future protection and then get dollars of much lower value."

And if one were to ask: Why all this worry—why not leave it to the dealers (bankers and insurance companies) in money "for future delivery"?—my answer would be: This isn't just "peanuts"—it involves hundreds of billions of dollars. For example, United States bank deposits as of December 31, 1953, totaled \$201 billion; and life insurance in force in 1954, \$339 billion—together, \$540 billion. Why, that is the equivalent of 528,000 tons of gold, avoirdupois, based on \$35 per troy ounce—it is 25 times as much gold as we have burled at Fort Knox and the other repositorics. And

does that mean that we can't restore the gold standard? No; it doesn't, and for the following reasons:

People want very little gold, and are never likely to want much gold; for possession of gold pays no interest—and it is much more profitable to have money in a bank at interest, or in an insurance policy for future protection, than to have gold hoarded in a bureau drawer or mattress at no interest. People merely want honesty and security—they want assurance that the standard of value, the American dollar, shall not be kicked around by politicians; that it shall be maintained unchangeable in value—maintained, at all times, as good as gold.

And this aim can easily be accomplished if Congress will only take favorable action on one of the gold-standard bills being currently introduced—bills designed to firmly fix the value of the dollar at \$35 a fine ounce of gold and restore the age-old sound principle of redeemability, on demand.

Must we continue to accept the theory that the national budget cannot be balanced in terms of honest dollars—that it can only be balanced in terms of "printing press" dollars?

FREDERICK G. SHULL, Connecticut State Chairman, Gold Standard League. New Haven, Conn., February 8, 1955.

United States Needs Compulsory Federal Inspection for Poultry

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955

Mr. PRICE. Mr. Speaker, I have called attention on several occasions to the need for Federal inspection and grading of poultry. I introduced House Resolution 647 in the 83d Congress and House Resolution 57 in this Congress which calls for an investigation of the commercial slaughtering and processing of poultry.

A very graphic article entitled "A Sick Chick Goes to Market" appeared in the March 1955 issue of Consumer Report, and I hope that every Member of Congress will take the time to read it. I believe the housewives of the country will be greatly alarmed to read about some of the conditions existing in a segment of the poultry industry.

Under leave to extend my remarks, I include herewith the article appearing in this month's Consumer Report:

A SICK CHICK GOES TO MARKET

The average buyer of poultry or poultry products may assume that she is protected by the same Federal laws which dictate the inspection of most beef, pork, lamb, and other meats or meat products. She may take for granted the wholesomeness of the poultry she sets before her family, but she would be wrong. To this date there has never been any compulsory Federal inspection of poultry destined for the consumer market, and only a few States have any compulsory inspection laws of their own. There is a Federal inspection and grading program for poultry, but it is entirely voluntary. It is estimated that less than 20 percent of the poultry which reaches the dinner tables of America is covered by this voluntary inspection program.

Just how bad the situation is, is indicated by a booklet called Congress Should Probe Sick and Diseased Poultry, just published by the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL, 30,000 of whose members are employed in the poultry industry.

If the poultry is in Interstate commerce, the Government can use its law-enforcement powers to protect the public from filthy, decomposed, or adulterated food. In 1952, inspectors of the Food and Drug Administration selzed over 200,000 pounds of poultry unfit for human consumption. But the amount of poultry inspection the Food and Drug Administration can do on its small budget is relatively trivial. Furthermore, a great deal of poultry is produced and sold within State boundaries, and law enforcement here varies with the local or State health departments involved.

Thirty years ago there were very few large poultry slaughtering plants. Poultry for the most part was marketed alive, and often slaughtered at home. The consumer had a chance to see the bird, and would naturally reject a dead bird or one that was severely Today, probably less than one bird in a thousand is seen alive by the urban consumer, and it is difficult, if not impossible to determine illness in a slaughtered bird, however apparent the symptoms were when the fowl was alive. The Food and Drug Administration complains that inferior and diseased poultry frequently appears on the retail market as cut-up pieces; it is obviously hard to tell if a chicken was diseased or well, when all you see of it is a drumstick. Diseased and inferior poultry also finds its way into restaurants and soup factories. When a number of soup manufacturers recently changed their buying policies, sellers of poultry unfit for human consumption complained that their market was seriously hurt

How bad are conditions in the processing plants, and how widespread is the traffic in diseased poultry? Poultry plants range from pot scalders to assembly line operations where 600,000 pounds of poultry is dressed in a 24-hour day, and conditions vary from excellent to repulsive regardless of size of plant, or type of equipment. It has been stated by officials in the United States Public Health Service that anyone who has observed poultry plant operations from the public health point of view does not have to be convinced of the need for poultry in-spection programs. The poultry workers themselves have published sworn affidavits describing conditions in some of these uninspected plants. These affidavits indicate that considerable quantities of poultry in the advanced stages of disease and in most revolting condition are slaughtered and procesesd; even birds which are already decomposing are packed and shipped out to unsuspecting consumers. In dressing, eviscerating, and packing such diseased and unwholesome poultry there is a strong possibility of contaminating the equipment, and thereby the carcasses of birds which were healthy when slaughtered.

A PUBLIC HEALTH MENACE

It is well established by health authorities that certain poultry diseases are transmissible to man. Among these are psittacosis (parrot fever), which has been traced to turkeys, and a virus infection known as Newcastle disease. In addition, there are a large number of disease-causing organisms common to man and poultry; of these, the Salmonella group of bacteria, which cause infections similar to paratyphold or typhoid fever, are of the greatest concern to publichealth officers. In a single year (1948), the United States Public Health Service reports. 2,492 cases of food-borne disease were traced to poultry and poultry dishes. These cases were reported in the 62 outbreaks which reached epidemic proportions; it is probable

that there were many thousands of individual or sporadic cases which were unreported. Only a fraction of the States require that cases of food poisoning be reported to the health authorities.

Obviously, the consumer must obtain more protection against diseased or contaminated poultry than he is getting at present. The appearance and odor of a bird that has had its viscera removed, and has been cut up ready to cook are the consumer's only guide to wholesomeness. But it is not an infallible guide, since certainty about the bird's health often requires examination of the live bird as well as the viscera and carcass to determine whether the fowl is diseased. Moreover, in the case of frozen poultry, appearance and odor are even less reliable.

It sems obvious that the consumer can be effectively protected only by effective regulation of the poultry industry. Poultry is a major food, and its consumption has steadily grown to an estimated 35 pounds per capita. Yet the slaughtering, inspection, grading, labeling, packing, processing, canning, sale, and transportation of poultry or poultry products that move in interstate commerce are subject to no Federal control.

The first step toward effective poultry regulation might well be a full-scale investigation of the commercial slaughtering and processing of poultry. Such an investigation was called for last July in resolutions introduced in the Senate by Senator Paul. H. Douglas, of Illinois, and in the House of Representatives by Congressman Mrivin Paice, of Illinois. Both measures—Senate Resolution 283 and House Resolution 647—were referred to appropriate committees. CU believes that both resolutions merit the support of consumers who want to be certain that the poultry they buy is wholesome, free of disease, and fit for human consumption.

When You Come to Life's Twilight

EXTENSION OF REMARKS

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very interesting article entitled "When You Come to Life's Twilight." The article was written by W. Earl Hall, editor of the Mason City (Iowa) Globe-Gazette, and was published in that newspaper on March 14, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN YOU COME TO LIFE'S TWILIGHT (A radio commentary by W. Earl Hall)

Curiously enough two of the most challenging problems confronting our country today have to do with the two extremes of our population's lifespan. On the one hand we're asking: "What shall we do about our rising number of youngsters?" and on the other we're asking: "What shall we do about our rising number of oldsters?"

The youth problem has a good many facets and I've dealt with most of them, I think, down through the years in these once-a-week visits with you. These include providing classrooms and teachers for nearly twice as many children as we've been accom-

modating up to now. And there's the matter of a mounting juvenile delinquency.

In this commentary I'd like to talk about what are being referred to as our "senior citizens." And arbitrarily I'm going to consider age 65 as the dividing line although there would be some justification for starting with age 45, or even 40, for that's when a great many employers begin looking askance at job applicants.

"IF GIVEN A CHANCE"

Each passing day thousands of men and women are turned away from jobs they could fill satisfactorily if given a chance. They are experienced, healthy, emotionally stable and eager to work. But employers, for what seems to be good reason, have a preference for somebody younger.

It doesn't take any sociologist to sense

It doesn't take any sociologist to sense that an inestimable sum total of skill, experience and mature judgment is going to waste in our society. And what's bad now is going to be worse 20 years from now because America's population is growing heavy at the top. Life expectancy is increasing every year.

At latest count there were 43 million persons in the United States over 45. That's well over a fourth of the total population. By 1975, it's calculated, there will be 63 million persons past 45 and they will make up nearly half of all Americans past 20. Thus we see it's a great and growing problem. Let there be no doubt of that.

RETIRE-BUT TO WHAT?

Now let's turn to those 65 years of age or older. That's the generally accepted age for retirement. And the question has arisen in stern form: Retire to what?

Two of my warmest friends, caught up in this trend themselves, are giving their best thought and effort to the problem. One of them is Maurice duPont Lee, long identified as a chemical engineer with the Du Pont Co. of Wilmington, Del. The other is R. K. Bliss, probably the Nation's best known authority in the field of agricultural extension work. To thousands he has been almost synonymous with Iowa State College for the past 40 years or so.

It has been my satisfying experience in the past few months to bring these 2 grand people together through the medium of correspondence. Their approach to the problem of geratology has been from somewhat different angles but between them, they'll be making a fine contribution to the science. Of that I feel confident.

CREATIVE WORK BEST MEDICINE

Both, I'm sure, would agree with another friend of mine, now well into his eighties and as keen of mind as when for some 20 years he served with distinction as State health commissioner.

"Occupation," says Dr. Walter Bierring, now head of the Iowa division of gerontology, heart and chronic diseases, "is recognized as the best of medicine. Work, particularly if creative, gives to life its most enduring purpose."

We can go on from there—and I dip first into a letter written by my Wilmington friend to my Iowa State College friend.

"It is my contention," writes Maurice duPont Lee, "that a person who has worked throughout his active career and accumulated a stock of this world's goods has no moral right to go to Florida, sit under a palm tree and wait for the undertaker.

"This man of means is no more independent than the 'senior citizen' who lives on a pension. He relies entirely on the labor which earns the dividends on his securities.

"HE OWES A DEBT TO SOCIETY

"He has no right to accept this labor and not give back something in return. He should work for the community, or the church, for civic affairs—and it is with this in view that I have been pestering them, with some satisfactory results, I might add." What Maurice duPont Lee has done in carrying out this fundamental philosophy made one of the most interesting articles ever carried by the Saturday Evening Post. I've reproduced it in 2 or 3 of my commentaries, at least in broad outline.

In simple statement, Mr. Lee surrounded himself with some other retired people with a broad business background and made their experience and counsel available to small businesses which were having a rough go of it. Many such have been put on their feet, saved from failure.

Along with this he serves without pay as park commissioner in his hometown of Wilmington. He finds pride in the fact that Wilmington is better served by its park system than any city of comparable size in the world.

HE'S A FRIEND OF HUMANITY

And even this isn't the end of the story. Maurice Lee still finds time to be the friend in need for all who are in distress. From a woman suffering with incurable cancer, I recently received a letter about his work. Let me quote a sentence or two from it:

"Practically every moment of his busy day he is doing something for some unfortunate. * * * I have never once heard him mention what he has done or what he is doing for people."

Turning now to Mr. Bliss, we find what I suppose might be called a more general approach to the problem. In his 10 years of retirement from the extension directorship, he has managed to keep busy in a number of fields. All the while, too, he has been a student of this relatively new science called gerontology. It has to do with the aging.

HERE ARE SOME RULES

From sitting in on conferences and from his own experience and observation, Mr. Bliss has come up with a set of suggestions which he thinks will add zest, and probably years, to the life of those who look out on their setting sun after retirement from their lifework:

- 1. If at all possible, keep on working at something you like and as your strength will permit.
- Keep on living among long-time friends if possible. As one grows older, it becomes increasingly difficult to make new friends and the old ones keep dropping away.
- 3. Be as independent as you can. If one cannot be independent, then accept the situation philosophically. This sometimes requires a good sense of humor.
- 4. Keep on enjoying life. Dress as others dress. Don't, if you can help it, let yourself be set apart. Be a part of the community in which you live. Powder your nose, put rouge on your cheeks if you want to, wear conventional clothes, nice neckties, be one of the community or group, play suitable games, relax—have fun.
- 5. Watch your food. Get plenty of protein, calcium (milk is the best source), protective foods, and vitamin B complex group. Take note of your waistline.
- Have regular physical examinations at least once a year and oftener if worried about your health.

These are guides which have worked well for Mr. Bliss and he believes they have much to recommend them for others similarly situated.

WHY WOMEN LIVE LONGER

Incidentally, he has an interesting theory about why women live longer than men on the average. It's because the great majority of them keep on working at the tasks to which they were accustomed. But let's have R. K. Bliss tell it in his own words:

"When Dad retires, does Mom retire too? Not on your life. She keeps right on preparing three meals a day. She keeps the house in shape, makes the beds, etc.

"All the while old Dad is reading the papers and worrying about the present state of affairs and speculating on what's going to happen in the future. Mom doesn't have

much time to worry.

"Mom generally has some grandchildren to take care of occasionally, to sew for and mother at times. And if she becomes a widow—as a rather surprisingly large number do, she may go to live with one of her children. If so, she keeps on working, taking care of her own room, mending for the grand-children, etc."

DAD'S LIFE DESCRIBED

Then Mr. Bliss presents this contrast in Dad's life after retirement:

"Somebody else makes his bed, lays out his clothes, sees that he has the easy chair, cautions him about overdoing. (He might hurt his heart, you know.)

"Actually I think the tendency of the retirement system is to make Dad think about himself and his troubles so much that after a few years of it, he gets bored and tired and just drops off.

"No amount of social security that merely provides pork and beans and a good place to sleep will remedy this situation. We were told long ago that 'man cannot live by bread alone."

A study conducted and evaluated not so long ago by the University of Illinois lends support to the view held by Mr. Bliss that society is the poorer for not taking advantage of what our senior citizens have to offer. It covered 1,025 workers in 20 companies, all past 60, some past 70.

BAR ON GRANDMA MOSES

In overall performance, in total production, in the quality of product, in cooperative spirit and in absenteeism, the study revealed a highly satisfactory record for the oldsters as compared with their juniors on the job.

Now for a final word of testimony on this point by my Iowa friend:

"If Grandma Moses, the distinguished painter now 94, had been teaching school or college, she would have retired 24 or 29 years ago." She would never have painted even one picture.

In politics, there is no such binding restraint. Churchill is 80, Adenauer is almost as old and we have a group of Congressmen in their seventies and eighties.

It's comforting to know that a problem of such importance is coming more and more into focus in our country.

Russia, China, and the Outlook in the

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. WILEY. Mr. President, on the evening of March 16, 1955, it was my privilege to address the Intelligence Chapter of the Reserve Officers Association. That is composed of the Intelligence Services of the Army, the Navy, and other groups. I spoke on the subject Russia, China, and the Outlook in the Pacific. I ask unanimous consent that my address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RUSSIA, CHINA, AND THE OUTLOOK IN THE

As we look out on the world and ponder the problems that confront us, their very magnitude leads us at times to see only the dark side of the picture.

Unless those problems solve themselves, we must continue to seek solutions. And while seeking them, in association with our allies, we must keep up our guard, remain strong, and be prepared to meet any new danger which may threaten our security or that of the free world.

Yet the outlook is far from hopeless. Viewed superficially, or basing our conclusions on day-to-day developments, it might be thought fairly desperate. But if we dig deeper and look at the fundamentals, we can even be fairly cheerful.

There are favorable factors at work that justify an optimistic outlook. The facts of human nature likewise should strengthen our faith in the future.

The facts of history belie the concept that human beings will accept tyrannical rule indefinitely, or that tyrants cannot be overthrown.

The historic relationships of Eurasian peoples—including the Chinese and Russians—disclose more points of conflict, including conflicts of interest, than there are points of agreement.

Communism itself, although assuming malevolent form in its present incarnation, becomes a menace only as it is linked to nationalistic and imperialistic ambitions centering in Moscow and Peiping. In its basic philosophy it did not originate with Karl Marx. It is as old as mankind, and there have been communistic societies, or attempts to set them up, as far back as we can see in our study of human institutions.

To dispose of that subject first, and briefly, it is one of the simple facts of history that from the earliest times down to the present, these communistic communities have died out and either disappeared completely or passed through successive mutations into a pattern more nearly reflecting the competitive nature of life and the aspiration of human beings to pursue happiness and struggle for life's rewards in their own way. Communism has always failed when tried, because it conflicts with the fundamentals of human nature. It will fail in Russia and China for the same basic reason.

But it will fail for another reason also. It will fail because communism itself cannot compete with individualism. It must fail; because slaves and slave states cannot compete with free institutions and with free men living in free countries. It must fail because, under communism, and under dictatorial regimes and tyrannical rule, there is lacking the incentive to achievement which inspires free men to reach the heights they do.

A single illustration points the moral here: Russia and China are both suffering from food shortages. In the United States our problem is not shortages, but surpluses. Eisewhere in the free world the production of wheat, rice, meat, dairy products, and other dietary essentials is increasing constantly. The communist world, experimenting with collectivism, and with orders for food production handed down from above through a Communist bureaucracy, and with production at the source supervised by Communist overseers, suffers from hunger.

If the hungry peoples who are still free can be shown how to increase their own food supplies, and if we can help them to do this (meanwhile sharing our surpluses with them, as we have and will), they too will follow the path of freedom rather than fall into the lockstep of communism.

Now to be specific concerning Russia and China:

Moscow continues to growl and threaten, to abuse the rest of us, and to flood the free world with lying propaganda designed—though unsuccessfully—to convince it that the Soviet Union is the world's most power-

Can a nation suffering from food shortages, and which has to choose between guns and butter, consumer goods and the products of heavy industry, be so categorized? Hardly. With all of her progress of the last 25 or 30 years in some directions, Russia still cannot grow enough food for her people, and actually has fewer cattle now than when the Russian peasant was little more than a serf, but still had freedom enough to run

his farm in his own way. What about Russia's relations with China? Does this constitute a true partnership, or is Russia making China pay through the nose for whatever the Red regime getsmeanwhile pushing off on the Peiping government obsolete and surplus war equipment which Russia herself no longer wants?

To a limited extent it pays Russia to help Red China. As China develops economically, it can become a market for Russian products-when Russia has enough of anything to export. As China becomes stronger militarily, the Red regime and the Red Army can be used to threaten China's neighbors. But it also serves Russia's purposes; for by encouraging China to undertake military adventures in the Far East, Russia makes sure that there will be no Chinese thrust to the north or west-into Siberia or Mongolia.

China is kept in a state of subjection as surely as if she were one of the lesser satellites of the Soviet Union. And to the extent that China's resources go into her Army and Air Force, with no real hope that they can be used to enlarge her territory or advance her interests-China is kept weak economically, or at least weaker than if the whole energies of her industrious people were devoted to developing her resources for her

own benefit.

Thus, it may be suspected that Russia has a darkly ulterior, as well as a profit motive in giving Red China limited help. Moscow may even encourage Pelping to test our defenses in the Pacific for the double purpose, as they hope, of involving both China and the United States in a military conflict.

But certainly Russia can never afford to allow Red China to become a first-class military power. For whatever else they are, the rulers in the Kremlin are realists. They know their history. And they are not likely to forget that over the historic period the pressure of population on the Eurasian Continent has always come from the East. They will not forget that the Mongol hordes only a few centuries ago, as history is measured, overran Russia repeatedly, burned Moscow at least twice, and that for some 300 years Russia was forced to pay tribute to a Mongol Khan.

So there is a limit to the military and economic assistance Red China can expect from Russia.

Mao Tse-tung and Chou En-lai think of themselves as partners of Russia; but sooner or later they will learn-if they have not realized it thus far-that they are not partners.

Russia is using Red China and will use her, so long as it serves Russian purposes, and so long as the Peiping government permits

itself to be so used.

The Chinese rulers, for their part, will not be likely to forget the historic record. It is Russia that has hemmed China in. glance at the map will show this vividly. China cannot move either north or west into sparsely populated areas with presumably substantial resources awaiting development. without coming into conflict with Russia.

What country took over Mongolia at a moment of Chinese weakness? Russia.

What neighbor moved into Manchuria and forced concessions there from China? Russla.

What supposed friend led China into a hopeless war in Korea, draining Chinese resources and costing the lives of a million Chinese? Russia.

What country stripped Manchuria of Japanese industrial equipment after World War II, leaving Communist China with the problem of rebuilding that formerly busy area, as developed during the Japanese occupation? Russia.

Only twice in Chinese history-once during the Mongol period, under the reign of Kublai Khan, in what is known as the Yuan Dynasty, and again under the Manchushave the people of China gone south into Burma, Cambodia, and beyond, for purposes of military conquest.

These expeditions failed, and there is nothing in the present situation to suggest that any new Chinese military move in that direction would prove more successful, even without our intervention.

And the United States would intervene. Let there be no mistake on that point. And with a suddenness and strength that would

open Asian eyes.

The Red rulers of China know this.

As to Formosa, the answer is equally clear: There is no possibility whatever that the men who sit in Peiping could take Formosa against the opposition represented by the Nationalist government on that island, supported by United States naval and air strength. And the Red Chinese know this,

The Chinese never have been a maritime people. They could no more reach out into the Pacific over the opposition of the free nations, including the Asian people in countries nearby, and of course including ourselves, than they could march to Moscow against Russia's military might on land. The Chinese know this.

If they feel themselves bottled up in China, they might look at the map again, and see who it is that has bottled them up. map tells the story. The only territory formerly included in the Chinese empire which has been taken from China was taken from them by Russia.

When China has felt impelled to move into new territory in the past, the people of that country have moved-with the unsuccessful exceptions noted previously-either north or west. There has been trouble on her northern and western frontiers since before the Christian era.

It would not be altogether surprising if, at some future date, there should again be trouble there.

Moreover, the Chinese people, who enjoyed a high degree of culture before the first Russians emerged from the northern forests, certainly cannot enjoy subordinating themselves to the Russians now-or knowing that if Russia can prevent it they can never rise to equality with their neighbor to the west.

The Communists can settle down in China and behave themselves, so far as their conduct concerns others, or they can invite trouble, and undoubtedly find it in whatever direction they move.

And Communist Russia can do the same thing, as of today; for if they should move into Europe, beyond the present boundaries of the Communist bloc, they would invite destruction of all that they have gained, or built, in more than a quarter of a century.

That, then, is the picture.

These are some of the things we too often forget, or overlook, or fail to think about as we pass through this time of trouble.

On the whole, I think we have reason to be encouraged.

In the end, I believe the world will emerge into a better day.

Ultimately, we can hope, the Russian and Chinese people will throw off the tyranny of pseudo-communism, a dialectic screen for totalitarian rule by self-serving dictators and again join the ranks of the free nations.

For the present, we shall watch, wait, pray, keep our powder dry, our Seventh Fleet in the Formosa Straits, and our airbases around the perimeter of Russia.
